

**Run-on Document of All Ohio EPA Air Pollution Regulations  
Current as of December 2, 2010**

Ohio EPA air pollution regulations are located in the Ohio Administrative Code (OAC) in chapters 3745-14 to 3745-26, 3745-31, 3745-71 to 3745-80, 3745-100 to 3745-105, and 3745-108 to 3745-114. Additional chapters are added as needed to address new laws and requirements related to air pollution control. This document contains a copy of all Ohio EPA's air pollution control rules in Ohio Administrative Code (OAC) Chapter 3745 in a single electronic file to facilitate universal language searches among rules. This document contains the most recent copy of each rule as of the date listed above.

## Run-on Document, Modification Tracking

When a new or modified rule is added to the run-on file, the name and date are added to the tracking list. Tracking History is kept for the previous 12 months prior to the date of the current version. For a complete history, or if you have any questions regarding this document, contact Paul Braun at (614)644-3734 or at paul.braun@epa.state.oh.us.

Date	Rule or Chapter	General Actions
4/13/10	3745-21-25	Added new rule for 12/14/09
4/13/10	3745-21-22	Added final version of amended rule for 2/10/10
4/13/10	3745-77	Added final versions of amended rules for 2/14/10
4/13/10	3745-80	Added final versions of amended rules for 2/14/10
4/13/10	3745-108	Removed Rescinded Chapter
12/2/10	3745-14-(01, 06)	Added final versions of amended rules for 10/18/10

## Table of Contents

RUN-ON DOCUMENT, MODIFICATION TRACKING -----	II
CHAPTER 3745-14: NITROGEN OXIDES - BUDGET TRADING PROGRAM -----	1
3745-14-01    DEFINITIONS AND GENERAL PROVISIONS. -----	2
3745-14-02    THE NOX AUTHORIZED ACCOUNT REPRESENTATIVE. -----	35
3745-14-03    THE NOX BUDGET PERMIT. -----	40
3745-14-04    COMPLIANCE CERTIFICATION. -----	44
3745-14-05    NOX ALLOWANCE ALLOCATIONS. -----	47
3745-14-05 Appendix A -----	62
3745-14-05 Appendix B -----	65
3745-14-06    THE NOX ALLOWANCE TRACKING SYSTEM. -----	66
3745-14-07    NOX ALLOWANCE TRANSFERS. -----	78
3745-14-08    MONITORING AND REPORTING. -----	81
3745-14-09    NOX BUDGET OPT-IN UNITS. -----	96
3745-14-10    ALTERNATIVE COMPLIANCE PLANS. -----	105
3745-14-11    PORTLAND CEMENT KILNS. -----	107
3745-14-12    STATIONARY INTERNAL COMBUSTION ENGINES. -----	110
CHAPTER 3745-15: GENERAL PROVISIONS ON AIR POLLUTION CONTROL -----	114
3745-15-01    DEFINITIONS. -----	115
3745-15-02    PURPOSE. -----	119
3745-15-03    SUBMISSION OF EMISSION INFORMATION. -----	121
3745-15-04    MEASUREMENT OF EMISSIONS OF AIR CONTAMINANTS. -----	126
3745-15-05    "DE MINIMIS" AIR CONTAMINANT SOURCE EXEMPTION. -----	128
3745-15-06    MALFUNCTION OF EQUIPMENT; SCHEDULED MAINTENANCE; REPORTING. -----	132
3745-15-07    AIR POLLUTION NUISANCES PROHIBITED. -----	136
3745-15-08    CIRCUMVENTION. -----	138
3745-15-09    SEVERABILITY. -----	140
CHAPTER 3745-16: STACK HEIGHT REQUIREMENTS -----	142
3745-16-01    DEFINITIONS. -----	143
3745-16-02    GOOD ENGINEERING PRACTICE STACK HEIGHT REQUIREMENTS. -----	150
CHAPTER 3745-17: PARTICULATE MATTER STANDARDS -----	152
3745-17-01    DEFINITIONS. -----	153
3745-17-02    AMBIENT AIR QUALITY STANDARDS. -----	161
3745-17-03    MEASUREMENT METHODS AND PROCEDURES. -----	162
3745-17-04    COMPLIANCE TIME SCHEDULES. -----	174
3745-17-07    CONTROL OF VISIBLE PARTICULATE EMISSIONS FROM STATIONARY SOURCES. -----	183
3745-17-08    RESTRICTION OF EMISSION OF FUGITIVE DUST. -----	193
3745-17-08 Appendix A -----	198
3745-17-08 Appendix B -----	200
3745-17-09    RESTRICTIONS ON PARTICULATE EMISSIONS AND ODORS FROM INCINERATORS. -----	204
3745-17-10    RESTRICTIONS ON PARTICULATE EMISSIONS FROM FUEL BURNING EQUIPMENT. -----	206
3745-17-10 Appendix -----	212
3745-17-11    RESTRICTIONS ON PARTICULATE EMISSIONS FROM INDUSTRIAL PROCESSES. -----	213
3745-17-11 Appendix -----	220
3745-17-12    ADDITIONAL RESTRICTIONS ON PARTICULATE EMISSIONS FROM SPECIFIC AIR CONTAMINANT SOURCES IN CUYAHOGA COUNTY. -----	222
3745-17-13    ADDITIONAL RESTRICTIONS ON PARTICULATE EMISSIONS FROM SPECIFIC AIR CONTAMINANT SOURCES IN JEFFERSON COUNTY. -----	241
3745-17-13 Appendix -----	244

3745-17-14	CONTINGENCY PLAN REQUIREMENTS FOR CUYAHOGA AND JEFFERSON COUNTIES. -----	261
<b>CHAPTER 3745-18: SULFUR DIOXIDE REGULATIONS -----</b>		<b>265</b>
3745-18-01	DEFINITIONS AND INCORPORATION BY REFERENCE. -----	266
3745-18-02	AMBIENT AIR QUALITY STANDARDS; SULFUR DIOXIDE. -----	272
3745-18-03	ATTAINMENT DATES AND COMPLIANCE TIME SCHEDULES. -----	273
3745-18-04	MEASUREMENT METHODS AND PROCEDURES. -----	293
3745-18-05	AMBIENT AND METEOROLOGICAL MONITORING REQUIREMENTS.-----	305
3745-18-06	GENERAL EMISSION LIMIT PROVISIONS.-----	307
3745-18-07	ADAMS COUNTY EMISSION LIMITS.-----	310
3745-18-08	ALLEN COUNTY EMISSION LIMITS. -----	312
3745-18-09	ASHLAND COUNTY EMISSION LIMITS. -----	316
3745-18-10	ASHTABULA COUNTY EMISSIONS LIMITS. -----	318
3745-18-11	ATHENS COUNTY EMISSION LIMITS.-----	321
3745-18-12	AUGLAIZE COUNTY EMISSION LIMITS. -----	324
3745-18-13	BELMONT COUNTY EMISSION LIMITS. -----	326
3745-18-14	BROWN COUNTY EMISSION LIMITS.-----	328
3745-18-15	BUTLER COUNTY EMISSION LIMITS.-----	330
3745-18-16	CARROLL COUNTY EMISSION LIMITS. -----	336
3745-18-17	CHAMPAIGN COUNTY EMISSION LIMITS. -----	338
3745-18-18	CLARK COUNTY EMISSION LIMITS.-----	340
3745-18-19	CLERMONT COUNTY EMISSION LIMITS. -----	342
3745-18-20	CLINTON COUNTY EMISSION LIMITS. -----	344
3745-18-21	COLUMBIANA COUNTY EMISSION LIMITS. -----	346
3745-18-22	COSHOCTON COUNTY EMISSION LIMITS. -----	348
3745-18-23	CRAWFORD COUNTY EMISSION LIMITS. -----	350
3745-18-24	CUYAHOGA COUNTY EMISSION LIMITS. -----	352
3745-18-25	DARKE COUNTY EMISSION LIMITS.-----	365
3745-18-26	DEFIANCE COUNTY EMISSION LIMITS.-----	367
3745-18-27	DELAWARE COUNTY EMISSION LIMITS. -----	369
3745-18-28	ERIE COUNTY EMISSION LIMITS. -----	371
3745-18-29	FAIRFIELD COUNTY EMISSION LIMITS. -----	374
3745-18-30	FAYETTE COUNTY EMISSION LIMITS. -----	376
3745-18-31	FRANKLIN COUNTY EMISSION LIMITS.-----	378
3745-18-32	FULTON COUNTY EMISSION LIMITS. -----	384
3745-18-33	GALLIA COUNTY EMISSION LIMITS. -----	386
3745-18-34	GEAUGA COUNTY EMISSION LIMITS.-----	388
3745-18-35	GREENE COUNTY EMISSION LIMITS. -----	390
3745-18-36	GUERNSEY COUNTY EMISSION LIMITS.-----	393
3745-18-37	HAMILTON COUNTY EMISSION LIMITS. -----	395
3745-18-38	HANCOCK COUNTY EMISSION LIMITS.-----	406
3745-18-39	HARDIN COUNTY EMISSION LIMITS. -----	408
3745-18-40	HARRISON COUNTY EMISSION LIMITS. -----	410
3745-18-41	HENRY COUNTY EMISSION LIMITS. -----	412
3745-18-42	HIGHLAND COUNTY EMISSION LIMIT. -----	414
3745-18-43	HOCKING COUNTY EMISSION LIMITS. -----	416
3745-18-44	HOLMES COUNTY EMISSION LIMITS.-----	418
3745-18-45	HURON COUNTY EMISSION LIMITS. -----	420
3745-18-46	JACKSON COUNTY EMISSION LIMITS.-----	422
3745-18-47	JEFFERSON COUNTY EMISSION LIMITS.-----	424
3745-18-48	KNOX COUNTY EMISSION LIMITS. -----	429
3745-18-49	LAKE COUNTY EMISSION LIMITS. -----	431
3745-18-50	LAWRENCE COUNTY EMISSION LIMITS. -----	435
3745-18-51	LICKING COUNTY EMISSION LIMITS.-----	438
3745-18-52	LOGAN COUNTY EMISSION LIMITS. -----	440
3745-18-53	LORAIN COUNTY EMISSION LIMITS. -----	442
3745-18-54	LUCAS COUNTY EMISSION LIMITS. -----	446

3745-18-55	MADISON COUNTY EMISSION LIMITS. -----	453
3745-18-56	MAHONING COUNTY EMISSION LIMITS.-----	455
3745-18-57	MARION COUNTY EMISSION LIMITS.-----	459
3745-18-58	MEDINA COUNTY EMISSION LIMITS. -----	461
3745-18-59	MEIGS COUNTY EMISSION LIMITS. -----	463
3745-18-60	MERCER COUNTY EMISSION LIMITS. -----	465
3745-18-61	MIAMI COUNTY EMISSION LIMITS. -----	467
3745-18-62	MONROE COUNTY EMISSION LIMITS. -----	469
3745-18-63	MONTGOMERY COUNTY EMISSION LIMITS. -----	471
3745-18-64	MORGAN COUNTY EMISSION LIMITS. -----	476
3745-18-65	MORROW COUNTY EMISSION LIMITS. -----	478
3745-18-66	MUSKINGUM COUNTY EMISSION LIMITS.-----	480
3745-18-67	NOBLE COUNTY EMISSION LIMITS.-----	482
3745-18-68	OTTAWA COUNTY EMISSION LIMITS. -----	484
3745-18-69	PAULDING COUNTY EMISSION LIMITS. -----	486
3745-18-70	PERRY COUNTY EMISSION LIMITS. -----	488
3745-18-71	PICKAWAY COUNTY EMISSION LIMITS. -----	490
3745-18-72	PIKE COUNTY EMISSION LIMITS. -----	492
3745-18-73	PORTAGE COUNTY EMISSION LIMITS. -----	494
3745-18-74	PREBLE COUNTY EMISSION LIMITS.-----	496
3745-18-75	PUTNAM COUNTY EMISSION LIMITS.-----	498
3745-18-76	RICHLAND COUNTY EMISSION LIMITS. -----	500
3745-18-77	ROSS COUNTY EMISSION LIMITS. -----	503
3745-18-78	SANDUSKY COUNTY EMISSION LIMITS.-----	505

3745-18-82	STARK COUNTY EMISSION LIMITS. -----	515
3745-18-83	SUMMIT COUNTY EMISSION LIMITS.-----	522
3745-18-84	TRUMBULL COUNTY EMISSION LIMITS. -----	529
3745-18-85	TUSCARAWAS COUNTY EMISSION LIMITS. -----	533
3745-18-86	UNION COUNTY EMISSION LIMITS. -----	536
3745-18-87	VAN WERT COUNTY EMISSION LIMITS. -----	538
3745-18-88	VINTON COUNTY EMISSION LIMITS.-----	540
3745-18-89	WARREN COUNTY EMISSION LIMITS. -----	542
3745-18-90	WASHINGTON COUNTY EMISSION LIMITS. -----	544
3745-18-91	WAYNE COUNTY EMISSION LIMITS. -----	546
3745-18-92	WILLIAMS COUNTY EMISSION LIMITS. -----	549
3745-18-93	WOOD COUNTY EMISSION LIMITS.-----	551
3745-18-94	WYANDOT COUNTY EMISSION LIMITS. -----	553
<b>CHAPTER 3745-19: OPEN BURNING STANDARDS-----</b>		<b>555</b>
3745-19-01	DEFINITIONS. -----	556
3745-19-02	RELATIONS TO OTHER PROHIBITIONS.-----	560
3745-19-03	OPEN BURNING IN RESTRICTED AREAS.-----	562
3745-19-03	Appendix-----	566
3745-19-04	OPEN BURNING IN UNRESTRICTED AREAS. -----	570
3745-19-05	PERMISSION TO INDIVIDUALS AND NOTIFICATION TO THE OHIO EPA. -----	574
3745-19-06	OPEN BURNING UNILATERAL ORDER. -----	577
<b>CHAPTER 3745-20: ASBESTOS EMISSION CONTROL -----</b>		<b>579</b>
3745-20-01	DEFINITIONS AND INCORPORATION BY REFERENCE. -----	580
3745-20-02	STANDARDS FOR DEMOLITION AND RENOVATION, FACILITY INSPECTION, AND DETERMINATION OF APPLICABILITY. -----	589
3745-20-03	STANDARD FOR NOTIFICATION PRIOR TO DEMOLITION OR RENOVATION. -----	592
3745-20-04	DEMOLITION AND RENOVATION PROCEDURES FOR ASBESTOS EMISSION CONTROL. -----	597
3745-20-05	STANDARD FOR ASBESTOS WASTE HANDLING.-----	603

3745-20-06	STANDARD FOR ACTIVE ASBESTOS WASTE DISPOSAL SITES.-----	611
3745-20-07	STANDARD FOR INACTIVE ASBESTOS WASTE DISPOSAL SITES.-----	614
3745-20-08	REPORTING, CERTIFICATION AND PERMIT APPLICATION REQUIREMENTS.-----	618
3745-20-09	STANDARD FOR ROADWAYS.-----	622
3745-20-10	STANDARDS FOR ASBESTOS MILLS AND MANUFACTURING.-----	624
3745-20-11	STANDARD FOR FABRICATING.-----	627
3745-20-12	AIR CLEANING.-----	630
3745-20-13	STANDARD FOR OPERATIONS THAT CONVERT ASBESTOS-CONTAINING WASTE MATERIAL INTO NONASBESTOS (ASBESTOS-FREE) MATERIAL.-----	633
3745-20-14	STANDARD FOR INSULATING MATERIALS.-----	638
3745-20-15	STANDARD FOR SPRAYING.-----	640
<b>CHAPTER 3745-21: CARBON MONOXIDE, PHOTOCHEMICALLY REACTIVE MATERIALS, HYDROCARBONS, AND RELATED MATERIALS STANDARDS-----</b>		<b>642</b>
3745-21-01	DEFINITIONS.-----	643
3745-21-02	AMBIENT AIR QUALITY STANDARDS AND GUIDELINES.-----	737
3745-21-03	METHODS OF AMBIENT AIR QUALITY MEASUREMENT.-----	738
3745-21-04	ATTAINMENT DATES AND COMPLIANCE TIME SCHEDULES.-----	740
3745-21-06	CLASSIFICATION OF REGIONS.-----	758
3745-21-07	CONTROL OF EMISSIONS OF ORGANIC MATERIALS FROM STATIONARY SOURCES (I.E., EMISSIONS THAT ARE NOT REGULATED BY RULE 3745-21-09, 3745-21-12, 3745-21-13, 3745-21-14, 3745-21-15, 3745-21-16, OR 3745-21-18 OF THE ADMINISTRATIVE CODE).-----	760
3745-21-08	CONTROL OF CARBON MONOXIDE EMISSIONS FROM STATIONARY SOURCES.-----	777
3745-21-09	CONTROL OF EMISSIONS OF VOLATILE ORGANIC COMPOUNDS FROM STATIONARY SOURCES AND PERCHLOROETHYLENE FROM DRY CLEANING FACILITIES.-----	779
3745-21-09	APPENDIX A-----	903
3745-21-09	APPENDIX B-----	908
3745-21-10	COMPLIANCE TEST METHODS AND PROCEDURES.-----	910
3745-21-10	APPENDIX A-----	931
3745-21-10	APPENDIX B-----	943
3745-21-10	APPENDIX C-----	956
3745-21-11	REASONABLY AVAILABLE CONTROL TECHNOLOGY STUDIES FOR OZONE NON- ATTAINMENT AREAS.-----	957
3745-21-12	CONTROL OF VOLATILE ORGANIC COMPOUND EMISSIONS FROM COMMERCIAL BAKERY OVEN FACILITIES.-----	958
3745-21-13	CONTROL OF VOLATILE ORGANIC COMPOUND EMISSIONS FROM REACTORS AND DISTILLATION UNITS EMPLOYED IN SOCM <sub>I</sub> CHEMICAL PRODUCTION.-----	970
3745-21-14	CONTROL OF VOLATILE ORGANIC COMPOUND EMISSIONS FROM PROCESS VENTS IN BATCH OPERATIONS.-----	1010
3745-21-15	CONTROL OF VOLATILE ORGANIC COMPOUND EMISSIONS FROM WOOD FURNITURE MANUFACTURING OPERATIONS.-----	1029
3745-21-16	CONTROL OF VOLATILE ORGANIC COMPOUND EMISSIONS FROM INDUSTRIAL WASTEWATER.-----	1061
3745-21-17	PORTABLE FUEL CONTAINERS.-----	1090
3745-21-18	COMMERCIAL MOTOR VEHICLE AND MOBILE EQUIPMENT REFINISHING OPERATIONS.----	1093
3745-21-19	CONTROL OF VOLATILE ORGANIC COMPOUND EMISSIONS FROM AEROSPACE MANUFACTURING AND REWORK FACILITIES.-----	1099
3745-21-20	CONTROL OF VOLATILE ORGANIC EMISSIONS FROM SHIPBUILDING AND SHIP REPAIR OPERATIONS (MARINE COATINGS).-----	1120
3745-21-21	STORAGE OF VOLATILE ORGANIC LIQUIDS IN FIXED ROOF TANKS AND EXTERNAL FLOATING ROOF TANKS.-----	1139
3745-21-22	CONTROL OF VOLATILE ORGANIC COMPOUND EMISSIONS FROM OFFSET LITHOGRAPHIC PRINTING AND LETTERPRESS PRINTING FACILITIES.-----	1156
3745-21-23	CONTROL OF VOLATILE ORGANIC COMPOUND EMISSIONS FROM INDUSTRIAL SOLVENT CLEANING OPERATIONS.-----	1174
3745-21-24	FLAT WOOD PANELING COATINGS.-----	1189

3745-21-25	CONTROL OF VOC EMISSIONS FROM REINFORCED PLASTIC COMPOSITES PRODUCTION OPERATIONS. -----	1192
<b>CHAPTER 3745-22: OXYGENATED FUEL REQUIREMENTS-----</b>		<b>1232</b>
<b>CHAPTER 3745-23: NITROGEN OXIDE STANDARDS -----</b>		<b>1233</b>
3745-23-01	DEFINITIONS. -----	1234
3745-23-02	METHODS OF MEASUREMENT. -----	1236
<b>CHAPTER 3745-24: NOX AND VOC EMISSION STATEMENTS -----</b>		<b>1238</b>
3745-24-01	DEFINITIONS. -----	1239
3745-24-02	APPLICABILITY. -----	1241
3745-24-03	DEADLINES FOR SUBMISSION OF THE EMISSION STATEMENTS. -----	1243
3745-24-04	EMISSION STATEMENT REQUIREMENTS.-----	1245
<b>CHAPTER 3745-25: EMERGENCY EPISODE STANDARDS -----</b>		<b>1247</b>
3745-25-01	DEFINITIONS. -----	1248
3745-25-02	AMBIENT AIR QUALITY STANDARDS. -----	1251
3745-25-03	AIR POLLUTION EMERGENCIES AND EPISODE CRITERIA. -----	1255
3745-25-04	AIR POLLUTION EMERGENCY EMISSION CONTROL ACTION PROGRAMS. -----	1259
3745-25-04	Appendix-----	1262
3745-25-05	AIR POLLUTION EMERGENCY ORDERS. -----	1266
<b>CHAPTER 3745-26: I/M PROGRAM RULES AND REGULATIONS -----</b>		<b>1271</b>
3745-26-01	DEFINITIONS. -----	1272
3745-26-10	REQUIREMENTS FOR CONTRACTORS IN THE BASIC, ENHANCED OR OPT-IN ENHANCED AUTOMOBILE INSPECTION AND MAINTENANCE PROGRAM. -----	1279
3745-26-12	REQUIREMENTS FOR MOTOR VEHICLE OWNERS IN THE ENHANCED OR OPT-IN ENHANCED AUTOMOBILE INSPECTION AND MAINTENANCE PROGRAM. -----	1282
3745-26-13	REQUIREMENTS FOR CERTIFIED INSPECTORS IN THE ENHANCED OR OPT-IN ENHANCED AUTOMOBILE INSPECTION AND MAINTENANCE PROGRAM. -----	1293
3745-26-14	ENFORCEMENT OF PROGRAM RULES AND REGULATIONS FOR THE ENHANCED OR OPT-IN ENHANCED AUTOMOBILE INSPECTION AND MAINTENANCE PROGRAM. -----	1295
3745-26-15	WAIVER REPAIR FACILITY LICENSING PROCEDURES, REQUIREMENTS, AND OBLIGATIONS. -----	1297
3745-26-16	REQUIREMENTS FOR CERTIFIED WAIVER REPAIR TECHNICIANS AND APPROVED TECHNICIAN TRAINERS. -----	1301
<b>CHAPTER 3745-31: PERMITS TO INSTALL NEW SOURCES-----</b>		<b>1304</b>
3745-31-01	DEFINITIONS. -----	1305
3745-31-02	APPLICABILITY, REQUIREMENTS, AND OBLIGATIONS. -----	1352
3745-31-03	EXEMPTIONS. -----	1358
3745-31-04	APPLICATIONS. -----	1397
3745-31-05	CRITERIA FOR DECISION BY THE DIRECTOR. -----	1400
3745-31-06	COMPLETENESS DETERMINATIONS, PROCESSING REQUIREMENTS, PUBLIC PARTICIPATION, PUBLIC NOTICE, AND ISSUANCE. -----	1409
3745-31-07	TERMINATION, REVOCATION, EXPIRATION, RENEWAL, REVISION AND TRANSFER. -----	1415
3745-31-08	REGISTRATION STATUS PERMIT-TO-OPERATE.-----	1419
3745-31-09	VARIANCES ON OPERATION.-----	1422
3745-31-10	NSR PROJECTS AT EXISTING EMISSIONS UNITS AT A MAJOR STATIONARY SOURCE. -----	1429
3745-31-11	ATTAINMENT PROVISIONS - AMBIENT AIR INCREMENTS, CEILINGS AND CLASSIFICATIONS. -----	1432
3745-31-12	ATTAINMENT PROVISIONS - DATA SUBMISSION REQUIREMENTS.-----	1438
3745-31-13	ATTAINMENT PROVISIONS - REVIEW OF MAJOR STATIONARY SOURCES AND MAJOR MODIFICATIONS, STATIONARY SOURCE APPLICABILITY AND EXEMPTIONS.-----	1440
3745-31-14	ATTAINMENT PROVISIONS - PREAPPLICATION ANALYSIS. -----	1444
3745-31-15	ATTAINMENT PROVISIONS - CONTROL TECHNOLOGY REVIEW.-----	1447
3745-31-16	ATTAINMENT PROVISIONS - MAJOR STATIONARY SOURCE IMPACT ANALYSIS.-----	1449

3745-31-17	ATTAINMENT PROVISIONS - ADDITIONAL IMPACT ANALYSIS. -----	1451
3745-31-18	ATTAINMENT PROVISIONS - AIR QUALITY MODELS. -----	1453
3745-31-19	ATTAINMENT PROVISIONS - NOTICE TO THE UNITED STATES ENVIRONMENTAL PROTECTION AGENCY. -----	1455
3745-31-20	ATTAINMENT PROVISIONS - INNOVATIVE CONTROL TECHNOLOGY. -----	1459
3745-31-21	NONATTAINMENT PROVISIONS - REVIEW OF MAJOR STATIONARY SOURCES AND MAJOR MODIFICATIONS - STATIONARY SOURCE APPLICABILITY AND EXEMPTIONS. -----	1462
3745-31-22	NONATTAINMENT PROVISIONS - CONDITIONS FOR APPROVAL. -----	1466
3745-31-23	NONATTAINMENT PROVISIONS - STATIONARY SOURCES LOCATING IN DESIGNATED CLEAN OR UNCLASSIFIABLE AREAS WHICH WOULD CAUSE OR CONTRIBUTE TO A VIOLATION OF A NATIONAL AMBIENT AIR QUALITY STANDARD. -----	1470
3745-31-24	NONATTAINMENT PROVISIONS - BASELINE FOR DETERMINING CREDIT FOR EMISSION AND AIR QUALITY OFFSETS. -----	1474
3745-31-25	NONATTAINMENT PROVISIONS - LOCATION OF OFFSETTING EMISSIONS. -----	1479
3745-31-26	NONATTAINMENT PROVISIONS - OFFSET RATIO REQUIREMENTS. -----	1481
3745-31-27	NONATTAINMENT PROVISIONS - ADMINISTRATIVE PROCEDURES FOR EMISSION OFFSETS. -----	1483
3745-31-28	REVIEW OF MAJOR STATIONARY SOURCES OF HAZARDOUS AIR POLLUTANTS REQUIRING MACT DETERMINATIONS. -----	1486
3745-31-29	GENERAL PERMIT-TO-INSTALL AND GENERAL PTIO. -----	1491
3745-31-30	RESERVED. -----	1497
3745-31-31	RESERVED. -----	1499
3745-31-32	PLANTWIDE APPLICABILITY LIMIT (PAL). -----	1501
3745-31-33	SITE PREPARATION ACTIVITIES PRIOR TO OBTAINING A FINAL PERMIT-TO-INSTALL OR PTIO. -----	1516
<b>CHAPTER 3745-35: RESERVED-----</b>		<b>1521</b>
<b>CHAPTER 3745-71: LEAD EMISSIONS -----</b>		<b>1522</b>
3745-71-01	DEFINITIONS. -----	1523
3745-71-02	AMBIENT AIR QUALITY STANDARDS - LEAD. -----	1526
3745-71-03	METHODS OF AMBIENT AIR MEASUREMENT. -----	1527
3745-71-04	ATTAINMENT DATE. -----	1529
3745-71-05	EMISSIONS TEST METHODS AND PROCEDURES AND REPORTING REQUIREMENTS FOR NEW AND EXISTING SOURCES. -----	1531
3745-71-06	SOURCE SPECIFIC EMISSION LIMITS. -----	1534
3745-71-06	Appendix A -----	1537
3745-71-06	Appendix B -----	1538
<b>CHAPTER 3745-72: LOW REID VAPOR PRESSURE FUEL REQUIREMENTS-----</b>		<b>1540</b>
3745-72-01	APPLICABILITY. -----	1541

3745-14-01      **Definitions and general provisions.**

[Comment: For dates of non-regulatory government publications, publications of recognized organizations and associations, federal rules, and federal statutory provisions referenced in this rule, see the “Incorporation by Reference” section at the end of this rule.]

(A) This chapter establishes the provisions and requirements to implement a NOx budget trading, portland cement kilns, and a stationary (large) internal combustion engines program in the state of Ohio as a means of control and reduction of NOx emissions. The director authorizes the administrator to assist the director in implementing the state NOx budget trading program as a participant in the federal NOx budget trading program by carrying out the functions set forth for the administrator in this chapter.

(B) Definitions.

(1) Except as otherwise provided in this rule, the definitions in rule 3745-15-01 of the Administrative Code shall apply to this chapter.

(2) As used in this rule and in rules 3745-14-02 to 3745-14-10 of the Administrative Code (pertaining to NOx budget trading program and other sources identified in paragraph (A) of this rule):

(a) "Account certificate of representation" means the completed and signed submission required by rule 3745-14-02 of the Administrative Code for certifying the designation of a NOx authorized account representative, for a NOx budget source or a group of identified NOx budget sources, who is authorized to represent the owners and operators of such source or sources and of the NOx budget units at such source or sources with regard to matters under the NOx budget trading program.

(b) “Account number” means the identification number given by the administrator to each NOx allowance tracking system account.

(c) “Acid Rain emissions limitation” means, as defined in 40 CFR 72.2, a limitation on emissions of sulfur dioxide or NOx under the acid rain program under Title IV of the Clean Air Act.

(d) “Administrator” means the administrator of the United States environmental protection agency or the administrator's duly authorized representative.

(e) “Allocate” or “allocation” means the determination by the director of the number of NOx allowances to be initially credited to a NOx budget unit or an allocation set-aside.

(f) “ASTM” means the “American Society for Testing and Materials,” 100 Barr Harbor Drive, West Conshohocken, Pennsylvania.

- (g) “Automated data acquisition and handling system” or “DAHS” means that component of the CEMS, or other emissions monitoring system approved for use under rule 3745-14-08 of the Administrative Code, designed to interpret and convert individual output signals from pollutant concentration monitors, flow monitors, diluent gas monitors, and other component parts of the monitoring system to produce a continuous record of the measured parameters in the measurement units required by rule 3745-14-08 of the Administrative Code.
- (h) “Boiler” means an enclosed fossil or other fuel-fired combustion device used to produce heat and to transfer heat to recirculating water, steam, or other medium, excluding CO boilers associated with combusting CO from fluidized catalytic crackers at petroleum refineries.
- (i) “Btu” means British thermal unit.
- (j) “CAA” means the Clean Air Act as contained in 42 USC 7401 to 7671q.
- (k) “CO” means carbon monoxide.
- (l) “Combined cycle system” means a system comprised of one or more combustion turbines, heat recovery steam generators, and steam turbines configured to improve overall efficiency of electricity generation or steam production.
- (m) “Combustion turbine” means an enclosed fossil or other fuel-fired device that is comprised of a compressor, a combustor, and a turbine, and in which the flue gas resulting from the combustion of fuel in the combustor passes through the turbine, rotating the turbine.
- (n) “Commence commercial operation” means, with regard to a unit that serves a generator, to have begun to produce steam, gas, or other heated medium used to generate electricity for sale or use, including test generation. Except as provided in paragraph (C)(2) or (D) of this rule or rule 3745-14-09 of the Administrative Code, for a unit that is a NO<sub>x</sub> budget unit under paragraph (C)(1) of this rule on the date the unit commences commercial operation, such date shall remain the unit's date of commencement of commercial operation even if the unit is subsequently modified, reconstructed, or repowered. Except as provided in paragraph (C)(2) or (D) of this rule or rule 3745-14-09 of the Administrative Code, for a unit that is not a NO<sub>x</sub> budget unit under paragraph (C)(1) of this rule on the date the unit commences commercial operation, the date the unit becomes a NO<sub>x</sub> budget unit under paragraph (C)(1) of this rule shall be the unit's date of commencement of commercial operation.
- (o) “Commence operation” means to have begun any mechanical, chemical, or electronic process, including, with regard to a unit, start-up of a unit's

combustion chamber. Except as provided in paragraph (C)(2) or (D) of this rule or rule 3745-14-09 of the Administrative Code, for a unit that is a NOx budget unit under paragraph (C)(1) of this rule on the date of commencement of operation, such date shall remain the unit's date of commencement of operation even if the unit is subsequently modified, reconstructed, or repowered. Except as provided in paragraph (C)(2) or (D) of this rule or rule 3745-14-09 of the Administrative Code, for a unit that is not a NOx budget unit under paragraph (C)(1) of this rule on the date of commencement of operation, the date the unit becomes a NOx budget unit under paragraph (C)(1) of this rule shall be the unit's date of commencement of operation.

- (p) “Common stack” means a single flue through which emissions from two or more units are exhausted.
- (q) “Compliance account” means a NOx allowance tracking system account, established by the administrator for a NOx budget unit under rule 3745-14-06 of the Administrative Code in which the NOx allowance allocations for the unit are initially recorded and in which are held NOx allowances available for use by the unit for a control period for the purpose of meeting the unit's NOx budget emission limitation.
- (r) “Continuous emission monitoring system” or “CEMS” means the equipment required under rule 3745-14-08 of the Administrative Code to sample, analyze, measure, and provide, by readings taken at least once every fifteen minutes (using an automated DAHS, a permanent record of NOx emissions, stack gas volumetric flow rate or stack gas moisture content (as applicable), in a manner consistent with rule 3745-14-08 of the Administrative Code. The following are the principal types of continuous emission monitoring systems required under rule 3745-14-08 of the Administrative Code and 40 CFR Part 75:
  - (i) A flow monitoring system, consisting of a stack flow rate monitor and an automated DAHS. A flow monitoring system provides a permanent, continuous record of stack gas volumetric flow rate, in units of standard cubic feet per hour (scfh).
  - (ii) A NOx concentration monitoring system, consisting of a NOx pollutant concentration monitor and an automated DAHS. A NOx concentration monitoring system provides a permanent, continuous record of NOx emissions in units of parts per million (ppm).
  - (iii) A NOx emission rate (or NOx-diluent) monitoring system, consisting of a NOx pollutant concentration monitor, a diluent gas (carbon dioxide or oxygen) monitor, and an automated DAHS. A NOx concentration monitoring system provides a permanent, continuous record of: NOx concentration in units of parts per million, diluent gas concentration in

units of percent carbon dioxide or oxygen, and NO<sub>x</sub> emission rate in units of pounds per mmBtu.

- (iv) A moisture monitoring system, as defined in 40 CFR 75.11(b)(2). A moisture monitoring system provides a permanent, continuous record of the stack gas moisture content, in units of per cent water.
- (s) “Control period” means the period beginning May first of a year and ending on September thirtieth of the same year, inclusive.
- (t) “DAHS” means data acquisition and handling system.
- (u) “Director” means the director of the Ohio environmental protection agency.
- (v) “Electricity for sale under firm contract to the grid” means electricity for sale where the capacity involved is intended to be available at all times during the period covered by a guaranteed commitment to deliver, even under adverse conditions.
- (w) “Emissions” means air pollutants exhausted from a unit or source into the atmosphere, as measured, recorded, and reported to the Administrator by the NO<sub>x</sub> authorized account representative and as determined by the Administrator in accordance with rule 3745-14-08 of the Administrative Code.
- (x) “Energy efficiency/renewable energy project” means any project that, during the control period, reduces end-use demand for electricity, including demand-side management practices, or displace electrical energy utilization through the use of wind power, solar power, biomass or landfill methane generation.
- (y) “Energy information administration” means the energy information administration of the United States department of energy.
- (z) “Excess emissions” means any tonnage of NO<sub>x</sub> emitted by a NO<sub>x</sub> budget unit during a control period that exceeds the NO<sub>x</sub> budget emissions limitation for the unit.
- (aa) “Fossil fuel” means natural gas, petroleum, coal, or any form of solid, liquid, or gaseous fuel derived from such material.
- (bb) “Fossil fuel-fired” means, with regard to a unit:
  - (i) For units that commenced operation before January 1, 1996, the combustion of fossil fuel, alone or in combination with any other fuel, where fossil fuel actually combusted comprises more than fifty per cent of the annual heat input, on a Btu basis, during 1995, or, if a unit had

no heat input in 1995, during the last year of operation of the unit prior to 1995;

- (ii) For units that commenced operation on or after January 1, 1996 and before January 1, 1997, the combustion of fossil fuel, alone or in combination with any other fuel, where fossil fuel actually combusted comprises more than fifty per cent of the annual heat input, on a Btu basis, during 1996; or
- (iii) For units that commence operation on or after January 1, 1997:
  - (a) The combustion of fossil fuel, alone or in combination with any other fuel, where fossil fuel actually combusted comprises more than fifty per cent of the annual heat input, on a Btu basis, during any year; or
  - (b) The combustion of fossil fuel, alone or in combination with any other fuel, where fossil fuel is projected to comprise more than fifty per cent of the annual heat input, on a Btu basis, during any year, provided that the unit shall be “fossil fuel-fired” as of the date, during such year, on which the unit begins combusting fossil fuel.
- (cc) “General account” means a NOx allowance tracking system account, established under rule 3745-14-06 of the Administrative Code, that is not a compliance account or an overdraft account.
- (dd) “Generator” means a device that produces electricity.
- (ee) “Heat input” means the product (in mmBtu per time) of the gross calorific value of the fuel (in mmBtu per pound) and the fuel feed rate into a combustion device (in pounds of fuel per time), as measured, recorded, and reported to the director by the NOx authorized account representative and as determined by the director in accordance with rule 3745-14-08 of the Administrative Code, and does not include the heat derived from preheated combustion air, recirculated flue gases, or exhaust from other sources.
- (ff) “Heat input rate” means the amount of heat input (in mmBtu) divided by unit operating time (in hours) or, with regard to a specific fuel, the amount of heat input attributed to the fuel (in mmBtu) divided by the unit operating time (in hours) during which the unit combusts the fuel.
- (gg) “Innovative technology project” means any project utilizing technology that has not been adequately demonstrated in practice, but that would have a substantial likelihood of reducing NOx emissions compared to current practices. An innovative technology project could include technology to decrease electrical energy or fuel use either in stationary or mobile sources.

- (hh) “Life-of-the-unit, firm power contractual arrangement” means a unit participation power sales agreement under which a utility or industrial customer reserves, or is entitled to receive, a specified amount or percentage of nameplate capacity and associated energy from any specified unit and pays its proportional amount of such unit's total costs, pursuant to a contract:
- (i) For the life of the unit; or
  - (ii) For a cumulative term of no less than thirty years, including contracts that permit an election for early termination; or
  - (iii) For a period equal to or greater than twenty-five years or seventy per cent of the economic useful life of the unit determined as of the time the unit is built, with option rights to purchase or release some portion of the nameplate capacity and associated energy generated by the unit at the end of the period.
- (ii) “Maximum design heat input” means the ability of a unit to combust a stated maximum amount of fuel per hour on a steady state basis, as determined by the physical design and physical characteristics of the unit.
- (jj) “Maximum potential hourly heat input” means an hourly heat input used for reporting purposes when a unit lacks certified monitors to report heat input. If the unit intends to use Appendix D of 40 CFR Part 75 to report heat input, this value must be calculated, in accordance with 40 CFR Part 75, using the maximum fuel flow rate and the maximum gross calorific value. If the unit intends to use a flow monitor and a diluent gas monitor, this value must be reported, in accordance with 40 CFR Part 75, using the maximum potential flow rate and either the maximum carbon dioxide concentration (in per cent carbon dioxide) or the minimum oxygen concentration (in per cent oxygen).
- (kk) “Maximum potential NO<sub>x</sub> emission rate” means the emission rate of NO<sub>x</sub> (in pounds per mmBtu) calculated in accordance with Section 3 of Appendix F of 40 CFR Part 75, using the maximum potential concentration of NO<sub>x</sub> as defined in Section 2 of Appendix A of 40 CFR Part 75, and either the maximum oxygen concentration (in per cent oxygen) or the minimum carbon dioxide concentration (in per cent carbon dioxide), under all operating conditions of the unit except for unit start up, shutdown, and upsets.
- (ll) “Maximum rated hourly heat input” means a unit-specific maximum hourly heat input (mmBtu) which is the higher of the manufacturer's maximum rated hourly heat input or the highest observed hourly heat input.
- (mm) “mmBtu” means million. British thermal unit.
- (nn) “MWe” means megawatt electrical.

- (oo) “Monitoring system” means any monitoring system that meets the requirements of rule 3745-14-08 of the Administrative Code, including a continuous emissions monitoring system, an excepted monitoring system, or an alternative monitoring system.
- (pp) “Most stringent state or federal NO<sub>x</sub> emissions limitation” means the lowest NO<sub>x</sub> emission limitation (in pounds per mmBtu) that is applicable to the unit under state or federal law, regardless of the averaging period to which the emissions limitation applies.
- (qq) “Nameplate capacity” means the maximum electrical generating output (in MWe) that a generator can sustain over a specified period of time when not restricted by seasonal or other deratings as measured in accordance with the United States department of energy standards.
- (rr) “Non-Title V permit” means a federally enforceable permit administered by the director pursuant to the Clean Air Act and regulatory authority under the Clean Air Act, other than Title V of the Clean Air Act and Chapter 3745-77 of the Administrative Code.
- (ss) “NO<sub>x</sub>” means all oxides of nitrogen which are determined to be ozone precursors, including, but not limited to, nitrogen oxide and nitrogen dioxide, but excluding nitrous oxide.
- (tt) “NO<sub>x</sub> allowance” means a limited authorization by the director or the Administrator under the NO<sub>x</sub> budget trading program to emit up to one ton of NO<sub>x</sub> during the control period of the specified year or of any year thereafter, except as provided under paragraph (E)(6) of rule 3745-14-06 of the Administrative Code. No provision of the NO<sub>x</sub> budget trading program, the NO<sub>x</sub> budget permit application, the NO<sub>x</sub> budget permit, or an exemption under paragraph (C)(2)(a) or (D) of this rule and no provision of law shall be construed to limit the authority of the United States to terminate or limit such authorization, which does not constitute a property right. For purposes of this chapter, except paragraph (B), (C) or (D) of rule 3745-14-05 of the Administrative Code or paragraph (I) of rule 3745-14-09 of the Administrative Code, “NO<sub>x</sub> allowance” also includes an authorization to emit up to one ton of NO<sub>x</sub> during the control period of the specified year or of any year thereafter by the state or the Administrator in accordance with a state NO<sub>x</sub> budget trading program established, and approved and administered by the Administrator, pursuant to 40 CFR 51.121 or in accordance with the NO<sub>x</sub> budget trading program established by the Administrator in accordance with 40 CFR 52.34.
- (uu) “NO<sub>x</sub> allowance deduction” or “deduct NO<sub>x</sub> allowances” means the permanent withdrawal of NO<sub>x</sub> allowances by the administrator from a NO<sub>x</sub> allowance tracking system compliance account or overdraft account to account for the number of tons of NO<sub>x</sub> emissions from a NO<sub>x</sub> budget unit

for a control period, determined in accordance with rules 3745-14-06 and 3745-14-08 of the Administrative Code, or for any other allowance surrender obligation under this chapter.

- (vv) “NOx allowances held” or “hold NOx allowances” means the NOx allowances recorded by the administrator, or submitted to the administrator for recordation, in accordance with rule 3745-14-06 of the Administrative Code, in a NOx allowance tracking system account.
- (ww) “NOx allowance tracking system” means the system by which the administrator records allocations, deductions, and transfers of NOx allowances under the NOx budget trading program.
- (xx) “NOx allowance tracking system account” means an account in the NOx allowance tracking system established by the administrator for purposes of recording the allocation, holding, transferring, or deducting of NOx allowances.
- (yy) “NOx allowance transfer deadline” means midnight of November thirtieth or, if November thirtieth is not a business day, midnight of the first business day thereafter and is the deadline by which NOx allowances may be submitted for recordation in a NOx budget unit's compliance account, or the overdraft account of the source where the unit is located, in order to meet the unit's NOx budget emissions limitation for the control period immediately preceding such deadline.
- (zz) “NOx authorized account representative” means, for a NOx budget source or NOx budget unit at the source, the natural person who is authorized by the owners and operators of the source and all NOx budget units at the source, in accordance with rule 3745-14-02 of the Administrative Code, to represent and legally bind each owner and operator in matters pertaining to the NOx budget trading program or, for a general account, the natural person who is authorized, in accordance with rule 3745-14-06 of the Administrative Code, to transfer or otherwise dispose of NOx allowances held in the general account.
- (aaa) “NOx budget emissions limitation” means, for a NOx budget unit, the tonnage equivalent of the NOx allowances available for compliance deduction for the unit under paragraphs (E)(1), (E)(2), (E)(5) and (E)(6) of rule 3745-14-06 of the Administrative Code in a control period adjusted by deductions of such NOx allowances to account for actual heat input under paragraph (C)(5) of rule 3745-14-05 of the Administrative Code for the control period, or to account for excess emissions for a prior control period under paragraph (E)(4) of rule 3745-14-06 of the Administrative Code, or to account for withdrawal from the NOx budget trading program or for a change in regulatory status, of a NOx budget opt-in unit under paragraph (G) or (H) of rule 3745-14-09 of the Administrative Code.

- (bbb) “NOx budget opt-in permit” means a NOx budget permit covering a NOx budget opt-in unit.
- (ccc) “NOx budget opt-in unit” means a unit that has been elected to become a NOx budget unit under the NOx budget trading program and whose NOx budget opt-in permit has been issued and is in effect under rule 3745-14-09 of the Administrative Code.
- (ddd) “NOx budget permit” means the legally binding and federally enforceable written document, or portion of such document, issued by the director, including any permit revisions, specifying the NOx budget trading program requirements applicable to a NOx budget source, to each NOx budget unit at the NOx budget source, and to the owners and operators and the NOx authorized account representative of the NOx budget source and each NOx budget unit.
- (eee) “NOx budget source” means a source that includes one or more NOx budget units.
- (fff) “NOx budget trading program” means a multi-state NOx air pollution control and emission reduction program approved and administered by the Administrator pursuant to 40 CFR 51.121 or established by the Administrator pursuant to 40 CFR 52.34, as a means of mitigating the interstate transport of ozone and NOx.
- (ggg) “NOx budget unit” means a unit that is subject to the NOx emissions limitation under paragraph (C) of this rule or paragraph (A) of rule 3745-14-09 of the Administrative Code.
- (hhh) “Operating” means, with regard to a unit under paragraph (C)(1)(d)(ii) of rule 3745-14-03 or paragraph (A) of rule 3745-14-09 of the Administrative Code, having documented heat input for more than eight hundred seventy-six hours in the six months immediately preceding the submission of an application for an initial NOx budget permit under paragraph (D)(1) of rule 3745-14-09 of the Administrative Code. The unit's documented heat input shall be determined in accordance with 40 CFR Part 75 if the unit was otherwise subject to the requirements of 40 CFR Part 75 during that six-month period or shall be based on the best available data reported to the director for the unit if the unit was not otherwise subject to the requirements of 40 CFR Part 75 during that six-month period.
- (iii) “Operator” means any person who operates, controls, or supervises a NOx budget unit, a NOx budget source, or unit for which an application for a NOx budget opt-in permit under paragraph (D) of rule 3745-14-09 of the Administrative Code is submitted and not denied or withdrawn and shall include, but not be limited to, any holding company, utility system, or plant manager of such a unit or source.

- (jjj) “Opt-in” means to be elected to become a NOx budget unit under the NOx budget trading program through a final, effective NOx budget opt-in permit under rule 3745-14-09 of the Administrative Code.
- (kkk) “Overdraft account” means the NOx allowance tracking system account, established by the administrator under rule 3745-14-06 of the Administrative Code, for each NOx budget source where there are two or more NOx budget units.
- (lll) “Owner” means any of the following persons:
- (i) Any holder of any portion of the legal or equitable title in a NOx budget unit or in a unit for which an application for a NOx budget opt-in permit under paragraph (D) of rule 3745-14-09 of the Administrative Code submitted and not denied or withdrawn; or
  - (ii) Any holder of a leasehold interest in a NOx budget unit or in a unit for which an application for a NOx budget opt-in permit under paragraph (D) of rule 3745-14-09 of the Administrative Code is submitted and not denied or withdrawn; or
  - (iii) Any purchaser of power from a NOx budget unit or from a unit for which an application for a NOx budget opt-in permit under paragraph (D) of rule 3745-14-09 of the Administrative Code is submitted and not denied or withdrawn under a life-of-the-unit, firm power contractual arrangement (however, unless expressly provided for in a leasehold agreement, owner shall not include a passive lessor, or a person who has an equitable interest through such lessor, whose rental payments are not based, either directly or indirectly, upon the revenues or income from the NOx budget unit or the unit for which an application for a NOx budget opt-in permit under paragraph (D) of rule 3745-14-09 of the Administrative Code is submitted and not denied or withdrawn); or
  - (iv) With respect to any general account, any person who has an ownership interest with respect to the NOx allowances held in the general account and who is subject to the binding agreement for the NOx authorized account representative to represent that person's ownership interest with respect to the NOx allowances.
- (mmm) “Per cent monitor data availability” means, for purposes of paragraph (D)(1) of rule 3745-14-05 and paragraph (E)(2) of rule 3745-14-09 of the Administrative Code, total unit operating hours for which quality-assured data were recorded in accordance with rule 3745-14-08 of the Administrative Code in a control period divided by the total number of unit operating hours in the control period, and multiplied by one hundred per cent.

- (nnn) “Potential electrical output capacity” means thirty three per cent of a unit's maximum design heat input.
- (ooo) “Receive” or “receipt of” means, when referring to the director or the administrator, to come into possession of a document, information, or correspondence (whether sent in writing or by authorized electronic transmission), as indicated in an official correspondence log, or by a notation made on the document, information, or correspondence, by the director or the Administrator in the regular course of business.
- (ppp) “Recordation,” “record,” or “recorded” means, with regard to NOx allowances, the movement of NOx allowances by the administrator from one NOx allowance tracking system account to another, for purposes of allocation, transfer, or deduction.
- (qqq) “Reference method” means any direct test method of sampling and analyzing for an air pollutant as specified in Appendix A of 40 CFR Part 60.
- (rrr) “Serial number” means, when referring to NOx allowances, the unique identification number assigned to each NOx allowance by the administrator, under paragraph (D)(3) of rule 3745-14-06 of the Administrative Code.
- (sss) “Source” means any governmental, institutional, commercial, or industrial structure, installation, plant, building, or facility that emits or has the potential to emit any regulated air pollutant under the Clean Air Act. For purposes of Section 502(c) of the Clean Air Act, a source, including a source with multiple units, shall be considered a single facility.
- (ttt) “State” means one of the forty-eight contiguous states or a portion thereof or the District of Columbia that is subject to a NOx budget trading program under Section 110(c) or Section 126 of the Clean Air Act.
- (uuu) “State trading program budget” means the total number of NOx tons apportioned to all NOx budget units in the state, in accordance with the NOx budget trading program, for use in a given control period.
- (vvv) “Submit” or “serve” means to send or transmit a document, information, or correspondence to the person specified in accordance with the applicable regulation:
- (i) In person;
  - (ii) By United States postal service; or
  - (iii) By other means of dispatch or transmission and delivery.

Compliance with any submission, service, or mailing deadline shall be determined by the date of dispatch, transmission, or mailing and not the date of receipt.

- (www) "Title V operating permit" means a permit issued under Chapter 3745-77 of the Administrative Code.
- (xxx) "Title V operating permit regulations" means Chapters 3745-77 and 3745-78 of the Administrative Code.
- (yyy) "Ton" or "tonnage" means any "short ton" (i.e., two thousand pounds). For the purpose of determining compliance with the NO<sub>x</sub> budget emissions limitation, total tons for a control period shall be calculated as the sum of all recorded hourly emissions (or the tonnage equivalent of the recorded hourly emissions rates) in accordance with rule 3745-14-08 of the Administrative Code, with any remaining fraction of a ton equal to or greater than 0.50 ton deemed to equal one ton and any fraction of a ton less than 0.50 ton deemed to equal zero tons.
- (zzz) "Unit" means a fossil fuel-fired stationary boiler, combustion turbine, or combined cycle system.
- (aaaa) "Unit operating day" means a calendar day in which a unit combusts any fuel.
- (bbbb) "Unit operating hour" or "hour of unit operation" means any hour (or fraction of an hour) during which a unit combusts any fuel.
- (ccc) "Utilization" means the heat input (expressed in mmBtu/time) for a unit. The unit's total heat input for the control period in each year shall be determined in accordance with 40 CFR Part 75 if the NO<sub>x</sub> budget unit was otherwise subject to the requirements of 40 CFR Part 75 for the year, or shall be based on the best available data reported to the administrator for the unit if the unit was not otherwise subject to the requirements of 40 CFR Part 75 for the year.
- (3) As used in rule 3745-14-11 of the Administrative Code (pertaining to NO<sub>x</sub> budget program requirements for portland cement manufacturing):
- (a) "Clinker" means the product of a portland cement kiln from which finished cement is manufactured by milling and grinding.
- (b) "Long dry kiln" means a kiln fourteen feet or larger in diameter, four hundred feet or greater in length, which employs no preheating of the feed. The inlet feed to the kiln is dry.

- (c) “Long wet kiln” means a kiln fourteen feet or larger in diameter, four hundred feet or greater in length, which employs no preheating of the feed. The inlet feed to the kiln is a slurry.
  - (d) “Low-NOx burners” means combustion equipment designed to reduce flame turbulence, delay fuel/air mixing, and establish fuel-rich zones for initial combustion.
  - (e) “Malfunction” means any sudden, infrequent, and not reasonably preventable failure of air pollution control equipment, process equipment, or a process to operate in a normal or usual manner. Failures that are caused in part by poor maintenance or careless operation are not malfunctions.
  - (f) “Mid-kiln system firing” means the secondary firing in kilns by injecting solid fuel at an intermediate point in the kiln system using a specially designed feed injection mechanism for the purpose of decreasing NOx emissions through:
    - (i) Burning part of the fuel at a lower temperature; and
    - (ii) Reducing conditions at the solid fuel injection point that may destroy some of the NOx formed upstream in the kiln burning zone.
  - (g) “Portland cement” means a hydraulic cement produced by pulverizing clinker consisting essentially of hydraulic calcium silicates, usually containing one or more of the forms of calcium sulfate as an interground addition.
  - (h) “Portland cement kiln” means a system, including any solid, gaseous or liquid fuel combustion equipment, used to heat, calcine and fuse raw materials, including limestone and clay, to produce portland cement clinker.
  - (i) “Precalciner kiln” means a kiln system where the feed to the kiln is preheated in cyclone chambers which utilize a second burner to calcine material in a separate vessel attached to the preheater prior to the final fusion in a kiln which forms clinker.
  - (j) “Preheater kiln” means a kiln system where the feed to the kiln is preheated in cyclone chambers prior to the final fusion in a kiln which forms clinker.
  - (k) “Shutdown” means the cessation of operation of a portland cement kiln for any purpose.
  - (l) “Startup” means the setting in operation of a portland cement kiln for any purpose.
- (4) As used in rule 3745-14-12 of the Administrative Code (pertaining to NOx budget program requirements for stationary internal combustion engines):

- (a) “Affected engine” means any stationary internal combustion engine that is a large NO<sub>x</sub> SIP call engine, or other stationary internal combustion engine that is subject to NO<sub>x</sub> control under a compliance plan established pursuant to paragraph (B) of rule 3745-14-12 of the Administrative Code.
- (b) “Engine seasonal NO<sub>x</sub> 2007 tonnage reduction” means the year 2007 control period NO<sub>x</sub> emissions reductions value for a large NO<sub>x</sub> SIP call engine which is calculated as the difference between the 2007 base NO<sub>x</sub> emissions and the 2007 budget NO<sub>x</sub> emissions contained in the NO<sub>x</sub> SIP call engine inventory. The total engine seasonal NO<sub>x</sub> 2007 tonnage reduction for all large NO<sub>x</sub> SIP call engines in Ohio is 2730 tons.
- (c) “Facility seasonal NO<sub>x</sub> 2007 tonnage reduction” means the total of the engine seasonal NO<sub>x</sub> 2007 tonnage reductions attributable to all of an owner/operator’s large NO<sub>x</sub> SIP call engines.
- (d) “Large NO<sub>x</sub> SIP call engine” means a stationary internal combustion engine identified and designated as “large” in the NO<sub>x</sub> SIP call engine inventory (as defined in paragraph (B)(4)(e) of this rule) as emitting more than one ton of NO<sub>x</sub> emissions per average control period day in 1995.
- (e) “NO<sub>x</sub> SIP call engine inventory” means the inventory of internal combustion engines compiled by the United States environmental protection agency as part of the NO<sub>x</sub> SIP call rule, including the Federal Register notice entitled “Technical Amendment to the Finding of Significant Contribution and Rulemaking for Certain States for Purposes of Reducing Regional Transport of Ozone,” and the adjustment of the 2007 budget NO<sub>x</sub> control efficiency to eighty-two per cent for large gas-fired engines discussed in the Federal Register notice entitled “Interstate Ozone Transport: Response to Court Decisions on the NO<sub>x</sub> SIP Call, NO<sub>x</sub> SIP Call Technical Amendments, and Section 126 Rules.”
- (f) “Past NO<sub>x</sub> emission rate” means the emission rate of an affected engine in grams per brake horsepower-hour as determined by performance testing consistent with the requirements of 40 CFR Part 60, Appendix A. Where such performance test data are not available, the appropriate past NO<sub>x</sub> emission rate shall be evaluated and approved or denied by the director on a case-by-case basis using, for example, appropriate emission factors or data from the NO<sub>x</sub> SIP call engine inventory. For large NO<sub>x</sub> SIP call engines, the past NO<sub>x</sub> emission rate is the uncontrolled emission rate.
- (g) “Projected operating hours” means the projected actual number of hours of operation per control period for an affected engine.
- (h) “Projected NO<sub>x</sub> emission rate” means the projected emission rate in grams per brake horsepower-hour after installation of controls on an affected engine.

- (i) “Stationary internal combustion engine” means any internal combustion engine of the reciprocating type that is either attached to a foundation at a facility or is designed to be capable of being carried or moved from one location to another and remains at a single site at a building, structure, facility, or installation for more than twelve consecutive months. Any engine (or engines) that replaces an engine at a site that is intended to perform the same or similar function as the engine replaced is included in calculating the consecutive time period.

(C) Applicability.

- (1) The following units shall be NOx budget units, and any source that includes one or more such units shall be a NOx budget source, subject to the requirements of this chapter:

- (a) For EGUs:

- (i) For units, other than cogeneration units, that commenced operation before January 1, 1997, a unit serving during 1995 or 1996 a generator that had a nameplate capacity greater than twenty-five MWe and produced electricity for sale under a firm contract to the electric grid;
- (ii) For units, other than cogeneration units, that commenced operation on or after January 1, 1997 and before January 1, 1999, a unit serving during 1997 or 1998 a generator that had a nameplate capacity greater than twenty-five MWe and produced electricity for sale under a firm contract to the electric grid; and
- (iii) For units, other than cogeneration units, that commence operation on or after January 1, 1999, a unit serving at any time a generator that has a nameplate capacity greater than twenty-five MWe and produces electricity for sale.

- (iv) For cogeneration units:

- (a) For units commencing operation before January 1, 1997, a unit serving during 1995 or 1996 a generator with a nameplate capacity greater than twenty-five MWe and failing to qualify as an unaffected unit under 40 CFR 72.6(b)(4) for 1995 or 1996 under the “Acid Rain Program;”
- (b) For units commencing operation in 1997 or 1998, a unit serving during 1997 or 1998 a generator with a nameplate capacity greater than twenty-five MWe and failing to qualify as an unaffected unit under 40 CFR 72.6(b)(4) for 1997 or 1998 under the “Acid Rain Program;”

(c) For units commencing operation on or after January 1, 1999, a unit serving at any time a generator with a nameplate capacity greater than twenty-five MWe and failing to qualify as an unaffected unit under 40 CFR 72.6(b)(4) under the “Acid Rain Program” for any year.

(b) For non-EGUs:

(i) For units, other than cogeneration units, that commenced operation before January 1, 1997, a unit that has a maximum design heat input greater than two hundred fifty mmBtu per hour and that did not serve during 1995 or 1996 a generator producing electricity for sale under a firm contract to the electric grid;

(ii) For units, other than cogeneration units, that commenced operation on or after January 1, 1997 and before January 1, 1999, a unit that has a maximum design heat input greater than two hundred fifty mmBtu per hour and that did not serve during 1997 or 1998 a generator producing electricity for sale under a firm contract to the electric grid;

(iii) For units, other than cogeneration units, that commence operation on or after January 1, 1999, a unit with a maximum design heat input greater than two hundred fifty mmBtu per hour that:

(a) At no time serves a generator producing electricity for sale; or

(b) At any time serves a generator producing electricity for sale, if any such generator has a nameplate capacity of twenty-five MWe or less and has the potential to use no more than fifty per cent of the potential electrical output capacity of the unit.

(iv) For cogeneration units:

(a) For units commencing operation before January 1, 1997, a unit with a maximum design heat input greater than two hundred fifty mmBtu per hour and qualifying as an unaffected unit under 40 CFR 72.6(b)(4) under the “Acid Rain Program” for 1995 and 1996;

(b) For units commencing operation in 1997 or 1998, a unit with a maximum design heat input greater than two hundred fifty mmBtu per hour and qualifying as an unaffected unit under 40 CFR 72.6(b)(4) under the “Acid Rain Program” for 1997 and 1998;

(c) For units commencing on or after January 1, 1999, a unit with a maximum design heat input greater than two hundred fifty mmBtu per hour and qualifying as an unaffected unit under 40 CFR 72.6(b)(4) under the “Acid Rain Program” for each year.

(2) The following units shall be exempt from the requirements of the NOx budget trading program:

(a) Any unit to which Chapter 3745-109 of the Administrative Code applies.

[Comment: The above exemption applies to units under paragraph (C)(1) of this rule or units under paragraph (A) of rule 3745-14-09 of the Administrative Code, for any ozone season to which 40 CFR 51.121(r) applies. Ohio EPA is inserting this language because the United States environmental protection agency will not administer the NOx SIP Call trading program after 2008 (see 40 CFR 51.121(r)). In order to continue to meet the Ohio's NOx SIP Call obligations, Ohio has chosen to expand the applicability of Ohio's CAIR program as it pertains to the CAIR ozone season rules (rules 3745-109-01 and 3745-109-15 to 3745-109-21 of the Administrative Code) to cover all units that would otherwise be covered by Ohio's NOx SIP Call trading program (see 40 CFR 51.123(bb)(1) and (3)).

The federal CAIR program was vacated by the D.C. circuit court of appeals on July 11, 2008. The court then remanded, without vacatur, the federal CAIR program on December 23, 2008 allowing the full operation of the federal CAIR program and Ohio's CAIR program beginning with the January 1, 2009 control period. The court's remand requires the United States environmental protection agency to provide for remedy of certain flaws identified by the court in the original vacatur. An effective federal CAIR trading program is necessary for the operation of Ohio's CAIR program. Should the United States environmental protection agency eliminate or suspend the CAIR program, units under paragraph (C)(1) of this rule or units under paragraph (A) of rule 3745-14-09 of the Administrative Code would need to meet the requirements of this chapter following the elimination or suspension of the federal CAIR program, provided that 40 CFR 51.121(r) no longer applies and the Administrator will carry out the functions set forth for the administrator in this chapter.]

(b) A unit under paragraph (C)(1) of this rule that has a federally enforceable permit that includes a NOx emission limitation restricting NOx emissions during a control period to twenty-five tons or less and restricts the unit to burning only natural gas or fuel oil during a control period in 2004 or later and that includes the special provisions in paragraph (C)(2)(e) of this rule shall be exempt from the requirements of the NOx budget trading program, except for the provisions of this paragraph, paragraphs (B), (C)(1) and (F) of this rule and rules 3745-14-05 to 3745-14-07 of the Administrative Code. The NOx emission limitation under this paragraph shall restrict NOx emissions during the control period by one of the following methods:

(i) A restriction on unit operating hours calculated by dividing the federally enforceable emission limitation, in tons, determined in accordance with paragraph (C)(2)(b) of this rule, by the unit's maximum potential hourly

NOx mass emissions, which shall equal the unit's maximum rated hourly heat input multiplied by the highest default NOx emission rate applicable to the unit under 40 CFR 75.19(c), Table LM-2; or

- (ii) A restriction on unit fuel usage calculated by dividing the federally enforceable emission limitation, in tons, determined in accordance with paragraph (C)(2)(b) of this rule, by the product of the heat value of the fuel to be used multiplied by the default NOx emission rate for the fuel to be used as specified in 40 CFR 75.19(c), Table LM-2.
- (c) The exemption under paragraph (C)(2)(b) of this rule shall become effective as follows:
- (i) The exemption shall become effective on the date on which the NOx emission limitation and the special provisions in the permit under paragraph (C)(2)(b) of this rule become final; or
  - (ii) If the NOx emission limitation and the special provisions in the permit under paragraph (C)(2)(b) of this rule become final during a control period and after the first date on which the unit operates during such control period, then the exemption shall become effective on May first of such control period, provided that such NOx emission limitation and the special provisions apply to the unit as of such first date of operation. If such NOx emission limitation and special provisions do not apply to the unit as of such first date of operation, then the exemption under paragraph (C)(2)(b) of this rule shall become effective on October first of the year during which such NOx emission limitation and the special provisions become final.
- (d) The director shall provide the Administrator written notice of the issuance of any permit under paragraph (C)(2)(b) of this rule and, upon request, a copy of the permit.
- (e) The following special provisions apply to units exempt under paragraph (C)(2)(b) of this rule.
- (i) A unit exempt under paragraph (C)(2)(b) of this rule shall comply with the restriction on unit operating hours and fuel use described in paragraph (C)(2)(b) of this rule during the control period in each year.
  - (ii) NOx allowances shall be allocated to the unit in accordance with paragraphs (B)(1) to (B)(3) and (C)(1) to (C)(3) of rule 3745-14-05 of the Administrative Code. For each control period for which the unit is allocated NOx allowances under this paragraph:
    - (a) The owners and operators of the unit must specify a general account, in which the administrator will record the NOx allowances; and

- (b) After the administrator records a NOx allowance allocation under paragraphs (B)(1) to (B)(3) and (C)(1) to (C)(3) of rule 3745-14-05 of the Administrative Code, the administrator will deduct, from the general account under paragraph (C)(2)(e)(ii)(a) of this rule, NOx allowances that are allocated for the same or a prior control period as the NOx allowances allocated to the unit under paragraphs (B)(1) to (B)(3) and (C)(1) to (C)(3) of rule 3745-14-05 of the Administrative Code and that equal the NOx emission limitation (in tons of NOx) on which the unit's exemption under paragraph (C)(2)(b) of this rule is based. The NOx authorized account representative shall ensure that such general account contains the NOx allowances necessary for completion of such deduction.
- (iii) A unit exempt under paragraph (C)(2)(b) of this rule shall report hours of unit operation or fuel usage during the control period in each year to the director by November first of that year.
- (iv) For a period of five years from the date the records are created, the owners and operators of a unit exempt under paragraph (C)(2)(b) of this rule shall retain, at the source that includes the unit, records demonstrating that the conditions of the federally enforceable permit under paragraph (C)(2)(b) of this rule were met, including the restrictions on unit operating hours and fuel usage. The five-year period for keeping records may be extended for cause, at any time prior to the end of the period, in writing by the director or the administrator. The owners and operators bear the burden of proof that the unit met the restriction on unit operating hours and fuel use.
- (v) The owners and operators and, to the extent applicable, the NOx authorized account representative of a unit exempt under paragraph (C)(2)(b) of this rule shall comply with the requirements of the NOx budget trading program concerning all periods for which the exemption is not in effect, even if such requirements arise, or must be complied with, after the exemption takes effect.
- (vi) On the earlier of the following dates, a unit exempt under paragraph (C)(2)(b) of this rule shall lose its exemption:
- (a) The date on which the restriction on unit operating hours and fuel use described in paragraph (C)(2)(b) of this rule is removed from the unit's federally enforceable permit or otherwise becomes no longer applicable to any control period starting in 2004; or
- (b) The first date on which the unit fails to comply, or with regard to which the owners and operators fail to meet their burden of proving that the unit is complying, with the restriction on unit

operating hours and fuel use described in paragraph (C)(2)(b) of this rule during any control period starting in 2004.

(vii) A unit that loses its exemption in accordance with paragraph (C)(2)(e)(vi) of this rule shall be subject to the requirements of this chapter. For the purpose of applying permitting requirements under rule 3745-14-03 of the Administrative Code, allocating allowances under rule 3745-14-05 of the Administrative Code, and applying monitoring requirements under rule 3745-14-08 of the Administrative Code, the unit shall be treated as commencing operation and, if the unit is covered by paragraph (C)(1)(b) of this rule, commencing commercial operation on the date the unit loses its exemption.

(viii) A unit that is exempt under paragraph (C)(2)(b) of this rule is not eligible to be a NO<sub>x</sub> budget opt-unit under rule 3745-14-09 of the Administrative Code.

(D) Retired unit exemption.

(1) This rule applies to any NO<sub>x</sub> budget unit, other than a NO<sub>x</sub> budget opt-in unit, that is permanently retired.

(2) Standard provisions.

(a) Any NO<sub>x</sub> budget unit, other than a NO<sub>x</sub> budget opt-in unit, that is permanently retired shall be exempt from the NO<sub>x</sub> budget trading program, except for the provisions of this rule and rules 3745-14-05 to 3745-14-07 of the Administrative Code.

(b) The exemption under paragraph (D)(2)(a) of this rule shall become effective the day on which the unit is permanently retired. Within thirty days of permanent retirement, the NO<sub>x</sub> authorized account representative of the unit shall submit a statement to the director. A copy of the statement shall be submitted to the administrator. The statement shall state (in a format prescribed by the director) that the unit is permanently retired and will comply with the requirements of paragraph (D)(3) of this rule.

(c) After receipt of the statement under paragraph (D)(2)(b) of this rule, the director shall amend any permit covering the source at which the unit is located to add the provisions and requirements of the exemption under paragraphs (D)(2)(a) and (D)(3) of this rule.

(3) Special provisions.

(a) A unit exempt under paragraph (D) of this rule shall not emit any NO<sub>x</sub>, starting on the date that the exemption takes effect.

- (b) The director shall allocate NOx allowances under rule 3745-14-05 of the Administrative Code to a unit exempt under paragraph (D) of this rule. For each control period for which the unit is allocated one or more NOx allowances, the owners and operators of the unit shall specify a general account, in which the administrator will record such NOx allowances.
- (c) For a period of five years from the date the records are created, the owners and operators of a unit exempt under paragraph (D) of this rule shall retain at the source that includes the unit, records demonstrating that the unit is permanently retired. The five-year period for keeping records may be extended for cause, at any time prior to the end of the period, in writing by the director or the administrator. The owners and operators bear the burden of proof that the unit is permanently retired.
- (d) The owners and operators and, to the extent applicable, the NOx authorized account representative of a unit exempt under this rule shall comply with the requirements of the NOx budget trading program concerning all periods for which the exemption is not in effect, even if such requirements arise, or must be complied with, after the exemption takes effect.
- (e) Returning retired units to service.
  - (i) A unit exempt under paragraph (D) of this rule and located at a source that is required, or but for this exemption would be required, to have a Title V operating permit shall not resume operation unless the NOx authorized account representative of the source submits a complete NOx budget permit application for the unit not less than twelve months before the later of May 1, 2004 or the date on which the unit resumes operation.
  - (ii) A unit exempt under paragraph (D) of this rule and located at a source that is required, or but for this exemption would be required, to have a non-Title V permit shall not resume operation unless the NOx authorized account representative of the source submits a complete NOx budget permit application for the unit not less than twelve months before the later of May 1, 2004 or the date on which the unit is to first resume operation.
- (f) On the earlier of the following dates, a unit exempt under paragraph (D) of this rule shall lose its exemption:
  - (i) The date on which the NOx authorized account representative submits a NOx budget permit application under paragraph (D)(3)(e) of this rule;
  - (ii) The date on which the NOx authorized account representative is required under paragraph (D)(3)(e) of this rule to submit a NOx budget permit application; or

(iii) The date on which the unit resumes operation, if the unit is not required to submit a NOx budget permit application.

(g) For the purpose of applying monitoring requirements under rule 3745-14-08 of the Administrative Code, a unit that loses its exemption under paragraph (D) of this rule shall be treated as a unit that commences operation or commercial operation on the first date on which the unit resumes operation.

(h) A unit that is exempt under paragraph (D) of this rule is not eligible to be a NOx budget opt-in unit under rule 3745-14-09 of the Administrative Code.

(E) Standard requirements.

(1) Permit requirements.

(a) The NOx authorized account representative of each NOx budget unit or NOx budget source required to have a federally enforceable permit for the unit or source shall:

(i) Submit to the director a complete NOx budget permit application in accordance with the deadlines specified in paragraphs (B)(2) and (B)(3) of rule 3745-14-03 of the Administrative Code;

(ii) Submit in a timely manner any supplemental information that the director determines is necessary in order to review a NOx budget permit application and issue or deny a NOx budget permit.

(b) The owners and operators of each NOx budget unit or source required to have a federally enforceable permit shall have a NOx budget permit issued by the director and operate the unit in compliance with such NOx budget permit.

(c) The owners and operators of a NOx budget source that is not otherwise required to have a federally enforceable permit are not required to submit a NOx budget permit application, and to have a NOx budget permit for such NOx budget source.

(2) Monitoring requirements.

(a) The owners and operators and, to the extent applicable, the NOx authorized account representative of each NOx budget source and each NOx budget unit at the source shall comply with the monitoring requirements of rule 3745-14-08 of the Administrative Code.

(b) The emissions measurements recorded and reported in accordance with rule 3745-14-08 of the Administrative Code shall be used to determine compliance by the unit with the NOx budget emissions limitation under paragraph (E)(3) of this rule.

(3) NOx allowances.

- (a) The owners and operators of each NOx budget source and each NOx budget unit at the source shall hold NOx allowances available for compliance deductions under paragraph (E) of rule 3745-14-06 of the Administrative Code, as of the NOx allowance transfer deadline, in the unit's compliance account and the source's overdraft account in an amount not less than the total NOx emissions for the control period from the unit, as determined in accordance with rule 3745-14-08 of the Administrative Code, plus any amount necessary to account for actual utilization under paragraph (C)(5) of rule 3745-14-05 of the Administrative Code for the control period.
- (b) Each ton of NOx emitted in excess of the NOx budget emissions limitation shall constitute a separate violation of this chapter, the Clean Air Act, and applicable Ohio law.
- (c) A NOx budget unit shall be subject to the requirements under paragraph (E)(3)(a) of this rule starting on the later of May 31, 2004 or the date on which the unit commences operation.
- (d) NOx allowances shall be held in, deducted from, or transferred among NOx allowance tracking system accounts in accordance with rules 3745-14-05, 3745-14-06, 3745-14-07 and 3745-14-09 of the Administrative Code.
- (e) A NOx allowance shall not be deducted, in order to comply with the requirements under paragraph (E)(3)(a) of this rule, for a control period in a year prior to the year for which the NOx allowance was allocated.
- (f) A NOx allowance allocated by the director under the NOx budget trading program is a limited authorization to emit one ton of NOx in accordance with the NOx budget trading program. No provision of the NOx budget trading program, the NOx budget permit application, the NOx budget permit, or an exemption under paragraph (C)(2) or (D) of this rule and no provision of law shall be construed to limit the authority of the United States or the state of Ohio to terminate or limit such authorization.
- (g) A NOx allowance allocated by the director under the NOx budget trading program does not constitute a property right.
- (h) Upon recordation by the administrator under rules 3745-14-06 and 3745-14-07 of the Administrative Code, every allocation, transfer, or deduction of a NOx allowance to or from a NOx budget unit's compliance account or the overdraft account of the source where the unit is located is deemed to amend automatically, and become a part of, any NOx budget permit of the NOx budget unit by operation of law without any further review.

- (4) The owners and operators of a NOx budget unit that has excess emissions in any control period shall:
- (a) Surrender the NOx allowances required for deduction under paragraph (E)(4)(a) of rule 3745-14-06 of the Administrative Code; and
  - (b) Pay any fine, penalty, or assessment or comply with any other remedy imposed under paragraph (E)(4)(c) of rule 3745-14-06 of the Administrative Code.
- (5) Record keeping and reporting requirements.
- (a) Unless otherwise provided, the owners and operators of a NOx budget source and each NOx budget unit at the source shall keep on site at the source, or at a central location in Ohio for unattended sources, each of the following documents for a period of five years from the date the document is created: (This period may be extended for cause, at any time prior to the end of five years, in writing by the director or the administrator. Records for unattended sources retained at a central location shall be available immediately at the central location upon the request of the director or administrator and within three days following receipt of a written request from the director or administrator.)
    - (i) The account certificate of representation for the NOx authorized account representative for the source and each NOx budget unit at the source and all documents that demonstrate the truth of the statements in the account certificate of representation, in accordance with paragraph (D) of rule 3745-14-02 of the Administrative Code, provided that the certificate and documents shall be retained on site at the source beyond such five-year period until such documents are superseded because of the submission of a new account certificate of representation changing the NOx authorized account representative;
    - (ii) All emissions monitoring information, in accordance with rule 3745-14-08 of the Administrative Code;
    - (iii) Copies of all reports, compliance certifications, and other submissions and all records made or required under the NOx budget trading program; and
    - (iv) Copies of all documents used to complete a NOx budget permit application and any other submission under the NOx budget trading program or to demonstrate compliance with the requirements of the NOx budget trading program.
  - (b) The NOx authorized account representative of a NOx budget source and each NOx budget unit at the source shall submit the reports and compliance certifications required under the NOx budget trading program, including

those under rules 3745-14-04, 3745-14-08 and 3745-14-09 of the Administrative Code.

(6) Liability.

- (a) Any person who knowingly violates any requirement or prohibition of the NOx budget trading program, a NOx budget permit, or an exemption under paragraph (C)(2) or (D) of this rule shall be subject to enforcement pursuant to applicable state and federal law.
  - (b) Any person who knowingly makes a false material statement in any record, submission, or report under the NOx budget trading program shall be subject to criminal enforcement pursuant to applicable state and federal law.
  - (c) No permit revision shall excuse any violation of the requirements of the NOx budget trading program that occurs prior to the date that the revision takes effect.
  - (d) Each NOx budget source and each NOx budget unit shall meet the requirements of the NOx budget trading program.
  - (e) Any provision of the NOx budget trading program that applies to a NOx budget source (including a provision applicable to the NOx authorized account representative of a NOx budget source) shall also apply to the owners and operators of such source and of the NOx budget units at the source.
  - (f) Any provision of the NOx budget trading program that applies to a NOx budget unit (including a provision applicable to the NOx authorized account representative of a NOx budget unit) shall also apply to the owners and operators of such unit. Except with regard to the requirements applicable to units with a common stack under rule 3745-14-08 of the Administrative Code, the owners and operators and the NOx authorized account representative of one NOx budget unit shall not be liable for any violation by any other NOx budget unit of which they are not owners or operators or the NOx authorized account representative and that is located at a source of which they are not owners or operators or the NOx authorized account representative.
- (7) No provision of the NOx budget trading program, a NOx budget permit application, a NOx budget permit, or an exemption under paragraph (C)(2) or (D) of this rule shall be construed as exempting or excluding the owners and operators and, to the extent applicable, the NOx authorized account representative of a NOx budget source or NOx budget unit from compliance with any other provision of the applicable, approved state implementation plan, a federally enforceable permit, or the Clean Air Act.

(F) Computation of time.

- (1) Unless otherwise stated, any time period scheduled, under the NOx budget trading program, to begin on the occurrence of an act or event shall begin on the day the act or event occurs.
  - (2) Unless otherwise stated, any time period scheduled, under the NOx budget trading program, to begin before the occurrence of an act or event shall be computed so that the period ends the day before the act or event occurs.
  - (3) Unless otherwise stated, if the final day of any time period under the NOx budget trading program, except for the control period defined in paragraph (B)(2)(r) of this rule, falls on a weekend or a state or federal holiday, the time period shall be extended to the next business day.
- (G) Incorporation by reference. This chapter includes references to certain matter or materials. The text of the incorporated materials is not included in the regulations contained in this chapter. The materials are hereby made a part of the regulations in this chapter. For materials subject to change, only the specific version specified in the regulation are incorporated. Material is incorporated as it exists on the effective date of this rule. Except for subsequent annual publication of existing (unmodified) Code of Federal Regulation compilations, any amendment or revision to a referenced document is not incorporated unless and until this rule has been amended to specify the new dates.
- (1) Availability. The materials incorporated by reference are available as follows:
    - (a) Clean Air Act as defined in this rule. Information and copies may be obtained by writing to: "Superintendent of Documents, Attn: New Orders, PO Box 371954, Pittsburgh, PA 15250-7954." The full text of the Act as amended in 1990 is also available in electronic format at [www.epa.gov/oar/caa/](http://www.epa.gov/oar/caa/). A copy of the Act is also available for inspection and copying at most public libraries and "The State Library of Ohio."
    - (b) Code of Federal Regulations. Information and copies may be obtained by writing to: "Superintendent of Documents, Attn: New Orders, PO Box 371954, Pittsburgh, PA 15250-7954." The full text of the CFR is also available in electronic format at [www.access.gpo.gov/nara/cfr/](http://www.access.gpo.gov/nara/cfr/). The CFR compilations are also available for inspection and copying at most Ohio public libraries and "The State Library of Ohio."
    - (c) Ohio EPA weekly review. Information and copies may be obtained by writing to: "Ohio EPA Legal Department, 122 S. Front Street, Columbus, Ohio, 43125." The full text of the Ohio EPA Weekly Review is also available in electronic format at [www.epa.state.oh.us/legal/pubnote.html/](http://www.epa.state.oh.us/legal/pubnote.html/). The Ohio EPA Weekly Review compilations are also available for inspection and copying at most Ohio public libraries and "The State Library of Ohio."

- (d) Federal Registrar. Information and copies may be obtained by writing to: “Superintendent of Documents, Attn: New Orders, PO Box 371954, Pittsburgh, PA 15250-7954.” Text of the Federal Register is also available in electronic format at [www.gpoaccess.gov/fr/index.html](http://www.gpoaccess.gov/fr/index.html). The Federal Register is also available for inspection and copying at most Ohio public libraries and “The State Library of Ohio.”
- (e) American Society for Testing Materials (ASTM). Information and copies may be obtained by writing to: “ASTM International, 100 Bar Harbor Drive, P.O. Box C700, West Conshohocken, Pennsylvania 19426-2959.” These documents are available for purchase at [www.astm.org](http://www.astm.org). ASTM documents are also generally available at local public libraries and “The State Library of Ohio.”

(2) Incorporated materials.

- (a) 40 CFR 51.121; “Findings and requirements for submission of State implementation plan revisions relating to emissions of oxides of nitrogen;” 63 FR 57491, Oct. 27, 1998, as amended at 63 FR 71225, Dec. 24, 1998; 64 FR 26305, May 14, 1999; 65 FR 11230, Mar. 2, 2000; 65 FR 56251, Sept. 18, 2000 ; 69 FR 21642, Apr. 21, 2004; 70 FR 25317, May 12, 2005; 70 FR 51597, Aug. 31, 2005, 73 FR 21538, Apr. 22, 2008.

Prior Effective Dates: 5/25/04, 5/7/05, 7/19/08

**(A) Duties of the NOx authorized account representative.**

- (1) Except as provided under paragraph (B) of this rule, each NOx budget source, including all NOx budget units at the source, shall have one and only one NOx authorized account representative, with regard to all matters under the NOx budget trading program concerning the source or any NOx budget unit at the source.
- (2) The NOx authorized account representative of the NOx budget source shall be selected by an agreement binding on the owners and operators of the source and all NOx budget units at the source.
- (3) Upon receipt by the administrator of a complete account certificate of representation under paragraph (D) of this rule, the NOx authorized account representative of the source shall represent and, by his or her representations, actions, inactions, or submissions, legally bind each owner and operator of the NOx budget source represented and each NOx budget unit at the source in all matters pertaining to the NOx budget trading program, notwithstanding any agreement between the NOx authorized account representative and such owners and operators. The owners and operators shall be bound by any decision or order issued to the NOx authorized account representative by the director, the administrator, or a court regarding the source or unit.
- (4) No NOx budget permit shall be issued, and no NOx allowance tracking system account shall be established for a NOx budget unit at a source, until the administrator has received a complete account certificate of representation under paragraph (D) of this rule for a NOx authorized account representative of the source and the NOx budget units at the source.
- (5) NOx budget trading program submissions
  - (a) Each submission under the NOx budget trading program shall be submitted, signed, and certified by the NOx authorized account representative for each NOx budget source on behalf of which the submission is made. Each such submission shall include the following certification statement by the NOx authorized account representative:

"I am authorized to make this submission on behalf of the owners and operators of the NOx budget sources or NOx budget units for which the submission is made. I certify under penalty of law that I have personally examined, and am familiar with, the statements and information submitted in this document and all its attachments. Based on my inquiry of those individuals with primary responsibility for obtaining the information, I

certify that the statements and information are to the best of my knowledge and belief true, accurate, and complete. I am aware that there are significant penalties for submitting false statements and information or omitting required statements and information, including the possibility of fine or imprisonment."

- (b) The director and the administrator shall accept or act on a submission made on behalf of owner or operators of a NOx budget source or a NOx budget unit only if the submission has been made, signed, and certified in accordance with paragraph (A)(5)(a) of this rule.

(B) The alternate NOx authorized account representative.

- (1) An account certificate of representation may designate one and only one alternate NOx authorized account representative who may act on behalf of the NOx authorized account representative. The agreement by which the alternate NOx authorized account representative is selected shall include a procedure for authorizing the alternate NOx authorized account representative to act in lieu of the NOx authorized account representative.
- (2) Upon receipt by the administrator of a complete account certificate of representation under paragraph (D) of this rule, any representation, action, inaction, or submission by the alternate NOx authorized account representative shall be deemed to be a representation, action, inaction, or submission by the NOx authorized account representative.
- (3) Except in paragraphs (A)(1), (C) and (D) of this rule and paragraph (B) of rule 3745-14-06 of the Administrative Code, whenever the term "NOx authorized account representative" is used in this part, the term shall be construed to include the alternate NOx authorized account representative.

(C) Changing the NOx authorized account representative and the alternate NOx authorized account representative; changes in the owners and operators.

- (1) The NOx authorized account representative may be changed at any time upon receipt by the administrator of a superseding complete account certificate of representation. Notwithstanding any such change, all representations, actions, inactions, and submissions by the previous NOx authorized account representative prior to the time and date when the administrator receives the superseding account certificate of representation shall be binding on the new NOx authorized account representative and the owners and operators of the NOx budget source and the NOx budget units at the source.
- (2) The alternate NOx authorized account representative may be changed at any time upon receipt by the administrator of a superseding complete account certificate of representation. Notwithstanding any such change, all representations,

actions, inactions, and submissions by the previous alternate NOx authorized account representative prior to the time and date when the administrator receives the superseding account certificate of representation shall be binding on the new alternate NOx authorized account representative and the owners and operators of the NOx budget source and the NOx budget units at the source.

(3) Changes in the owners and operators.

- (a) In the event a new owner or operator of a NOx budget source or a NOx budget unit is not included in the list of owners and operators submitted in the account certificate of representation, such new owner or operator shall be deemed to be subject to and bound by the account certificate of representation, the representations, actions, inactions, and submissions of the NOx authorized account representative and any alternate NOx authorized account representative of the source or unit, and the decisions, orders, actions, and inactions of the director or the administrator, as if the new owner or operator were included in such list.
- (b) Within thirty days following any change in the owners and operators of a NOx budget source or a NOx budget unit, including the addition of a new owner or operator, the NOx authorized account representative or alternate NOx authorized account representative shall submit a revision to the account certificate of representation amending the list of owners and operators to include the change.

(D) Account certificate of representation.

- (1) A complete account certificate of representation for a NOx authorized account representative or an alternate NOx authorized account representative shall include the following elements in a format prescribed by the Administrator:
  - (a) Identification of the NOx budget source and each NOx budget unit at the source for which the account certificate of representation is submitted;
  - (b) The name, address, e-mail address (if any), telephone number, and facsimile transmission number (if any) of the NOx authorized account representative and any alternate NOx authorized account representative;
  - (c) A list of the owners and operators of the NOx budget source and of each NOx budget unit at the source;
  - (d) The following certification statement by the NOx authorized account representative and any alternate NOx authorized account representative:

"I certify that I was selected as the NOx authorized account representative or alternate NOx authorized account representative, as applicable, by an

agreement binding on the owners and operators of the NOx budget source and each NOx budget unit at the source. I certify that I have all the necessary authority to carry out my duties and responsibilities under the NOx budget trading program on behalf of the owners and operators of the NOx budget source and of each NOx budget unit at the source and that each such owner and operator shall be fully bound by my representations, actions, inactions, or submissions and by any decision or order issued to me by the director, the Administrator, or a court regarding the source or unit."

(e) The signature of the NOx authorized account representative and any alternate NOx authorized account representative and the dates signed.

(2) Unless otherwise required by the director or the administrator, documents of agreement referred to in the account certificate of representation shall not be submitted to the director or the administrator. Neither the director nor the administrator shall be under any obligation to review or evaluate the sufficiency of such documents, if submitted.

(E) Objections concerning the NOx authorized account representative.

(1) Once a complete account certificate of representation has been submitted and received, the director and the administrator shall rely on the account certificate of representation unless and until a superseding complete account certificate of representation is received by the administrator.

(2) Except as provided in paragraphs (C)(1) and (C)(2) of this rule, no objection or other communication submitted to the director or the administrator concerning the authorization, or any representation, action, inaction, or submission of the NOx authorized account representative shall affect any representation, action, inaction, or submission of the NOx authorized account representative or the finality of any decision or order by the director or the administrator under the NOx budget trading program.

(3) Neither the director nor the administrator will adjudicate any private legal dispute concerning the authorization or any representation, action, inaction, or submission of any NOx authorized account representative, including private legal disputes concerning the proceeds of NOx allowance transfers.

3745-14-03      **The NOx budget permit.**

(A) General NOx budget trading program permit requirements.

- (1) For each NOx budget source required to have a federally enforceable operating permit, such permit shall include a NOx budget permit administered by the director.
  - (a) For NOx budget sources required to have a Title V operating permit, the NOx budget portion of the Title V operating permit shall be administered in accordance with Chapter 3745-77 of the Administrative Code except as provided otherwise by this rule or rule 3745-14-09 of the Administrative Code.
  - (b) For NOx budget sources required to have a non-Title V operating permit, the NOx budget portion of the non-Title V operating permit shall be administered in accordance with Chapter 3745-35 of the Administrative Code, except as provided otherwise by this rule or rule 3745-14-09 of the Administrative Code.
- (2) Each NOx budget permit (including a draft or proposed NOx budget permit, if applicable) shall contain all applicable NOx budget trading program requirements and shall be a complete and segregable portion of the permit required under paragraph (A)(1) of this rule.

(B) Submission of NOx budget permit applications.

- (1) The NOx authorized account representative of any NOx budget source required to have a federally enforceable operating permit shall submit to the director a complete NOx budget permit application by the applicable deadline in paragraph (B)(2) of this rule.
- (2) Application time.
  - (a) For NOx budget sources required to have a Title V operating permit:
    - (i) For any source, with one or more NOx budget units that commence operation before January 1, 2000, the NOx authorized account representative shall submit a complete NOx budget permit application covering such NOx budget units to the director before May 1, 2003;
    - (ii) For any source, with one or more NOx budget units that commence operation on or after January 1, 2000, the NOx authorized account representative shall submit a complete NOx budget permit application covering such NOx budget unit to the director at least twelve months

before the later of May 1, 2004 or the date on which the NOx budget unit commences operation.

(b) For NOx budget sources required to have a non-Title V operating permit:

(i) For any source, with one or more NOx budget units that commence operation before January 1, 2000, the NOx authorized account representative shall submit a complete NOx budget permit application covering such NOx budget units to the director before May 1, 2003;

(ii) For any source, with any NOx budget unit that commences operation on or after January 1, 2000, the NOx authorized account representative shall submit a complete NOx budget permit application covering such NOx budget unit to the director at least twelve months before the later of May 1, 2004 or the date on which the NOx budget unit commences operation.

(3) Duty to reapply.

(a) For a NOx budget source required to have a Title V operating permit, the NOx authorized account representative shall submit a complete NOx budget permit renewal application for the NOx budget source covering the NOx budget units at the source in accordance with Chapter 3745-77 of the Administrative Code.

(b) For a NOx budget source required to have a non-Title V operating permit, the NOx authorized account representative shall submit a complete NOx budget permit application for the NOx budget source covering the NOx budget units at the source in accordance with rule 3745-35-02 of the Administrative Code.

(C) Information requirements for NOx budget permit applications.

(1) A complete NOx budget permit application shall include the following elements concerning the NOx budget source for which the application is submitted, in a format prescribed by the director:

(a) Identification of the NOx budget source, including plant name and the ORIS (office of regulatory information systems) or facility code assigned to the source by the United States energy information administration, or a facility code assigned to the source by the administrator;

(b) Identification of each NOx budget unit at the NOx budget source and whether it is a NOx budget unit under paragraph (C)(1) of rule 3745-14-01 or rule 3745-14-09 of the Administrative Code;

(c) The standard requirements under paragraph (E) of rule 3745-14-01 of the Administrative Code; and

(d) For each NOx budget opt-in unit at the NOx budget source, the following certification statements by the NOx authorized account representative:

(i) "I certify that each unit for which this permit application is submitted under rule 3745-14-09 of the Administrative Code is not a NOx budget unit under paragraph (C)(1) of rule 3745-14-01 of the Administrative Code and is not covered by an exemption under paragraph (C)(2) or (D) of rule 3745-14-01 of the Administrative Code that is in effect."

(ii) If the application is for an initial NOx budget opt-in permit,

"I certify that each unit for which this permit application is submitted under rule 3745-14-09 of the Administrative Code is currently operating, as that term is defined under paragraph (B)(2) of rule 3745-14-01 of the Administrative Code."

(D) NOx budget permit contents.

(1) Each NOx budget permit (including any draft or proposed NOx budget permit, if applicable) shall contain, in a format prescribed by the director, all elements required for a complete NOx budget permit application under paragraph (C) of this rule.

(2) Each NOx budget permit is deemed to incorporate automatically the definitions of terms under paragraph (B) of rule 3745-14-01 of the Administrative Code and, upon recordation by the Administrator, in accordance with rules 3745-14-06 and 3745-14-07 of the Administrative Code, every allocation, transfer, or deduction of a NOx allowance to or from the compliance accounts of the NOx budget units covered by the permit or the overdraft account of the NOx budget source covered by the permit.

(E) NOx budget permit revisions.

(1) For a NOx budget source with a Title V operating permit, except as provided in paragraph (D)(2) of this rule, the director shall revise the NOx budget permit, as necessary, in accordance with rule 3745-77-08 of the Administrative Code.

(2) For a NOx budget source with a non-Title V operating permit, except as provided in paragraph (D)(2) of this rule, the director shall revise the NOx budget permit, as necessary, in accordance with rule 3745-35-02 of the Administrative Code.

3745-14-04      **Compliance certification.**

(A) The compliance certification report.

- (1) For each control period in which one or more NOx budget units at a source are subject to the NOx budget emissions limitation, the NOx authorized account representative of the source shall submit to the director and the administrator, by November thirtieth of that year, a compliance certification report for each source covering all such units.
- (2) The NOx authorized account representative shall include in the compliance certification report under paragraph (A)(1) of this rule the following elements, in a format prescribed by the administrator, concerning each unit at the source and subject to the NOx budget emissions limitation for the control period covered by the report:
  - (a) Identification of each NOx budget unit;
  - (b) At the NOx authorized account representative's option, the serial numbers of the NOx allowances that are to be deducted from each unit's compliance account under paragraph (E) of rule 3745-14-06 of the Administrative Code for the control period;
  - (c) At the NOx authorized account representative's option, for units sharing a common stack and having NOx emissions that are not monitored separately or apportioned in accordance with rule 3745-14-08 of the Administrative Code, the percentage of allowances that is to be deducted from each unit's compliance account under paragraph (E)(5) of rule 3745-14-06 of the Administrative Code; and
  - (d) The compliance certification under paragraph (A)(3) of this rule.
- (3) In the compliance certification report under paragraph (A)(1) of this rule, the NOx authorized account representative shall certify, based on reasonable inquiry of those persons with primary responsibility for operating the source and the NOx budget units at the source in compliance with the NOx budget trading program, whether each NOx budget unit for which the compliance certification is submitted was operated during the calendar year covered by the report in compliance with the requirements of the NOx budget trading program applicable to the unit, including all the following:
  - (a) Whether the unit was operated in compliance with the NOx budget emissions limitation;

- (b) Whether the monitoring plan that governs the unit has been maintained to reflect the actual operation and monitoring of the unit, and contains all information necessary to attribute NO<sub>x</sub> emissions to the unit, in accordance with rule 3745-14-08 of the Administrative Code;
- (c) Whether all the NO<sub>x</sub> emissions from the unit, or a group of units (including the unit) using a common stack, were monitored or accounted for through the missing data procedures and reported in the quarterly monitoring reports, including whether conditional data were reported in the quarterly reports in accordance with rule 3745-14-08 of the Administrative Code, and if conditional data were reported, the owner or operator shall indicate whether the status of all conditional data has been resolved and all necessary quarterly report resubmissions have been made;
- (d) Whether the facts that form the basis for certification under rule 3745-14-08 of the Administrative Code of each monitor at the unit or a group of units (including the unit) using a common stack, or for using an excepted monitoring method or alternative monitoring method approved under rule 3745-14-08 of the Administrative Code, if any, have changed.
- (e) If a change is required to be reported under paragraph (A)(3)(d) of this rule, specify the nature of the change, the reason for the change, when the change occurred, and how the unit's compliance status was determined subsequent to the change, including what method was used to determine emissions when a change mandated the need for monitor recertification.

(B) Director's or administrator's action on compliance certifications.

- (1) The director or administrator may review and conduct independent audits concerning any compliance certification or any other submission under the NO<sub>x</sub> budget trading program and make appropriate adjustments of the information in the compliance certifications or other submissions.
- (2) The administrator may deduct NO<sub>x</sub> allowances from or transfer NO<sub>x</sub> allowances to a unit's compliance account or a source's overdraft account based on the information in the compliance certifications or other submissions, as adjusted under paragraph (B)(1) of this rule.

3745-14-05      **NOx allowance allocations.**

[Comment: For dates of non-regulatory government publications, publications of recognized organizations and associations, federal rules, and federal statutory provisions referenced in this rule, see the "Incorporation by Reference" section at the end of rule 3745-14-01 of the Administrative Code.]

(A) The state trading program budget allocated by the director under paragraph (C) of this rule for a control period shall equal the total number of tons of NOx emissions apportioned to the NOx budget units in Ohio for the control period, as determined by the applicable, approved state implementation plan, less the sum of the NOx emission limitations (in tons) for each unit exempt under paragraph (C)(2) of rule 3745-14-01 of the Administrative Code that is not allocated any NOx allowances under paragraph (C)(2) or (C)(3) of this rule for the control period and whose NOx emission limitation is not included in the current calculations under paragraph (C)(4)(e)(ii)(b) of this rule for the control period. (Ohio's trading program budget is forty-nine thousand four hundred sixty NOx allowances: forty-five thousand four hundred thirty-two for units under paragraph (C)(1)(a) of rule 3745-14-01 of the Administrative Code, and four thousand twenty-eight for units under paragraph (C)(1)(b) of rule 3745-14-01 of the Administrative Code.)

(B) Timing requirements for NOx allowance allocations.

- (1) The NOx allowance allocations, determined in accordance with paragraphs (C)(1) to (C)(3) of this rule, for the control periods in 2004 through 2007 are set forth in appendices A and B of this rule.
- (2) By April 1, 2005, the director shall submit to the administrator the NOx allowance allocations, determined in accordance with paragraphs (C)(1) to (C)(3) of this rule, for the control periods in 2008 through 2012.
- (3) By April 1, 2010, and by April 1 of 2015, and thereafter by April first of the year that is five years after the last year for which NOx allowance allocations are determined, the director shall submit to the administrator the NOx allowance allocations determined in accordance with paragraphs (C)(1) to (C)(3) of this rule, for the control periods in the years that are three, four, five, six and seven years after the applicable deadline under this paragraph.
- (4) By April 1, 2004 and April first of each year thereafter, the director shall submit to the administrator the NOx allowance allocations determined in accordance with paragraph (C)(4) of this rule, for the control period in the year of the applicable deadline under this paragraph.
- (5) If the director fails to submit to the administrator the NOx allowance allocations in accordance with paragraphs (B)(1) to (B)(3) of this rule, the administrator

shall allocate, for the applicable control period, the same number of NOx allowances to NOx budget units as were allocated to the NOx budget units for the preceding control period.

- (6) The director shall make available to the public each determination of NOx allowance allocations under this rule according to the following procedures:
  - (a) Notice shall be given: by publication in a newspaper of general circulation in the area where the source is located and in the "Ohio EPA Weekly Review"; to persons on a mailing list developed by the director, including those who request in writing to be on the list; and by other means if necessary to assure adequate notice to the affected public;
  - (b) The notice shall identify the names and addresses of the affected facilities; the NOx allowances to be assigned to each NOx budget unit at each facility; the name and address of the director; and the name, address, and telephone number of a person from whom interested persons may obtain additional information;
  - (c) The director shall provide at least thirty days for public comment;
  - (d) The director shall keep a record of the commenters and also of the issues raised during the public participation process and such records shall be available to the public.

(C) NOx allowance allocations.

- (1) Heat inputs used to calculate NOx allowance allocations.
  - (a) The heat input (in mmBtu) used for calculating NOx allowance allocations for each NOx budget unit under paragraph (C)(1) of rule 3745-14-01 of the Administrative Code shall be:
    - (i) For a NOx allowance allocation under paragraph (B)(1) of this rule:
      - (a) For a unit under paragraph (C)(1)(a) of rule 3745-14-01 of the Administrative Code, the average of the two highest amounts of the unit's heat input for the control periods in 1995 through 1998;  
or
      - (b) For a unit under paragraph (C)(1)(b) of rule 3745-14-01 of the Administrative Code, the control period in 1995 or, if the director determines that reasonably reliable data are available for control periods in 1996 through 1998, the average of the two highest amounts of the unit's heat input for the control periods in 1995 through 1998.

- (ii) For a NOx allowance allocation under paragraphs (B)(2) and (B)(3) of this rule, the average of the unit's two highest control period heat input in the years that are four, five, six, seven and eight years before the first year for which the allocation is being calculated;
  - (iii) For a NOx allowance allocation under paragraphs (B)(2) and (B)(3) of this rule, if a NOx budget unit does not have five years of control period heat input, the following shall apply:
    - (a) For a NOx budget unit with more than two years of control period heat input data the average of the two highest control period heat input;
    - (b) For a NOx budget unit with only two years of control period heat input data, the average of the control period heat input for those two years; or
    - (c) For a NOx budget unit with one year of control period heat input data, the heat input for that control period.
- (b) The unit's heat input for the control period in each year specified in paragraph (C)(1)(a) of this rule shall be determined in accordance with 40 CFR Part 75. Notwithstanding the first sentence of this paragraph (C)(1)(b) of this rule:
- (i) For a NOx allowance allocation under paragraph (B) of this rule, such heat input shall be determined using the best available data reported to the director for the unit if the unit was not otherwise subject to the requirements of 40 CFR Part 75 for the control period;
  - (ii) For a NOx allowance allocation under paragraph (B)(2) or (B)(3) of this rule for a unit exempt under paragraph (C)(2) of rule 3745-14-01 of the Administrative Code, such heat input shall be treated as zero if the unit is exempt under paragraph (C)(2) of rule 3745-14-01 of the Administrative Code during the control period.
- (2) For each group of control periods specified in paragraphs (B)(1) to (B)(3) of this rule, the director shall allocate, to all NOx budget units under paragraph (C)(1)(a) of rule 3745-14-01 of the Administrative Code that commenced operation before May 1, 1997 for allocations under paragraph (B)(1) of this rule; May 1, 2003 for allocations under paragraph (B)(2) of this rule; and May first of the year five years before the first year for which the allocation under paragraph (B)(3) of this rule is being calculated, a total number of NOx allowances equal to ninety-five per cent in 2004 and 2005, and ninety-three per cent in all subsequent years, of the portion of the state trading program budget

under paragraph (A) of this rule covering such units. The director shall allocate allowances in accordance with the following procedures:

- (a) The director shall allocate NO<sub>x</sub> allowances to each NO<sub>x</sub> budget unit under paragraph (C)(1)(a) of rule 3745-14-01 of the Administrative Code for each control period in an amount equaling the lesser of 0.15 pound per mmBtu or the unit's most stringent state or federal NO<sub>x</sub> emission limitation multiplied by the heat input determined under paragraph (C)(1) of this rule, divided by two thousand pounds per ton, rounded to the nearest whole NO<sub>x</sub> allowance as appropriate.
  - (b) If the initial total number of NO<sub>x</sub> allowances allocated to all NO<sub>x</sub> budget units under paragraph (C)(1)(a) of rule 3745-14-01 of the Administrative Code for a control period under paragraph (C)(2)(a) of this rule does not equal ninety-five per cent in 2004 and 2005, and ninety-three per cent in all subsequent years, of the state trading program budget under paragraph (A) of this rule covering such units, the director shall adjust the total number of NO<sub>x</sub> allowances allocated to all such NO<sub>x</sub> budget units for the control period under paragraph (C)(2)(a) of this rule so that the total number of NO<sub>x</sub> allowances allocated equals ninety-five per cent in 2004 and 2005, and ninety-three per cent in all subsequent years, of such portion of the state trading program budget. This adjustment shall be made by multiplying each unit's allocation by ninety-five per cent in 2004 and 2005, and ninety-three per cent in all subsequent years, of such portion of the state trading program budget under paragraph (A) of this rule, dividing by the total number of NO<sub>x</sub> allowances allocated under paragraph (C)(2)(a) of this rule for the control period, and rounding to the nearest whole number of NO<sub>x</sub> allowances as appropriate.
- (3) For each group of control periods under paragraphs (B)(1) to (B)(3) of this rule, the director shall allocate to all NO<sub>x</sub> budget units under paragraph (C)(1)(b) of rule 3745-14-01 of the Administrative Code that commenced operation before May 1, 1997 for allocations under paragraph (B)(1) of this rule; May 1, 2003 for allocations under paragraph (B)(2) of this rule, and May first of the year five years before the first year for which the allocation under paragraph (B)(3) of this rule is being calculated, a total number of NO<sub>x</sub> allowances equal to ninety-five per cent of portion of the state trading program budget under paragraph (A) of this rule covering such units. The director shall allocate allowances in accordance with the following procedures:
- (a) The director shall allocate NO<sub>x</sub> allowances to each NO<sub>x</sub> budget unit under paragraph (C)(1)(b) of rule 3745-14-01 of the Administrative Code for each control period in an amount equaling the lesser of 0.17 pound per mmBtu or the unit's most stringent state or federal NO<sub>x</sub> emission limitation multiplied by the heat input determined under paragraph (C)(1) of this rule, divided by

two thousand pounds per ton, and rounded to the nearest whole number of NOx allowances as appropriate.

- (b) If the initial total number of NOx allowances allocated to all NOx budget units under paragraph (C)(1)(b) of rule 3745-14-01 of the Administrative Code for a control period under paragraph (C)(3)(a) of this rule does not equal ninety-five per cent of the portion of the state trading program budget under paragraph (A) of this rule covering such units, the director shall adjust the total number of NOx allowances allocated to all such NOx budget units for the control period under paragraph (C)(3)(a) of this rule so that the total number of NOx allowances allocated equals ninety-five per cent of the portion of the state trading program budget under paragraph (A) of this rule covering such units. This adjustment shall be made by multiplying each unit's allocation by ninety-five per cent of the portion of the state trading program budget under paragraph (A) of this rule covering such units, dividing by the total number of NOx allowances allocated under paragraph (C)(3)(a) of this rule, and rounding to the nearest whole NOx allowance as appropriate.
- (4) For each control period under paragraph (B)(4) of this rule, the director shall allocate NOx allowances to NOx budget units under paragraph (C)(1) of rule 3745-14-01 of the Administrative Code that commence operation, or are projected to commence operation, on or after the following dates: May 1, 1997, for control periods under paragraph (B)(1) of this rule; May 1, 2003, for control periods under paragraph (B)(2) of this rule; and May first of the year five years before the beginning of the group of five years that includes the control period, for control periods under paragraph (B)(3) of this rule. The director shall make the allocations under this paragraph (C)(4) of this rule in accordance with the following procedures:
  - (a) The director shall establish a new source set-aside for each control period. Each new source set-aside shall be allocated NOx allowances equal to five per cent of the total state trading program budget under paragraph (A) of this rule, rounded to the nearest whole number of NOx allowances as appropriate.
  - (b) The NOx authorized account representative of a NOx budget unit specified in paragraph (C)(4) of this rule may submit to the director a request, in a format specified by the director, to be allocated NOx allowances for the control period. The NOx allowance allocation request shall be submitted to the director on or after the date on which the director issues a permit to construct the unit and by January first before the control period for which the NOx allowances are requested.
  - (c) In a NOx allowance allocation request under paragraph (C)(4)(b) of this rule, the NOx authorized account representative for a NOx budget unit under

paragraph (C)(1)(a) of rule 3745-14-01 of the Administrative Code may request for a control period NO<sub>x</sub> allowances in an amount that does not exceed the lesser of:

- (i) 0.15 pound per mmBtu multiplied by the unit's maximum design heat input, multiplied by the lesser of three thousand six hundred seventy-two hours or the number of hours remaining in the control period starting with the day in the control period on which the unit commences operation or is projected to commence operation, divided by two thousand pounds per ton, and rounded to the nearest whole number of NO<sub>x</sub> allowances as appropriate; or
  - (ii) The unit's most stringent state or federal NO<sub>x</sub> emission limitation multiplied by the unit's maximum design heat input, multiplied by the lesser of three thousand six hundred seventy-two hours or the number of hours remaining in the control period starting with the day in the control period on which the unit commences operation or is projected to commence operation, divided by two thousand pounds per ton, and rounded to the nearest whole number of NO<sub>x</sub> allowances as appropriate.
- (d) In a NO<sub>x</sub> allowance allocation request under paragraph (C)(4)(b) of this rule, the NO<sub>x</sub> authorized account representative for a NO<sub>x</sub> budget unit under paragraph (C)(1)(b) of rule 3745-14-01 of the Administrative Code may request for the control period NO<sub>x</sub> allowances in an amount that does not exceed the lesser of:
- (i) 0.17 pound per mmBtu multiplied by the unit's maximum design heat input, multiplied by the lesser of three thousand six hundred seventy two hours or the number of hours remaining in the control period starting with the day in the control period on which the unit commences operation or is projected to commence operation, divided by two thousand pounds per ton, and rounded to the nearest whole number of NO<sub>x</sub> allowances as appropriate; or
  - (ii) The unit's most stringent state or federal NO<sub>x</sub> emission limitation multiplied by the unit's maximum design heat input, multiplied by the lesser of three thousand six hundred seventy-two hours or the number of hours remaining in the control period starting with the day in the control period on which the unit commences operation or is projected to commence operation, divided by two thousand pounds per ton, and rounded to the nearest whole number of NO<sub>x</sub> allowances as appropriate.

- (e) The director shall review each NO<sub>x</sub> allowance allocation request submitted in accordance with paragraph (C)(4)(b) of this rule and shall allocate NO<sub>x</sub> allowances pursuant to such request as follows:
- (i) Upon receipt of the NO<sub>x</sub> allowance allocation request, the director shall make any necessary adjustments to the request to ensure that the requirements of paragraphs (C)(4), (C)(4)(b), (C)(4)(c), and (C)(4)(d) of this rule are met.
  - (ii) The director shall determine the following amounts:
    - (a) The sum of the NO<sub>x</sub> allowances requested (as adjusted under paragraph (C)(4)(e)(i) of this rule) in all NO<sub>x</sub> allowance allocation requests under paragraph (C)(4)(b) of this rule for the control period; and
    - (b) For units exempt under paragraph (C)(2) of rule 3745-14-01 of the Administrative Code that commenced operation, or are projected to commence operation, on or after May 1, 1997, for control periods under paragraph (B)(1) of this rule; May 1, 2003, for control periods under paragraph (B)(2) of this rule; and May first of the year five years before beginning of the group of five years that includes the control period for control periods under paragraph (B)(3) of this rule, the sum of the NO<sub>x</sub> emission limitations (in tons of NO<sub>x</sub>) on which each unit's exemption under paragraph (C)(2) of rule 3745-14-01 of the Administrative Code is based.
  - (iii) If the number of NO<sub>x</sub> allowances in the new source set-aside, under paragraph (C)(4)(a) of this rule, for the control period less the amount under paragraph (C)(4)(e)(ii)(b) of this rule is not less than the amount determined under paragraph (C)(4)(e)(ii)(a) of this rule, the director shall allocate the amount of the NO<sub>x</sub> allowances requested (as adjusted under paragraph (C)(4)(e)(i) of this rule) to the NO<sub>x</sub> budget unit for which the allocation request was submitted.
  - (iv) If the number of NO<sub>x</sub> allowances in the new source set-aside, under paragraph (C)(4)(a) of this rule, for the control period less the amount under paragraph (C)(4)(e)(ii)(b) of this rule is less than the amount determined under paragraph (C)(4)(e)(ii)(a) of this rule, the director shall allocate, to the NO<sub>x</sub> budget unit for which the allocation request was submitted, the amount of NO<sub>x</sub> allowances requested (as adjusted under paragraph (C)(4)(e)(i) of this rule) multiplied by the number of NO<sub>x</sub> allowances in the new source set-aside for the control period less the amount determined under paragraph (C)(4)(e)(ii)(b) of this rule, divided by the amount determined under paragraph (C)(4)(e)(ii)(a) of

this rule, and rounded to the nearest whole number of NO<sub>x</sub> allowances as appropriate.

- (f) By April first of the year for which the request for allocations from the new unit allocation set-aside was made under paragraph (C)(4)(b) of this rule, the director shall take appropriate action under paragraph (C)(4)(e) of this rule and notify the NO<sub>x</sub> authorized account representative that submitted the request and the administrator of the number of NO<sub>x</sub> allowances allocated for the control period to the NO<sub>x</sub> budget unit.
- (5) For a NO<sub>x</sub> budget unit that is allocated NO<sub>x</sub> allowances under paragraph (C)(4) of this rule for a control period, the administrator shall deduct NO<sub>x</sub> allowances under paragraph (E)(2) or (E)(5) of rule 3745-14-06 of the Administrative Code to account for the actual utilization of the unit during the control period. The administrator shall calculate the number of NO<sub>x</sub> allowances to be deducted to account for the unit's actual utilization using the following formulas and rounding to the nearest whole NO<sub>x</sub> allowance as appropriate, provided that the number of NO<sub>x</sub> allowances to be deducted shall be zero if the number calculated is less than zero:
- (a) NO<sub>x</sub> allowances deducted for actual utilization for units under paragraph (C)(1)(a) of rule 3745-14-01 of the Administrative Code equals the unit's NO<sub>x</sub> allowances allocated for the control period minus the unit's actual control period utilization multiplied by the lesser of 0.15 pound per mmBtu or the unit's most stringent state or federal NO<sub>x</sub> emission limitation, divided by two thousand pounds per ton rounded to the nearest whole NO<sub>x</sub> allowance as appropriate.
- (b) NO<sub>x</sub> allowances deducted for actual utilization for units under paragraph (C)(1)(b) of rule 3745-14-01 of the Administrative Code equals the unit's NO<sub>x</sub> allowances allocated for the control period minus the unit's actual control period utilization multiplied by the lesser of 0.17 pound per mmBtu or the unit's most stringent state or federal NO<sub>x</sub> emission limitation, divided by two thousand pounds per ton rounded to the nearest whole NO<sub>x</sub> allowance as appropriate.

Where the :

"Unit's NO<sub>x</sub> allowances allocated for control period" is the number of NO<sub>x</sub> allowances allocated to the unit for the control period under paragraph (C)(4) of this rule; and

"Unit's actual control period utilization" is the utilization (in mmBtu), as defined in paragraph (B) of rule 3745-14-01 of the Administrative Code, of the unit during the control period.

- (6) After making the deductions for compliance under paragraph (E)(2), (E)(5) or (E)(6) of rule 3745-14-06 of the Administrative Code for a control period, the administrator shall notify the director whether any NOx allowances remain in the new unit allocation set-aside for the control period. The director shall allocate any such NOx allowances to the NOx budget units in the state using the following formula and rounding to the nearest whole NOx allowance as appropriate:

$$\text{(Unit's share of NOx allowances remaining in the new unit allocation set-aside)} \\ = \text{(total NOx allowances remaining in new unit allocation set-aside) x (unit's} \\ \text{NOx allowance allocation) / (state trading program budget excluding the new} \\ \text{unit allocation set-aside)}$$

Where the:

"Total NOx allowances remaining in new unit allocation set-aside" is the total number of NOx allowances remaining in the new unit allocation set-aside for the control period;

"Unit's NOx allowance allocation" is the number of NOx allowances allocated under paragraph (C)(2) or (C)(3) of this rule to the unit for the control period to which the new unit allocation set-aside applies; and

"State trading program budget excluding new unit allocation set-aside" is the state's trading program budget under paragraph (A) of this rule for the control period to which the new unit allocation set-aside applies multiplied by ninety-five per cent rounded to the nearest whole NOx allowance as appropriate.

- (7) Notwithstanding paragraph (C)(6) of this rule, the director shall not allocate the total amount of NOx allowances remaining in the new unit allocation set-aside from the 2005 control period to existing NOx budget units in the state. Of the total of two thousand two hundred twenty-seven new unit set aside allowances from the 2005 control period that are available for allocation, the director shall allocate one thousand nine hundred eighty-seven allowances to existing NOx budget units and withhold two hundred forty allowances for permanent retirement. (This reduction is necessary to off-set emission increases associated with the termination of the automobile inspection maintenance program ("E-Check") in the Cincinnati and Dayton areas).
- (8) The director shall establish an allocation set-aside for each control period beginning in 2006 for energy efficiency/renewable energy projects. Each energy efficiency/renewable energy project set-aside shall be allocated NOx allowances equal to one per cent of the tons of NOx emissions in the state trading program budget under paragraph (A) of this rule as applicable to units identified by paragraph (C)(1)(a) of rule 3745-14-01 of the Administrative Code, rounded to the nearest whole NOx allowance as appropriate.

- (a) Applicants may submit a proposal to the director for an energy efficiency/renewable energy project and request allocations from the energy efficiency/renewable energy project set-aside for energy reductions obtained as a result of the project. The director shall review proposals based on criteria determined by the director, and notify applicants of approved projects. Proposals must contain the following:
    - (i) A detailed description of the project; and
    - (ii) An estimate of the number of allocations that will be requested.
  - (b) To receive allocations for the energy efficiency/renewable energy projects approved by the director, the applicant must submit a completed project report that verifies that the project was completed as proposed and that proposed energy reductions were obtained.
  - (c) Upon verification of the project's success, the director shall award the required allocations to the applicant.
  - (d) Allocations shall be awarded on an annual basis and for no more than five consecutive years for each approved energy efficiency/renewable energy project.
- (9) The director shall establish an allocation set-aside for each control period beginning in 2006 for innovative technology projects. Each innovative technology project set-aside shall be allocated NO<sub>x</sub> allowances equal to one per cent of the tons of NO<sub>x</sub> emissions in the state trading program budget under paragraph (A) of this rule as applicable to units identified by paragraph (C)(1)(a) of rule 3745-14-01 of the Administrative Code, rounded to the nearest whole NO<sub>x</sub> allowance as appropriate.
- (a) Applicants may submit a proposal to the director for an innovative technology project and request allocations from the innovative technology project set-aside for NO<sub>x</sub> reductions or energy reductions obtained. The director shall review proposals based on criteria determined by the director, and notify applicants of approved projects. Proposals must contain the following:
    - (i) A detailed description of the project; and
    - (ii) An estimate of the number of allocations that will be requested.
  - (b) To receive allocations for the innovative technology projects approved by the director, the applicant shall submit a completed project report that

verifies that the project was completed as proposed and that proposed NOx reductions or energy reductions were obtained.

- (c) Upon verification of the project's success, the director shall award the required allocations to the applicant.
  - (d) Allocations shall be awarded on an annual basis and for no more than five consecutive years for each approved innovative technology project.
- (10) Allowances remaining at the end of each year in the energy efficiency/renewable energy allocation set-aside or in the innovative technology project allocation set-aside, shall be allocated to NOx budget units under paragraph (C)(1)(a) of rule 3745-14-01 of the Administrative Code in the following year, prorated on the basis of each unit's previous year allocations.
- (D) Early reduction credit. The owner or operator of a NOx budget unit may request early reduction credit for NOx emission rate reductions made in the unit during the 2001, 2002 or 2003 control periods. The director may allocate NOx allowances, to be used in 2004 and 2005, to the unit in accordance with the following requirements:
- (1) Each NOx budget unit for which the owner or operator requests any early reduction credit under this rule shall monitor and report NOx emissions in accordance with rule 3745-14-08 of the Administrative Code starting in the 2000 control period and for each control period for which such early reduction credit is requested. The unit's per cent monitor data availability shall be not less than ninety per cent during the 2000 control period, and the unit shall be in compliance with any applicable state or federal emission control requirements during 2000 through 2003.
  - (2) The NOx emission rate and heat input under paragraphs (D)(3) and (D)(4) of this rule shall be determined in accordance with rule 3745-14-08 of the Administrative Code.
  - (3) Each NOx budget unit for which the owner or operator requests early reduction credit under paragraph (D)(4) of this rule shall reduce its NOx emission rate for each control period for which early reduction credit is requested to less than eighty per cent of the unit's NOx emission rate in the 2000 control period. Early reduction credits shall not be earned for NOx reductions required under the state implementation plan or otherwise required under any provision of the Clean Air Act.
  - (4) The NOx authorized account representative of a NOx budget unit that meets the requirements of paragraphs (D)(1) and (D)(3) of this rule may submit to the director a request for early reduction credit based on NOx emission rate reductions for the unit in any or all of the control periods in 2001, 2002 or 2003.

- (a) The NO<sub>x</sub> authorized account representative may request early reduction credit for NO<sub>x</sub> reductions made in the 2001, 2002 or 2003 control periods in the amount equal to the following: the unit's heat input for such control period multiplied by the difference between the unit's NO<sub>x</sub> emission rate (in pound per mmBtu) during the 2000 control period and the NO<sub>x</sub> emission rate (in pound per mmBtu) for each control period for which early reduction credits are requested, divided by two thousand pounds per ton and rounded to the nearest whole number of tons as appropriate.
  - (b) Requests for early reduction credit for reductions made in 2001 and 2002 shall be submitted, in a format specified by the director, by February 1, 2003; and for reductions made in 2003, by February 1, 2004.
- (5) The director shall allocate NO<sub>x</sub> allowances, to NO<sub>x</sub> budget units meeting the requirements of paragraphs (D)(1) to (D)(3) of this rule and covered by early reduction credit requests meeting the requirements of paragraph (D)(4)(b) of this rule, in accordance with the following procedures:
- (a) Upon receipt of such early reduction credit requests, the director shall make any necessary adjustments to the request to ensure that the amount of the early reduction credit requested meets the requirement of paragraphs (D)(1) to (D)(4) of this rule.
  - (b) If the combined number of early reduction credit in all accepted early reduction credit requests for 2001 and 2002 is not greater than eleven thousand one hundred fifty- one, and the early reduction credit in all accepted early reduction credit requests for 2003 is not greater than eleven thousand one hundred fifty, the director shall allocate to each NO<sub>x</sub> budget unit covered by such accepted requests one allowance for each early reduction credit requested.
  - (c) If the combined number of early reduction credit in all accepted early reduction credit requests for 2001 and 2002 is greater than eleven thousand one hundred fifty-one, or the early reduction credit in all accepted early reduction credit requests for 2003 is greater than eleven thousand one hundred fifty, the director shall allocate NO<sub>x</sub> allowances to each NO<sub>x</sub> budget unit covered by such requests according to the following formula and rounded to the nearest whole number of NO<sub>x</sub> allowances as appropriate:

$$(\text{unit's allocated early reduction credit}) = (\text{unit's adjusted early reduction credit}) \times (A) / (\text{total adjusted early reduction credit requested by all units})$$

Where:

A = eleven thousand one hundred fifty-one for early reduction credit request made for early reductions made in 2001 and 2002; and eleven thousand one hundred fifty for early reduction credit requests for early reductions made in 2003;

"Unit's adjusted early reduction credit" means the number of early reduction credit for the unit for the combined years 2001 and 2002, or 2003 in accepted early reduction credit requests, as adjusted under paragraph (D)(5)(a) of this rule;

"Total adjusted early reduction credit requested by all units" means the number of early reduction credit for all units for the combined years 2001 and 2002, or 2003 in accepted early reduction credit requests, as adjusted under paragraph (D)(5)(a) of this rule.

- (6) The director shall notify the NO<sub>x</sub> authorized account representatives who requested early reduction credit according to paragraph (D)(4) of this rule the amount of early reduction credit the administrator will record as NO<sub>x</sub> allowances for early reductions made during the control periods in 2001, 2002 and 2003 by the following dates:
  - (a) April 1, 2003, for NO<sub>x</sub> emission rate reductions made during the 2001 and 2002 control periods; and
  - (b) April 1, 2004, for NO<sub>x</sub> emission rate reductions made during the 2003 control period.
- (7) The director shall submit to the administrator the NO<sub>x</sub> allowance allocations determined in accordance with paragraph (D)(5) of this rule by the following dates:
  - (a) By May 1, 2003, for NO<sub>x</sub> emission reductions made during the 2001 and 2002 control periods;
  - (b) By May 1, 2004, for NO<sub>x</sub> emission reductions made during the 2003 control period.
- (8) NO<sub>x</sub> allowances recorded under paragraph (D)(7) of this rule may be deducted for compliance under paragraph (E) of rule 3745-14-06 of the Administrative Code for the control periods in 2004 and 2005. Notwithstanding paragraph (F)(1)(a) of rule 3745-14-06 of the Administrative Code, the administrator shall deduct, as retired, any NO<sub>x</sub> allowance that is recorded under paragraph (D)(7) of this rule and is not deducted for compliance in accordance with paragraph (E) of rule 3745-14-06 of the Administrative Code for the control periods in 2004 and 2005.

- (9) NOx allowances recorded under paragraph (D)(7) of this rule are treated as banked allowances in 2004 and 2005 for the purposes of paragraph (F)(1)(b) of rule 3745-14-06 of the Administrative Code.
- (10) The total number of NOx allowances available for early reduction credit shall be twenty two thousand three hundred one. Of this amount, eleven thousand one hundred fifty-one NOx allowances shall be available as early reduction credit for reductions made in the control periods in 2001 and 2002, and eleven thousand one hundred fifty NOx allowances shall be available as early reduction credit for reductions made in the control period in 2003. NOx allowances available for reductions made in the 2001 and 2002 control periods that are not allocated by the director in accordance with paragraph (D)(5) of this rule shall be available for reductions made during the control period in 2003. NOx allowances available for reductions made in the 2001, 2002 and 2003 control periods that are not allocated or recorded by the director in accordance with paragraph (D)(5) of this rule shall be retired.

3745-14-06      **The NOx allowance tracking system.**

[Comment: For dates of non-regulatory government publications, publications of recognized organizations and associations, federal rules, and federal statutory provisions referenced in this rule, see the "Incorporation by Reference" section at the end of rule 3745-14-01 of the Administrative Code.]

(A) NOx allowance tracking system accounts.

- (1) Consistent with paragraph (B)(1) of this rule, the administrator shall establish one compliance account for each NOx budget unit and one overdraft account for each source with two or more NOx budget units. Allocations of NOx allowances pursuant to rule 3745-14-05 or 3745-14-09 of the Administrative Code and deductions or transfers of NOx allowances pursuant to paragraphs (E) and (G) of this rule, paragraph (B) of rule 3745-14-04, and rules 3745-14-07 and 3745-14-09 of the Administrative Code shall be recorded in the compliance accounts or overdraft accounts in accordance with this rule.
- (2) Consistent with paragraph (B)(2) of this rule, the administrator shall establish, upon request, a general account for any person. Transfers of allowances pursuant to rule 3745-14-07 of the Administrative Code shall be recorded in the general account in accordance with this rule.

(B) Establishment of accounts.

- (1) Upon receipt of a complete account certificate of representation, the administrator shall establish:
  - (a) A compliance account for each NOx budget unit for which the account certificate of representation was submitted; and
  - (b) An overdraft account for each source for which the account certificate of representation was submitted and that has two or more NOx budget units.
- (2) General accounts.
  - (a) Any person may apply to open a general account for the purpose of holding and transferring allowances. An application for a general account may designate one and only one NOx authorized account representative and one and only one alternate NOx authorized account representative who may act on behalf of the NOx authorized account representative. The agreement by which the alternate NOx authorized account representative is selected shall include a procedure for authorizing the alternate NOx authorized account representative to act in lieu of the NOx authorized account representative. A complete application for a general account shall be submitted to the

administrator and shall include the following elements in a format prescribed by the administrator:

- (i) Name, mailing address, e-mail address (if any), telephone number, and facsimile transmission number (if any) of the NOx authorized account representative and any alternate NOx authorized account representative;
- (ii) At the option of the NOx authorized account representative, organization name and type of organization;
- (iii) A list of all persons subject to a binding agreement for the NOx authorized account representative or any alternate NOx authorized account representative to represent their ownership interest with respect to the allowances held in the general account;
- (iv) The following certification statement by the NOx authorized account representative and any alternate NOx authorized account representative:

"I certify that I was selected as the NOx authorized account representative or the NOx alternate authorized account representative, as applicable, by an agreement that is binding on all persons who have an ownership interest with respect to NOx allowances held in the general account. I certify that I have all the necessary authority to carry out my duties and responsibilities under the NOx budget trading program on behalf of such persons and that each such person shall be fully bound by my representations, actions, inactions, or submissions and by any order or decision issued to me by the Administrator or a court regarding the general account."

- (v) The signature of the NOx authorized account representative and any alternate NOx authorized account representative and the dates signed.

Unless otherwise required by the director or the administrator, documents of agreement referred to in the account certificate of representation shall not be submitted to the director or the administrator. Neither the director nor the administrator shall be under any obligation to review or evaluate the sufficiency of such documents, if submitted.

- (b) Upon receipt by the administrator of a complete application for a general account under paragraph (B)(2)(a) of this rule:
  - (i) The administrator shall establish a general account for the person or persons for whom the application is submitted.

- (ii) The NOx authorized account representative and any alternate NOx authorized account representative for the general account shall represent and, by his or her representations, actions, inactions, or submissions, legally bind each person who has an ownership interest with respect to NOx allowances held in the general account in all matters pertaining to the NOx budget trading program, notwithstanding any agreement between the NOx authorized account representative or any alternate NOx authorized account representative and such person. Any such person shall be bound by any order or decision issued to the NOx authorized account representative or any alternate NOx authorized account representative by the administrator or a court regarding the general account.
  - (iii) Any representation, action, inaction or submission by an alternate NOx authorized account representative shall be deemed to be a representation, action, inaction or submission by the NOx authorized account representative.
  - (iv) Each submission concerning the general account shall be submitted, signed, and certified by the NOx authorized account representative or any alternate NOx authorized account representative for the persons having an ownership interest with respect to NOx allowances held in the general account. Each such submission shall include the following certification statement by the NOx authorized account representative or any alternate NOx authorized account representative:

"I am authorized to make this submission on behalf of the persons having an ownership interest with respect to the NOx allowances held in the general account. I certify under penalty of law that I have personally examined, and am familiar with, the statements and information submitted in this document and all its attachments. Based on my inquiry of those individuals with primary responsibility for obtaining the information, I certify that the statements and information are to the best of my knowledge and belief true, accurate, and complete. I am aware that there are significant penalties for submitting false statements and information or omitting required statements and information, including the possibility of fine or imprisonment."
  - (v) The administrator shall accept or act on a submission concerning the general account only if the submission has been made, signed, and certified in accordance with paragraph (B)(2)(b)(iv) of this rule.
- (c) Change of NOx authorized account representative or alternate NOx authorized account representative.

- (i) The NOx authorized account representative for a general account may be changed at any time upon receipt by the administrator of a superseding complete application for a general account under paragraph (B)(2)(b) of this rule. Notwithstanding any such change, all representations, actions, inactions, and submissions by the previous NOx authorized account representative prior to the time and date when the administrator receives the superseding application for a general account shall be binding on the new NOx authorized account representative and the persons with an ownership interest with respect to the allowances in the general account.
  - (ii) The alternate NOx authorized account representative for a general account may be changed at any time upon receipt by the administrator of a superseding complete application for a general account under paragraph (B)(2)(b) of this rule. Notwithstanding any such change, all representations, actions, inactions, and submissions by the previous alternate NOx authorized account representative prior to the time and date when the administrator receives the superseding application for a general account shall be binding on the new alternate NOx authorized account representative and the persons with an ownership interest with respect to the allowances in the general account.
- (d) Change in owners.
- (i) In the event a new person having an ownership interest with respect to NOx allowances in the general account is not included in the list of such persons in the account certificate of representation, such new person shall be deemed to be subject to and bound by the account certificate of representation, the representation, actions, inactions, and submissions of the NOx authorized account representative and any alternate NOx authorized account representative of the source or unit, and the decisions, orders, actions, and inactions of the administrator, as if the new person were included in such list.
  - (ii) Within thirty days following any change in the persons having an ownership interest with respect to NOx allowances in the general account, including the addition of persons, the NOx authorized account representative or any alternate NOx authorized account representative shall submit a revision to the application for a general account amending the list of persons having an ownership interest with respect to the NOx allowances in the general account to include the change.
- (e) Administrator's reliance on general account application.
- (i) Once a complete application for a general account has been submitted and received, the administrator shall rely on the application unless and

until a superseding complete application for a general account is received by the administrator.

(ii) Except as provided in paragraph (B)(2)(d) of this rule, no objection or other communication submitted to the administrator concerning the authorization, or any representation, action, inaction, or submission of the NOx authorized account representative or any alternate NOx authorized account representative for a general account shall affect any representation, action, inaction, or submission of the NOx authorized account representative or any alternate NOx authorized account representative or the finality of any decision or order by the administrator under the NOx budget trading program.

(iii) The administrator shall not adjudicate any private legal dispute concerning the authorization or any representation, action, inaction, or submission of the NOx authorized account representative or any alternate NOx authorized account representative for a general account, including private legal disputes concerning the proceeds of NOx allowance transfers.

(3) The administrator shall assign a unique identifying number to each account established under paragraph (B)(1) or (B)(2) of this rule.

(C) NOx allowance tracking system responsibilities of the NOx authorized account representative.

(1) Following the establishment of a NOx allowance tracking system account, all submissions to the administrator pertaining to the account, including, but not limited to, submissions concerning the deduction or transfer of NOx allowances in the account, shall be made only by the NOx authorized account representative for the account.

(2) The administrator shall assign a unique identifying number to each NOx authorized account representative.

(D) Recording NOx allowance allocations.

(1) The administrator shall record the NOx allowances for 2004 in the NOx budget unit's compliance accounts and the allocation set-asides, as allocated under rule 3745-14-05 of this chapter. The administrator shall also record the NOx allowances allocated under paragraph (I)(1)(a) of rule 3745-14-09 of the Administrative Code for each NOx budget opt-in unit in its compliance account.

(2) Each year, after the administrator has made all deductions from a NOx budget unit's compliance account and the overdraft account pursuant to paragraph (E) of rule 3745-14-06 of the Administrative Code, the administrator shall record NOx

allowances, as allocated to the unit under rule 3745-14-05 of the Administrative Code or paragraph (I)(1)(b) of rule 3745-14-09 of the Administrative Code, in the compliance account for the year after the last year for which allowances were previously allocated to the compliance account. Each year, the administrator shall also record NOx allowances, as allocated under rule 3745-14-05 of the Administrative Code, in the allocation set-aside for the year after the last year for which allowances were previously allocated to an allocation set-aside.

- (3) When allocating NOx allowances to and recording them in an account, the administrator shall assign each NOx allowance a unique identification number that shall include digits identifying the year for which the NOx allowance is allocated.

(E) Compliance.

- (1) The NOx allowances are available to be deducted for compliance with a unit's NOx budget emissions limitation for a control period in a given year only if the NOx allowances:

- (a) Were allocated for a control period in a prior year or the same year; and
- (b) Are held in the unit's compliance account, or the overdraft account of the source where the unit is located, as of the NOx allowance transfer deadline for that control period or are transferred into the compliance account or overdraft account by a NOx allowance transfer correctly submitted for recording under paragraph (A) of rule 3745-14-07 of the Administrative Code by the NOx allowance transfer deadline for that control period.

- (2) Deductions for compliance.

- (a) Following the recording, in accordance with paragraph (B) of rule 3745-14-07 of the Administrative Code, of NOx allowance transfers submitted for recording in the unit's compliance account or the overdraft account of the source where the unit is located by the NOx allowance transfer deadline for a control period, the administrator shall deduct NOx allowances available under paragraph (E)(1) of this rule to cover the unit's NOx emissions, as determined in accordance with rule 3745-14-08 of the Administrative Code, or to account for actual utilization under paragraph (C)(5) of rule 3745-14-05 of the Administrative Code, for the control period as follows:

- (i) From the compliance account; and
- (ii) Only if no more NOx allowances available under paragraph (E)(1) of this rule remain in the compliance account, from the overdraft account.  
[In deducting allowances for units at the source from the overdraft

account, the administrator shall begin with the unit having the compliance account with the lowest NOx allowance tracking system account number and end with the unit having the compliance account with the highest NOx allowance tracking system account number. Account numbers shall be sorted beginning with the leftmost character and ending with the rightmost character and the letter characters assigned values in alphabetical order and less than all numeric characters.]

- (b) The administrator shall deduct NOx allowances first under paragraph (E)(2)(a)(i) of this rule and then under paragraph (E)(2)(a)(ii) of this rule:
  - (i) Until the number of NOx allowances deducted for the control period equals the number of tons of NOx emissions, determined in accordance with rule 3745-14-08 of the Administrative Code, from the unit for the control period for which compliance is being determined, plus the number of NOx allowances required for deduction to account for actual utilization under paragraph (C)(5) of rule 3745-14-05 of the Administrative Code for the control period; or
  - (ii) Until no more NOx allowances available under paragraph (E)(1) of this rule remain in the respective account.
- (3) Identification of NOx allowances by serial number.
  - (a) The NOx authorized account representative for each compliance account may identify by serial number the NOx allowances to be deducted from the unit's compliance account under paragraph (E)(2), (E)(4), (E)(5) or (E)(6) of this rule. Such identification shall be made in the compliance certification report submitted in accordance with paragraph (A) of rule 3745-14-04 of the Administrative Code.
  - (b) The administrator shall deduct NOx allowances for a control period from the compliance account, in the absence of an identification or in the case of a partial identification of NOx allowances by serial number under paragraph (E)(3)(a) of this rule, or the overdraft account on a first-in-first-out accounting basis in the following order:
    - (i) Those NOx allowances that were allocated for the control period to the unit under rule 3745-14-05 or 3745-14-09 of the Administrative Code;
    - (ii) Those NOx allowances that were allocated for the control period to any unit and transferred and recorded in the account pursuant to rule 3745-14-07 of the Administrative Code, in order of their recorded date;

- (iii) Those NO<sub>x</sub> allowances that were allocated for a prior control period to the unit under rule 3745-14-05 or 3745-14-09 of the Administrative Code; and
- (iv) Those NO<sub>x</sub> allowances that were allocated for a prior control period to any unit and transferred and recorded in the account pursuant to rule 3745-14-07 of the Administrative Code, in order of their recorded date.

(4) Deductions for excess emissions.

- (a) After making the deductions for compliance under paragraph (E)(2) of this rule, the administrator shall deduct from the unit's compliance account or the overdraft account of the source where the unit is located a number of NO<sub>x</sub> allowances, allocated for a control period after the control period in which the unit has excess emissions, equal to three times the number of the unit's excess emissions.
- (b) If the compliance account or overdraft account does not contain sufficient NO<sub>x</sub> allowances, the administrator shall deduct the required number of NO<sub>x</sub> allowances (i.e., three times the number of the unit's excess emissions) regardless of the control period for which they were allocated whenever NO<sub>x</sub> allowances are recorded in either account.
- (c) Any allowance deduction required under paragraph (E)(4)(a) or (E)(4)(b) of this rule shall not affect the liability of the owners and operators of the NO<sub>x</sub> budget unit for any fine, penalty, or assessment, or their obligation to comply with any other remedy, for the same violation, as ordered under the Clean Air Act or applicable state law. The following guidelines shall be followed in assessing fines, penalties or other obligations:
  - (i) For purposes of determining the number of days of violation, if a NO<sub>x</sub> budget unit has excess emissions for a control period, each day in the control period constitutes a day in violation unless the owners and operators of the unit demonstrate that a lesser number of days should be considered;
  - (ii) Each ton of excess emissions is a separate violation.
- (d) For a unit with excess emissions for the 2008 control period, the requirements of paragraphs (E)(4)(a) to (E)(4)(c) of this rule shall apply except that the administrator shall deduct, from the compliance account covering the unit in the CAIR NO<sub>x</sub> ozone season trading program (in lieu of the accounts listed in paragraphs (E)(4)(a) and (E)(4)(b) of this rule), CAIR NO<sub>x</sub> ozone season allowances (in lieu of NO<sub>x</sub> allowances under the NO<sub>x</sub> budget trading program).

- (5) In the case of units sharing a common stack and having emissions that are not separately monitored or apportioned in accordance with rule 3745-14-08 of the Administrative Code:
- (a) The NO<sub>x</sub> authorized account representative of the units may identify the percentage of NO<sub>x</sub> allowances to be deducted from each such unit's compliance account to cover the unit's share of NO<sub>x</sub> emissions from the common stack for a control period. Such identification shall be made in the compliance certification report submitted in accordance with paragraph (A) of rule 3745-14-04 of the Administrative Code.
  - (b) Notwithstanding paragraph (E)(2)(b)(i) of this rule, the administrator shall deduct NO<sub>x</sub> allowances for each such unit until the number of NO<sub>x</sub> allowances deducted equals the unit's identified percentage, under paragraph (E)(5)(a) of this rule, of the number of tons of NO<sub>x</sub> emissions, as determined in accordance with rule 3745-14-08 of the Administrative Code, from the common stack for the control period for which compliance is being determined or, if no percentage is identified, an equal percentage for each such unit, plus the number of allowances required for deduction to account for actual utilization under paragraph (C)(5) of rule 3745-14-05 of the Administrative Code for the control period.
- (6) Each year starting in 2005, after the administrator has completed the designation of banked NO<sub>x</sub> allowances under paragraph (F)(1)(b) of this rule and before May first of the year, the administrator shall determine the extent to which banked NO<sub>x</sub> allowances otherwise available under paragraph (E)(1) of this rule are available for compliance in the control period for the current year, as follows:
- (a) The administrator shall determine the total number of banked NO<sub>x</sub> allowances held in compliance accounts, overdraft accounts, or general accounts.
  - (b) If the total number of banked NO<sub>x</sub> allowances determined to be held in compliance accounts, overdraft accounts, or general accounts is less than or equal to ten per cent of the sum of the state trading program budgets for the control period, any banked NO<sub>x</sub> allowance may be deducted for compliance in accordance with paragraphs (E)(1) to (E)(5) of this rule.
  - (c) If the total number of banked NO<sub>x</sub> allowances determined to be held in compliance accounts, overdraft accounts, or general accounts exceeds ten per cent of the sum of the state trading program budgets for the control period, any banked allowance may be deducted for compliance in accordance with paragraphs (E)(1) to (E)(5) of this rule, except as follows:

- (i) The administrator shall determine the following ratio: 0.10 multiplied by the sum of the state trading program budgets for the control period divided by the total number of banked NOx allowances determined to be held in compliance accounts, overdraft accounts, or general accounts.
  - (ii) The administrator shall multiply the number of banked NOx allowances in each compliance account or overdraft account by the ratio determined under paragraph (E)(6)(c)(i) of this rule. The resulting product is the number of banked NOx allowances in the account that may be deducted for compliance in accordance with paragraphs (E)(1) to (E)(5) of this rule. Any banked NOx allowances in excess of the resulting product may be deducted for compliance in accordance with paragraphs (E)(1) to (E)(5) of this rule, except that, if such NOx allowances are used to make a deduction under paragraphs (E)(2) to (E)(5) of this rule, two (rather than one) such NOx allowances shall authorize one ton of NOx emissions during the control period and must be deducted for each deduction of one NOx allowance required under paragraphs (E)(2) to (E)(5) of this rule.
- (7) The administrator shall record in the appropriate compliance account or overdraft account all deductions from such an account pursuant to paragraphs (E)(2), (E)(4), (E)(5) and (E)(6) of this rule.
- (F) Banking.
- (1) NOx allowances shall be banked for future use or transfer in a compliance account, an overdraft account, or a general account, as follows:
    - (a) Any NOx allowance that is held in a compliance account, an overdraft account, or a general account shall remain in such account unless and until the NOx allowance is deducted or transferred pursuant to paragraphs (E) and (G) of this rule, paragraph (B) of rule 3745-14-04, and rules 3745-14-07 and 3745-14-09 of the Administrative Code.
    - (b) The administrator shall designate, as a "banked" NOx allowance, any NOx allowance that remains in a compliance account, an overdraft account, or a general account after the administrator has made all deductions for a given control period from the compliance account or overdraft account pursuant to paragraph (E) of this rule (except deductions pursuant to paragraph (E)(4)(b) of this rule) and that were allocated for that control period or a control period in a prior year.
- (G) The administrator may, at his or her sole discretion and on his or her own motion, correct any error in any NOx allowance tracking system account. Within ten

business days of making such correction, the administrator shall notify the NOx authorized account representative for the account.

(H) Closing of general accounts.

- (1) The NOx authorized account representative of a general account may instruct the administrator to close the account by submitting a statement requesting deletion of the account from the NOx allowance tracking system and by correctly submitting for recording, under paragraph (A) of rule 3745-14-07 of the Administrative Code, an allowance transfer of all NOx allowances in the account to one or more other NOx allowance tracking system accounts.
- (2) If a general account shows no activity for a period of a year or more and does not contain any NOx allowances, the administrator shall notify the NOx authorized account representative for the account that the account will be closed and deleted from the NOx allowance tracking system following twenty business days after the notice is sent. The account shall be closed after the twenty-day period unless, before the end of the twenty-day period, the administrator receives a correctly submitted transfer of NOx allowances into the account under paragraph (A) of rule 3745-14-07 of the Administrative Code or a statement submitted by the NOx authorized account representative demonstrating to the satisfaction of the administrator good cause as to why the account should not be closed.

3745-14-07      **NOx allowance transfers.**

(A) Submission of NOx allowance transfers.

- (1) The NOx authorized account representatives seeking recording of a NOx allowance transfer shall submit the transfer to the administrator. To be considered correctly submitted, the NOx allowance transfer shall include the following elements in a format specified by the administrator:
  - (a) The numbers identifying both the transferor and transferee accounts;
  - (b) A specification by serial number of each NOx allowance to be transferred;  
and
  - (c) The printed name and signature of the NOx authorized account representative of the transferor account and the date signed.

(B) Recordation of NOx allowance transfer requests.

- (1) Within five business days of receiving a NOx allowance transfer, except as provided in paragraph (B)(2) of this rule, the administrator shall record a NOx allowance transfer by moving each NOx allowance from the transferor account to the transferee account as specified by the request, provided that:
  - (a) The transfer is correctly submitted under paragraph (A) of this rule; and
  - (b) The transferor account includes each NOx allowance identified by serial number in the transfer.
- (2) A NOx allowance transfer that is submitted for recording following the NOx allowance transfer deadline and that includes any NOx allowances allocated for a control period prior to or the same as the control period to which the NOx allowance transfer deadline applies shall not be recorded until after completion of the process of recording of NOx allowance allocations in paragraph (D) of rule 3745-14-06 of the Administrative Code.
- (3) Where a NOx allowance transfer submitted for recording fails to meet the requirements of paragraph (B)(1) of this rule, the administrator shall not record such transfer.

(C) Notification of transfers recorded.

- (1) Within five business days of recording a NOx allowance transfer under paragraph (B) of this rule, the administrator shall notify the NOx authorized account representative of both the transferor and transferee accounts.

- (2) Within ten business days of receipt of a NOx allowance transfer that fails to meet the requirements of paragraph (B)(1) of this rule, the administrator shall notify the NOx authorized account representatives of both accounts subject to the transfer of:
  - (a) A decision not to record the transfer, and
  - (b) The reasons for not recording the transfer.
- (3) Nothing in this rule shall preclude the re-submission of a NOx allowance transfer for recording that failed to meet the requirements of paragraph (B)(1) of this rule upon a previous submission.

3745-14-08      **Monitoring and reporting.**

[Comment: For dates of non-regulatory government publications, publications of recognized organizations and associations, federal rules, and federal statutory provisions referenced in this rule, see the "Incorporation by Reference" section at the end of rule 3745-14-01 of the Administrative Code.]

(A) General requirements.

- (1) The owners and operators, and to the extent applicable, the NO<sub>x</sub> authorized account representative of a NO<sub>x</sub> budget unit, shall comply with the monitoring and reporting requirements as provided in this rule and in 40 CFR Part 75, Subpart H. For purposes of complying with such requirements, the definitions in paragraph (B) of rule 3745-14-01 of the Administrative Code and in 40 CFR 72.2 shall apply, and the terms "affected unit," "designated representative," and "continuous emission monitoring system" (or "CEMS") in 40 CFR Part 75 shall be replaced by the terms "NO<sub>x</sub> budget unit," "NO<sub>x</sub> authorized account representative," and "continuous emission monitoring system" (or "CEMS"), respectively, as defined in paragraph (B) of rule 3745-14-01 of the Administrative Code.
- (2) The owner or operator of each NO<sub>x</sub> budget unit and each unit for which an application for a NO<sub>x</sub> budget opt-in permit is submitted and not denied or withdrawn, as provided in rule 3745-14-09 of the Administrative Code, shall meet the following requirements:
  - (a) Install all monitoring systems required under this rule for monitoring NO<sub>x</sub> mass emissions; (This includes all systems required to monitor NO<sub>x</sub> emission rate, NO<sub>x</sub> concentration, heat input rate, and stack flow rate, in accordance with 40 CFR 75.71 and 40 CFR 75.72.)
  - (b) Install all monitoring systems for monitoring heat input rate;
  - (c) Successfully complete all certification tests required under paragraph (B) of this rule and meet all other requirements of this rule and 40 CFR Part 75 applicable to the monitoring systems under paragraphs (A)(2)(a) and (A)(2)(b) of this rule; and
  - (d) Record, report and quality assure the data from the monitoring systems required under paragraphs (A)(2)(a) and (A)(2)(b) of this rule.
- (3) The owner or operator shall meet the certification and other requirements of paragraphs (A)(2)(a) to (A)(2)(c) of this rule on or before the following dates. The owner or operator shall record, report and quality-assure the data from the

monitoring systems under paragraphs (A)(2)(a) and (A)(2)(b) of this rule on and after the following dates:

- (a) For the owner or operator of a NOx budget unit for which the owner or operator intends to apply for early reduction credit under paragraph (D) of rule 3745-14-05 of the Administrative Code, by May 1, 2000;
- (b) For the owner or operator of a NOx budget unit under paragraph (C)(1) of rule 3745-14-01 of the Administrative Code that commences operation before January 1, 2003, and that is not subject to or does not meet the deadline under paragraph (A)(3)(a) of this rule, by May 1, 2003;
- (c) For the owner or operator of a NOx budget unit under paragraph (C)(1)(a) of rule 3745-14-01 of the Administrative Code that commences operation on or after January 1, 2003 and that reports on an annual basis under paragraph (E)(4) of this rule, by the later of the following dates:
  - (i) May 1, 2003; or
  - (ii) Ninety days after the date on which the unit commences commercial operation.
- (d) For the owner or operator of a NOx budget unit under paragraph (C)(1)(a) of rule 3745-14-01 of the Administrative Code that commences operation on or after January 1, 2003 and that reports on a control period basis under paragraph (E)(4)(b)(i) of this rule, by no later than ninety days after the date on which the unit commences commercial operation, provided that this date is during a control period; (If this date does not occur during a control period, the applicable deadline is May first immediately following this date.)
- (e) For the owner or operator of a NOx budget unit under paragraph (C)(1)(b) of rule 3745-14-01 of the Administrative Code that commences operation on or after January 1, 2003 and that reports on an annual basis under paragraph (E)(4) of this rule, by the later of the following dates:
  - (i) May 1, 2003; or
  - (ii) One hundred eighty days after the date on which the unit commences operation.
- (f) For the owner or operator of a NOx budget unit under paragraph (C)(1)(b) of rule 3745-14-01 of the Administrative Code that commences operation on or after January 1, 2003 and that reports on a control period basis under paragraph (E)(4)(b)(ii) of this rule, by one hundred eighty days after the date on which the unit commences operation, provided that this date is

during a control period; (If this date does not occur during a control period, the applicable deadline is May first immediately following this date.)

- (g) For the owner or operator of a NO<sub>x</sub> budget unit that has a new stack or flue for which construction is completed after the applicable deadline under paragraph (A)(3)(a), (A)(3)(b), (A)(3)(c), (A)(3)(d), (A)(3)(e) or (A)(3)(f) of this rule or rule 3745-14-09 of the Administrative Code and that reports on an annual basis under paragraph (E)(4) of this rule, by ninety days after the date on which emissions first exit to the atmosphere through the new stack or flue;
- (h) For the owner or operator of a NO<sub>x</sub> budget unit that has a new stack or flue for which construction is completed after the applicable deadline under paragraph (A)(3)(a), (A)(3)(b), (A)(3)(c), (A)(3)(d), (A)(3)(e) or (A)(3)(f) of this rule or rule 3745-14-09 of this chapter and that reports on a control period basis under paragraph (E)(4)(b)(ii) of this rule, by ninety days after the date on which emissions first exit to the atmosphere through the new stack or flue, provided that this date is during a control period; (If this date does not occur during a control period, the applicable deadline is May first immediately following this date.)
- (i) For the owner or operator of a unit for which an application for a NO<sub>x</sub> budget opt-in unit is submitted and not denied or withdrawn, by the date specified under rule 3745-14-09 of this chapter.

(4) Reporting data prior to initial certification.

The owner or operator of a NO<sub>x</sub> budget unit under paragraph (A)(3)(c), (A)(3)(d), (A)(3)(e) or (A)(3)(f) of this rule shall determine, record and report NO<sub>x</sub> mass emissions, heat input rate, and any other values required to determine NO<sub>x</sub> mass emissions (e.g., NO<sub>x</sub> emission rate and heat input rate, or NO<sub>x</sub> concentration and stack flow rate) in accordance with 40 CFR 75.70(g), from the date and hour that the unit starts operating until the date and hour on which the continuous emission monitoring system, excepted monitoring system under 40 CFR Part 75, Appendix D or 40 CFR Part 75 Appendix E, or excepted monitoring methodology under 40 CFR 75.19, is provisionally certified.

(5) Prohibitions.

- (a) No owner or operator of a NO<sub>x</sub> budget unit shall use any alternative monitoring system, alternative reference method, or any other alternative for the required continuous emission monitoring system without having obtained prior written approval in accordance with paragraph (F) of this rule.

- (b) No owner or operator of a NOx budget unit shall operate the unit so as to discharge, or allow to be discharged, NOx emissions to the atmosphere without accounting for all such emissions in accordance with the applicable provisions of this rule and 40 CFR Part 75 except as provided for in 40 CFR 75.74.
- (c) No owner or operator of a NOx budget unit shall disrupt the continuous emission monitoring system, any portion thereof, or any other approved emission monitoring method, and thereby avoid monitoring and recording NOx mass emissions discharged into the atmosphere, except for periods of recertification or periods when calibration, quality assurance testing, or maintenance is performed in accordance with the applicable provisions of this rule and 40 CFR Part 75 except as provided for in 40 CFR 75.74.
- (d) No owner or operator of a NOx budget unit shall retire or permanently discontinue use of the continuous emission monitoring system, any component thereof, or any other approved emission monitoring system, except under any one of the following circumstances:
  - (i) During the period that the unit is covered by an exemption under paragraphs (C)(2) and (D) of rule 3745-14-01 of the Administrative Code that is in effect;
  - (ii) The owner or operator is monitoring emissions from the unit with another certified monitoring system approved by the director, in accordance with the applicable provisions of this rule and 40 CFR Part 75, for use at that unit that provides emission data for the same pollutant or parameter as the retired or discontinued monitoring system; or
  - (iii) The NOx authorized account representative submits notification of the date of certification testing of a replacement monitoring system for the retired or discontinued monitoring system in accordance with paragraph (B)(2)(b) of this rule.

(B) Initial certification and recertification procedures.

- (1) The owner or operator of a NOx budget unit that is subject to an acid rain emissions limitation shall comply with the initial certification and recertification procedures of 40 CFR Part 75, except that:
  - (a) If, prior to January 1, 1998, the administrator approved a petition under 40 CFR 75.17(a) or 40 CFR 75.17(b) for apportioning the NOx emission rate measured in a common stack or a petition under 40 CFR 75.66 for an alternative to a requirement in 40 CFR 75.17, the NOx authorized account representative shall resubmit the petition, under paragraph (F)(1) of this

rule, to the administrator to determine if the approval applies under the NO<sub>x</sub> budget trading program;

- (b) For any additional CEMS required under the common stack provisions in 40 CFR 75.72, or for any NO<sub>x</sub> concentration CEMS used under the provisions of 40 CFR 75.71(a)(2), the owner or operator shall meet the requirements of paragraph (B)(2) of this rule.
- (2) The owner or operator of a NO<sub>x</sub> budget unit that is not subject to an acid rain emissions limitation shall comply with the following initial certification and recertification procedures. The owner or operator of such a unit that qualifies to use the low mass emissions excepted monitoring methodology under 40 CFR 75.19 or that qualifies to use an alternative monitoring system under subpart E of 40 CFR Part 75 shall comply with the following procedures, as modified by paragraph (B)(3) or (B)(4) of this rule. The owner or operator of a NO<sub>x</sub> budget unit that is subject to an acid rain emissions limitation and that requires additional CEMS under the common stack provisions in 40 CFR 75.72 or uses a NO<sub>x</sub> concentration CEMS under 40 CFR 75.71(a)(2) shall comply with the following.
- (a) The owner or operator shall ensure that each monitoring system required by 40 CFR Part 75, Subpart H (which includes the automated data acquisition and handling system) successfully completes all of the initial certification testing required under 40 CFR 75.20 by the applicable deadline in paragraph (A)(3) of this rule. In addition, whenever the owner or operator installs a monitoring system in order to meet the requirements of this chapter in a location where no such monitoring system was previously installed, initial certification according to 40 CFR 75.20 is required.
  - (b) Whenever the owner or operator makes a replacement, modification, or change in a certified monitoring system that may significantly affect the ability of the system to accurately measure or record NO<sub>x</sub> mass emissions or heat input rate or to meet the requirements of 40 CFR 75.21 or Appendix B to 40 CFR Part 75, the owner or operator shall recertify the monitoring system in accordance with 40 CFR 75.20(b). Furthermore, whenever the owner or operator makes a replacement, modification, or change to the flue gas handling system or the unit's operation that may significantly change the stack flow or concentration profile, the owner or operator shall recertify the continuous emissions monitoring system in accordance with 40 CFR 75.20(b). Examples of changes that require recertification include: replacement of the analyzer, complete replacement of an existing continuous emission monitoring system, or change in location or orientation of the sampling probe or site.
  - (c) Certification approval process for initial certifications and recertification.

- (i) The NO<sub>x</sub> authorized account representative shall submit to the administrator, the United States environmental protection agency region 5 office, and the director a written notice of the dates of certification in accordance with paragraph (D) of this rule.
- (ii) The NO<sub>x</sub> authorized account representative shall submit to the administrator, the United States environmental protection agency region 5 office, and director a certification application for each monitoring system required under 40 CFR Part 75, Subpart H. A complete certification application shall include the information specified in. 40 CFR Part 75, Subpart H.
- (iii) Except for units using the low mass emission excepted methodology under 40 CFR 75.19, the provisional certification date for a monitor shall be determined in accordance with 40 CFR 75.20(a)(3). A provisionally certified monitor may be used under the NO<sub>x</sub> budget trading program for a period not to exceed one hundred twenty days after receipt by the director of the complete certification application for the monitoring system or component thereof under paragraph (B)(2)(c)(ii) of this rule. Data measured and recorded by the provisionally certified monitoring system or component thereof, in accordance with the requirements of 40 CFR Part 75, shall be considered valid quality-assured data (retroactive to the date and time of provisional certification), provided that the director does not invalidate the provisional certification by issuing a notice of disapproval within one hundred twenty days of receipt of the complete certification application by the director.
- (iv) The director shall issue a written notice of approval or disapproval of the certification application to the owner or operator within one hundred twenty days of receipt of the complete certification application under paragraph (B)(2)(c)(ii) of this rule. In the event the director does not issue such a notice within such one hundred twenty-day period, each monitoring system that meets the applicable performance requirements of 40 CFR Part 75 and is included in the certification application shall be deemed certified for use under the NO<sub>x</sub> budget trading program.
  - (a) If the certification application is complete and shows that each monitoring system meets the applicable performance requirements of 40 CFR Part 75, then the director shall issue a written notice of approval of the certification application within one hundred twenty days of receipt.
  - (b) A certification application shall be considered complete when all of the applicable information required to be submitted under

paragraph (B)(2)(c)(ii) of this rule has been received by the director. If the certification application is not complete, then the director shall issue a written notice of incompleteness that sets a reasonable date by which the NO<sub>x</sub> authorized account representative shall submit the additional information required to complete the certification application. If the NO<sub>x</sub> authorized account representative does not comply with the notice of incompleteness by the specified date, then the director may issue a notice of disapproval under paragraph (B)(2)(c)(iv)(c) of this rule. The one hundred twenty-day review period shall not begin prior to receipt of a complete certification application.

- (c) If the certification application shows that any monitoring system or component thereof does not meet the performance requirements of this chapter, or if the certification application is incomplete and the requirement for disapproval under paragraph (B)(2)(c)(iv)(b) of this rule has been met, then the director shall issue a written notice of disapproval of the certification application. Upon issuance of such notice of disapproval, the provisional certification is invalidated by the director and the data measured and recorded by each uncertified monitoring system or component thereof shall not be considered valid quality-assured data beginning with the date and hour of provisional certification [as defined under 40 CFR 75.20(a)(3)]. The owner or operator shall follow the procedures for loss of certification in paragraph (B)(2)(c)(v) of this rule for each monitoring system or component thereof which is disapproved for initial certification.
- (d) The director may issue a notice of disapproval of the certification status of a monitor in accordance with paragraph (C)(2) of this rule.
- (v) If the director issues a notice of disapproval of a certification application under paragraph (B)(2)(c)(iv)(c) of this rule or a notice of disapproval of certification status under paragraph (B)(2)(c)(iv)(d) of this rule, then:
  - (a) The owner or operator shall substitute the following values, for each hour of unit operation during the period of invalid data specified under 40 CFR 75.20(a)(4)(iii), 40 CFR 75.20(b)(5), 40 CFR 75.20(h)(4) or 40 CFR 75.21(e) and continuing until the date and hour specified under 40 CFR 75.20(a)(5)(i):
    - (i) For units that the owner or operator intends to monitor or monitors for NO<sub>x</sub> emission rate and heat input or intends to determine or determines NO<sub>x</sub> mass emissions using the low mass emission excepted methodology under 40 CFR 75.19,

the maximum potential NO<sub>x</sub> emission rate and the maximum potential hourly heat input of the unit;

- (ii) For units that the owner or operator intends to monitor or monitors for NO<sub>x</sub> mass emissions using a NO<sub>x</sub> pollutant concentration monitor and a flow monitor, the maximum potential concentration of NO<sub>x</sub> and the maximum potential flow rate of the unit under Section 2 of Appendix A of 40 CFR Part 75.
  - (b) The NO<sub>x</sub> authorized account representative shall submit a notification of certification retest dates and a new certification application in accordance with paragraphs (B)(2)(c)(i) and (B)(2)(c)(ii) of this rule;
  - (c) The owner or operator shall repeat all certification tests or other requirements that were failed by the monitoring system, as indicated in the director's notice of disapproval, no later than thirty unit operating days after the date of issuance of the notice of disapproval.
- (3) The owner or operator of a gas fired or oil fired unit using the low mass emissions excepted methodology under 40 CFR 75.19 and not subject to an acid rain emission limitation shall meet the applicable general operating requirements of 40 CFR 75.10 and the applicable requirements of 40 CFR 75.19. The owner or operator of such a unit shall also meet the applicable certification and recertification procedures of paragraph (B)(2) of this rule, except that the excepted methodology shall be deemed provisionally certified for use under the NO<sub>x</sub> budget trading program as of the following dates:
  - (a) For a unit that does not have monitoring equipment initially certified or recertified for the NO<sub>x</sub> budget trading program as of the date on which the NO<sub>x</sub> authorized account representative submits the certification application under 40 CFR 75.19 for the unit, starting on the date of such submissions until the completion of the period for the director's review;
  - (b) For a unit that has monitoring equipment initially certified or recertified for the NO<sub>x</sub> budget trading program as of the date on which the NO<sub>x</sub> authorized account representative submits the certification application under 40 CFR 75.19 for the unit and that reports data on an annual basis under paragraph (E)(4) of this rule, starting January first of the year after the year of such submission until the completion of the period for the director' review;
  - (c) For a unit that has monitoring equipment initially certified or recertified for the NO<sub>x</sub> budget trading program as of the date on which the NO<sub>x</sub>

authorized account representative submits the certification application under 40 CFR 75.19 for the unit and that reports on a control period basis under paragraph (E)(4) of this rule, starting May first of the control period after the year of such submission until the completion of the period for the director's review.

- (4) The NO<sub>x</sub> authorized account representative of each unit not subject to an acid rain emissions limitation for which the owner or operator intends to use an alternative monitoring system approved by the administrator under subpart E of 40 CFR Part 75, shall comply with the applicable certification procedures in paragraph (B)(2) of this rule before using the system under the NO<sub>x</sub> budget trading program. The NO<sub>x</sub> authorized account representative shall also comply with the applicable recertification procedures in paragraph (B)(2)(c) of this rule. The requirements of 40 CFR 75.20(f) shall apply to such alternative monitoring system.

(C) Out of control periods.

- (1) Whenever any monitoring system fails to meet the quality assurance or data validation requirements of 40 CFR Part 75, data shall be substituted using the applicable procedures in 40 CFR Part 75, Appendix D, 40 CFR Part 75, Appendix E, or 40 CFR Part 75, Subpart D
- (2) Whenever both an audit of a monitoring system and a review of the initial certification or recertification application reveal that any system or component should not have been certified or recertified because it did not meet a particular performance specification or other requirement under paragraph (B) of this rule or the applicable provisions of 40 CFR Part 75, both at the time of the initial certification or recertification application submission and at the time of the audit, the director shall issue a notice of disapproval of the certification status of such system or component. For the purposes of this paragraph, an audit shall be either a field audit or an audit of any information submitted to the director or the administrator. By issuing the notice of disapproval, the director revokes prospectively the certification status of the system or component. The data measured and recorded by the system or component shall not be considered valid quality-assured data from the date of issuance of the notification of the revoked certification status until the date and time that the owner or operator completes subsequently approved initial certification or recertification tests for the system or component.

- (D) The NO<sub>x</sub> authorized account representative for a NO<sub>x</sub> budget unit shall submit written notice of certification and recertification test dates to the director and the administrator in accordance with 40 CFR 75.61, except that if a unit is not subject to an acid rain emission limitation, notification is only required to be sent to the director.

(E) Record keeping and reporting.

(1) General provisions

- (a) The NO<sub>x</sub> authorized account representative shall comply with all record keeping and reporting requirements in this rule and with the requirements of paragraph (A)(5) of rule 3745-14-02 of the Administrative Code.
- (b) If the NO<sub>x</sub> authorized account representative for a NO<sub>x</sub> budget unit subject to an acid rain emission limitation who signed and certified any submission that is made under 40 CFR Part 75, Subpart F or 40 CFR Part 75, Subpart G and which includes data and information required under this rule or 40 CFR Part 75, Subpart H is not the same person as the designated representative or the alternative designated representative for the unit under 40 CFR Part 72, then the submission shall also be signed by the designated representative or the alternative designated representative.

(2) Monitoring plans.

- (a) The owner or operator of a unit subject to an acid rain emissions limitation shall comply with the requirements of 40 CFR 75.62, except that the monitoring plan shall also include all of the information required by 40 CFR Part 75, Subpart H.
  - (b) The owner or operator of a unit that is not subject to an acid rain emissions limitation shall comply with the requirements of 40 CFR 75.62, except that the monitoring plan is only required to include the information required by 40 CFR Part 75, Subpart H.
- (3) The NO<sub>x</sub> authorized account representative shall submit an application to the administrator, United States environmental protection agency region 5 office, and the director within forty-five days after completing all initial certification or recertification tests required under paragraph (B) of this rule including the information required under 40 CFR Part 75, Subpart H.
- (4) The NO<sub>x</sub> authorized account representative shall submit quarterly reports as follows:
- (a) If a unit is subject to an acid rain emission limitation or if the owner or operator of the NO<sub>x</sub> budget unit chooses to meet the annual reporting requirements of this rule, the NO<sub>x</sub> authorized account representative shall submit a quarterly report for each calendar quarter beginning with:
    - (i) For a unit for which the owner or operator intends to apply or applies for the early reduction credit under paragraph (D) of rule 3745-14-05 of the Administrative Code, the calendar quarter that includes the date of

initial provisional certification under paragraph (B)(2)(c)(iii) or (B)(3) of this rule. Data shall be reported from the date and hour corresponding to the date and hour of provisional certification; or

- (ii) For a unit that commences operation on or before May 1, 2003 and that is not subject to paragraph (E)(4)(a)(i) of this rule, the earlier of the calendar quarter that includes the date of initial provisional certification under paragraph (B)(2)(c)(iii) or (B)(3) of this rule or, if the certification tests are not completed by May 1, 2003, the calendar quarter covering May 1, 2003 through June 30, 2003. Data shall be recorded and reported from the earlier of the date and hour corresponding to the date and hour of provisional certification or the first hour on May 1, 2003; or
  - (iii) For a unit that commences operation after May 1, 2003, the calendar quarter in which the unit commences operation. Data shall be reported from the date and hour corresponding to when the unit commenced operation.
- (b) If a NO<sub>x</sub> budget unit is not subject to an acid rain emission limitation, then the NO<sub>x</sub> authorized account representative shall either:
- (i) Meet all of the requirements of 40 CFR Part 75 related to monitoring and reporting NO<sub>x</sub> mass emissions during the entire year and meet the reporting deadlines specified in paragraph (E)(4)(a) of this rule; or
  - (ii) Submit quarterly reports covering the period May first through September thirtieth of each year and including the data described in 40 CFR 75.74(c)(6). The NO<sub>x</sub> authorized account representative shall submit such quarterly reports, beginning with:
    - (a) For a unit for which the owner or operator intends to apply or applies for early reduction credit under paragraph (D) of rule 3745-14-05 of the Administrative Code, the calendar quarter that includes the date of initial provisional certification under paragraph (B)(2)(c)(iii) or (B)(3) of this rule. Data shall be recorded and reported from the date and hour corresponding to the date and hour of provisional certification; or
    - (b) For a unit that commences operation on or before May 1, 2003 and that is not subject to paragraph (E)(4)(b)(i) of this rule, the calendar quarter covering May 1, 2003 through June 30, 2003. Data shall be recorded and reported from the earlier of the date and hour corresponding to the date and hour of initial certification under paragraph (B)(2)(c)(iii) or (B)(3) of this rule or the first hour of May 1, 2003; or

- (c) For a unit that commences operation after May 1, 2003 and during a control period, the calendar quarter in which the unit commences operation. Data shall be reported from the date and hour corresponding to when the unit commences operation; or
  - (d) For a unit that commences operation after May 1, 2003 and not during a control period, the calendar quarter covering the first control period after the unit commences operation. Data shall be recorded and reported from the earlier of the date and hour corresponding to the date and hour of initial provisional certification under paragraph (B)(2)(c)(iii) or (B)(3) of this rule or the first hour of May first of the first control period after the unit commences operation.
- (c) The NO<sub>x</sub> authorized account representative shall submit each quarterly report to the administrator within thirty days following the end of the calendar quarter covered by the report. Quarterly reports shall be submitted in the manner specified in 40 CFR Part 75, Subpart H and 40 CFR 75.64.
  - (i) For units subject to an acid rain emissions limitation, quarterly reports shall include all of the data and information required in 40 CFR Part 75, Subpart H for each NO<sub>x</sub> budget unit (or group of units using a common stack) and the data and information required in 40 CFR Part 75, Subpart G.
  - (ii) For units not subject to an acid rain emissions limitation, quarterly reports are only required to include all of the data and information required in 40 CFR Part 75, Subpart H for each NO<sub>x</sub> budget unit (or group of units using a common stack).
- (d) The NO<sub>x</sub> authorized account representative shall submit to the administrator a compliance certification in support of each quarterly report based on reasonable inquiry of those persons with primary responsibility for ensuring that all of the unit's' emissions are correctly and fully monitored. The compliance certification shall state that:
  - (i) The monitoring data submitted were recorded in accordance with the applicable requirements of this rule and 40 CFR Part 75, including the quality assurance procedures and specifications;
  - (ii) For a unit with add-on NO<sub>x</sub> emission controls and for all hours where data are substituted in accordance with 40 CFR 75.34(a)(1), the add-on emission controls were operating within the range of parameters listed in the quality assurance/quality control program under 40 CFR Part 75,

Appendix B and the substitute values do not systematically underestimate NOx emissions; and

- (iii) For a unit that is reporting on a control period basis under paragraph (E)(4)(d)(ii) of this rule, the NOx emission rate and NOx concentration values substituted for missing data under 40 CFR Part 75, Subpart D are calculated using only values from a control period and do not systematically underestimate NOx emissions.

(F) Petitions.

- (1) The NOx authorized account representative of a NOx budget unit that is subject to an acid rain emission limitation may submit a petition under 40 CFR 75.66 to the administrator requesting approval to apply an alternative to any requirement of this rule.
  - (a) Application of an alternative to any requirement of this rule shall be in accordance with this rule only to the extent that the petition is approved by the administrator in consultation with the director.
  - (b) Notwithstanding paragraph (F)(1)(a) of this rule, if the petition requests approval to apply an alternative to a requirement concerning any additional CEMS required under the common stack provisions of 40 CFR 75.72, the petition shall be governed by paragraph (F)(2) of this rule.
- (2) The NOx authorized account representative of a NOx budget unit that is not subject to an acid rain emission limitation may submit a petition under 40 CFR 75.66 to the director and the administrator requesting approval to apply an alternative to any requirement of this rule.
  - (a) The NOx authorized account representative of a NOx budget unit that is subject to an acid rain emission limitation may submit a petition under 40 CFR 75.66 to the director and the administrator requesting approval to apply an alternative to a requirement concerning any additional CEMS required under the common stack provisions of 40 CFR 75.72 or a NOx concentration CEMS used under 40 CFR 75.71(a)(2).
  - (b) Application of an alternative to any requirement of this rule shall be in accordance with this rule only to the extent the petition under paragraph (F)(2) of this rule is approved by both the director and the administrator.

(G) Additional requirements to provide heat input data for allocation purposes.

The owner or operator of a NOx budget unit that monitors and reports NOx mass emissions using a NOx concentration system and a flow system shall also monitor

and report heat input rate at the unit level using the procedures set forth in 40 CFR Part 75.

Promulgated Under: 119.03  
Statutory Authority: 3704.03(E)  
Rule Amplifies: 3704.03(A), 3704.03(D), 3704.03(E)  
Prior Effective Dates: 7/18/02

3745-14-09      **NOx budget opt-in units.**

- (A) A unit that is not a NOx budget unit under paragraph (C) of rule 3745-14-01 of the Administrative Code, vents all of its emissions to a stack, and is operating, may qualify, under this rule, to become a NOx budget opt-in unit. A unit that is a NOx budget unit under paragraph (C) of rule 3745-14-01 of the Administrative Code, is covered by a retired unit exemption under paragraph (D) of rule 3745-14-01 of the Administrative Code that is in effect, or is not operating is not eligible to become a NOx budget opt-in unit.
- (B) Except as otherwise provided in this chapter, a NOx budget opt-in unit shall be treated as a NOx budget unit for purposes of applying rules 3745-14-01 to 3745-14-08 and 3745-14-10 of the Administrative Code.
- (C) A unit for which an application for a NOx budget opt-in permit is submitted and not denied or withdrawn, or a NOx budget opt-in unit, located at the same source as one or more NOx budget units, shall have the same NOx authorized account representative as such NOx budget units.
- (D) Applying for a NOx budget opt-in permit.
  - (1) In order to apply for an initial NOx budget opt-in permit, the NOx authorized account representative of a unit qualified under paragraph (A) of this rule may submit the following to the director at any time, except as provided under paragraph (G)(7) of this rule:
    - (a) A complete NOx budget permit application under paragraph (C) of rule 3745-14-03 of the Administrative Code;
    - (b) A monitoring plan submitted in accordance with paragraph (E)(2) of rule 3745-14-08 of the Administrative Code; and
    - (c) A complete account certificate of representation under paragraph (D) of rule 3745-14-02 of the Administrative Code, if no NOx authorized account representative has been previously designated for the unit.
  - (2) The NOx authorized account representative of a NOx budget opt-in unit shall submit a complete NOx budget permit application under paragraph (C) of rule 3745-14-03 of the Administrative Code to renew the NOx budget opt-in permit in accordance with paragraph (B)(3) of rule 3745-14-03 of the Administrative Code and, if applicable, an updated monitoring plan in accordance with rule 3745-14-08 of the Administrative Code.

- (E) The director shall issue or deny a NOx budget opt-in permit for a unit for which an initial application for a NOx budget opt-in permit is submitted, in accordance with paragraph (A) of rule 3745-14-03 of the Administrative Code and the following:
- (1) The director shall determine, on an interim basis, the sufficiency of the monitoring plan accompanying the initial application for a NOx budget opt-in permit. A monitoring plan is sufficient, for purposes of interim review, if the plan appears to contain information demonstrating that the NOx emissions rate and heat input of the unit are monitored and reported in accordance with rule 3745-14-08 of the Administrative Code. A determination of sufficiency shall not be construed as acceptance or approval of the unit's monitoring plan.
  - (2) If the director determines that the unit's monitoring plan is sufficient under paragraph (E)(1) of this rule and after completion of monitoring system certification under rule 3745-14-08 of the Administrative Code, the NOx emissions rate and the heat input of the unit shall be monitored and reported in accordance with rule 3745-14-08 of the Administrative Code for one full control period during which per cent monitor data availability is not less than ninety per cent and during which the unit is in full compliance with any applicable state or federal emissions or emission-related requirements. Solely for purposes of applying the requirements in the prior sentence, the unit shall be treated as a NOx budget unit prior to issuance of a NOx budget opt-in permit covering the unit.
  - (3) Based on the information monitored and reported under paragraph (E)(2) of this rule, the units baseline heat rate shall be calculated as the unit's total heat input (in mmBtu) for the control period and the units baseline NOx emissions rate shall be calculated as the unit's total NOx emissions (in pounds) for the control period divided by the units baseline heat rate.
  - (4) After calculating the baseline heat input and the baseline NOx emissions rate for the unit under paragraph (E)(3) of this rule, the director shall issue a draft NOx budget opt-in permit for the unit in accordance with paragraph (A) of rule 3745-14-03 of the Administrative Code.
  - (5) Notwithstanding paragraphs (E)(1) to (E)(4) of this rule, if at any time before issuance of a draft NOx budget opt-in permit for the unit, the director determines that the unit does not qualify as a NOx budget opt-in unit under paragraph (A) of this rule, the director shall issue a draft denial of a NOx budget opt-in permit for the unit in accordance with paragraph (A) of rule 3745-14-03 of the Administrative Code.
  - (6) A NOx authorized account representative of a unit may withdraw its application for a NOx budget opt-in permit under paragraph (D) of this rule at any time prior to the issuance of the final NOx budget opt-in permit. Once the application for a NOx budget opt-in permit is withdrawn, a NOx authorized

account representative wanting to reapply shall submit a new application for a NOx budget permit under paragraph (D) of this rule.

- (7) The effective date of the initial NOx budget opt-in permit shall be May first of the first control period starting after the issuance of the initial NOx budget opt-in permit by the director. The unit shall be a NOx budget opt-in unit and a NOx budget unit as of the effective date of the initial NOx budget opt-in permit.

(F) NOx budget opt-in permit contents.

- (1) Each NOx budget opt-in permit shall contain all elements required under paragraph (C) of rule 3745-14-03 of the Administrative Code.
- (2) Each NOx budget opt-in permit is deemed to incorporate automatically the definitions of terms under paragraph (B) of rule 3745-14-01 of the Administrative Code and, upon recordation by the Administrator, under this rule and rule 3745-14-06 of the Administrative Code, every allocation, transfer, or deduction of NOx allowances to or from the compliance accounts of each NOx budget opt-in unit covered by the NOx budget opt-in permit or the overdraft account of the NOx budget source where the NOx budget opt-in unit is located.

(G) Withdrawal of opt-in units from NOx budget trading program.

- (1) To withdraw from the NOx budget trading program, the NOx authorized account representative of a NOx budget opt-in unit shall submit to the director a request to withdraw effective as of a specified date prior to May first or after September thirtieth. The submission shall be made no later than ninety days prior to the requested effective date of withdrawal.
- (2) Before a NOx budget opt-in unit covered by a request under paragraph (G)(1) of this rule may withdraw from the NOx budget trading program and the NOx budget opt-in permit may be terminated under paragraph (G)(5) of this rule, the following conditions shall be met:
  - (a) For the control period immediately before the withdrawal is to be effective, the NOx authorized account representative shall submit or shall have submitted to the director an annual compliance certification report in accordance with paragraph (A) of rule 3745-14-04 of the Administrative Code.
  - (b) If the NOx budget opt-in unit has excess emissions for the control period immediately before the withdrawal is to be effective, the Administrator shall deduct from the NOx budget opt-in unit's compliance account, or the overdraft account of the NOx budget source where the NOx budget opt-in unit is located, the full amount required under paragraph (E)(4) of rule 3745-14-06 of the Administrative Code for the control period.

- (c) After the requirements for withdrawal under paragraphs (G)(2)(a) and (G)(2)(b) of this rule are met, the administrator shall deduct from the NOx budget opt-in unit's compliance account, or the overdraft account of the NOx budget source where the NOx budget opt-in unit is located, NOx allowances equal in number to and allocated for the same or a prior control period as any NOx allowances allocated to that source under paragraph (I) of this rule for any control period for which the withdrawal is to be effective. The administrator shall close the NOx budget opt-in units compliance account and shall establish, and transfer any remaining allowances to, a new general account for the owners and operators of the NOx budget opt-in unit. The NOx authorized account representative for the NOx budget opt-in unit shall become the NOx authorized account representative for the general account.
- (3) A NOx budget opt-in unit that withdraws from the NOx budget trading program shall comply with all requirements under the NOx budget trading program concerning all years for which such NOx budget opt-in unit was a NOx budget opt-in unit, even if such requirements arise or shall be complied with after the withdrawal takes effect.
- (4) Notification.
  - (a) After the requirements for withdrawal under paragraphs (G)(1), (G)(2) and (G)(3) of this rule are met, the director shall issue a notification to the NOx authorized account representative of the NOx budget opt-in unit of the acceptance of the withdrawal of the NOx budget opt-in unit as of a specified effective date that is after such requirements have been met and that is prior to May first or after September thirtieth.
  - (b) If the requirements for withdrawal under paragraphs (G)(1), (G)(2) and (G)(3) of this rule are not met, the director shall issue a notification to the NOx authorized account representative of the NOx budget opt-in unit that the NOx budget opt-in units request to withdraw is denied. If the NOx budget opt-in units request to withdraw is denied, the NOx budget opt-in unit shall remain subject to the requirements for a NOx budget opt-in unit.
- (5) After the director issues a notification under paragraph (G)(4)(a) of this rule that the requirements for withdrawal have been met, the director shall revise the NOx budget permit covering the NOx budget opt-in unit to terminate the NOx budget opt-in permit as of the effective date specified under paragraph (G)(4)(a) of this rule. A NOx budget opt-in unit shall continue to be a NOx budget opt-in unit until the effective date of the termination.

- (6) If the director denies the NOx budget opt-in unit's request to withdraw, the NOx authorized account representative may submit another request to withdraw in accordance with paragraphs (G)(1) and (G)(2) of this rule.
- (7) Once a NOx budget opt-in unit withdraws from the NOx budget trading program and its NOx budget opt-in permit is terminated under this rule, the NOx authorized account representative may not submit another application for a NOx budget opt-in permit under paragraph (D) of this rule for the unit prior to the date that is two years after the date on which the terminated NOx budget opt-in permit became effective.

(H) Change in regulatory status of NOx budget opt-in units.

- (1) When a NOx budget opt-in unit becomes a NOx budget unit under paragraph (C) of rule 3745-14-01 of the Administrative Code, the NOx authorized account representative shall notify in writing the director and the administrator of such change in the NOx budget opt-in units regulatory status, within thirty days of such change.
- (2) Director's and administrator's action.
  - (a) When the NOx budget opt-in unit becomes a NOx budget unit, the director shall revise the NOx budget opt-in unit's NOx budget opt-in permit to meet the requirements of a NOx budget permit under paragraph (D) of rule 3745-14-03 of the Administrative Code as of an effective date that is the date on which such NOx budget opt-in unit becomes a NOx budget unit.
  - (b) The administrator shall deduct from the compliance account for the NOx budget unit under paragraph (H)(2)(a) of this rule, or the overdraft account of the NOx budget source where the unit is located, NOx allowances equal in number to and allocated for the same or a prior control period as:
    - (i) Any NOx allowances allocated to the NOx budget unit (as a NOx budget opt-in unit) under paragraph (I) of this rule for any control period after the last control period during which the unit's NOx budget opt-in permit was effective; and
    - (ii) If the effective date of the NOx budget permit revision under paragraph (H)(2)(a) of this rule is during a control period, the NOx allowances allocated to the NOx budget unit (as a NOx budget opt-in unit) under paragraph (I) of this rule for the control period multiplied by the ratio of the number of days, in the control period, starting with the effective date of the permit revision under paragraph (H)(2)(a) of this rule, divided by the total number of days in the control period.

- (c) The NO<sub>x</sub> authorized account representative shall ensure that the compliance account of the NO<sub>x</sub> budget unit under paragraph (H)(2)(a) of this rule, or the overdraft account of the NO<sub>x</sub> budget source where the unit is located, includes the NO<sub>x</sub> allowances necessary for completion of the deduction under paragraph (H)(2)(b) of this rule. If the compliance account or overdraft account does not contain sufficient NO<sub>x</sub> allowances, the administrator shall deduct the required number of NO<sub>x</sub> allowances, regardless of the control period for which they were allocated, whenever NO<sub>x</sub> allowances are recorded in either account.
- (i) For every control period during which the NO<sub>x</sub> budget permit revised under paragraph (H)(2)(a) of this rule is effective, the NO<sub>x</sub> budget unit under paragraph (H)(2)(a) of this rule shall be treated, solely for purposes of NO<sub>x</sub> allowance allocations under paragraph (C) of rule 3745-14-05 of the Administrative Code, as a unit that commenced operation on the effective date of the NO<sub>x</sub> budget permit revision under paragraph (H)(2)(a) of this rule and shall be allocated NO<sub>x</sub> allowances under paragraph (C) of rule 3745-14-05 of the Administrative Code.
- (ii) Notwithstanding paragraph (H)(2)(c)(i) of this rule, if the effective date of the NO<sub>x</sub> budget permit revision under paragraph (H)(2)(a) of this rule is during a control period, the following number of NO<sub>x</sub> allowances shall be allocated, under paragraph (C) of rule 3745-14-05 of the Administrative Code, to the NO<sub>x</sub> budget unit under paragraph (H)(2)(a) of this rule for the control period: the number of NO<sub>x</sub> allowances otherwise allocated to the NO<sub>x</sub> budget unit under paragraph (C) of rule 3745-14-05 of the Administrative Code for the control period multiplied by the ratio of the number of days in the control period, starting with the effective date of the permit revision under paragraph (H)(2)(a) of this rule, divided by the total number of days in the control period.
- (d) When the NO<sub>x</sub> authorized account representative of a NO<sub>x</sub> budget opt-in unit does not renew its NO<sub>x</sub> budget opt-in permit under paragraph (D)(2) of this rule, the administrator shall deduct from the NO<sub>x</sub> budget opt-in units compliance account, or the overdraft account of the NO<sub>x</sub> budget source where the NO<sub>x</sub> budget opt-in unit is located, NO<sub>x</sub> allowances equal in number to and allocated for the same or a prior control period as any NO<sub>x</sub> allowances allocated to the NO<sub>x</sub> budget opt-in unit under paragraph (I) of this rule for any control period after the last control period for which the NO<sub>x</sub> budget opt-in permit is effective. The NO<sub>x</sub> authorized account representative shall ensure that the NO<sub>x</sub> budget opt-in source's compliance account or the overdraft account of the NO<sub>x</sub> budget source where the NO<sub>x</sub> budget opt-in unit is located includes the NO<sub>x</sub> allowances necessary for completion of such deduction. If the compliance account or overdraft account does not contain sufficient NO<sub>x</sub> allowances, the administrator shall

deduct the required number of NOx allowances, regardless of the control period for which they were allocated, whenever NOx allowances are recorded in either account.

- (e) After the deduction under paragraph (H)(2)(d) of this rule is completed, the administrator shall close the NOx budget opt-in units compliance account. If any NOx allowances remain in the compliance account after completion of such deduction and any deduction under paragraph (E) of rule 3745-14-06 of the Administrative Code, the administrator shall close the NOx budget opt-in unit's compliance account and shall establish, and transfer any remaining allowances to, a new general account for the owners and operators of the NOx budget opt-in unit. The NOx authorized account representative for the NOx budget opt-in unit shall become the NOx authorized account representative for the general account.

(I) NOx allowance allocations to opt-in units.

(1) NOx allowance allocation.

- (a) By April first immediately before the first control period for which the NOx budget opt-in permit is effective, the director shall allocate NOx allowances to the NOx budget opt-in unit and submit to the administrator the allocation for the control period in accordance with paragraph (I)(2) of this rule.
  - (b) By no later than April first, after the first control period for which the NOx budget opt-in permit is in effect, and April first of each year thereafter, the director shall allocate NOx allowances to the NOx budget opt-in unit, and submit to the administrator allocations for the next control period, in accordance with paragraph (I)(2) of this rule.
- (2) For each control period for which the NOx budget opt-in unit has an approved NOx budget opt-in permit, the NOx budget opt-in unit shall be allocated NOx allowances in accordance with the following procedures:
- (a) The heat input (in mmBtu) used for calculating NOx allowance allocations shall be the lesser of:
    - (i) The NOx budget opt-in unit's baseline heat input determined pursuant to paragraph (E)(3) of this rule; or
    - (ii) The NOx budget opt-in unit's heat input, as determined in accordance with rule 3745-14-08 of the Administrative Code, for the control period in the year prior to the year of the control period for which the NOx allocations are being calculated.

- (b) The director shall allocate NO<sub>x</sub> allowances to the NO<sub>x</sub> budget opt-in unit in an amount equaling the heat input (in mmBtu) determined under paragraph (I)(2)(a) of this rule multiplied by the lesser of:
  - (i) The NO<sub>x</sub> budget opt-in units baseline NO<sub>x</sub> emissions rate (in lb/mmBtu) determined pursuant to paragraph (E)(3) of this rule; or
  - (ii) The most stringent state or federal NO<sub>x</sub> emissions limitation applicable to the NO<sub>x</sub> budget opt-in unit during the control period.

3745-14-11 **Portland cement kilns.**

[For dates of non-regulatory government publications, publications of recognized organizations and associations, federal rules, and federal statutory provisions referenced in this rule, see the "Incorporation by Reference" section at the end of rule 3745-14-01 of the Administrative Code.]

(A) The requirements of this rule shall apply only to following types of portland cement kilns with process rates of at least that indicated below:

(1) For long dry kilns, twelve tons per hour;

(2) For long wet kilns, ten tons per hour;

(3) For preheater kilns, sixteen tons per hour; and

(4) For precalciner and preheater/precalciner kilns, twenty-two tons per hour.

(B) After April 30, 2004, an owner or operator of any portland cement kiln subject to this rule shall not operate the kiln during May first through September thirtieth unless the kiln has installed and operates during May first through September thirtieth with low-NO<sub>x</sub> burners, mid-kiln system firing, or alternative control techniques, subject to approval by the administrator, that achieve at least the same emissions decreases as low-NO<sub>x</sub> burners or mid-kiln system firing.

(C) Reporting, monitoring and record keeping requirements.

(1) Any owner or operator subject to the requirements of paragraph (B) of this rule shall comply with the following requirements:

(a) By May 1, 2004, submit to the director and administrator the identification number and type of each unit subject to the rule, the name and address of the plant where the unit is located, and the name and telephone number of the person responsible for demonstrating the compliance of the unit with this rule; and

(b) Submit a report documenting for each unit the total NO<sub>x</sub> emissions from May first through September thirtieth of each year to the director and administrator by October thirty-first of each year, beginning in 2004.

(2) Any owner or operator of a unit subject to paragraph (B) of this rule shall complete an initial performance test and subsequent annual testing consistent with the requirements of Methods 1, 2, 3 and 4 of 40 CFR Part 60, Appendix A and Method 7, 7A, 7C, 7D, or 7E of 40 CFR Part 60.

(3) Any owner or operator of a unit subject to paragraph (B) of this rule shall produce and maintain records which shall include, but are not limited to:

- (a) The emissions, in pounds of NO<sub>x</sub> per ton of clinker produced from each affected cement kiln;
- (b) The date, time and duration of any startup, shutdown or malfunction in the operation of any of the cement kilns or the emissions monitoring equipment;
- (c) The results of any performance testing; and
- (d) Daily cement kiln production records.

(4) All records required to be produced or maintained shall be retained on site for a minimum of two years and be made available to the director or administrator upon request.

(D) The requirements of this rule shall not apply to the following periods of operation:

- (1) Start-up and shutdown periods and periods of malfunction, not to exceed thirty-six consecutive hours; and
- (2) Regularly scheduled maintenance activities.

Effective: 07/19/2008

3745-14-12      **Stationary internal combustion engines.**

[Comment: For dates of non-regulatory government publications, publications of recognized organizations and associations, federal rules, and federal statutory provisions referenced in this rule, see the "Incorporation by Reference" section at the end of rule 3745-14-01 of the Administrative Code.]

(A) The requirements of this rule apply to the owner or operator of any large NO<sub>x</sub> SIP call engine.

(B) Compliance plan.

(1) After May 1, 2007, an owner or operator of a large NO<sub>x</sub> SIP call engine shall not operate the engine in the 2007 control period or any subsequent year's control period unless the owner or operator complies with the requirements of a compliance plan which meets the provisions listed below.

(a) The compliance plan shall be approved by the director.

(b) The compliance plan shall demonstrate enforceable emission reductions from one or more stationary internal combustion engines equal to or greater than the facility seasonal NO<sub>x</sub> 2007 tonnage reduction.

(c) The compliance plan may cover some or all engines at an individual facility or at several facilities or at all facilities in the state of Ohio that are in control of the same owner/operator.

(d) The compliance plan shall be submitted to the director by May 1, 2006.

(e) The compliance plan may include credit for decreases in NO<sub>x</sub> emissions from large NO<sub>x</sub> SIP call engines in the state of Ohio due to NO<sub>x</sub> control equipment. Credit may also be included for decreases in NO<sub>x</sub> emissions from other engines in the state of Ohio due to NO<sub>x</sub> control equipment not reflected in the 2007 base NO<sub>x</sub> emissions in the NO<sub>x</sub> SIP call engine inventory.

(f) The compliance plan shall include the following items:

(i) List of engines subject to the plan, including the engine's manufacturer, model, facility location address, and facility identification number;

(ii) The projected control period hours of operation for each engine and supporting documentation;

(iii) A description of the NO<sub>x</sub> emissions control installed, or to be installed, on each engine and documentation to support the projected NO<sub>x</sub> emission rates;

- (iv) The past and projected NO<sub>x</sub> emission rates for each affected engine in grams per brake horsepower-hour;
  - (v) A numerical demonstration that the emission reductions obtained from all engines included under the plan will be equivalent to or greater than the owner/operator's facility seasonal NO<sub>x</sub> 2007 tonnage reduction, based on the difference between the past NO<sub>x</sub> emission rate and the projected NO<sub>x</sub> emission rate multiplied by the projected operating hours for each affected engine, and taking into account any credit under paragraph (B)(1)(e) of this rule; and
  - (vi) Provisions for monitoring, reporting and recordkeeping for each affected engine.
- (2) The projected NO<sub>x</sub> emission rate in grams per brake horsepower-hour for each affected engine shall be included in a federally enforceable permit.
- (C) Any owner or operator subject to the requirements of paragraph (B) of this rule shall comply with the following requirements:
- (1) Monitoring requirements:
- (a) Complete an initial performance test consistent with the requirements of 40 CFR Part 60, Appendix A, following installation of emission controls required to achieve the emission rate limit specified in paragraph (B)(2) of this rule.
  - (b) Perform periodic monitoring sufficient to yield reliable data from the relevant time period that is representative of a source's compliance with the emission rate limit specified in paragraph (B)(2) of this rule. Such periodic monitoring may include either:
    - (i) Performance tests consistent with the requirements of 40 CFR Part 60, Appendix A, or portable monitors using ASTM D6522-00(2005);
    - (ii) A parametric monitoring program that specifies operating parameters, and their ranges, that will provide reasonable assurance that each engine's emissions are consistent with the requirements of paragraph (B)(2) of this rule;
    - (iii) A predictive emissions measurement system that relies on automated data collection from instruments; or
    - (iv) A continuous emission monitoring system that complies with 40 CFR Part 60 or 40 CFR Part 75.
- (2) Record keeping requirements:

- (a) Maintain all records necessary to demonstrate compliance with the requirements of this rule for a period of two calendar years at the plant at which the subject engine is located. The records shall be made available to the director and administrator upon request.
- (b) For each engine subject to the requirements of this rule, the owner or operator shall maintain records of:
  - (i) Identification and location of each engine subject to the requirements of this rule:
  - (ii) Calendar date of record:
  - (iii) The number of hours the unit is operated during each control period compared to the projected operating hours:
  - (iv) Type and quantity of fuel used: and
  - (v) The results of all compliance tests.
- (3) Reporting requirements.

Any owner or operator subject to the requirements of this rule shall submit results of all compliance tests to the director.

## **Chapter 3745-15: General Provisions on Air Pollution Control**

*Contact:* Mike Ahern 614-644-3631  
Mike.Ahern@EPA.State.Oh.US

3745-15-01      **Definitions.**

[Comment: For dates of non-regulatory government publications, publications of recognized organizations and associations, federal rules, and federal statutory provisions referenced in this rule, see the last paragraph of this rule titled "Incorporation by reference."]

As used in all air pollution rules, except as may be otherwise specifically provided.

- (A) "Act" means Chapters 3704. and 3745. of the Revised Code.
- (B) "Agency", "Ohio EPA", "OEPA" or "board", means the Ohio environmental protection agency or its director as the context or other law or rules may require.
- (C) "Air pollutant" or "air contaminant" means particulate matter, dust, fumes, gas, mist, smoke, vapor or odorous substances, or any combination thereof.
- (D) "Air pollution" means the presence in the ambient air of one or more air pollutants or any combination thereof in sufficient quantity and of such characteristics and duration as is or threatens to be injurious to human health or welfare, plant or animal life, or property, or which interferes with the comfortable enjoyment of life or property.
- (E) "Ambient air" means that portion of the atmosphere outside of buildings and other enclosures, stacks, or ducts which surrounds human, plant, or animal life, or property.
- (F) "Ambient air quality standards" means ambient air quality goals expressed numerically and intended to be attained and maintained in a stated time through the application of appropriate preventive or control measures.
- (G) "ASME" means the "American Society of Mechanical Engineers".
- (H) "ASTM" means the "American Society for Testing and Materials".
- (I) "Area" means the state of Ohio.
- (J) "Clean Air Act" or "CAA" means the federal Clean Air Act as amended November 15, 1990; 42 USC 7401 to 7671q.
- (K) "Control equipment" means any device or contrivance which prevents or reduces emissions.
- (L) "Commenced" means that an owner or operator has undertaken a continuous program of construction or modification or has entered into a binding contractual obligation to undertake and complete, within a reasonable time, a continuous program of construction or modification.

- (M) "Director" means the director of the Ohio environmental protection agency.
- (N) "Effective date of these rules" means February 15, 1972, notwithstanding any amendment, rescission or renumbering of any of these rules.
- (O) "Emission" means the act of releasing or discharging an air pollutant into the ambient air from any source.
- (P) "Existing source" means any source the construction of which was commenced prior to February 15, 1972.
- (Q) "Facility" means any building, structure, installation, operation, or combination thereof which contains one or more stationary source(s) of air contaminants.
- (R) "Modification" means any physical change in, or change in the method of operation of, an existing source or a new source that increases the amount of any air pollutant emitted by such source or which results in the emission of any air pollutant not previously emitted from the same location.
- (S) "New source" means any source the construction or modification of which is commenced on or after February 15, 1972.
- (T) "Non-methane hydrocarbon" means any chemical compound containing carbon but excluding: carbon monoxide, carbon dioxide, carbides, metallic carbonates, ammonium carbonate, and methane.
- (U) "Owner or operator" means any person who owns, leases, controls, operates or supervises a facility, an emission source, or air pollution control equipment.
- (V) "Person" means the state or any agency thereof, any political subdivision, or any agency thereof, public or private corporation, individual, partnership, or other entity.
- (W) "Region" means an air quality control region as designated by the secretary of health, education and welfare, or by the administrator, United States environmental protection agency, or by the director.
- (X) "Source" means any building, structure, facility, operation, installation, other physical facility, or real or personal property that emits or may emit any air pollutant.
- (Y) "Source operation" means the last operation preceding emission which operation:
- (1) Results in the separation of the air contaminant from the process materials or in the conversion of the process materials into air contaminants, as in the case of combustion fuel; and
  - (2) Is not an air pollution abatement operation.

(Z) "Stack" means any chimney, flue, conduit, or duct arranged to conduct emissions to the ambient air.

(AA) "Standard conditions" means a dry gas temperature of seventy degrees Fahrenheit (21.1 degrees centigrade) and a gas pressure of 14.7 pounds per square inch absolute (seven hundred sixty millimeters mercury).

(BB) Incorporation by reference. This chapter includes references to certain matter or materials. The text of the incorporated materials is not included in the regulations contained in this chapter. The materials are hereby made a part of the regulations in this chapter. For materials subject to change, only the specific version specified in the regulation are incorporated. Material is incorporated as it exists on the effective date of this rule. Except for subsequent annual publication of existing (unmodified) Code of Federal Regulation compilations, any amendment or revision to a referenced document is not incorporated unless and until this rule as been amended to specify the new dates.

(1) Availability. The materials incorporated by reference are available as follows:

- (a) American society of mechanical engineers (ASME). Information and copies of ASTM documents may be obtained by writing to: "ASME International, P.O. Box 2300, Fairfield, NJ 07007-2300." ASME documents are also available for purchase at [www.asme.org](http://www.asme.org). ASME documents are also available for inspection and copying at most public libraries and "The State Library of Ohio."
- (b) American society for testing materials (ASTM). Information and copies of ASTM documents may be obtained by writing to: "ASTM International, 100 Bar Harbor Drive, P.O. Box C700, West Conshohocken, Pennsylvania 19426- 2959." ASTM documents are also available for purchase at [www.astm.org](http://www.astm.org). ASTM documents are also available for inspection and copying at most public libraries and "The State Library of Ohio."
- (c) Code of Federal Regulations (CFR). Information and copies may be obtained by writing to: "Superintendent of Documents, Attn: New Orders, PO Box 371954, Pittsburgh, PA 15250-7954." The full text of the CFR is also available in electronic format at <http://www.gpoaccess.gov/cfr/index.html>. The CFR compilations are also available for inspection and copying at most public libraries and "The State Library of Ohio."
- (d) United States Code (USC). Information and copies may be obtained by writing to: "Superintendent of Documents, Attn: New Orders, PO Box 371954, Pittsburgh, PA 15250-7954." The full text of the United States Code is also available in electronic format at <http://www4.law.cornell.edu/uscode/>. The U.S.C compilations are also available for inspection and copying at most public libraries and "The State Library of Ohio."

(2) Incorporated materials.

- (a) 40 CFR Part 302; "Designation, reportable quantities, and notification;" as published in the July 1, 2006 Code of Federal Regulations.
- (b) 40 CFR Part 355; "Emergency Planning and Notification;" as published in the July 1, 2006 Code of Federal Regulations.
- (c) 42 USC 7401 to 7671q; "The Public Health and Welfare-Air Pollution Prevention and Control;" published January 19, 2004 in Supplement III of the 2000 Edition of the United States Code; as amended January 23, 2004, Pub. L. 108-199, sec. 425(a) and sec. 428(b), 118 Stat. 417-418.
- (d) Section 112(b) of the Clean Air Act; contained in 42 USC 7412; "Hazardous air pollutants- List of pollutants;" published January 19, 2004 in Supplement III of the 2000 Edition of the United States Code.

3745-15-02      **Purpose.**

It is the purpose of all air pollution rules to set forth such requirements as shall be necessary to secure and maintain those levels of air quality which are consistent with the protection of health and the prevention of injury to plant, animal life, and property in the state of Ohio, and to provide for the comfortable enjoyment of the natural attractions of the state to the greatest extent practical. All regulations of the director shall be construed in such manner as to effectuate this purpose.

**Submission of emission information.**

(A) The director may require the keeping and periodic submission of records and reports, including but not limited to, information on air contaminants, emissions or fuel from any or all potential sources for purposes of maintaining an air pollution emission inventory or any other reasonable purpose as determined by the director. Such information shall be recorded, compiled, and submitted in a manner and form prescribed by the director.

(B) Periodic reporting.

(1) Requirements under paragraph (C) of this rule shall be applicable to an owner or operator of a facility:

(a) Issued a permit-to-install, pursuant to Chapter 3745-31 of the Administrative Code, or

(b) Issued a federally enforceable permit-to-install and operate (FEPTIO), pursuant to Chapter 3745-31 of the Administrative Code; however, this requirement shall only be applicable to the terms and conditions specifically identified in the FEPTIO as subject to reporting under paragraph (C) of this rule, or

(c) Issued a permit-to-install and operate (PTIO), pursuant to Chapter 3745-31 of the Administrative Code, for a source for which a Title V permit is subsequently issued, pursuant to Chapter 3745-77 of the Administrative Code.

(2) Requirements under paragraph (D) of this rule shall be applicable to an owner or operator of a facility issued a permit-to-install and operate (PTIO) or a federally enforceable permit-to-install and operate (FEPTIO), pursuant to Chapter 3745-31 of the Administrative Code, for a source not subject to the requirements of Chapter 3745-77 of the Administrative Code.

(C) Quarterly report.

(1) Pursuant to paragraph (A) of this rule, each permit described under paragraph (B)(1) of this rule shall require the owner or operator submit a quarterly report of:

(a) Any deviations from emission limitations, operational restrictions, and control device operating parameter limitations that have been detected by the testing, monitoring, and recordkeeping requirements specified in such permit;

- (b) The probable cause of such deviations; and
  - (c) Any corrective actions or preventive measures which have been or will be taken to remedy the deviations; or
  - (d) If no deviations occurred during a calendar quarter, the owner or operator shall submit a quarterly report, which states that no deviations occurred during that quarter.
- (2) For the purposes of this rule, quarterly shall mean January to March, April to June, July to September, and October to December. Each report shall be submitted by the thirty-first of January, thirtieth of April, thirty-first of July, and thirty-first of October of each year, or any other variation of a continuous quarterly period the director approves, and shall cover the previous calendar quarter.

[Comment: "submitted" as used above will be considered the postmark date, if sent by United States postal service; the electronic signature date, if submitted through the Ohio environmental protection agency's electronic reporting system; or the signature date of the receipt, if hand delivered in person to the appropriate Ohio environmental protection agency district office or local air agency.]

- (3) Unless required by Chapter 3745-77 of the Administrative Code, quarterly reports may exclude the requirements of paragraphs (C)(1)(a) to (C)(1)(c) of this rule for reported deviations resulting from malfunctions reported in accordance with rule 3745-15-06 of the Administrative Code. In lieu of the requirements of paragraphs (C)(1)(a) to (C)(1)(c), the owner or operator shall identify in the quarterly report the date the malfunction occurred and the form in which it was reported (e.g., telephone, e-mail, written).
- (4) Reports submitted in accordance with Chapter 3745-77 of the Administrative Code, for sources subject to Chapter 3745-77 of the Administrative Code, shall be deemed to meet the requirements for quarterly reporting under this rule if the requirements contained in paragraph (C) of this rule are satisfied in the reporting required under Chapter 3745-77 of the Administrative Code. The owner or operator shall identify in any report submitted under the requirements of Chapter 3745-77 of the Administrative Code when such report is being submitted in accordance with this paragraph.
- (D) Permit evaluation report.
- (1) Pursuant to paragraph (A) of this rule, each permit described under paragraph (B)(2) of this rule shall require the owner or operator to submit a permit evaluation report, in a form and manner prescribed by the director, which identifies, at a minimum:

- (a) A list of all air contaminant sources that have been issued a permit described under paragraph (B)(2) of this rule;
- (b) Additional information or corrections to air contaminant sources identified in the permit evaluation permit;
- (c) Any deviations from emission limitations, operational restrictions, and control device operating parameter limitations that have been detected by the testing, monitoring, and recordkeeping requirements specified in such permit;
- (d) The probable cause of such deviations; and
- (e) Any corrective actions or preventive measures which have been or will be taken to remedy the deviations; or
- (f) If no deviations occurred during the reporting period, the owner or operator shall identify in the permit evaluation report that no deviations occurred during that reporting period.

(2) Reporting period.

- (a) The permit evaluation report shall be submitted annually, at a minimum, and cover a reporting period of no more than twelve-months for each air contaminant source. The first permit, described under paragraph (B)(2) of this rule, issued to an owner or operator shall identify the reporting period for the covered air contaminant source. This reporting period shall be applied to all subsequent air contaminant sources issued permits described under paragraph (B)(2) of this rule. The four possible reporting periods, and subsequent permit evaluation report due dates are:
  - (i) January first to December thirty-first, report due by February fifteenth.
  - (ii) April first to March thirty-first, report due by May fifteenth.
  - (iii) July first to June thirtieth, report due by August fifteenth.
  - (iv) October first to September thirtieth, report due by November fifteenth.
- (b) The permit evaluation report shall be submitted to the appropriate Ohio environmental protection agency district office or local air agency by the due date specified.

[Comment: "submitted" as used above will be considered the postmark date, if sent by United States postal service; the electronic signature date, if submitted through the Ohio environmental protection agency's electronic

reporting system; or the signature date of the receipt, if hand delivered in person to the appropriate Ohio environmental protection agency district office or local air agency.]

- (c) The Ohio environmental protection agency shall provide opportunity for an owner or operator to request a change in the permit evaluation reporting period and due date through procedures established by the director.
- (3) Unless required by Chapter 3745-77 of the Administrative Code, permit evaluation reports may exclude the requirements of paragraphs (D)(1)(c) to (D)(1)(e) of this rule for reported deviations resulting from malfunctions reported in accordance with rule 3745-15-06 of the Administrative Code. In lieu of the requirements of paragraphs (D)(1)(c) to (D)(1)(e), the owner or operator shall identify in the permit evaluation report the date the malfunction occurred and the form in which it was reported (e.g., telephone, e-mail, written).

**Measurement of emissions of air contaminants.**

- (A) The director may require any persons responsible for emission of air contaminants to make or have made tests to determine the emission of air contaminants from any source whenever the director has reason to believe that an emission in excess of that allowed by these rules is occurring or has occurred from time to time. All tests shall be conducted by qualified persons and the results calculated in accordance with test procedures approved by the director. The owner or the owner's authorized agent shall notify the director in writing of the time, place, and person who will conduct the tests and the director or the director's authorized representative shall be permitted to witness the tests. The director shall be furnished with a written report of test results no later than thirty days after completion of the tests and such report shall be signed by the person or persons responsible for the tests. The director may reject the results of any compliance test which is not performed in accordance with approved test procedures or which is performed without the advance notice and information required by this paragraph.
- (B) The director may conduct tests of emissions of air contaminants from any source. Upon request of the director the person responsible for the source to be tested shall provide necessary holes in stacks or ducts and such other safe and proper sampling and testing facilities exclusive of instruments and sensing devices as may be necessary for proper determination of the emission of air contaminants.
- (C) The director may install, or require the owner or operator of any source of air contamination, at the owner or operator's expense, to install, use, and maintain monitoring equipment, and to sample the owner or operator's emissions in accordance with methods approved by the director.

[Comment: For dates of non-regulatory government publications, publications of recognized organizations and associations, federal rules, and federal statutory provisions referenced in this rule, see the last paragraph in rule 3745-15-01 of the Administrative Code titled "Incorporation by reference."]

(A) For purposes of this rule, the following definitions apply:

- (1) "Actual emissions" means the amount of emissions an air contaminant source actually emits on a calendar day or calendar year basis, whichever is applicable.
- (2) "Air contaminant" means particulate matter, dust, fumes, gas, mist, radionuclides, smoke, vapor, or odorous substances, or any combination thereof, but does not include water by itself.
- (3) "Air contaminant source" or "source" means each separate operation or activity that results or may result in the emission of any air contaminant.
- (4) "Air pollution control equipment" shall mean control equipment which is not, aside from air pollution control requirements, vital to production of the normal product of the source or to its normal operation. Equipment is vital if the source could not produce its normal product or operate without it.
- (5) "Hazardous air pollutant" means any pollutant listed pursuant to Section 112(b) of the CAA.
- (6) "Potential to emit" or "potential emissions" shall mean the amount of emissions of an air contaminant which would be emitted from a source during a twenty-four hour calendar day or calendar year basis, whichever is applicable, if that source were operated without the use of air pollution control equipment unless such control equipment is, aside from air pollution control requirements, necessary for the facility to produce its normal product or is integral to the normal operation of the source. Potential emissions shall be based on maximum rated capacity.
- (7) "Similar sources" are:
  - (a) Sources for which construction and operation are essentially the same, although, the capacity of each source is not necessarily the same;
  - (b) Sources in which the physical or chemical process occurring in each source is essentially the same; and
  - (c) Sources from which essentially the same air pollutants are emitted.

- (B) Except as provided in paragraphs (C), (D) and (H) of this rule and division (B) of section 3704.011 of the Revised Code, any air contaminant source is exempt from Chapter 3704. of the Revised Code and rules adopted thereunder, unless the potential emissions of any one of the following exceeds ten pounds per day: particulate matter, sulfur dioxide, nitrogen oxides, organic compounds, carbon monoxide, lead or any other air contaminant.
- (C) The exemption contained in paragraph (B) of this rule shall not apply to a source if any of the following applies:
- (1) A requirement established under the CAA or regulations adopted under it limits the emissions of an air pollutant from the source to less than ten pounds per day or restricts the operation of the source in a manner equivalent to an emission limit of less than ten pounds per day;
  - (2) The source is subject to an emission limit adopted by the director to achieve and maintain the national ambient air quality standards or a rule adopted by the director to protect public health and welfare limits the emissions from the source to less than ten pounds per day of an air pollutant or restricts the operation of the source in a manner equivalent to an emission limit of less than ten pounds per day;
  - (3) The source emits radionuclides;
  - (4) The source alone or in combination with similar sources at the same facility, would result in potential emissions of any air pollutant in excess of twenty-five tons per year. In determining the total emissions from a group of similar sources, an enforceable permit emission limit shall be used in lieu of the potential to emit for such source or sources; or
  - (5) The source emits more than one ton per year of any hazardous air pollutants or combination of hazardous air pollutants.
- (D) The exemption provided in division (A) of section 3704.011 of the Revised Code does not apply to an air contaminant source having potential emissions greater than ten pounds per day (or one ton per year of one or more hazardous air pollutants) of any air contaminant unless the owner or operator of the source maintains records that are adequate to demonstrate that actual emissions from the source did not exceed ten pounds per day (or one ton per year of one or more hazardous air pollutants) and unless that source is not subject to the limitations specified in paragraph (C) of this rule.
- (E) In order to verify that actual emissions from a source described in paragraph (D) of this rule complied with the requirements of divisions (A) and (C) of section 3704.011 of the Revised Code during its operations, the owner or operator of the

source shall maintain records that show that emissions of any air contaminant from the source did not exceed ten pounds per day on each day the source emitted air contaminants, and that the source in any one year did not emit more than one ton of hazardous air pollutants as defined in division (1) of section 3704.03 of the Revised Code, and that the emissions from the source, in combination with similar air contaminant sources at the same facility, did not result in potential emissions of any air contaminant from the facility in excess of twenty-five tons during the preceding calendar year. Records consisting of one or more of the following types of information, if applicable, shall be adequate to make that demonstration, so long as the information clearly demonstrates that the owner or operator is operating in accordance with this rule:

- (1) A narrative description of how the emissions from the source were determined and maintained at or below the daily exemption level, and, for emissions of hazardous air pollutants, at or below the annual exemption level;
  - (2) A description of the air pollution control equipment used on the source and a statement that the source is not capable of operating without that pollution control equipment functioning;
  - (3) If air pollution control equipment is used, a copy of any report of the results of any emission test that was conducted following Ohio EPA approved methods, if applicable, or any other emission evaluation;
  - (4) A description of all production constraints required for the source to comply with the exemption levels;
  - (5) Records of actual operations that demonstrate that the daily and annual emissions from the source were maintained at or below the exemption level by the use of the necessary production constraints or pollution control equipment;
  - (6) A list of all similar sources at the same facility and a statement for each such source of the annual potential emissions. Compliance with paragraph (C)(4) of this rule shall be demonstrated; and
  - (7) A summation of the total emissions from each exempt or similar source, a summation of stated potential emissions from all sources identified in paragraph (E)(6) of this rule, and a written certification by the owner or operator that the applicable exemption levels were complied with.
- (F) Records developed under paragraph (E) of this rule shall be maintained by the owner of the source at a location at the facility for a period of two years following the recording of the information, and shall be provided to the director upon his request or upon the request of his authorized representative.

- (G) The owner or operator of such an exempt source not subject to paragraph (E) of this rule, upon the request of the director or his authorized representative concerning such source, shall provide information that is adequate to demonstrate that the source qualifies for the exemption.
- (H) Nothing in this rule shall be construed to exempt any source from requirements of the CAA, including its being considered for purposes of determining whether a facility constitutes a major source or is otherwise regulated under Chapter 3745-77 of the Administrative Code or any requirement to identify insignificant activities and emissions levels in a title V permit application. In addition, this rule does not exempt any source that is a part of a major new source or major modification that would be required to meet any requirements under applicable state or federal regulations.
- (I) If a source exempt under this rule should at any time exceed the exempt emission levels provided in paragraphs (B) and (D) of this rule, the owner or operator of such source shall immediately submit a written report describing the nature and cause of the exceedance. Upon request by the director, the owner or operator of such source shall submit an application for a permit to install if required by Chapter 3745-31 of the Administrative Code and an application for a permit to operate pursuant to Chapter 3745-35 or Chapter 3745-77 of the Administrative Code, as applicable.

**Malfunction of equipment; scheduled maintenance; reporting.**

- (A) Scheduled maintenance of air pollution control equipment shall be conducted according to the following:
- (1) For the purposes of this rule, maintenance of air pollution control equipment which is scheduled to prevent a malfunction which would occur within two weeks if the maintenance were not performed shall be considered to be a malfunction and shall be subject to the provisions of paragraph (B) of this rule.
  - (2) Except as otherwise indicated in paragraph (A)(3) of this rule, scheduled maintenance of air pollution control equipment, that requires the shutdown or bypassing of said equipment, must be accompanied by the shutdown of the associated air pollution sources.
  - (3) In cases where a complete source shutdown may result in damage to the air pollution sources or is otherwise impossible or impractical, the owner or operator may request authorization to continue operating the sources during the scheduled maintenance of air pollution control equipment. Any such request shall be made in a written report at least two weeks prior to the planned shutdown of the air pollution control equipment. The director shall authorize the shutdown of the air pollution control equipment if, in his judgment, the situation justifies continued operation of the sources. Any written report submitted pursuant to this paragraph shall contain the following:
    - (a) Identification and location of the specific source for which air pollution control equipment will be taken out of service. The identification shall include the Ohio environmental protection agency permit application number;
    - (b) The expected length of time that the air pollution control equipment will be taken out of service;
    - (c) The nature and estimated quantity of emissions of air contaminants which are likely to occur during the shutdown period;
    - (d) Measures such as the use of off-shift labor and equipment that will be taken to minimize the length of the shutdown period;
    - (e) The reasons that it will be impossible or impractical to shut down the source operation during the scheduled maintenance period; and
    - (f) A demonstration that all feasible interim control measures will be taken to reduce emissions from the source during the shutdown period.

(B) Malfunctions of air pollution control equipment shall be reported as follows:

- (1) In the event that any emission source, air pollution control equipment, or related facility breaks down in such a manner as to cause the emission of air contaminants in violation of any applicable law, the person responsible for such equipment shall immediately notify the Ohio environmental protection agency district office or delegate agency of such failure or breakdown. If the malfunction continues for more than seventy-two hours, the source owner or operator shall provide a written statement to the director within two weeks of the date the malfunction occurred. The immediate notification and written statement shall include the following data:
  - (a) Identification and location of such equipment including the Ohio environmental protection agency permit application number for each air contaminant source;
  - (b) The estimated or actual duration of breakdown;
  - (c) The nature and estimated quantity of air contaminants which have been or may be emitted into the ambient air during the breakdown period;
  - (d) Statements demonstrating that:
    - (i) Shutdown or reduction of source operation during the breakdown period will be or would have been impossible or impractical;
    - (ii) The estimated breakdown period will be or was reasonable in duration based on installation or repair time, delivery dates of equipment, replacement parts, or materials, or current unavailability of essential equipment, parts, or materials;
    - (iii) Available alternative operating procedures and interim control measures will be or have been implemented during the breakdown period to reduce adverse effects on public health or welfare; and
    - (iv) All actions necessary and required by any applicable preventive maintenance and malfunction abatement plan will be or have been implemented.
- (2) The Ohio environmental protection agency district office or delegate agency shall be notified when the condition causing the failure or breakdown has been corrected and the equipment is again in operation. Notification of the correction of the condition causing the failure or breakdown may be given verbally if the duration of the malfunction is seventy-two hours or less. Otherwise, such notification shall be in writing.

- (3) Within two months following a failure or breakdown which exceeded seventy-two hours in duration, the owner or operator of such equipment shall prepare and submit a detailed report which identifies a program to prevent, detect and correct, as expeditiously as practicable, similar future failures or breakdowns of such equipment.
- (C) The director retains the responsibility to evaluate any report submitted pursuant to this rule. The director shall take appropriate action upon a determination that the reporting requirements of this rule have not been satisfied, that the equipment was not properly operated and maintained prior to breakdown, that shutdown of the source or operation during the period of maintenance or breakdown was or has become practicable, that the shutdown or breakdown was or has become avoidable, or was induced or prolonged in bad faith, or that the emissions endanger or tend to endanger the health or safety of the public.
- (D) If, in the judgment of the director, excessive or unduly prolonged malfunctions of any emission source, air pollution control equipment or related facility have occurred, the director may require the owner or operator of said source, equipment or related facility to prepare, submit and implement a preventive maintenance and malfunction abatement plan which is acceptable to the director. Such plan shall be designed to prevent, detect and correct malfunctions or equipment failures which could result in emissions exceeding any applicable law.
  - (1) Each preventive maintenance and malfunction abatement plan shall be in writing and specify the following:
    - (a) A comprehensive preventive maintenance program, including a description of the items or conditions that will be inspected, the frequency of these inspections or repairs, and an identification of the types and quantities of the replacement parts which will be maintained in inventory for quick replacement;
    - (b) An identification of the source and the operating outlet variables of the air pollution control equipment that will be monitored in order to detect a malfunction or failure, the normal operating range of these variables, and a description of the monitoring or surveillance procedures and of the method of informing operating personnel of any malfunction, including alarm systems, lights and/or other indicators; and
    - (c) A description of the corrective procedures that will be taken in the event of a malfunction or failure in order to achieve compliance with any applicable law as expeditiously as practicable.
  - (2) Any acceptable preventive maintenance and malfunction abatement plan shall be specified in the terms and conditions of any permit or variance issued for a source covered by such plan.

- (3) Operation and maintenance records shall be maintained by the owner or operator of the source to demonstrate that any preventive maintenance and malfunction abatement plan is fully implemented. All such records shall be maintained for a minimum of two years and shall be subject to inspection by the director or his representative upon request.

3745-15-07      **Air pollution nuisances prohibited.**

- (A) Except as provided in paragraph (B) of this rule, the emission or escape into the open air from any source or sources whatsoever, of smoke, ashes, dust, dirt, grime, acids, fumes, gases, vapors, odors, or any other substances or combinations of substances, in such manner or in such amounts as to endanger the health, safety or welfare of the public, or cause unreasonable injury or damage to property, is hereby found and declared to be a public nuisance. It shall be unlawful for any person to cause, permit or maintain any such public nuisance.
  
- (B) Those sources of odors not subject to regulation under Chapter 3745-17, 3745-18, 3745-21 or 3745-31 of the Administrative Code shall not be subject to this rule.

Effective: May 17, 1982

## **Chapter 3745-16: Stack Height Requirements**

*Contact:* Sarah VanderWielen 614-644-3632  
sara.vanderwielen@EPA.State.Oh.US

3745-16-01      **Definitions.**

[Comment: For dates of non-regulatory government publications, publications of recognized organizations and associations, federal rules, and federal statutory provisions referenced in this rule, see the "Incorporation by Reference" section at the end of this rule.]

(A) Except as otherwise provided in this rule, the definitions in rule 3745-15-01 of the Administrative Code shall apply to this chapter.

(B) A "stack in existence" means that the owner or operator had:

- (1) Begun, or caused to begin, a continuous program of physical on-site construction of the stack; or
- (2) Entered into binding agreements or contractual obligations which could not be cancelled or modified without substantial loss to the owner or operator, to undertake a program of construction of the stack within a reasonable time.

(C)

(1) "Dispersion technique" means any technique which attempts to affect the concentration of a pollutant in the ambient air by:

- (a) Using that portion of a stack which exceeds good engineering practice stack height;
- (b) Varying the rate of emission of a pollutant according to atmospheric conditions or ambient concentrations of that pollutant; or
- (c) Increasing final exhaust gas plume rise by manipulating source process parameters, exhaust gas parameters, stack parameters, or combining exhaust gases from several existing stacks into one stack, or other selective handling of exhaust gas streams so as to increase the exhaust gas plume rise.

(2) The following are excluded from the term "dispersion technique":

- (a) The reheating of a gas stream, following use of a pollution control system, for the purpose of returning the gas to the temperature at which it was originally discharged from the source or sources generating the gas stream;
- (b) The merging of exhaust gas streams where:
  - (i) The owner or operator demonstrates that the sources were originally designed and constructed with such merged gas streams;

- (ii) After July 8, 1985, such merging is part of a change in operation of the sources that includes the installation of pollution controls and is accompanied by a net reduction in the allowable emissions of a pollutant. This exclusion from the definition of "dispersion techniques" shall apply only to the emission limitation for the pollutant affected by such change in operation; or
  - (iii) Before July 8, 1985, such merging was part of a change in operation of the sources that included the installation of emissions control equipment or was carried out for sound economic or engineering reasons. Where there was an increase in the emission limitation or, in the event that no emission limitation was in existence prior to the merging, an increase in the quantity of pollutants actually emitted prior to the merging, the director shall presume that merging was significantly motivated by an intent to gain emissions credit for greater dispersion. Absent a demonstration by the owner or operator that merging was not significantly motivated by such intent, the director shall deny credit for the effects of such merging in calculating the allowable emissions for the source;
- (c) Smoke management in agricultural or silvicultural prescribed burning programs;
  - (d) Episodic restrictions on residential woodburning and open burning; or
  - (e) Techniques under paragraph (C)(1)(c) of this rule which increase final exhaust gas plume rise where the resulting allowable emissions of sulfur dioxide from the facility do not exceed five thousand tons per year.
- (D) "Emission limitation" and "emission standard" mean a requirement that limits the quantity, rate or concentration of emissions of air contaminants, including any requirement relating to the operation or maintenance of a source.
- (E) "Excessive concentration" for purposes of paragraph (F)(3) of this rule means:
- (1) For sources seeking credit for stack height exceeding that established under paragraph (F)(2) of this rule, a maximum ground-level concentration due to emissions from a stack due in whole or part to downwash, wakes or eddy effects produced by nearby structures or nearby terrain features which individually is at least forty per cent in excess of the maximum concentration experienced in the absence of such downwash, wakes or eddy effects and which contributes to a total concentration due to emissions from all sources that is greater than an ambient air quality standard. For sources subject to the United States environmental protection agency prevention of significant deterioration program (40 CFR 51.166 and 40 CFR 52.21), an "excessive concentration" alternatively

means a maximum ground-level concentration due to emissions from a stack due in whole or part to downwash, wakes or eddy effects produced by nearby structures or nearby terrain features which individually is at least forty per cent in excess of the maximum concentration experienced in the absence of such downwash, wakes or eddy effects and greater than a prevention of significant deterioration increment. The allowable emission rate to be used in making such demonstrations shall be prescribed by the United States environmental protection agency new source performance standard that is applicable to the source category unless the owner or operator demonstrates that this emission rate is infeasible. Where such demonstrations have been approved by the director, he may establish an alternative emission limitation;

- (2) For sources seeking credit after October 1, 1983, for increases in existing stack heights up to the heights established under paragraph (F)(2) of this rule, either:
  - (a) A maximum ground-level concentration due in whole or part to downwash, wakes or eddy effects as provided in paragraph (E)(1) of this rule, except that the emission rate approved by the administrator of the United States environmental protection agency as part of the state implementation plan (or, in the absence of such a limit, the actual emission rate) shall be used; or
  - (b) The presence of a nuisance in violation of rule 3745-15-07 of the Administrative Code caused by the existing stack, as determined by the director; and
- (3) For sources seeking credit after January 12, 1979 for a stack height determined under paragraph (F)(2) of this rule where the director requires the use of a field study or fluid model to verify GEP stack height, for sources seeking stack height credit after November 9, 1984 based on the aerodynamic influence of cooling towers, and for sources seeking stack height credit after December 31, 1970 based on the aerodynamic influence of structures not adequately represented by the equations in paragraph (F)(2) of this rule, a maximum ground-level concentration due in whole or part to downwash, wakes or eddy effects that is at least forty per cent in excess of the maximum concentration experienced in the absence of such downwash, wakes or eddy effects.

(F) "Good engineering practice" (GEP) stack height means the greater of:

- (1) Sixty-five meters, measured from the ground-level elevation at the base of the stack;
- (2)
  - (a) For stacks in existence on January 12, 1979, and for which the owner or operator had obtained all applicable pre-construction permits or approvals

required by Chapters 3745-31 and 3745-35 of the Administrative Code, the stack height calculated by the following formula:

$$H_g = 2.5 H$$

Where:  $H_g$  = good engineering practice stack height, measured from the ground-level elevation at the base of the stack; and

$H$  = height of nearby structure(s) measured from the ground-level elevation at the base of the stack;

Provided the owner or operator produces evidence that this equation was actually relied on in establishing an emission limitation; or

(b) For all other stacks, the stack height calculated by the following formula:

$$H_g = H + 1.5 L$$

Where:  $H_g$  = good engineering practice stack height, measured from the ground-level elevation at the base of the stack;

$H$  = height of nearby structure(s) measured from the ground-level elevation at the base of the stack; and

$L$  = height or projected width, whichever is less, of nearby structure(s);

Provided that the director may require the use of a field study or fluid model to verify GEP stack height for the source; or

(3) The height demonstrated by a fluid model or a field study approved by the director, which ensures that the emissions from the stack do not result in excessive concentrations of any air contaminants as a result of atmospheric downwash, wakes or eddy effects created by the source itself, nearby structures or nearby terrain features.

(G) "Nearby," as used in paragraph (F) of this rule, is defined for a specific structure or terrain feature and

(1) For purposes of applying the formulae provided in paragraph (F)(2) of this rule, means that distance up to five times the lesser of the height or the width dimension of a structure, but not greater than 0.8 kilometers, and

(2) For conducting demonstrations under paragraph (F)(3) of this rule, means not greater than 0.8 kilometers, except that the portion of a terrain feature may be considered to be nearby which falls within a distance of up to ten times the maximum height of the feature, not to exceed 3.2 kilometers if such feature

achieves, within a distance of 0.8 kilometers from the stack, a height which is at least forty per cent of the GEP stack height determined by the formulae provided in paragraph (F)(2) of this rule or twenty-six meters, whichever is greater, as measured from the ground-level elevation at the base of the stack. The height of the structure or terrain feature is measured from the ground-level elevation at the base of the stack.

- (H) "Stack" means any chimney, flue, conduit or duct arranged to conduct any emissions to the ambient air, excluding flares.
- (I) "Stack height" means the distance from the ground-level elevation at the base of the stack to the crown of the stack. If a stack arises from a building or other structure, the ground-level elevation of that building or structure will be used as the base elevation of the stack.
- (J) Incorporation by reference. This chapter contains certain matter or materials. The text of the incorporated materials is not included in the regulations contained in this chapter. The materials are hereby made a part of the regulations in this chapter. For materials subject to change, only the specific version specified in the regulation are incorporated. Material is incorporated as it exists on the effective date of this rule. Except for subsequent annual publication of existing (unmodified) Code of Federal Regulation compilations, any amendment or revision to a referenced document is not incorporated unless and until this rule has been amended to specify the new dates.

(1) Availability.

- (a) Clean Air Act. Information and copies may be obtained by writing to: "Superintendent of Documents, Attn: New Orders, PO Box 371954, Pittsburgh, PA 15250-7954." 3745-16-02      **Good engineering practice stack height requirements.**

[Comment: For dates of non-regulatory government publications, publications of recognized organizations and associations, federal rules, and federal statutory provisions referenced in this rule, see the last paragraph of rule 3745-16-01 of the Administrative Code titled "Incorporation by reference."]

- (A) The requirements of this rule shall apply to all new and existing air contaminant sources except:
- (1) Stack heights in existence, or dispersion techniques implemented on or before December 31, 1970, except where pollutants are being emitted from such stacks or using such dispersion techniques by sources, as defined in Section 111(a)(3) of the Clean Air Act, which were constructed or reconstructed, or for which major modifications, as defined in 40 CFR 51.165(a)(1)(v)(A), 51.166(b)(2)(i) and 52.21(b)(2)(i), were carried out after December 31, 1970; or
  - (2) Coal-fired steam electric generating units subject to the provisions of Section 118 of the Clean Air Act, which commenced operation before July 1, 1957, and having stacks constructed under a construction contract awarded before February 8, 1974.
- (B) Except as otherwise provided in paragraph (A) of this rule, any emission limitation imposed upon any source must not be affected by so much of any source's stack height that exceeds good engineering practice, nor by any other dispersion technique.
- (C) Before adopting a new or revised emission limitation that is based on a good engineering practice stack height that exceeds the height allowed by paragraph (F)(1) or (F)(2) of rule 3745-16-01 of the Administrative Code, the director shall provide public notice of the availability of the demonstration study and shall provide an opportunity for a public hearing on it.
- (D) This chapter of the Administrative Code does not authorize the director to order the reduction of the actual stack height of any source.

## **Chapter 3745-17: Particulate Matter Standards**

*Contact:* Lee Burkleca 614-728-1344  
Lee.Burkleca@EPA.State.Oh.US

**3745-17-01 Definitions.**

[Comment: For dates of non-regulatory government publications, publications of recognized organizations and associations, federal rules, and federal statutory provisions referenced in this rule, see the "Incorporation by Reference" paragraph at the end of this rule.]

(A) Except as otherwise provided in this rule, the definitions in rule 3745-15-01 of the Administrative Code shall apply to this chapter.

(B) As used in Chapter 3745-17 of the Administrative Code:

- (1) "Banked condition" means the condition where fuel is burned on the grates of fuel burning equipment at rates which are sufficient to maintain ignition only.
- (2) "British thermal unit" or "Btu" means the amount of heat required to raise the temperature of one pound of water from fifty-nine degrees Fahrenheit to sixty degrees Fahrenheit at a constant pressure of one atmosphere.
- (3) "Facility" means any building, structure, installation, operation, or combination thereof which contains one or more stationary source(s) of air contaminants. As used in paragraph (D) of rule 3745-17-08 of the Administrative Code, the definition of facility shall not include agricultural activities, such as the tilling of land, the harvesting of crops, the application of fertilizers, pesticides or herbicides, and grain drying, which are conducted on a farm.
- (4) "Fuel" means wood, refuse, natural gas, coke oven gas, petroleum, coal, and any combustible solid, liquid, or gas derived from such materials.
- (5) "Fuel burning equipment" means any furnace or boiler, and any appurtenances thereto such as stacks, ducting and similar apparatus, used in the process of burning fuel for the primary purpose of producing heat or power by indirect heat transfer, where the products of combustion do not come into contact with process materials.
- (6) "Fugitive dust" means particulate matter which is emitted from any source by means other than a stack.
- (7) "Fugitive dust source" means any source which emits fugitive dust or which emitted fugitive dust prior to the installation of any control equipment that was installed on or after February 15, 1972.
- (8) "Grain elevator" means any plant or installation at which grain is unloaded, handled, cleaned, dried, stored, or loaded, except those located at the following: animal food, pet food or cereal manufacturers; breweries; livestock feedlots; wheat flour, wet corn, dry corn or rice mills; or soybean oil extraction plants.

- (9) "Incinerator" means any equipment, machine, device, article, contrivance, structure, or part of a structure used to burn liquid, semi-solid or solid refuse or to process salvageable materials by burning other than by open burning as defined in rule 3745-19-01 of the Administrative Code.
- (10) "OEPA" or "Ohio EPA" means the Ohio environmental protection agency.
- (11) "Opacity" means the degree to which emissions reduce the transmission of light and obscure the view of the background.
- (12) "Particulate emissions" means particulate matter measurable by the applicable test methods in 40 CFR Part 60, Appendix A, "Standards of Performance for New Stationary Sources".
- (13) "Particulate matter" means any material, except water in uncombined form, that is or has been airborne, and exists as a liquid or a solid at standard conditions.
- (14) "Permanent storage capacity" means grain storage capacity which is inside a building, bin or silo.
- (15) "PM<sub>2.5</sub>" means particulate matter with an aerodynamic diameter less than or equal to a nominal 2.5 micrometers as measured either by a reference method that is based on 40 CFR Part 50, Appendix L and designated in accordance with 40 CFR Part 53 or by an equivalent method designated in accordance with 40 CFR Part 53.
- (16) "PM<sub>10</sub>" means particulate matter with an aerodynamic diameter less than or equal to a nominal ten micrometers as measured either by a reference method that is based on 40 CFR Part 50, Appendix J and designated in accordance with 40 CFR Part 53 or by an equivalent method designated in accordance with 40 CFR Part 53.
- (17) "Process weight" means the total weight of all materials introduced into the source operation, including solid fuels, but excluding gaseous fuels and liquid fuels when they are used solely as fuels, and excluding air introduced for the purpose of combustion.
- (18) "Reasonably available control measures" means the control technology which enables a particular fugitive dust source to achieve the lowest particulate matter emission level possible and which is reasonably available considering technological feasibility and cost-effectiveness.
- (19) "Refuse" means any discarded matter, or any matter which is to be reduced in volume, or otherwise changed in chemical or physical properties, in order to facilitate its discard, removal or disposal.

- (20) "Salvageable material" means any material which is to be reduced in volume, or otherwise changed in chemical or physical properties, in order to facilitate its reuse.
- (21) "Single fuel burning unit" means any single, enclosed combustion chamber in which fuel is burned for the primary purpose of producing heat or power by indirect heat transfer, where the products of combustion do not come into contact with process materials.
- (22) "Stack" means any chimney, flue, conduit or duct, including the outlet of any air pollution control equipment, which is arranged to conduct emissions to the ambient air.
- (23) "Stand-by fuel burning equipment" means any fuel burning equipment which is used only as a direct substitution for other fuel burning equipment for a limited period due to unpredictable and unavoidable breakdown or failure, or routine scheduled maintenance of such other fuel burning equipment.
- (24) "Start-up" means the commencement of firing of fuel burning equipment from a cold, non-fired condition.
- (25) "Stationary gas turbine" means an engine that is not self-propelled (although it may be mounted on a vehicle for portability), in which a turbine is driven by expanding hot combustion gases. Such an engine typically consists of an axial-flow air compressor, one or more combustion chambers, and a turbine. A gas turbine employed in a jet engine is not included in this definition.
- (26) "Stationary small internal combustion engine" means an engine, other than an engine used to, or intended to, propel any vehicle, with a rated power of less than or equal to six hundred horsepower and in which combustion occurs within one or more cylinders, thereby converting heat energy into mechanical energy that can be used to drive an electric generator or other mechanical equipment.
- (27) "Stationary large internal combustion engine" means an engine, other than an engine used to, or intended to, propel any vehicle, with a rated power of greater than six hundred horsepower and in which combustion occurs within one or more cylinders, thereby converting heat energy into mechanical energy that can be used to drive an electric generator or other mechanical equipment.
- (28) "Topping-off" means that portion of a ship loading operation at a grain terminal during which:
- (a) The top portion of a hold (not to exceed twenty-five per cent of the total volume of the hold) is filled with grain; and
  - (b) The control of particulate emissions through the use of tarpaulin covers and associated ventilation and control equipment is impractical or impossible.

- (29) "Uncontrolled mass rate of emission" means the total weight rate of particulate emissions which are, or in the absence of control equipment would be, emitted from an air contaminant source when such source is operated at its maximum capacity.
- (C) Incorporation by reference. This chapter includes references to certain matter or materials. The text of the incorporated materials is not included in the regulations contained in this chapter. The materials are hereby made a part of the regulations in this chapter. For materials subject to change, only the specific versions specified in the regulation are incorporated. Material is incorporated as it exists on the effective date of this rule. Except for subsequent annual publication of existing (unmodified) Code of Federal Regulation compilations, any amendment or revision to a referenced document is not incorporated unless and until this rule has been amended to specify the new dates.
- (1) Availability. The materials incorporated by reference are available as follows:
- (a) "Acid Rain Program Continuous Emission Monitoring Systems (CEMS) Field Audit Manual." Information and copies may be obtained by writing to: "US EPA (6204N), Attn: Matthew Boze, 1200 Pennsylvania Ave., NW, Washington, D.C. 20460." This document is also available in electronic format at <http://www.epa.gov/airmarkets/monitoring/auditmanual/index.html>. The manual can also be obtained for inspection and copying at most public libraries and "The State Library of Ohio."
  - (b) American Society for Testing Materials (ASTM). Information and copies of documents may be obtained by writing to: "ASTM International, 100 Bar Harbor Drive, P.O. Box C700, West Conshohocken, Pennsylvania 19426-2959." These documents are also available for purchase at <http://www.astm.org>. ASTM documents are also available for inspection and copying at most public libraries and "The State Library of Ohio."
  - (c) Code of Federal Regulations (CFR). Information and copies may be obtained by writing to: "Superintendent of Documents, Attn: New Orders, P.O. Box 371954, Pittsburgh, PA 15250-7954." The full text of the CFR is also available in electronic format at <http://www.gpoaccess.gov/cfr/index.html>. The CFR compilations are also available for inspection and copying at most public libraries and "The State Library of Ohio."
  - (d) Engineering Guides. Information and copies may be obtained by writing to: "Ohio EPA Division of Air Pollution Control, 122 S. Front Street, Columbus, OH 43215" or by calling (614) 644-2270. Engineering Guides are also available for downloading at <http://www.epa.state.oh.us/dapc/engineer/eguides.html>.
  - (e) EPA 340/1-86-010 and EPA 450/3-88-008. Information and copies may be obtained by writing to: "US EPA Office of Air Quality Planning and

Standards (OAQPS), Info CHIEF Help Desk, Mail Code C339-02 Research Triangle Park, NC 27711" or by calling (919) 541-1000. EPA 340/1-86-010 can also be obtained for inspection and copying at most public libraries and "The State Library of Ohio."

- (f) "Standard Methods for the Examination of Water and Wastewater." Information and copies may be ordered by writing to: "American Public Health Association, Publications Sales, P.O. Box 753, Waldorf, MD 20604-0753," or by calling 1-301-893-1894. This document is also available for ordering at <http://www.apha.org/>. A copy of the document is also available for inspection and copying at most public libraries and "The State Library of Ohio."

3745-17-02      **Ambient air quality standards.**

This rule was rescinded as of 4/18/09.

The rule language was moved to OAC Rule 3745-25-02.

**3745-17-03 Measurement methods and procedures.**

[Comment: For dates of non-regulatory government publications, publications of recognized organizations and associations, federal rules, and federal statutory provisions referenced in this rule, see the last paragraph of rule 3745-17-01 of the Administrative Code titled "Incorporation by reference."]

(A) For purposes of ascertaining, defining, and measuring ambient air quality, PM<sub>2.5</sub> and PM<sub>10</sub> shall be measured by the methods specified in paragraphs (B)(15) and (B)(16), respectively, of rule 3745-17-01 of the Administrative Code. Such measurements for PM<sub>10</sub> shall be corrected to standard conditions for purposes of comparing measurements with the ambient air quality standards set forth in rule 3745-25-02 of the Administrative Code.

(B) Emissions test methods and procedures for all new and existing sources.

(1) For the purpose of determining compliance with paragraph (A)(1) of rule 3745-17-07 of the Administrative Code, visible particulate emissions shall be determined according to the following:

(a) Except as provided in paragraph (B)(1)(b) of this rule, "USEPA Method 9" shall be employed.

(b) As an alternative to the compliance procedures specified in paragraph (B)(1)(a) of this rule, coal-fired boilers with heat input capacities equal to or greater than two hundred fifty million Btu per hour that are controlled with either baghouses or electrostatic precipitators may determine compliance with the visible particulate emission limitations specified in paragraph (A)(1) of rule 3745-17-07 of the Administrative Code through the use of continuous opacity monitoring data. The continuous opacity monitoring system shall comply with the requirements specified in 40 CFR 60.13 and shall be certified in accordance with the requirements of "USEPA Performance Specification 1." (The continuous opacity monitoring system consists of all the equipment used to acquire data and includes the data recording/processing hardware and software.) During each calendar quarter, the permittee shall be deemed in compliance with paragraph (A)(1) of rule 3745-17-07 of the Administrative Code if the following conditions are met:

(i) The nonexempt opacity values in excess of twenty per cent opacity are less than 1.10 per cent of the six-minute average opacity values. (Exempt opacity values are defined in paragraphs (A)(1)(b), (A)(2), and (A)(3) of rule 3745-17-07 of the Administrative Code.)

- (ii) None of the nonexempt six-minute average opacity values exceeds sixty per cent.
- (iii) The total amount of time, in hours, of exempt and nonexempt opacity values greater than twenty per cent and less than sixty per cent (not including start-up, shutdown, and malfunction exemptions provided in paragraphs (A)(2) and (A)(3) of rule 3745-17-07 of the Administrative Code) does not exceed the product of 0.10 times the actual number of hours the emissions unit was in operation during the calendar quarter.

In the event of a discrepancy between the continuous opacity monitoring data and any observations performed in accordance with paragraph (B)(1)(a) of this rule during the same time period, an evaluation may be performed by the Ohio EPA to assess the accuracy of the continuous opacity monitoring data (which may include an audit of the continuous opacity monitoring system performed in accordance with EPA 340/1-86-010 (recommended quality assurance procedures for opacity continuous emission monitoring systems) and "Acid Rain Program Continuous Emission Monitoring Systems (CEMS) Field Audit Manual" and the validity of the observations performed in accordance with paragraph (B)(1)(a) of this rule. The Ohio EPA may accept and utilize any data or observation it finds credible. The permittee is not precluded from using any credible evidence in defense of any enforcement action that may be initiated by the Ohio EPA.

- (2) For the purpose of determining compliance with paragraph (B)(2) of rule 3745-17-07 of the Administrative Code, pertaining to visible particulate emissions from coke oven batteries:
  - (a) Charging operations:
    - (i) The charging period shall begin when the coal from the charging system starts to enter the oven and shall end when the last charge port lid is replaced. Such charging period shall not include the period of time during which the port lids are reopened in order to sweep spilled coal into the oven.
    - (ii) The observer shall stand on the topside of the coke oven battery such that a good view of all charge ports of the oven being charged and the charging system is possible. The observer may change position to obtain a clear view of all oven ports, drop sleeves, and hoppers. During the charging period, the observer shall watch all the potential emission sources including the charge ports and the entire charging system. Upon observing the release of any visible particulate emission, an accumulative stopwatch shall be started. The watch shall be stopped when the visible particulate emission stops and shall be restarted when

a visible particulate emission reappears. The observer shall continue this procedure for the entire charging period. If visible particulate emissions should occur simultaneously from several points during a charge, the visible particulate emissions shall be timed collectively as one continuous visible particulate emission. Furthermore, visible particulate emissions which may start from one source immediately after those from another source shall be timed as one continuous visible particulate emission. The following visible particulate emissions shall not be timed: steam vapor, visible particulate emissions from burning coal that is spilled on top of the oven or oven lid during charging, visible particulate emissions emitted from any equipment other than the charging system or charging ports, visible particulate emissions from closed standpipes during charging, visible particulate emissions emitted from coke oven doors which may rise above the battery and which may be windblown across its topside, and visible particulate emissions that drift from the top of the charging system, but have already been timed as a visible particulate emission from the drop sleeve below the hopper. The time recorded on the stopwatch shall represent the total time that visible particulate emissions are observed during a charge. The number of seconds of visible particulate emissions observed for each charge shall be recorded on a data sheet.

- (iii) A minimum of six consecutive charges shall be observed and the time in seconds of visible particulate emissions during such charges shall be totalled. If the observations of a set of consecutive charges is interrupted by an event not in the control of an observer, then the data for the interrupted charge(s) shall be discarded and additional charge(s) shall be observed until the total number of consecutive charges equals at least six. For purposes of this paragraph, charges immediately preceding and following any interrupted or discarded charge(s) shall be deemed consecutive.

(b) Offtake piping and charging hole lids:

- (i) The observer shall walk down the length of the top of the battery and shall complete the inspection in an expeditious manner consistent with the safety of the observer. When safety conditions permit, the observer will walk near the center of the battery, but may deviate from this path to obtain a better view of any lid or offtake piping system. Separate traverses may be performed for offtake piping and charging hole lids. If the battery has two collector mains, the observer may make two traverses when observing visible particulate emissions from offtake piping. If an observer elects to make two traverses for a battery which has two collector mains, the observer shall inspect one collector main during the first traverse and inspect the other collector main during the second traverse. During each traverse, the observer shall record the

time of the beginning and end of each traverse and the identity of any charging hole or offtake piping system having visible particulate emissions.

- (ii) Visible particulate emissions from offtake piping shall include emissions from cracks and/or defects in the piping, emissions from the jointure of the battery to the standpipe, emissions from the standpipe to the gooseneck and gooseneck to the collector main, emissions from the seal between the gooseneck and gooseneck lid, and emissions from opened offtake lids. Visible particulate emissions from charging holes shall include emissions from the seal between the charging hole or stationary jumper pipe lid and its casting, emissions from the charging hole or stationary jumper pipe casting/battery interface, and emissions from opened charging holes or stationary jumper pipe lids. Visible particulate emissions which shall not be included are emissions caused by maintenance work in progress at an oven, emissions caused by the vaporization of wet luting materials, emissions caused by burning or smoldering excess topside coal, and emissions from charging ports and offtake piping during the charging operation. Visible particulate emissions from open offtake piping and charging holes, from a maximum of three ovens, shall be exempt. Regardless of the number of points from which visible particulate emissions are observed from any one offtake piping system, the maximum entry for any oven with a single offtake system shall be one and the maximum entry for any oven with two offtake piping systems shall be two. The maximum number of charging hole leaks recorded for any oven shall not exceed the number of charging holes on that oven.
- (iii) The percentage of charging holes and offtake piping with visible particulate emissions shall be determined by totalling the number of charging holes or offtake piping with visible particulate emissions, including that number of opened charging holes and offtake piping with visible particulate emissions which exceeds the amount which is allowed for three ovens, dividing that number by the total number of observed charging holes or offtake piping on operating ovens, and multiplying the result by one hundred per cent. For purposes of this paragraph, any oven which is not out of service for rebuild or maintenance work that is extensive enough to require the oven to be skipped in the charging sequence shall constitute an operating oven. Further, any opened charging hole or offtake piping lids on operating ovens shall be included as observed charging holes and offtake piping.

(c) Oven doors:

- (i) The observer shall observe visible particulate emissions by completely walking around the coke oven battery at a steady distance from a

position just outside the pusher machine and quencher car tracks as close to the battery as safety and visibility conditions permit. The observer shall traverse each side of a battery expeditiously, recording the time of the beginning and end of each side traverse, the identity of each door having visible particulate emissions, and the identity of any door not observable during the traverse. A visible particulate emission from an individual door shall be noted on an inspection sheet when an observer determines any visible particulate emissions are occurring from any location on the perimeter of a coke oven door or chuck door. Visible particulate emissions observed at the top of the battery above a specific oven door but not clearly attributable to such door shall not be counted in this procedure. An observer shall observe each oven door only once while scanning the perimeter for any visible particulate emissions. After a brief scan of an oven door, the observer shall move along his/her traverse, checking subsequent doors on the battery in a like manner. If a temporary machine obstruction occurs which blocks the view of a series of ovens, the ovens shall be bypassed and the remaining oven doors on that side of the battery shall be observed. After the traverse of such side of the battery, the bypassed oven doors and only those oven doors, may be reobserved. After completing one side, the observer shall proceed directly to the opposite side of the battery and proceed to perform a like traverse while repeating the above procedures. A row of two or more continuous batteries may be inspected by observing all of the pusher side doors and then all of the coke side doors.

- (ii) The percentage of oven doors with visible particulate emissions shall be determined by totalling the number of doors with visible particulate emissions, dividing that sum by the total number of observed doors on operating ovens, and multiplying the result by one hundred per cent. For purposes of this paragraph, any oven which is not out of service for a rebuild or maintenance work that is extensive enough to require that oven to be skipped in the charging sequence shall constitute an operating oven. Further, any doors that are removed from operating ovens shall constitute unobserved doors.
- (d) For any pushing operations, visible particulate emissions shall be determined according to "USEPA Method 9" with the following modifications:
- (i) Paragraph 2.5 ("Data Reduction") of "USEPA Method 9" shall not be used; and
  - (ii) Visible particulate emission readings shall be recorded at fifteen-second intervals during each pushing operation observed and the average reading during each such operation shall be determined by summing

the opacity readings and dividing this sum by the number of observations during that pushing operation.

- (3) For the purpose of determining compliance with paragraphs (B)(1), (B)(3), (B)(7)(a)(i), (B)(7)(b), (B)(7)(c), and (B)(8)(a) to (B)(8)(d) of rule 3745-17-07 of the Administrative Code, paragraphs (C)(3)(c), (D)(3), (F)(4)(c), (I)(1), (L)(3), (O)(1), (P)(2), (V)(4)(c), (W)(2), (X)(2), and (X)(3) of rule 3745-17-12 of the Administrative Code, or with paragraph (D)(4)(a) of rule 3745-17-13 of the Administrative Code, visible emissions of fugitive dust shall be determined according to "USEPA Method 9" with the following modifications:
  - (a) For paragraphs (B)(1), (B)(7)(b), (B)(7)(c), (B)(8)(b), (B)(8)(d), and (B)(9) of rule 3745-17-07 of the Administrative Code, the data reduction and average opacity calculation shall be based upon sets of twelve consecutive visible emission observations recorded at fifteen-second intervals.
  - (b) Opacity observations shall be made from a position that provides the observer a clear view of the source and the fugitive dust with the sun behind the observer. A position at least fifteen feet from the source is recommended. To the extent possible, the line of sight should be approximately perpendicular to the flow of fugitive dust and to the longer axis of the emissions. Except as provided in paragraphs (B)(3)(d) and (B)(3)(e) of this rule, opacity observations shall be made for the point of highest opacity within the fugitive dust. Since the highest opacity usually occurs immediately above or downwind of the source, the observer should normally concentrate on the area(s) of the plume close to the source. For purposes of paragraphs (B)(7)(b) and (B)(8)(b) of rule 3745-17-07 of the Administrative Code, observations shall be made where the fugitive dust plume is distinctly separate from the falling material and from the surface of the pile.
  - (c) <Reserved>.
  - (d) For paragraphs (B)(7)(a)(i), (B)(8)(a), and (B)(8)(c) of rule 3745-17-07 of the Administrative Code and paragraphs (I)(1), (O)(1), and (P)(2) of rule 3745-17-12 of the Administrative Code:
    - (i) A data set shall consist of twelve observations based on four uninterrupted vehicle passes, three observations per vehicle pass, using "USEPA Method 9." The initial observation shall be taken immediately after passage of the first vehicle, at the point of highest opacity within the fugitive dust, and at four feet above the surface of the roadway or parking area. Two additional observations shall be taken at the same point as the initial observation and at five seconds and ten seconds after the initial reading. The same procedure shall be conducted for the next three vehicle passes. If any interruption in observations during any

vehicle pass occurs, the observation(s) taken during that vehicle pass shall be discarded and the next vehicle pass shall be observed. For vehicle traffic on top of any material storage pile, the observer may observe passes of the same vehicle or vehicles, at identical or different points atop the pile, in order to obtain readings for four vehicle passes.

- (ii) The data reduction and average opacity calculation shall be based upon the average of twelve observations in each data set.
  - (e) For paragraph (B)(7)(c) of rule 3745-17-07 of the Administrative Code, observations of fugitive dust resulting from a vehicle's movement upon a coal storage pile shall be made at a point no less than one vehicle length from the rear of the vehicle and at an elevation no lower than the maximum height of the vehicle. For purposes of this rule, vehicle length and height shall be based upon the length and height of the vehicle being observed.
- (4) For the purpose of determining compliance with paragraphs (B)(4) to (B)(6), (B)(7)(a)(ii), and (B)(7)(d) of rule 3745-17-07 of the Administrative Code, paragraphs (B), (C)(1), (C)(2), (E), (F)(1) to (F)(3), (K), (M)(1), (M)(2), (Q)(1), (S)(4)(b), (U)(1), (U)(2), (V)(1) to (V)(3), (W)(1), (X)(1), (X)(4), (Y)(1) to (Y)(3), and (Z) of rule 3745-17-12 of the Administrative Code, or with paragraph (B) of rule 3745-17-13 of the Administrative Code, visible emissions of fugitive dust shall be determined according to "USEPA Method 22" with the following modifications:
- (a) If the observer's view is obscured and observations must be terminated prior to completing the necessary or desired observation period, the observer shall clearly note this fact on the observation form. When the observer's view of the source is no longer obscured, the observations shall recommence to complete the observation period.
  - (b) The observer shall identify on the observation form all interruptions due to rest breaks.
  - (c) For the purpose of determining compliance with the applicable visible emission limitation, the observations, excluding break periods and periods of obscured vision, shall be considered continuous.
  - (d) For any roadway or parking area, the observer shall determine the presence and duration of visible particulate matter at the same point of the potential emissions and at a height approximately four feet above the surface of the roadway or parking area.
- (5) Visible particulate emission readings other than those referenced in paragraph (B)(4) of this rule shall be determined by observers qualified according to tests and procedures set forth in "USEPA Method 9."

- (6) The director may refuse to accept the results of emission tests conducted pursuant to paragraphs (B)(7) to (B)(10) of this rule which are not conducted with prior review and approval of the test specifications by the director. Test specifications must be submitted for this purpose at least thirty days before the proposed test date. The director will advise an entity of any deficiencies in the proposed test specifications as expeditiously as practicable so as to minimize any disruption of the proposed testing schedule.
- (7) For the purpose of determining compliance with paragraphs (B)(3) and (B)(4) of rule 3745-17-08 of the Administrative Code:
- (a) The amount of particulate emissions shall be determined by the test methods specified in paragraph (B)(12) of rule 3745-17-01 of the Administrative Code.
  - (b) For electric arc furnaces at iron foundries, steel foundries and iron and steel mills, the sampling and measurement of the particulate emissions shall be performed only during those operating intervals commencing with the addition of cold scrap to the furnace and ending with the completion of the tapping of the furnace.
  - (c) For argon-oxygen decarburization vessels, the sampling and measurement of the particulate emissions shall be performed only during those operating intervals commencing with the pouring of hot metal into the vessel and ending with the completion of the tapping of the vessel.
  - (d) For basic oxygen furnaces, the sampling and measurement of the particulate emissions shall be performed only during those operating intervals commencing with the addition of hot metal to the furnace and ending with the completion of the tapping of the furnace.
  - (e) For hot metal transfer operations, the sampling and measurement of the particulate emissions shall be performed only during those operating intervals when hot metal is being poured.
  - (f) For hot metal desulfurization operations, the sampling and measurement of the particulate emissions shall be performed only during those operating intervals commencing with the initial injection of the desulfurization agent into the hot metal and ending with the completion of the injection process.
  - (g) For blast furnace casthouses, the sampling and measurement of the particulate emissions shall be performed only during the casting operation, commencing with the opening of the tap hole and ending one minute after the positioning of the mud gun to plug the tap hole.

- (h) For pushing operations at coke oven batteries, one point of a probe traverse shall be sampled during each pushing operation and the sampling and measurement of the particulate emissions shall be performed only during those operating intervals commencing with the first movement of the ram and ending with the full extension of the ram plus ten seconds or with the first movement of the quench car, whichever occurs first.
- (8) For the purpose of determining compliance with rule 3745-17-09 of the Administrative Code:
- (a) The amount of particulate emissions from an incinerator shall be determined by test methods specified in paragraph (B)(12) of rule 3745-17-01 of the Administrative Code. Emission tests shall be conducted at maximum burning capacity of the incinerator.
  - (b) The maximum burning capacity of an incinerator shall be the manufacturer's or designer's guaranteed maximum rate or such other rate as may be determined by the director in accordance with good engineering practices. In case of conflict, the determination made by the director shall govern.
- (9) For the purpose of determining compliance with rule 3745-17-10 of the Administrative Code and paragraphs (N)(1), (N)(2), (O)(7), (O)(8)(a), (P)(1), (P)(7), and (P)(8) of rule 3745-17-12 of the Administrative Code:
- (a) The amount of particulate emissions shall be determined by test methods specified in paragraph (B)(12) of rule 3745-17-01 of the Administrative Code, except that for "USEPA Method 5" the probe and filter holder heating systems in the sampling train shall be set to provide a gas temperature no greater than three hundred twenty degrees Fahrenheit (one hundred sixty degrees Celsius).
  - (b) The heat content of fuels shall be determined according to ASTM D5685-05 or ASTM E870-82 for solid fuels, ASTM D240-02 for liquid fuels, and ASTM D1826-94 for gaseous fuels.
  - (c) The ash content of coal shall be determined according to ASTM D3174-04.
- (10) For the purpose of determining compliance with rule 3745-17-11 of the Administrative Code, paragraphs (C)(3)(b), (D)(2), (F)(4)(b), (F)(5), (G), (H), (I)(2) to (I)(14), (I)(16), (I)(17), (I)(19) to (I)(30), (I)(38) to (I)(40), (I)(43), (I)(45), (I)(46), (I)(48), (J), (L)(2), (M)(3), (N)(3), (N)(4), (O)(3) to (O)(6), (O)(9), (O)(10), (P)(3)(a), (P)(4) to (P)(6), (P)(10), (P)(11), (Q)(2), (R)(1), (S)(1) to (S)(4)(a), (T), (U)(3), (V)(4)(b), and (Y)(4) of rule 3745-17-12 of the Administrative Code, and paragraphs (D)(2), (D)(3), (D)(4)(b) to (D)(4)(d), (D)(5) and (D)(6) of rule 3745-17-13 of the Administrative Code:

- (a) The amount of particulate emissions shall be determined by test methods specified in paragraph (B)(11) of rule 3745-17-01 of the Administrative Code.
  - (b) The controlled mass rate of particulate emissions from sources equipped with control equipment, or the uncontrolled mass rate of particulate emissions from sources not equipped with control equipment, shall be determined by sampling and other measurements made at the air contaminant source or sources prior to the point at which air contaminants are emitted to the ambient air. For sources equipped with control equipment, the uncontrolled mass rate of emission may be determined by either sampling in the stack upstream from the inlet of the control equipment or by the use of other techniques accepted by the director.
  - (c) For coke quench towers, the concentration of total dissolved solids in the quench water shall be determined according to Section 209(C), "Standard Methods for the Examination of Water and Wastewater," using a drying temperature between one hundred three and one hundred five degrees Celsius. Analyses shall be performed on grab samples of the quench water as applied to the coke. Samples shall be collected at a minimum of five days per week per quench tower and analyzed to report a weekly average concentration for each quench tower. Samples for each week must be analyzed either:
    - (i) Separately, with daily concentrations determined and averaged as a weekly average, or
    - (ii) As one composite sample, with equal volumes of each day's sample combined to form the composite sample.
- (C) Continuous emission monitoring requirements for measuring opacity for "Appendix P" facilities.
- (1) Any facility subject to 40 CFR Part 51, Appendix P, "Minimum Emission Monitoring Requirements," shall operate and maintain a continuous emission monitoring system (CEMS) for measuring opacity. The CEMS shall comply with all specifications outlined in 40 CFR Part 60, Appendix B, "Performance Specifications." The CEMS must be capable of providing external calibration filter access in accordance with Section 5.1.9 of "USEPA Performance Specification 1."
  - (2) Any owner or operator of a facility that meets the applicability requirements specified in paragraph (C)(1) of this rule shall submit reports to the director of excess emissions for each calendar quarter within thirty days following the end of each calendar quarter. The reports shall include, but not be limited to, the times and values of all six-minute average readings of opacity above the

applicable standard(s), along with the dates, magnitudes (per cent opacity), reasons (if known), and corrective actions taken (if any). In addition, the reports shall include the dates and times of each period during which the continuous emission monitoring system was inoperative, except for zero and span checks, and the nature of system repairs or adjustments.

3745-17-04      **Compliance time schedules.**

(A) Certification and permit application requirements.

- (1) Except as otherwise provided in paragraph (A)(2) of this rule, by no later than October 1, 1980, any owner or operator of an air contaminant source subject to paragraph (B)(2) of rule 3745-17-07 of the Administrative Code or of a fugitive dust source subject to paragraph (D) of rule 3745-17-08 of the Administrative Code, as those rules existed on June 18, 1980, shall either:
  - (a) Certify in writing to the director that such source is in compliance with all of the following which are applicable: paragraph (B)(2) of rule 3745-17-07 of the Administrative Code and paragraph (B) of rule 3745-17-08 of the Administrative Code. Such certification shall include: equipment description, Ohio EPA permit application number (if assigned), and all necessary data (consistent with the appropriate permit application appendices) and calculations which confirm the compliance status. The certification shall also include an application for a permit-to-operate such source in accordance with rule 3745-35-02 of the Administrative Code if such source does not possess an effective permit; or
  - (b) Submit an application for a permit-to-operate or an application for a modification to a permit-to-operate in accordance with rule 3745-35-02 of the Administrative Code. Such application shall include a final control plan and a compliance schedule which will bring the source into compliance with paragraph (B)(2) of rule 3745-17-07 of the Administrative Code and paragraph (B) of rule 3745-17-08 of the Administrative Code as expeditiously as practicable but in no event later than the dates specified in paragraph (B) of this rule.
- (2) Any owner or operator of an air contaminant source, which is subject to the requirements of paragraph (D) of rule 3745-17-08 of the Administrative Code, as such rule existed on August 1, 1982, and which is located in Madison township, Sandusky county, Ohio, shall comply with the certification and permit application requirements in paragraph (A)(1) of this rule by no later than October 1, 1982.
- (3) Any certification and/or application required by paragraph (A)(1) of this rule, or any permit-to-operate issued by the director, may include multiple, similar fugitive dust sources located at a specified facility, if such similar fugitive dust sources fall within one of the following general source categories: storage piles, mineral extraction operations, material handling operations, or roads and parking lots. Where appropriate, the certification, application or permit-to-operate may specify such similar fugitive dust sources and their associated control measures by their general source categories.

- (4) By no later than October 1, 1991, any owner or operator of an air contaminant source subject to rule 3745-17-12 of the Administrative Code, as such rule existed on June 14, 1991, shall comply with the requirements in either of the following paragraphs:
- (a) Certify in writing to the director that such source is in compliance with rule 3745-17-12 of the Administrative Code. Such certification shall include: equipment description, Ohio EPA permit application number, and all necessary data (consistent with the appropriate permit application appendices) and calculations which confirm the compliance status. The certification shall also include an application for a permit-to-operate such source in accordance with rule 3745-35-02 of the Administrative Code if such source does not possess an effective permit.
  - (b) Submit an application for a permit-to-operate or an application for a modification in accordance with rule 3745-35-02 of the Administrative Code. Such application shall include a final control plan and a compliance schedule which will bring the source into compliance with rule 3745-17-12 of the Administrative Code as expeditiously as practicable, but in no event later than the dates specified in paragraph (B) of this rule.
- (5) By no later than January 1, 1992, any owner or operator of an air contaminant source subject to rule 3745-17-13 of the Administrative Code, as such rule existed on December 6, 1991, shall comply with the requirements in either of the following paragraphs:
- (a) Certify in writing to the director that such source is in compliance with rule 3745-17-13 of the Administrative Code. Such certification shall include: equipment description, Ohio EPA permit application number, and all necessary data (consistent with the appropriate permit application appendices) and calculations which confirm the compliance status. The certification shall also include an application for a permit-to-operate such source in accordance with rule 3745-35-02 of the Administrative Code if such source does not possess an effective permit.
  - (b) Submit an application for a permit-to-operate or an application for a modification in accordance with rule 3745-35-02 of the Administrative Code. Such application shall include a final control plan and a compliance schedule which will bring the source into compliance with rule 3745-17-13 of the Administrative Code as expeditiously as practicable, but in no event later than the dates specified in paragraph (B) of this rule.
- (6) By no later than October 15, 1983, the "Columbus and Southern Ohio Electric Company, Conesville Station" (OEPA premise number 0616000000) or any subsequent owner or operator shall submit an application for a permit-to-operate

in accordance with rule 3745-35-02 of the Administrative Code for boiler number four (OEPA source number B004). Such application shall include a final control plan and a compliance schedule which will bring the source into compliance with paragraph (C)(6) of rule 3745-17-10 of the Administrative Code as expeditiously as practicable but in no event later than the date specified in paragraph (B)(4) of this rule.

(B) Compliance time schedules.

- (1) Any owner or operator of an air contaminant source, which is subject to the requirements of rule 3745-17-07 of the Administrative Code, shall achieve compliance with said requirements by the following deadlines:
  - (a) For paragraph (A) of rule 3745-17-07 of the Administrative Code, by June 18, 1980.
  - (b) For paragraphs (B)(2)(b), (B)(2)(c), and (B)(2)(e) of rule 3745-17-07 of the Administrative Code, by December 31, 1982.
  - (c) For paragraphs (B)(2)(a) and (B)(2)(d)(ii) of rule 3745-17-07 of the Administrative Code, by October 1, 1983.
  - (d) For paragraphs (B)(2)(d)(i) and (B)(3) to (B)(6) of rule 3745-17-07 of the Administrative Code, by June 14, 1991.
  - (e) For paragraphs (B)(7) and (B)(10) of rule 3745-17-07 of the Administrative Code, by January 31, 1998.
- (2) Except as otherwise provided in paragraph (B)(3) of this rule, any owner or operator of a fugitive dust source, which is subject to paragraph (D) of rule 3745-17-08 of the Administrative Code, shall achieve compliance with any applicable requirements of paragraph (B) of rule 3745-17-08 of the Administrative Code as expeditiously as practicable, but not later than the deadlines established in the following schedules:
  - (a) For paragraphs (B)(2), (B)(7) and (B)(8) of rule 3745-17-08 of the Administrative Code, by August 1, 1981.
  - (b) For paragraph (B)(6) of rule 3745-17-08 of the Administrative Code, by January 1, 1982.
  - (c) For paragraphs (B)(3) and (B)(4) of rule 3745-17-08 of the Administrative Code and any other reasonably available control measures not specifically described in rule 3745-17-08 of the Administrative Code, by December 31, 1982.

- (3) Any owner or operator of an air contaminant source, which is subject to the requirements of paragraph (D) of rule 3745-17-08 of the Administrative Code and which is located in Madison township, Sandusky county, Ohio, shall achieve compliance with the requirements of paragraph (B) of rule 3745-17-08 of the Administrative Code as expeditiously as practicable, but in no event later than the deadlines in the following schedules:
  - (a) For paragraphs (B)(2), (B)(7) and (B)(8) of rule 3745-17-08 of the Administrative Code, by August 1, 1983.
  - (b) For paragraph (B)(6) of rule 3745-17-08 of the Administrative Code, by January 1, 1984.
  - (c) For paragraph (B)(3) of rule 3745-17-08 of the Administrative Code and any other reasonably available control measures not specifically described in rule 3745-17-08 of the Administrative Code, by January 1, 1985.
- (4) "Columbus and Southern Ohio Electric Company, Conesville Station" or any subsequent owner or operator of the "Columbus and Southern Ohio Electric Company, Conesville Station Facility, Rural Free Delivery 1, Conesville, Ohio" shall achieve compliance with the requirements of paragraph (C)(6)(b) of rule 3745-17-10 of the Administrative Code as expeditiously as practicable, but in no event later than June 19, 1984.
- (5) Any owner or operator of an air contaminant source, which is subject to the requirements of rule 3745-17-11 of the Administrative Code, shall achieve compliance with said requirements as expeditiously as practicable, but not later than the deadlines established in the following schedules:
  - (a) For paragraphs (B)(1) to (B)(3) of rule 3745-17-11 of the Administrative Code, by April 15, 1977.
  - (b) For paragraph (B)(4) of rule 3745-17-11 of the Administrative Code, by June 14, 1991.
  - (c) For paragraphs (B)(5) and (B)(6) of rule 3745-17-11 of the Administrative Code, by January 31, 1998.
- (6) Any owner or operator of an air contaminant source, which is subject to the requirements of rule 3745-17-12 of the Administrative Code, shall achieve compliance with said requirements as expeditiously as practicable, but not later than the deadlines established in the following schedules:
  - (a) For paragraphs (B), (C)(3)(c)(i), (F)(3), (G), (I)(3), (I)(4), (I)(11) to (I)(14), (I)(17), (I)(19), (I)(20), (I)(22) to (I)(27), (I)(29), (I)(38)(a), (I)(39)(a), (I)(40)(a), (I)(46), (M)(3), (N), (O)(2) to (O)(4), (P)(5), (P)(6), (Q)(2), (R),

- (S)(4), (T), (U)(3), (V)(3), (W), (Y)(3), and (Y)(4) of rule 3745-17-12 of the Administrative Code, by June 14, 1991; and for paragraphs (I)(2) and (I)(9) of rule 3745-17-12 of the Administrative Code, by December 6, 1991; and for paragraph (P)(3) of rule 3745-17-12 of the Administrative Code, by November 15, 1995.
- (b) For paragraphs (C)(1), (E), (F)(1), (F)(2), (I)(1), (K), (M)(1), (M)(2), (U)(1), (U)(2), (V)(1), (V)(2), (X)(1), (Y)(1), (Y)(2), and (Z) of rule 3745-17-12 of the Administrative Code, by August 1, 1992.
  - (c) For paragraphs (C)(2) and (X)(4) of rule 3745-17-12 of the Administrative Code, by January 1, 1993.
  - (d) For paragraphs (C)(3)(a), (C)(3)(b), (C)(3)(c)(ii), (D), (F)(4), (F)(5), (H), (L), (Q)(1), (S)(1) to (S)(3), (V)(4), (X)(2), and (X)(3) of rule 3745-17-12 of the Administrative Code, by December 10, 1993.
  - (e) For paragraphs (I)(8), (I)(30) and (I)(47)(c) to (I)(47)(e) of rule 3745-17-12 of the Administrative Code, by December 31, 1991.
  - (f) For paragraphs (I)(1), (I)(16), (I)(28), (I)(30), (I)(38)(b), (I)(39)(b), (I)(45), (I)(47)(a), (J), (O)(1), (O)(5) to (O)(11), (P)(1), (P)(2), (P)(4), and (P)(7) to (P)(13) of rule 3745-17-12 of the Administrative Code, by January 31, 1998.
  - (g) For paragraphs (I)(5) to (I)(7), (I)(10), (I)(21), (I)(40), (I)(43), and (I)(48) of rule 3745-17-12 of the Administrative Code, by the effective date of this rule.
- (7) Any owner or operator of an air contaminant source, which is subject to the requirements of rule 3745-17-13 of the Administrative Code, shall achieve compliance with said requirements as expeditiously as practicable, but not later than the deadlines established in the following schedules:
- (a) For paragraph (D)(3) of rule 3745-17-13 of the Administrative Code, by December 6, 1991.
  - (b) For paragraph (B) of rule 3745-17-13 of the Administrative Code, by November 1, 1992.
  - (c) For paragraphs (D)(2), (D)(4)(a), (D)(4)(d), (D)(4)(e), (D)(5) and (D)(6) of rule 3745-17-13 of the Administrative Code, by not later than the effective date of this rule.
  - (d) For paragraphs (D)(4)(a) to (D)(4)(c) of rule 3745-17-13 of the Administrative Code, by December 31, 1993.

- (e) For paragraphs (C) and (D)(1) of rule 3745-17-13 of the Administrative Code, by January 31, 1998.
- (8) Any owner or operator of a facility, which is subject to the requirements of paragraph (C)(1) of rule 3745-17-03 of the Administrative Code, shall achieve compliance with said requirements by January 31, 1998.

3745-17-07      **Control of visible particulate emissions from stationary sources.**

[Comment: For dates of non-regulatory government publications, publications of recognized organizations and associations, federal rules, and federal statutory provisions referenced in this rule, see the last paragraph of rule 3745-17-01 of the Administrative Code titled "Incorporation by reference."]

(A) Visible particulate emission limitations for stack emissions:

(1) General limitations:

- (a) Except as otherwise specified in paragraphs (A)(1)(b), (A)(2) and (A)(3) of this rule, visible particulate emissions from any stack shall not exceed twenty per cent opacity, as a six-minute average.
  - (b) Except as otherwise specified in paragraphs (A)(2) and (A)(3) of this rule, visible particulate emissions from any stack may exceed twenty per cent opacity, as a six-minute average, for not more than six consecutive minutes in any sixty minutes, but shall not exceed sixty per cent opacity, as a six-minute average, at any time.
- (2) It shall be deemed not to be a violation of this rule where the presence of uncombined water is the only reason for failure of a stack emission to meet the requirements of this rule.
- (3) The visible particulate emission limitations established in paragraph (A)(1) of this rule shall not apply to the following:
- (a) The start-up of the following fuel burning equipment:
    - (i) For any fuel burning equipment which are equipped with baghouses or electrostatic precipitators, until the exhaust gases have achieved a temperature of two hundred fifty degrees Fahrenheit at the inlet of the baghouses or electrostatic precipitators, provided that the director may incorporate a higher start-up temperature in the permit or variance for such source for which an applicant demonstrates to the satisfaction of the director that the higher temperature is needed for safety considerations or to prevent damage to the control equipment.
    - (ii) For any fuel burning equipment which are uncontrolled or which are equipped solely with mechanical collectors (including mechanical collectors which are equipped with sidestream separators or similar devices) for the control of particulate emissions, for a period of not more than three hours from the moment of start-up, provided that the director may incorporate a longer start-up time period in the permit or

variance for such source for which an applicant demonstrates to the satisfaction of the director that the longer time period is required.

- (b) The shutdown of the following fuel burning equipment:
- (i) For any fuel burning equipment which are equipped with baghouses or electrostatic precipitators, after the temperature of the exhaust gases has dropped below two hundred fifty degrees Fahrenheit at the inlet of the baghouses or electrostatic precipitators, provided that the director may incorporate a higher shutdown temperature in the permit or variance for such source for which an applicant demonstrates to the satisfaction of the director that the higher temperature is needed for safety considerations or to prevent damage to the control equipment.
  - (ii) For any fuel burning equipment which are uncontrolled or which are equipped solely with mechanical collectors (including mechanical collectors which are equipped with sidestream separators or similar devices) for the control of particulate emissions, for a period of not more than three hours, provided that the director may incorporate a longer shutdown time period in the permit or variance for such source for which an applicant demonstrates to the satisfaction of the director that the longer time period is required.
- (c) The malfunction of any air contaminant source or the malfunction/shutdown of air pollution control equipment associated with any air contaminant source, if the owner or operator of said air contaminant source or air pollution control equipment complies with the requirements of rule 3745-15-06 of the Administrative Code and none of the conditions listed in paragraph (C) of rule 3745-15-06 of the Administrative Code exists.
- (d) Intermittent soot-blowing operations (the cleaning of heat transfer surfaces with pressurized air or steam) for fuel burning equipment which are uncontrolled or which are equipped solely with mechanical collectors (including mechanical collectors which are equipped with sidestream separators or similar devices) for the control of particulate emissions, provided that the owner or operator of such fuel burning equipment maintains a daily record which clearly documents the date, beginning time and ending time for all intermittent soot-blowing operations.
- (e) Salt glazing operations conducted in a gas-fired periodic brick or tile kiln, for a period of not more than two hours during any twenty-one consecutive days of operation of said kiln.
- (f) Intermittent ash removal operations (the dumping or pulling of ash) for fuel burning equipment which are uncontrolled or which are equipped solely with mechanical collectors (including mechanical collectors which are

equipped with sidestream separators or similar devices) for the control of particulate emissions, provided that the owner or operator of such fuel burning equipment maintains a daily record which clearly documents the date, beginning time and ending time for all intermittent ash removal operations.

- (g) The commencement of increased coal firing from a banked condition for fuel burning equipment, for a period not to exceed thirty minutes.
- (h) Any air contaminant source which is not subject to any mass emission limitation in paragraphs (B)(3) and (B)(4) of rule 3745-17-08 of the Administrative Code, or rule 3745-17-09, 3745-17-10 or 3745-17-11 of the Administrative Code.
- (i) Any air contaminant source for which an equivalent visible particulate emission limitation has been established by the director pursuant to paragraph (C) of this rule.
- (j) The following kiln operations at the facility (OEPA premise number 0372000127) located at 755 Lime Road, Woodville, Ohio, provided that "Martin Marietta Magnesia Specialties, Inc.," or any subsequent owner or operator of such facility, maintains daily records that clearly document the dates, beginning times, and ending times for the operations:
  - (i) The start-up of any kiln equipped with a baghouse, until the time stone feed to the kiln begins.
  - (ii) The start-up of any kiln equipped with an electrostatic precipitator, from the time the stone feed to the kiln begins until the time a stable firing condition for the solid fuel is achieved, but not longer than six hours from the time firing with the solid fuel begins.
  - (iii) The shutdown of any kiln equipped with a baghouse, after the time the temperature of the exhaust gases from the kiln has dropped below two hundred fifty degrees Fahrenheit at the inlet of the baghouse.

For the purposes of this paragraph, "start-up" shall be defined as the point of commencement of firing the kiln until such time as the process is operating in a steady-state condition using its primary fuel. A steady-state condition is present when the throughputs of process material, fuel and combustion air have been stabilized in a manner that demonstrates the combustion process will be consistently complete and safe, with an exhausted combustibles concentration within established safety limits.

(B) Visible particulate emission limitations for fugitive dust:

- (1) Except as provided in paragraphs (B)(2) to (B)(11) of this rule, visible particulate emissions from any fugitive dust source shall not exceed twenty per cent opacity as a three-minute average.
- (2) Except as provided in paragraph (B)(11) of this rule, visible particulate emissions from the fugitive dust sources associated with a coke oven battery shall comply with the following:
  - (a) There shall be no visible particulate emissions from any charging operations except for a period of time not to exceed one hundred twenty-five seconds during any five consecutive charges. One charge, which represents the charge with the highest visible particulate emissions value of twenty consecutive charges observed, may be exempted from this visible particulate emission limitation.
  - (b) At no time shall there be visible particulate emissions from more than ten per cent of the offtake piping.
  - (c) At no time shall there be visible particulate emissions from more than five per cent of the charging hole lids.
  - (d) For visible particulate emissions from oven doors:
    - (i) For the Still coke oven battery (OEPA source number B919) at the "Armco Steel Company, L.P., Middletown Works" (OEPA premise number 1409010006), located on Crawford street, Middletown, Ohio, at no time shall there be visible particulate emissions from more than sixteen per cent of the oven doors.
    - (ii) For all other coke oven batteries, at no time shall there be visible particulate emissions from more than ten per cent of the oven doors. Two oven doors, which represent the last oven charged prior to the commencement of visible particulate emission readings performed in accordance with paragraph (B)(2)(c) of rule 3745-17-03 of the Administrative Code, shall be exempted from this visible emission limitation.
    - (iii) For purposes of this paragraph, an oven door and the associated chuck door on the pusher side of the battery shall be considered as one door.
  - (e) Visible particulate emissions during any pushing operations shall not exceed an average of twenty per cent opacity read above the battery top. For purposes of this paragraph, the duration of a pushing operation shall commence with the moving (or pushing) of the coke mass from an oven and shall conclude when the quench car enters the quench tower.

- (3) Except as provided in paragraph (B)(11) of this rule, visible particulate emissions of fugitive dust from electric arc furnace shop roof monitors, argon-oxygen decarburization shop roof monitors, blast furnace casthouses and sintering operations shall not exceed twenty per cent opacity as a six-minute average.
- (4) Except as provided in paragraphs (B)(7), (B)(8), and (B)(11) of this rule, there shall be no visible particulate emissions from any paved roadway or parking area except for a period of time not to exceed six minutes during any sixty-minute observation period, as determined in accordance with paragraph (B)(4) of rule 3745-17-03 of the Administrative Code.
- (5) Except as provided in paragraphs (B)(7), (B)(8), and (B)(11) of this rule, there shall be no visible particulate emissions from any unpaved roadway or parking area except for a period of time not to exceed thirteen minutes during any sixty-minute observation period, as determined in accordance with paragraph (B)(4) of rule 3745-17-03 of the Administrative Code.
- (6) Except as provided in paragraphs (B)(7) to (B)(11) of this rule, there shall be no visible particulate emissions from any material storage pile except for a period of time not to exceed thirteen minutes during any sixty-minute observation period, as determined in accordance with paragraph (B)(4) of rule 3745-17-03 of the Administrative Code.
- (7) Except as provided in paragraph (B)(11) of this rule, visible particulate emissions from any roadway, parking area, material handling operation, or coal storage pile located at facilities owned or operated by "Buckeye Power, Inc., Cincinnati Gas & Electric Company, The Cleveland Electric Illuminating Company, Columbus Southern Power Company, Dayton Power & Light Company, Ohio Edison Company, Ohio Power Company, and The Toledo Edison Company" or any subsequent owners or operators of such facilities shall not exceed any of the following limitations:
  - (a) For any paved or unpaved roadway or parking area:
    - (i) Ten per cent opacity, as determined in Accordance with paragraph (B)(3) of rule 3745-17-03 of the Administrative Code, for the following facilities:

[reserved]
    - (ii) No visible particulate emissions from any paved roadway or parking area, except for a period of time not to exceed six minutes during any sixty-minute observation period, or from any unpaved roadway or parking area, except for a period of time not to exceed thirteen minutes during any sixty-minute observation period, as determined in accordance with paragraph (B)(4) of rule 3745-17-03 of the

Administrative Code, for all other facilities not identified in paragraph (B)(7)(a)(i) of this rule.

- (b) Twenty per cent opacity for any material handling operation (including loading coal into or loading coal out of any coal storage pile), as determined in accordance with paragraph (B)(3) of rule 3745-17-03 of the Administrative Code;
  - (c) Twenty per cent opacity from the operation of vehicles on top of any coal storage pile (emissions from the combustion of fuels in such vehicles are not subject to this limitation), as determined in accordance with paragraph (B)(3) of rule 3745-17-03 of the Administrative Code; and
  - (d) No visible particulate emissions from any coal storage pile due to wind erosion, except for a period of time not to exceed thirteen minutes during any sixty-minute observation period, as determined in accordance with paragraph (B)(4) of rule 3745-17-03 of the Administrative Code.
- (8) Except as provided in paragraph (B)(11) of this rule, visible particulate emissions from any roadway, parking area, or material storage pile located at iron and steel production facilities owned and operated by "Empire Detroit Steel Company, LTV Steel Company, Republic Engineered Steels, Incorporated, The Timken Company, or USS/KOBE Steel Company" or any subsequent owner or operator of such facilities shall not exceed any of the following limitations:
- (a) Ten per cent opacity for any paved or unpaved roadway or parking area, as determined in accordance with paragraph (B)(3) of rule 3745-17-03 of the Administrative Code;
  - (b) Twenty per cent opacity for any material handling operation (including loading coal into or loading coal out of any coal storage pile), as determined in accordance with paragraph (B)(3) of rule 3745-17-03 of the Administrative Code;
  - (c) Ten per cent opacity from the operation of vehicles on top of any material storage pile, where such vehicles are employed for the purpose of compacting, grading or transporting materials (emissions from the combustion of fuels in such vehicles are not subject to this limitation), as determined in accordance with paragraph (B)(3) of rule 3745-17-03 of the Administrative Code; and
  - (d) Ten per cent opacity from wind erosion of any material storage pile, as determined in accordance with paragraph (B)(3) of rule 3745-17-03 of the Administrative Code.

- (9) Within thirty days after the effective date of this rule, the "Ford Motor Company, Cleveland Casting Plant" (OEPA premise number 1318120180) or any subsequent owner or operator of the "Ford Motor Company, Cleveland Casting Plant" located at 5600 Henry Ford Boulevard, Brook Park, Ohio shall submit a written notification to the director which indicates whether, for the control of fugitive dust generated from any material storage pile located at such facility, it will comply with either the visible particulate emission limitation in paragraph (B)(6), or the visible particulate emission limitation in paragraph (B)(6) except that fugitive dust emissions from loading material into or out of any material storage pile shall not exceed a visible particulate emission limitation of twenty per cent opacity, as determined in accordance with paragraph (B)(3) of rule 3745-17-03 of the Administrative Code. In such notification, "Ford Motor Company, Cleveland Casting Plant" or any subsequent owner or operator of such facility shall choose between the visible particulate emission limitations. Except as otherwise provided in paragraph (B)(10) of this rule, after submitting such written notification indicating which visible particulate emission limitation it will comply with, "Ford Motor Company, Cleveland Casting Plant" or any subsequent owner or operator of such facility will be subject to and shall comply with such visible particulate emission limitation(s).
- (10) After selecting a visible particulate emission limitation(s) option pursuant to paragraph (B)(9) of this rule, in the event that "Ford Motor Company, Cleveland Casting Plant" or any subsequent owner or operator of the "Ford Motor Company, Cleveland Casting Plant" subsequently desires to be subject to and to comply with the other identified visible particulate emission limitation(s) option identified in paragraph (B)(9) of this rule, "Ford Motor Company, Cleveland Casting Plant" or any subsequent owner or operator of such facility may so notify the director by submitting a written notification which clearly indicates that "Ford Motor Company, Cleveland Casting Plant" or any subsequent owner or operator of such facility desires to be subject to and shall comply with the alternative visible particulate emission limitation(s) option. To be effective, any such written notification shall expressly identify the specific date on which "Ford Motor Company, Cleveland Casting Plant" or any subsequent owner or operator of such facility desires to be subject to the alternative option and shall be submitted no later than thirty days prior to such date. In the event that "Ford Motor Company, Cleveland Casting Plant" or any subsequent owner or operator of such facility complies with the written notification provisions contained in this paragraph, "Ford Motor Company, Cleveland Casting Plant" or any subsequent owner or operator of such facility shall become subject to and shall comply with the alternative visible particulate emission limitation(s) option as of the date specifically identified in the written notification.
- (11) The visible particulate emission limitations specified in paragraphs (B)(1) to (B)(9) of this rule shall not apply to the following:
- (a) Ship loading spouts at grain terminals;

- (b) Blasting at mineral extraction operations;
  - (c) Blowing taps, poling and oxygen lancing of the tap hole and casting operations associated with ferroalloy electric arc furnaces;
  - (d) Any fugitive dust source which is exempted from the requirements of paragraph (B) of rule 3745-17-08 of the Administrative Code;
  - (e) Any fugitive dust source which is not located within the geographical areas specified in appendix A of rule 3745-17-08 of the Administrative Code, unless the director, in accordance with paragraph (A)(2) of rule 3745-17-08 of the Administrative Code, requires the owner or operator to submit and implement a control program which will bring the fugitive dust source into compliance with the requirements of paragraph (B) of rule 3745-17-08 of the Administrative Code; and
  - (f) The malfunction of any air contaminant source or the malfunction/shutdown of air pollution control equipment associated with any air contaminant source, if the owner or operator of said air contaminant source or air pollution control equipment complies with the requirements of rule 3745-15-06 of the Administrative Code and none of the conditions listed in paragraph (C) of rule 3745-15-06 of the Administrative Code exists.
  - (g) Any fugitive dust for which a visible particulate emission limitation has been established in rule 3745-17-12 or 3745-17-13 of the Administrative Code.
- (12) It shall be deemed not to be a violation of this rule where the presence of uncombined water is the only reason for failure of a fugitive dust emission to meet the requirements of this rule.

(C) Equivalent visible particulate emission limitations:

- (1) For the purpose of establishing an equivalent visible particulate emission limitation for stack emissions subject to a mass-based, particulate emission limitation, any owner or operator of an air contaminant source which is subject to the requirements of paragraph (A)(1) of this rule may request the director to determine the average opacity of the emissions from said source during any performance test(s) conducted pursuant to paragraph (B) of rule 3745-17-03 of the Administrative Code. Any such request shall be made in writing at the time the test specifications and procedures are submitted to the director pursuant to paragraph (B)(6) of rule 3745-17-03 of the Administrative Code.
- (2) If, upon review of such owner's or operator's written report of the results of the performance test(s), it is the director's judgment that the air contaminant source is in compliance with all applicable emission limitations for which the

performance tests were conducted, but fails to comply with the requirements of paragraph (A)(1) of this rule, the director shall notify the owner or operator as expeditiously as practicable that he may request the director to establish an equivalent visible particulate emission limitation for the source. Such request shall be made in writing within thirty days following receipt of the notification from the director.

- (3) Any written request for an equivalent visible particulate emission limitation from an owner or operator of an air contaminant source shall include information which demonstrates the following:
    - (a) That the performance tests were conducted in accordance with the conditions and procedures accepted by the director pursuant to paragraph (B)(6) of rule 3745-17-03 of the Administrative Code; and
    - (b) That the air contaminant source and any associated air pollution control equipment were operated and maintained in a manner so as to minimize the opacity of the emissions during the performance test(s).
  - (4) If an owner or operator of an air contaminant source complies with the requirements of paragraphs (C)(1) to (C)(3) of this rule, the director may establish an equivalent visible particulate emission limitation for said source in accordance with the procedures described in the Ohio EPA, Division of Air Pollution Control documents entitled "Engineering Guide #13" and "Engineering Guide #15." Any such equivalent visible particulate emission limitation shall be specified in the terms and conditions of the permit, variance or order issued by the director for said source.
- (D) Any revision approved by the director in accordance with paragraphs (A)(3)(a)(i), (A)(3)(a)(ii), (A)(3)(b)(i), and (A)(3)(b)(ii) of this rule shall not revise the federally enforceable requirements of the state implementation plan until approved by the United States environmental protection agency.

**3745-17-08      Restriction of emission of fugitive dust.**

[Comment: For dates of non-regulatory government publications, publications of recognized organizations and associations, federal rules, and federal statutory provisions referenced in this rule, see the last paragraph of rule 3745-17-01 of the Administrative Code titled "Incorporation by reference."]

**(A) Applicability:**

- (1) Except as otherwise indicated in paragraph (A)(3) of this rule, the requirements of paragraph (B) of this rule shall apply to any fugitive dust source which is located within the areas identified in appendix A to this rule. Except as additional time for achieving compliance is provided in paragraph (B) of rule 3745-17-04 of the Administrative Code, any such source shall comply with the requirements of paragraph (B) of this rule upon the effective date of this rule.
- (2) Notwithstanding the exemptions in paragraph (A)(3) of this rule, the requirements of paragraph (B) of this rule shall apply to any fugitive dust source regardless of location if, in the director's judgment, probable cause exists to believe that such source is causing or contributing to a violation of rule 3745-15-07 or 3745-17-02 of the Administrative Code. In such cases, the director may require the owner or operator of the fugitive dust source to apply for and obtain a permit to operate for the source in accordance with rule 3745-35-02 of the Administrative Code, and/or require the owner or operator to submit and implement a control program which will bring the fugitive dust source into compliance with the requirements of paragraph (B) of this rule as expeditiously as practicable.
- (3) The requirements of paragraph (B) of this rule shall not apply to:
  - (a) Any fugitive dust source which is located at a grain elevator having a permanent storage capacity of less than 2.5 million bushels;
  - (b) Reserved
  - (c) Fugitive dust generated from publicly owned roadways and parking lots, provided the fugitive dust is not directly caused by the deposition of materials due to industrial, commercial, or construction activities; and
  - (d) Fugitive dust generated from the tilling and wind erosion of farm land.
  - (e) Except as otherwise provided in paragraphs (E) and (F) of this rule, fugitive dust generated from any roadway or parking area at the "Ford Motor Company, Cleveland Casting Plant" or any subsequent owner or operator of the "Ford Motor Company, Cleveland Casting Plant" facility located at

5600 Henry Ford Boulevard, Brook Park, Ohio (OEPA premise number 1318120180) and at the "Wheeling Pittsburgh Steel Corporation" or any subsequent owner or operator of the "Wheeling Pittsburgh Steel Corporation" facilities located at South Third Street, Steubenville, Ohio (OEPA premise number 1741150011) and at McLister avenue, Mingo Junction, Ohio (OEPA premise number 1741090010).

- (4) An air contaminant source can be subject to both of the requirements of rule 3745-17-11 of the Administrative Code and this rule if it is a fugitive dust source, as defined in paragraph (B)(7) of 3745-17-01 of the Administrative Code, and also emits, by means of one or more stacks, particulate matter that is subject to a limitation(s) in rule 3745-17-11 of the Administrative Code.
- (B) No person shall cause or permit any fugitive dust source to be operated; or any materials to be handled, transported, or stored; or a building or its appurtenances or a road to be used, constructed, altered, repaired, or demolished without taking or installing reasonably available control measures to prevent fugitive dust from becoming airborne. Such reasonably available control measures shall include, but not be limited to, one or more of the following which are appropriate to minimize or eliminate visible particulate emissions of fugitive dust:
- (1) The use of water or other suitable dust suppression chemicals for the control of fugitive dust from the demolition of existing buildings or structures, construction operations, the grading of roads or the clearing of land;
  - (2) The periodic application of asphalt, oil (excluding any used oil as defined in paragraph (A)(12) of rule 3745-279-01 of the Administrative Code), water, or other suitable dust suppression chemicals on dirt or gravel roads and parking lots, and other surfaces which can cause emissions of fugitive dust;
  - (3) The installation and use of hoods, fans, and other equipment to adequately enclose, contain, capture, vent and control the fugitive dust. Such equipment shall meet the following requirements:
    - (a) The collection efficiency is sufficient to minimize or eliminate visible particulate emissions of fugitive dust at the point(s) of capture to the extent possible with good engineering design; and
    - (b) The control equipment achieves an outlet emission rate of not greater than 0.030 grain of particulate emissions per dry standard cubic foot of exhaust gases or there are no visible particulate emissions from the exhaust stack(s), whichever is less stringent;
  - (4) For ship loading operations at grain terminals:

- (a) Except during topping-off periods or during the loading of tween-deckers or tankers, the covering of the hatches and loading spouts with tarpaulin covers, to the extent practicable, and evacuation of the hatches to control equipment which is designed to achieve an outlet emission rate of 0.030 grain of particulate emissions per dry standard cubic foot of exhaust gases; or
  - (b) The installation and use of control measures such as deadbox or bullet-type loading spouts which are equivalent to or better than the overall control efficiency of the measures described in paragraph (B)(4)(a) of this rule;
- (5) The use of adequate containment methods during sandblasting or other similar operations;
  - (6) The periodic application of water or other suitable dust suppression chemicals, the installation of storage silos, bins or other enclosed structures, or the use of canvas or other suitable coverings, for all materials stockpiles and stockpiling operations, except temporary stockpiles and stockpiling operations for grain and grain products;
  - (7) The covering, at all times, of open bodied vehicles when transporting materials likely to become airborne;
  - (8) The paving of roadways and the maintaining of roadways in a clean condition; and
  - (9) The prompt removal, in such a manner as to minimize or prevent resuspension, of earth or other material from paved streets onto which earth or other material has been deposited by trucking or earth moving equipment or erosion by water or other means.
- (C) For purposes of determining compliance with the requirements of paragraph (B) of this rule, the director shall consider a control measure to be adequate if it complies with the following:
    - (1) The visible particulate emission limitation(s) contained in rule 3745-17-07 of the Administrative Code;
    - (2) If applicable, the control requirements contained in paragraph (B) of this rule; and
    - (3) The definition of reasonably available control measures in paragraph (B)(17) of rule 3745-17-01 of the Administrative Code.
- (D) Any owner or operator of a facility which contains a fugitive dust source and which is located within any area identified in appendix A to this rule shall submit a

certification and/or application for a permit-to-operate in accordance with paragraphs (A) and (B) of rule 3745-17-04 of the Administrative Code. This paragraph shall not exempt the owner or operator of a fugitive dust source which is not located within an area identified in appendix A to this rule from the requirements of rule 3745-35-02 or 3745-77-02 of the Administrative Code.

- (E) Within thirty days after January 31, 1998, the "Ford Motor Company, Cleveland Casting Plant" (OEPA premise number 1318120180) or any subsequent owner or operator of the "Ford Motor Company, Cleveland Casting Plant" located at 5600 Henry Ford Boulevard, Brook Park, Ohio shall submit a written notification to the director which indicates whether it will comply with either the work practice plan in appendix B to this rule or the visible particulate emission limitation in paragraph (B)(5) of rule 3745-17-07 of the Administrative Code and the requirements of paragraph (B)(2) of this rule for the control of fugitive dust generated from any unpaved roadway or parking area located at such facility. In such notification, "Ford Motor Company, Cleveland Casting Plant" or any subsequent owner or operator of such facility shall choose between the requirements of the work practice plan or the requirements of paragraph (B)(5) of rule 3745-17-07 of the Administrative Code and of paragraph (B)(2) of this rule. Except as otherwise provided in paragraph (F) of this rule, after submitting such written notification indicating which control requirements it will comply with, "Ford Motor Company, Cleveland Casting Plant" or any subsequent owner or operator of such facility will be subject to and shall comply with such control requirements.
- (F) After selecting a control requirements option pursuant to paragraph (E) of this rule, in the event that "Ford Motor Company, Cleveland Casting Plant" or any subsequent owner or operator of the "Ford Motor Company, Cleveland Casting Plant" subsequently desires to be subject to and to comply with the other identified control requirements option identified in paragraph (E) of this rule, "Ford Motor Company, Cleveland Casting Plant" or any subsequent owner or operator of such facility may so notify the director by submitting a written notification which clearly indicates that "Ford Motor Company, Cleveland Casting Plant" or any subsequent owner or operator of such facility desires to be subject to and shall comply with the alternative control requirements option. To be effective, any such written notification shall expressly identify the specific date on which "Ford Motor Company, Cleveland Casting Plant" or any subsequent owner or operator of such facility desires to be subject to the alternative control requirements option and shall be submitted no later than thirty days prior to such date. In the event that "Ford Motor Company, Cleveland Casting Plant" or any subsequent owner or operator of such facility complies with the written notification provisions contained in this paragraph, "Ford Motor Company, Cleveland Casting Plant" or any subsequent owner or operator of such facility shall become subject to and shall comply with the alternative control requirements option as of the date specifically identified in the written notification.

## 3745-17-08 Appendix A

AREAS OF THE STATE OF OHIO  
WHERE PARAGRAPHS (B) AND (D) OF RULE 3745-17-08  
OF THE ADMINISTRATIVE CODE ARE APPLICABLE

COUNTY	DESCRIPTION OF AREA(S)
Allen	City of Lima
Ashtabula	City of Ashtabula; and Ashtabula and Plymouth Townships
Belmont	entire county
Butler	Cities of Hamilton, Middletown and New Miami; and Fairfield, Lemon, Madison and St. Clair Townships
Carroll	entire county
Clark	Cities of New Carlisle and Springfield
Clinton	Cities of Blanchester and Wilmington
Columbiana	entire county
Coshocton	Jackson Township
Cuyahoga	entire county
Defiance	Richland Township
Franklin	City of Columbus
Gallia	City of Gallipolis
Geauga	Cities of Chardon and Middlefield; and Bainbridge Township
Greene	City of Fairborn
Hamilton	Cities of Cincinnati, Norwood, Golf Manor, Amberley, Arlington Heights, Reading, Lockland, Evendale, Sharonville, Springdale, Glendale, Woodlawn, Lincoln Heights, Wyoming, Elmwood Place and St. Bernard; and Miami, Whitewater, Delhi and Springfield Townships
Henry	City of Napoleon
Jackson	City of Jackson
Jefferson	entire county
Lake	Cities of Painesville, Willowick, Willoughby Hills, Wickliffe, Eastlake, Madison and Mentor; and Madison, Leroy and Painesville Townships
Lawrence	Cities of Ironton and Coal Grove
Lorain	Cities of Sheffield, Lorain, Avon and Avon Lake; and Sheffield Township
Lucas	Cities of Maumee, Toledo and Oregon; and Washington and Waterville Townships

COUNTY	DESCRIPTION OF AREA(S)
Mahoning	City of Youngstown
Medina	entire county
Meigs	City of Racine
Miami	City of Piqua; and Concord Township
Monroe	entire county
Montgomery	Cities of Dayton, Kettering, Miamisburg, Moraine, Oakwood, Riverside, Trotwood and West Carrollton; and Butler, Jefferson, Harrison, Mad River, Madison, Miami, Washington and Wayne Townships
Morgan	Center Township
Muskingum	Cities of Philo and Zanesville
Noble	City of Caldwell
Portage	Cities of Kent and Ravenna
Preble	City of Eaton
Richland	City of Mansfield; and Madison, Mifflin and Franklin Townships
Sandusky	Cities of Gibsonburg and Woodville; and Jackson, Madison, Washington and Woodville Townships
Seneca	City of Tiffin
Shelby	City of Sidney
Stark	Cities of Canton, East Canton, Louisville and Meyers Lake; and Canton, Nimishillen, Osnaburg, Perry and Plain Townships
Summit	Cities of Akron, Barberton, Cuyahoga Falls and Norton; and Coventry and Franklin Townships
Trumbull	Cities of Warren and Niles; and Warren Township
Washington	entire county
Wood	City of Perrysburg
Wyandot	City of Carey; and Crawford Township

## 3745-17-08 Appendix B

WORK PRACTICE PLAN FOR THE CONTROL OF  
FUGITIVE DUST EMISSIONS FROM UNPAVED  
ROADWAYS AT THE FORD MOTOR COMPANY  
CLEVELAND CASTING PLANT

- A. Dust control program for unpaved roadways:
1. The facility shall employ the following dust control measures on all of the unpaved roadways identified in Figure I of this Appendix such that the program achieves and maintains a minimum of 75 percent control efficiency, as determined by the methodology set forth in the U.S. Environmental Protection Agency's reference document entitled Control of Open Fugitive Dust Sources (EPA-450/3-88-008), Section 3.0, "Unpaved Roads":
    - a. All unpaved roadways shall be treated with a dust suppressant solution, consisting of either a petroleum resin emulsion, asphalt emulsion or acrylic cement in water, and applied at a coverage dilution with water at a ratio of not more than 10 parts of water to one part of concentrate. Such treatments shall be performed in accordance with the following schedule and on a year-round basis, except as otherwise provided in Section A.1.b of this Appendix:
 

<u>segments</u>	<u>minimum application frequency</u>
UR1	every four and one-half weeks
UR2, UR3	every six and one-half weeks
    - b. The requirements of Section A.1.a of this Appendix may be suspended during any one of the following events:
      - i. when the unpaved roadways are visibly wetted as a result of a precipitation of equal to or greater than one quarter inch of rainfall as measured by an on-site rain gauge or rainfall data provided by the National Weather Service at Cleveland Hopkins Airport; or
      - ii. when the unpaved roadways are covered with snow and/or ice.

Resumption of the treatment requirements of Section A.1.a of this Appendix shall occur within five (5) days after cessation of the above event(s).

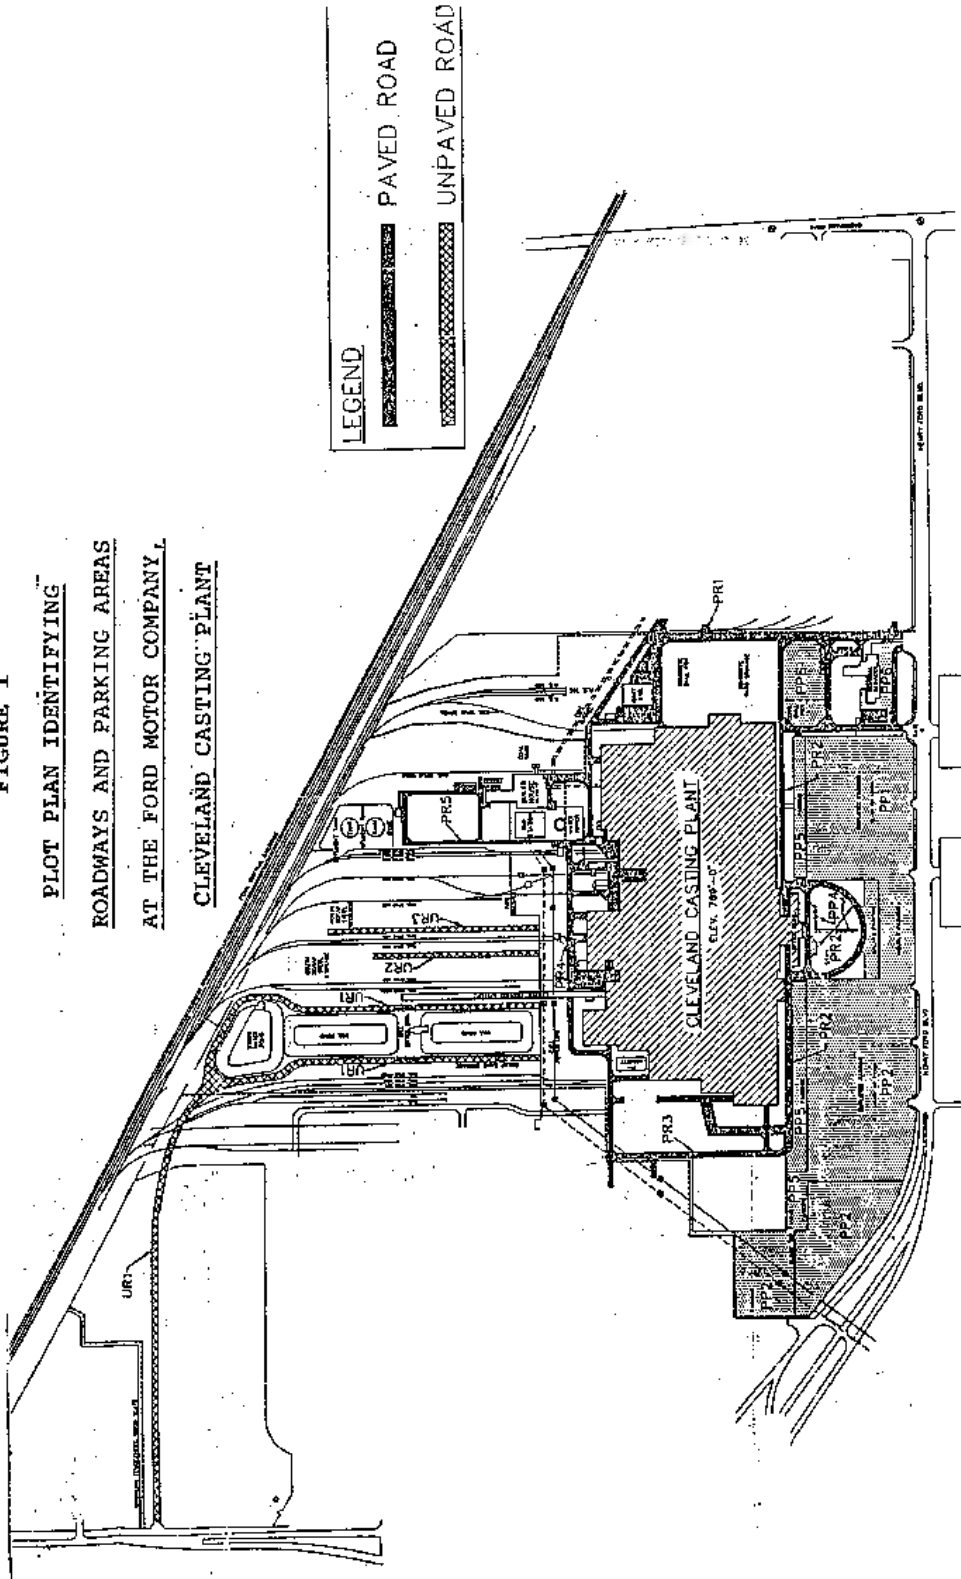

2. Any dust suppressant spray truck used for treating unpaved roadways pursuant to Section A.1.a shall be operated and maintained in order to apply dust suppressant solution at a coverage rate of at least 0.25 gallon per square yard at the specified frequency.
  3. The facility shall maintain records and submit reports concerning the dust control program in accordance with the following:
    - a. The following information shall be recorded on a daily basis:
      - i. for periods during which the treatment requirements of Section A.1.a of this Appendix have been suspended pursuant to the provisions of Section A.1.b of this Appendix:
        - a. the date(s) of suspension;
        - b. the specific treatment operations suspended;
        - c. the daily precipitation in inches of water and/or the presence of snow and/or ice cover, whichever is/are applicable;
      - ii. the date each unpaved roadway was treated;
      - iii. an identification of each unpaved roadway or portion thereof which was treated;
      - iv. an identification of the dust suppressant spray vehicle employed for the treatment;
      - v. the name of the operator who performed the treatment;
      - vi. the type of chemical dust suppressant applied to each unpaved roadway;
      - vii. the dilution ratio (gallons of chemical dust suppressant to gallons of water); and
      - viii. the amount of dust suppressant solution applied to each unpaved roadway (gallons per square yard).
    - b. The records collected pursuant to Section A.3.a of this Appendix shall be retained by the facility for a period of not less than three years and shall be made available to the Director or his representative upon request.
    - c. The facility shall submit to the Director or his representative, within five (5) days of any non-compliance with the requirements of Section (A) of this Appendix, a report which includes a detailed explanation of the cause of such noncompliance, all remedial actions required, and the date by which compliance was or will be reestablished.
- B. Change to dust control programs in Section A of this Appendix:
1. The facility may petition the Ohio EPA for written approval of treatment methods, treatment schedules and procedures or reporting requirements different from those required herein. Such alternative practices must be demonstrated to the Ohio EPA and the U.S. Environmental Protection Agency to result in equivalent dust control effectiveness in accordance with the document entitled Control of Open Fugitive Dust Sources (EPA-

450/3-88-008). The facility reserves the right to contest any disapproval of such petition in the appropriate judicial forum.

2. In the event that the facility certifies that the use of all or a portion of an unpaved roadway identified in Figure I of this Appendix has been discontinued, the dust suppressant solution application program for that roadway may be terminated or reduced. If the facility begins to utilize any new unpaved roadway, parking area, or other vehicular activity area not shown in Figure I of this Appendix, it shall notify the Director in the reports required pursuant to this Appendix and treat the roadway or area in accordance with the procedures contained herein.
3. The Director shall not be precluded from requiring adjustments, including increased chemical suppressant application, if on-site inspections reveal that the program contained herein does not prevent excessive visible dust entrainment and emissions from a particular roadway or surface.
4. In the event that an unpaved roadway that has been chemically treated becomes completely hardened and cemented by such treatment so as to become like a paved road as demonstrated by observation, by compaction tests and silt analyses or in the event that the facility paves any unpaved roadway or area, that roadway or area shall be treated as a paved surface and shall be subject to the requirements of paragraph (I)(1) of rule 3745-17-12 of the Administrative Code.

**Restrictions on particulate emissions and odors from incinerators.**

(A) General provisions.

- (1) This rule shall apply to any incinerator except those regulated under Chapter 3745-75 of the Administrative Code.
- (2) For the purposes of this rule, the total of the capacities of all incinerators which are united either physically or operationally shall be considered as the incineration capacity.

(B) Emission limitation.

No person shall cause, suffer, or allow to be emitted into the ambient air from any incinerators, particulate emissions in the exhaust gases in excess of: 0.10 pound per one hundred pounds of liquid, semi-solid or solid refuse and salvageable material charged, for incinerators having incineration capacities equal to or greater than one hundred pounds per hour; or 0.20 pound per one hundred pounds of liquid, semi-solid or solid refuse and salvageable material charged for incinerators having incineration capacities less than one hundred pounds per hour.

(C) Design-operation requirements.

Incinerators, including all associated equipment and grounds, shall be designed, operated and maintained so as to prevent the emission of objectionable odors.

Effective: 02/01/2008

Prior Effective Dates: 2/15/1972, 6/18/1980, 10/1/1983, 7/9/1991

**Restrictions on particulate emissions from fuel burning equipment.**

- (A) This rule applies to installations in which fuel, including any product or by-product of a manufacturing process, is burned for the primary purpose of producing heat or power by indirect heat transfer.
- (B) For purposes of this rule the actual heat input shall be the aggregate heat content of all fuels whose products of combustion emanate from a single fuel burning unit. The maximum capacity shall be the equipment manufacturer's or designer's guaranteed maximum heat input, whichever is greater. Unless otherwise specified in paragraphs (B)(1) to (B)(4) of this rule, the total heat input of all fuel burning units on a plant or premises which are united either physically or operationally shall be the total of the maximum capacities for all such units. The total heat input shall be used for determining the maximum allowable amount of particulate emissions per million Btu of actual heat input from any single fuel burning unit.
- (1) Any new or existing fuel burning equipment which is fired only with gaseous fuels and/or number two fuel oil and which is physically or operationally united with other fuel burning equipment on a plant or premises shall not be included by the director for purposes of determining the total heat input and maximum allowable particulate emissions per million Btu of actual heat input for such other fuel burning equipment. The maximum allowable amount of particulate emissions for any new or existing fuel burning equipment which is fired only with gaseous fuels, excluding blast furnace gas, and/or number two fuel oil shall be 0.020 pound per million Btu of actual heat input. The maximum allowable amount of particulate emissions for any new or existing fuel burning equipment which is fired only with blast furnace gas or any mixture of blast furnace gas with other gaseous fuels and/or number two fuel oil shall be 0.040 pound per million Btu of actual heat input.
- (2) Stand-by fuel burning equipment which is physically or operationally united with other fuel burning equipment on a plant or premises shall be exempted by the director for purposes of determining total heat input and maximum allowable particulate emissions per million Btu of actual heat input for such other fuel burning equipment. Except as provided in paragraph (B)(1) of this rule, the total heat input for such other fuel burning equipment shall be used for determining the maximum allowable amount of particulate emissions per million Btu of actual heat input for any stand-by fuel burning equipment.
- (3) Derating of fuel burning equipment.
- (a) For purposes of this paragraph, fuel burning equipment shall include, where appropriate, all equipment on a plant or premises which are united either physically or operationally.

- (b) Upon request, the director may specify the total heat input for fuel burning equipment at a derated value which is less than the total maximum capacity of such equipment if, in the director's judgment, the equipment will not be operated so that the actual heat input exceeds the derated value. Any owner or operator requesting derating of fuel burning equipment shall demonstrate to the director, with such steam charts, records of fuel consumption and fuel quality, and other data as are necessary, that the actual heat input from the equipment will not exceed the derated total heat input value.
  - (c) The terms and conditions of any permit, variance, or order for equipment which has been granted a derated total heat input value shall prohibit the operation of such equipment at a level in excess of the derated total heat input value. The director may include in any such permit, variance, or order requirements for the monitoring and reporting of the actual heat input of the equipment.
  - (d) Any derating of fuel burning equipment approved by the director shall not revise the federally enforceable requirements of the state implementation plan until approved by the United States environmental protection agency.
- (4) Fuel burning equipment which constitutes a new source and is physically or operationally united with existing fuel burning equipment on a plant or premises shall not be included by the director for purposes of determining total heat input and maximum allowable particulate emissions per million Btu of actual heat input for such existing fuel burning equipment. Except as may be provided in paragraphs (B)(1) and/or (B)(2) of this rule, the total heat input for the new and existing fuel burning equipment shall be used for determining the maximum allowable amount of particulate emissions per million Btu of actual heat input for the new fuel burning equipment.

(C) Emission limitations.

- (1) Except as provided in paragraph (B)(1) of this rule (as it pertains to gaseous fuels and number two fuel oil) and paragraphs (C)(3) to (C)(7) of this rule, any owner or operator of fuel burning equipment which is located within the following counties shall operate said equipment so that the particulate emissions do not exceed the allowable emission rate specified by "Curve P-1" of "Figure I" in the appendix to this rule: Adams, Allen, Ashtabula, Athens, Belmont, Brown, Butler, Clark, Clermont, Clinton, Columbiana, Coshocton, Cuyahoga, Darke, Defiance, Delaware, Fairfield, Franklin, Gallia, Geauga, Greene, Hamilton, Henry, Jackson, Jefferson, Lake, Lawrence, Licking, Lorain, Lucas, Madison, Mahoning, Medina, Meigs, Miami, Monroe, Montgomery, Morgan, Muskingum, Noble, Perry, Pickaway, Portage, Preble, Richland, Ross, Sandusky, Scioto, Seneca, Shelby, Stark, Summit, Trumbull, Union, Warren, Washington, Wyandot and Wood.

- (2) Except as provided in paragraph (B)(1) of this rule (as it pertains to gaseous fuels and number two fuel oil) and paragraph (C)(7) of this rule, any owner or operator of fuel burning equipment which is located within the following counties shall operate said equipment so that the particulate emissions do not exceed the allowable emission rate specified by "Curve P-2" of "Figure I" in the appendix to this rule: Ashland, Auglaize, Carroll, Champaign, Crawford, Erie, Fayette, Fulton, Guernsey, Hancock, Hardin, Harrison, Highland, Hocking, Holmes, Huron, Knox, Logan, Marion, Mercer, Morrow, Ottawa, Paulding, Pike, Putnam, Tuscarawas, Van Wert, Vinton, Wayne and Williams.
- (3) The "Ford Motor Company, Lorain Assembly Plant" (OEPA premise number 1947080234) or any subsequent owner or operator of the "Ford Motor Company, Lorain Assembly Plant Facility, 5401 Baumhart Road, Lorain, Ohio" shall not cause or permit the particulate emissions from boilers number 1 through 3 (OEPA source numbers B001 through B003) to exceed a maximum of 0.20 pounds of particulate emissions per million Btu actual heat input from each boiler.
- (4) The "Ford Motor Company, Lima Engine Plant" (OEPA premise number 0302020143) or any subsequent owner or operator of the "Ford Motor Company, Lima Engine Plant Facility, Bible and North Sugar Roads, Lima, Ohio" shall not cause or permit the particulate emissions from boilers number 1 through 3 (OEPA source numbers B001 through B003) to exceed a maximum of 0.24 pounds of particulate emissions per million Btu actual heat input from each boiler.
- (5) The emission limitations specified for the "Ford Motor Company" facilities identified in paragraphs (C)(3) and (C)(4) of this rule shall not be construed to preclude the director from establishing alternative emission limitations for such facilities pursuant to paragraphs (B)(1) to (B)(4) of this rule.
- (6) The "Columbus and Southern Ohio Electric Company, Conesville Station."
  - (a) Prior to achieving compliance with the emission limitation specified in paragraph (C)(6)(b) of this rule, the "Columbus and Southern Ohio Electric Company, Conesville Station" (OEPA premise number 0616000000) or any subsequent owner or operator of the "Columbus and Southern Ohio Electric Company, Conesville Station Facility, Rural Free Delivery 1, Conesville, Ohio" shall not cause or permit the particulate emissions from boiler number 4 (OEPA source number B004) to exceed a maximum of 0.43 pound of particulate emissions per million Btu actual heat input.
  - (b) In accordance with the compliance schedule established in paragraph (C)(4) of rule 3745-17-04 of the Administrative Code, the "Columbus and Southern Ohio Electric Company, Conesville Station" (OEPA) premise number 0616000000) or any subsequent owner or operator of the

"Columbus and Southern Ohio Electric Company, Conesville Station Facility, Rural Free Delivery 1, Conesville, Ohio" shall not cause or permit the particulate emissions from boiler number 4 (OEPA source number B004) to exceed a maximum of 0.10 pound of particulate emissions per million Btu actual heat input.

- (7) Alternative emission requirements for small coal-fired fuel burning equipment which is used exclusively for space heating purposes.
- (a) Any owner or operator of coal-fired fuel burning equipment, which has an individual maximum capacity of equal to or greater than one million Btu per hour and less than twenty million Btu per hour and which is used exclusively for space heating purposes, may choose to immediately comply with all the following requirements in lieu of the requirements of paragraph (C)(1) or (C)(2) of this rule:
- (i) The coal received for use in the fuel burning equipment has an ash content of less than 8.0 per cent by weight and a heat content of greater than thirteen thousand Btu per pound (ash content and heat content shall be determined on a dry basis in accordance with the procedures specified in paragraph (B)(9) of rule 3745-17-03 of the Administrative Code).
- (ii) The use of flyash reinjection in the coal-fired fuel burning equipment is prohibited.
- (iii) The coal-fired fuel burning equipment employs an overfire air system which is designed, maintained and operated in accordance with good engineering practice and which minimizes visible particulate emissions from the fuel burning equipment.
- (iv) Except as otherwise provided in paragraph (A)(3) of rule 3745-17-07 of the Administrative Code, the visible particulate emissions from the coal-fired fuel burning equipment comply with the requirements of paragraph (A)(1) of rule 3745-17-07 of the Administrative Code. No coal-fired fuel burning equipment which is subject to the alternative emission requirements of this rule shall be eligible for an equivalent visible particulate emission limitation pursuant to paragraph (C) of rule 3745-17-07 of the Administrative Code.
- (v) The coal-fired fuel burning equipment is operated and maintained in a manner which will optimize combustion efficiency and minimize visible particulate emissions.
- (vi) During January and July of each year, the owner or operator shall submit reports to the director which document the quality and quantity

(on a dry basis) of each shipment of coal received during the previous six calendar months for the coal-fired fuel burning equipment and which demonstrate compliance with the requirements of paragraph (C)(7)(a)(i) of this rule. Data provided by the coal supplier(s) may be used for these semi-annual reports if such data are accurate and representative of the quality and quantity of each shipment of coal received for the fuel burning equipment.

- (b) Any owner or operator of coal-fired fuel burning equipment who chooses to comply with the requirements of paragraph (C)(7)(a) of this rule in lieu of the requirements of paragraph (C)(1) or (C)(2) of this rule shall notify the director in writing. The written notification shall include sufficient information and commitments to demonstrate compliance with the requirements of paragraph (C)(7)(a) of this rule. If the information and commitments are adequate to demonstrate compliance with all of the requirements of paragraph (C)(7)(a) of this rule on a continuing basis, the alternative emission requirements shall be specified in the terms and conditions of the permit to operate or variance issued for the source.

3745-17-10 Appendix

FIGURE 1

**(A) General provisions:**

- (1) This rule applies to any operation, process, or activity which releases or may release particulate emissions into the ambient air except:
  - (a) The burning of fuel for the primary purpose of producing heat or power by indirect heating in which the products of combustion do not come into direct contact with process materials;
  - (b) The burning of refuse;
  - (c) The processing of salvageable material by burning;
  - (d) The loading of ships and the drying of grain at grain elevator operations;
  - (e) Salt glazing in a gas-fired periodic brick or tile kiln, for a period of not more than two hours during any twenty-one consecutive days of operation of said kiln;
  - (f) The generation of fugitive dust which the director has determined is subject to rule 3745-17-08 of the Administrative Code;
  - (g) Any such operation, process, or activity which is subject to a particulate emission limitation contained in rule 3745-17-12 or 3745-17-13 of the Administrative Code;
  - (h) Surface coating processes that apply only dip coatings, roll coatings, flow coatings, or brush coatings;
  - (i) Surface coating processes that use less than five gallons of coatings per day, provided the owner or operator maintains coating usage records, coating purchase records, and/or production records that clearly demonstrate the actual coating usage is less than five gallons per day;
  - (j) Surface coating processes (e.g., for sealers, adhesives, and deadeners) that employ airless spray and bead-type (extrusion) application methods;
  - (k) Surface coating processes that employ hand-held cup spray guns;
  - (l) Surface coating processes for which the owner or operator demonstrates to the satisfaction of the director that, due to the large size of the item(s) being coated, it is technically infeasible and/or economically unreasonable (in

terms of cost-effectiveness) to employ an enclosure (or hooding) and control device for the control of the particulate emissions; and

(m) Jet engine test cells and stands.

(2) Emission restriction requirements for sources, which are not subject to the requirements of paragraph (B)(4), (B)(5), (B)(6) or (C) of this rule or which are not exempted under paragraph (A)(1) of this rule, are specified in "Figure II" and in "Table I" in the appendix to this rule. "Figure II" in the appendix to this rule relates uncontrolled mass rate of emission (abscissa) to maximum allowable mass rate of emission (ordinate). A source complies with the requirements of "Figure II" in the appendix to this rule if its particulate emission rate, even during operation at the maximum capacity of the source, is always equal to or less than the allowable mass rate of emission of particulate matter (A) based upon the uncontrolled mass rate of emission (U). "Table I" in the appendix to this rule relates process weight of materials introduced into any specific process (at its maximum capacity) that may result in particulate emissions to maximum allowable mass rate of emission. A source complies with the requirements of "Table I" in the appendix to this rule if its rate of particulate emission, even during operation at the process weight rate (P) which reflects the maximum capacity of the source, is always equal to or less than the allowable rate of particulate emission specified by the appropriate equation appearing at the bottom of "Table I" in the appendix to this rule and incorporating the process weight rate (P) which reflects the maximum capacity of the source. Except as otherwise indicated in paragraphs (A)(2)(a) to (A)(2)(c) of this rule, the more stringent of the two requirements shall apply.

(a) "Figure II" in the appendix to this rule shall not apply:

- (i) To any source where the uncontrolled mass rate of emission cannot be ascertained;
- (ii) To any source with an uncontrolled mass rate of emission of less than ten pounds per hour; or
- (iii) To any fluid catalytic cracking unit at a petroleum refinery.

(b) "Table I" in the appendix to this rule shall not apply:

- (i) To any source where the process weight rate cannot be ascertained; or
- (ii) To any source which is located within the counties specified in paragraphs (B)(2) and (B)(3) of this rule, except as provided in paragraph (A)(2)(c) of this rule.

- (c) "Table I" in the appendix to this rule shall apply to any fluid catalytic cracking unit at a petroleum refinery.
- (3) For purposes of "Figure II" in the appendix to this rule, the total uncontrolled mass rate of emission from all similar process units at a plant, such units being united either physically or operationally, or otherwise located in close proximity to each other, shall be used for determining the maximum allowable mass rate of particulate emissions that pass through a stack or stacks from all such units.
- (4) For purposes of "Table I" in the appendix to this rule, process weight per hour is the total weight of all materials introduced into any single, specific process (at its maximum capacity) that may cause any emission of particulate matter. Solid fuels charged will be considered as part of the process weight, but liquid and gaseous fuels and combustion air will not. For a cyclical or batch operation, the process weight per hour will be derived by dividing the total process weight by the number of hours in one complete operation from the beginning of any given process to the completion thereof, excluding any time during which the equipment is idle. For a continuous operation, the process weight per hour will be derived by dividing the process weight for a given period of time by the number of hours in that period. For fluid catalytic cracking units at petroleum refineries, "process weight" shall mean the total weight of recirculated catalyst and cold catalyst introduced into the catalyst regenerator.
- (5) An air contaminant source can be subject to both of the requirements of rule 3745-17-08 of the Administrative Code and this rule if it is a fugitive dust source, as defined in paragraph (B)(7) of 3745-17-01 of the Administrative Code, and also emits, by means of one or more stacks, particulate matter that is subject to a limitation(s) in rule 3745-17-08 of the Administrative Code.

(B) Emission limitations:

- (1) Except as specified in paragraph (B)(4) , (B)(5), (B) (6) or (C) of this rule, any owner or operator of a source of particulate emissions which is located within the following counties shall operate said source so that the particulate emissions do not exceed the allowable emission rate specified by "curve P-1" of "Figure II" or by "Table I" in the appendix to this rule, whichever is applicable under paragraph (A)(2) of this rule: Adams, Allen, Ashtabula, Athens, Belmont, Brown, Butler, Clark, Clermont, Clinton, Columbiana, Coshocton, Cuyahoga, Darke, Defiance, Delaware, Fairfield, Franklin, Gallia, Geauga, Greene, Hamilton, Henry, Jackson, Jefferson, Lake, Lawrence, Licking, Lorain, Lucas, Madison, Mahoning, Medina, Meigs, Miami, Monroe, Montgomery, Morgan, Muskingum, Noble, Perry, Pickaway, Portage, Preble, Richland, Ross, Sandusky, Scioto, Seneca, Shelby, Stark, Summit, Trumbull, Union, Warren, Washington, Wyandot and Wood.

- (2) Except as otherwise provided in paragraph (B)(4), (B)(5) or (C) of this rule, any owner or operator of a source of emissions which is located within the following counties shall operate said source so that the particulate emissions do not exceed the allowable emission rate specified by "curve P-2" of "Figure II" in the appendix to this rule: Ashland, Auglaize, Carroll, Champaign, Crawford, Fulton, Guernsey, Hancock, Hardin, Harrison, Holmes, Knox, Logan, Marion, Mercer, Morrow, Paulding, Putnam, Tuscarawas, Van Wert, Wayne and Williams.
- (3) Except as otherwise provided in paragraph (B)(4), (B)(5) or (C) of this rule, any owner or operator of a source of particulate emissions which is located within the following counties shall operate said source so that the particulate emissions do not exceed the allowable emission rate specified by "curve P-3" of "Figure II" in the appendix to this rule: Erie, Fayette, Highland, Hocking, Huron, Ottawa, Pike and Vinton.
- (4) Any owner or operator of a stationary gas turbine shall not cause or permit the particulate emissions from the turbine's exhaust to exceed 0.040 pound per million Btu of actual heat input.
- (5) Any owner or operator of a stationary internal combustion engine shall not cause or permit the particulate emissions from the engine's exhaust to exceed the following:
  - (a) 0.310 pound per million Btu of actual heat input for a stationary small internal combustion engine; and
  - (b) 0.062 pound per million Btu of actual heat input for a stationary large internal combustion engine.
- (6) The "LTV Steel Company" (OEPA premise number 1318001613) or any subsequent owner or operator of the "LTV Steel Company" facility located at 3100 East 45th street, Cleveland, Ohio shall not cause or permit the particulate emissions from the 84-inch hot strip mill reheat furnaces (OEPA source numbers P046 through P048) to exceed 19.8 pounds per hour per furnace.

(C) Requirements for surface coating processes:

- (1) Any surface coating process not exempt under paragraphs (A)(1)(h) to (A)(1)(l) of this rule shall be controlled by a dry particulate filter, waterwash, or equivalent control device or devices.
- (2) Any surface coating process not exempt under paragraphs (A)(1)(h) to (A)(1)(k) of this rule shall follow all of these work practices:
  - (a) The owner or operator shall maintain documentation of the manufacturer's recommendations, instructions, or operating manuals for the control devices

with any modifications deemed necessary by the owner or operator during the time period in which the control devices are utilized.

- (b) The owner or operator shall operate the control devices in accordance with the manufacturer's recommendations, instructions, or operating manuals with any modifications deemed necessary by the owner or operator.
  - (c) The owner or operator shall conduct periodic inspections of the control devices to determine whether the devices are operating in accordance with the manufacturer's recommendations, instructions, or operating manuals with any modifications deemed necessary by the owner or operator. The periodic inspections of each control device shall be performed at a frequency that is based upon the recommendation of the manufacturer of the control device, and the owner or operator shall maintain a copy of the manufacturer's recommended inspection frequency. In addition to these periodic inspections, not less than once each calendar year the owner or operator shall conduct a comprehensive inspection of the control device while the emissions unit is shut down and perform any needed maintenance and repair for the control device to ensure that it is able to routinely operate in accordance with the manufacturer's recommendations.
  - (d) The owner or operator shall document each inspection of a control device by maintaining a record that includes the date of the inspection, a description of each problem identified and the date it was corrected, a description of the maintenance and repairs performed, and the name of the person who performed the inspection.
  - (e) In the event that the control devices are not operating in accordance with the manufacturer's recommendations, instructions, or operating manuals with any modifications deemed necessary by the owner or operator, the control devices shall be expeditiously repaired or otherwise returned to operation in accordance with such requirements. The owner or operator shall maintain documentation of those periods when the control devices are not operating in accordance with such requirements.
  - (f) Any documentation required under paragraphs (C)(2)(d) and (C)(2)(e) of this rule shall be maintained for not less than five years.
  - (g) Any documentation required under paragraphs (C)(2)(a) to (C)(2)(e) of this rule shall be maintained at the facility and shall be made available to Ohio EPA upon request.
- (3) Any surface coating process with a permit-to-install issued after January 1, 1990 that identifies particulate emission limitations and control measures based on best available technology, best available control technology, or the lowest

achievable emission rate shall comply with such limitations and measures instead of paragraphs (C)(1) and (C)(2) of this rule.

## 3745-17-11 Appendix

## TABLE I AND FIGURE II

TABLE IAllowable Rate of Particulate Emissions Based  
On Process Weight At Maximum Capacity (P)

Process Weight Rate At Maximum Capacity (P)		Allowable Rate Of Particulate Emission (E)		Process Weight Rate At Maximum Capacity (P)		Allowable Rate of Particulate Emission (E)	
Lb/Hr	Tons/Hr	Lb/Hr		Lb/Hr	Tons/Hr	Lb/Hr	
100	0.05	0.551		16,000	8	16.5	
200	0.10	0.877		18,000	9	17.9	
400	0.20	1.40		20,000	10	19.2	
600	0.30	1.83		30,000	15	25.2	
800	0.40	2.22		40,000	20	30.5	
1,000	0.50	2.58		50,000	25	35.4	
1,500	0.75	3.38		60,000	30	40.0	
2,000	1	4.10		70,000	35	41.3	
2,500	1.25	4.76		80,000	40	42.5	
3,000	1.50	5.38		90,000	45	43.6	
3,500	1.75	5.96		100,000	50	44.6	
4,000	2	6.52		120,000	60	46.3	
5,000	2.50	7.58		140,000	70	47.8	
6,000	3	8.56		160,000	80	49.0	
7,000	3.50	9.49		200,000	100	51.2	
8,000	4	10.4		1,000,000	500	69.0	
9,000	4.50	11.2		2,000,000	1,000	77.6	
10,000	5	12.0		6,000,000	3,000	92.7	
12,000	6	13.6					

The allowable rate of particulate emission (E) for process weight rates (P) not specifically listed in this table shall be obtained by use of the following equations: For  $0 < (P) \leq 0.05$ ,  $(E) = 0.551$ ; for  $0.05 < (P) \leq 30$ ,  $(E) = 4.10 (P)^{0.67}$ ; and for  $(P) > 30$ ,  $(E) = 55.0 (P)^{0.11} - 40.0$ .

FIGURE II

**Additional restrictions on particulate emissions from specific air contaminant sources in Cuyahoga county.**

[Comment: For dates of non-regulatory government publications, publications of recognized organizations and associations, federal rules, and federal statutory provisions referenced in this rule, see the last paragraph of rule 3745-17-01 of the Administrative Code titled "Incorporation by reference."]

- (A) Compliance with the emission limitations and control requirements specified in this rule shall be achieved in accordance with the time schedules contained in rule 3745-17-04 of the Administrative Code.
- (B) The "Aeroquip Corporation" (OEPA premise number 1318176325) or any subsequent owner or operator of the "Aeroquip Corporation" facility located at 5201 Grant Avenue, Cuyahoga Heights, Ohio shall not cause or permit any visible particulate emissions from the polyvinyl chloride resin handling system (OEPA source number F001).
- (C) The "Boyas Excavating, Incorporated" (OEPA premise number 1318006023) or any subsequent owner or operator of the "Boyas Excavating, Incorporated" facility located at 2929 Broadway avenue, Cleveland, Ohio shall comply with all the following control requirements for particulate matter:
  - (1) For the unpaved roadways and parking areas (OEPA source number F001), there shall be no visible particulate emissions except for a period of time not to exceed three minutes during any sixty-minute observation period.
  - (2) For the crushed concrete storage piles (OEPA source number F002), there shall be no visible particulate emissions except for a period of time not to exceed one minute during any sixty-minute observation period.
  - (3) For the concrete processing operations (OEPA source numbers F003 and F004):
    - (a) All of the particulate emissions from source F004 shall either be vented to a baghouse or controlled by a wet suppression system.
    - (b) If a baghouse is employed to control source F004, the total combined particulate emissions from all stacks associated with source F004 shall not exceed 2.4 pounds per hour.
    - (c) Visible particulate emissions of fugitive dust from source F003, and from source F004 if a wet suppression system is employed, shall not exceed the following requirements:

- (i) For the screening and conveying operations subject to Ohio environmental protection agency permit to install number 13-1430, as issued on September 11, 1985, five per cent opacity as a six-minute average; and
  - (ii) For all other operations, ten per cent capacity as a six-minute average.
- (D) The "Boyas Excavating, Incorporated" (OEPA premise number 1318007300) or any subsequent owner or operator of the "Boyas Excavating, Incorporated" facility located at 2929 Broadway avenue, Cleveland, Ohio shall comply with all the following control requirements for particulate matter from the sand and gravel processing operation (OEPA source number F001):
  - (1) All of the particulate emissions from this operation shall either be vented to a baghouse or controlled by a wet suppression system.
  - (2) If a baghouse is employed, the total combined particulate emissions from all stacks shall not exceed 1.2 pounds per hour.
  - (3) If a wet suppression system is employed, visible particulate emissions of fugitive dust shall not exceed ten per cent opacity as a six-minute average.
- (E) The "Boyas Excavating, Incorporated" (OEPA premise number 1318576031) or any subsequent owner or operator of the "Boyas Excavating, Incorporated" facility located at 12101 Rockside road, Valley View, Ohio shall not cause or permit any visible particulate emissions, except for a period of time not to exceed three minutes during any sixty-minute observation period, from the unpaved roadways and parking areas (OEPA source number F001).
- (F) The "Cleveland Builders Supply, Incorporated" (OEPA premise number 1318122676) or any subsequent owner or operator of the facility located at Hummel and Engle roads, Brook Park, Ohio shall comply with all the following control requirements for particulate matter:
  - (1) For the unpaved roadways and parking areas (OEPA source number F001), there shall be no visible particulate emissions except for a period of time not to exceed three minutes during any sixty-minute observation period.
  - (2) For the paved roadways and parking areas (OEPA source number F001), there shall be no visible particulate emissions except for a period of time not to exceed one minute during any sixty-minute observation period.
  - (3) For the cement transfer system associated with the concrete block manufacturing plant (OEPA source number F003), there shall be no visible particulate emissions.

- (4) For the aggregate handling operation associated with the concrete block manufacturing plant (OEPA source number F003):
  - (a) All of the particulate emissions from this operation shall either be vented to a baghouse or controlled by a wet suppression system.
  - (b) If a baghouse is employed, the total combined particulate emissions from all stacks shall not exceed 0.12 pound per hour.
  - (c) If a wet suppression system is employed, visible particulate emissions of fugitive dust shall not exceed ten per cent opacity as a six-minute average.
- (5) For the wet concrete batching operation (OEPA source number F004), the particulate emissions shall not exceed 0.17 pound per hour.
- (G) The "Cleveland Trinidad Paving Company" (OEPA premise number 1318001799) or any subsequent owner or operator of the "Cleveland Trinidad Paving Company" facility located at 3601 Trumbull avenue, Cleveland, Ohio shall comply with all the following emission limitations for particulate matter:
  - (1) For asphalt plant number 1 (OEPA source number P901), the particulate emissions shall not exceed 26.3 pounds per hour.
  - (2) For asphalt plant number 2 (OEPA source number P902), the particulate emissions shall not exceed 9.3 pounds per hour.
- (H) The "Cuyahoga Foundry Company" (OEPA premise number 1318171954) or any subsequent owner or operator of the "Cuyahoga Foundry Company" facility located at 4530 East 71st street, Cuyahoga Heights, Ohio shall not cause or permit the particulate emissions from the casting shakeout operation (OEPA source number F002) to exceed 0.32 pound per hour.
- (I) Except as otherwise provided in paragraphs (I)(50) and (I)(51) of this rule, the "Ford Motor Company, Cleveland Casting Plant" (OEPA premise number 1318120180) or any subsequent owner or operator of the "Ford Motor Company, Cleveland Casting Plant" facility located at 5600 Henry Ford boulevard, brook park, Ohio shall comply with all the following control requirements for particulate matter:
  - (1) For the paved roadways and parking areas (OEPA source number F001), visible particulate emissions shall not exceed five per cent opacity, as determined in accordance with paragraph (B)(3) of rule 3745-17-03 of the Administrative Code.
  - (2) For the electric induction holding furnace for cupola number 7 (OEPA source number F005), the particulate emissions shall not exceed 5.4 pounds per hour.

- (3) For the molding basement refuse pan conveyor, the mold line number 1 shakeout, the mold line number 2 mold conveyor, and the mold line number 3 dredgeout fractionating system (OEPA source numbers F023, P113, P148 and P186), all the following requirements shall be met:
  - (a) The particulate emissions from the F unit baghouse serving sources F023, P113, P148 and P186 shall not exceed 0.0063 grain per actual cubic foot of the total exhaust gases.
  - (b) The particulate emissions from the pulse flow baghouse serving source F023 shall not exceed 0.0059 grain per actual cubic foot of the total exhaust gases.
  - (c) The particulate emissions from the wet collectors 5-2 and 5-3 serving source F023 shall not exceed 0.010 grain per actual cubic foot of total exhaust gases.
- (4) For the knockout house refuse system, the number 2 cooling line shakeout and sprue/runner knockoff, the number 3 cooling line shakeout and sprue/runner knockoff (OEPA source numbers F024, P091 and P092), the particulate emissions from each of the knockout house wet collectors serving sources F024, P091 and P092 shall not exceed 0.010 grain per actual cubic foot of exhaust gases.
- (5) For the number 3 electric induction holding furnace (OEPA source number F025), the mold line number 2 holding furnace (OEPA source number P160), the exhaust gases from mold line number 7 holding furnace (OEPA source number P290) which were vented to stack D-35 prior to June 14, 1991, and the mold line number 7 iron pouring (OEPA source number P291), all the particulate emissions shall be vented to the D unit baghouse and the emissions from the D unit baghouse shall not exceed 0.0055 grain per actual cubic foot of exhaust gases. Alternatively, the number 3 electric induction holding furnace (F025) and the mold line number 2 holding furnace (P160) currently vented to D unit baghouse may be vented to the AAF unit baghouse; and in such case, the emissions from the AAF unit baghouse shall not exceed 0.005 grain per actual cubic foot of exhaust gases.
- (6) For the induction holding furnace number 2 (OEPA source number P026), the particulate emissions shall not exceed 0.005 grain per actual cubic foot of total exhaust gases. Alternatively, the induction holding furnace number 2 (P026) may be vented to the D unit baghouse; and in such case, the emissions from the D unit baghouse shall not exceed 0.005 grain per actual cubic foot of exhaust gases.
- (7) For the shot blast cleaning and grinding of castings at the numbers 1, 2, 3, 6, 7, 9 and 10 cleaning lines (OEPA source numbers F024, P091, P092, P027, P028,

P029, P032, P033, P035 and P036), the primary shakeouts at the unhook station numbers 2 and 3 (OEPA source numbers P038 and P039), the primary shakeouts at the dump station numbers 4 through 7 (OEPA source numbers P040 through P042), the reclamation and cleaning of iron scrap using rotary mill in cleaning room (OEPA source number P050), the number 3 cooler V-6 unhook station (OEPA source number P102), the osci-rocker blast (OEPA source number P411), and the shot reclamation and refuse system (OEPA source number P908), all the following requirements shall be met:

- (a) The particulate emissions from A unit baghouse serving sources F024, P091, P092, P027, P028, P029, P032, P038, P039, P042, and P908 shall not exceed 0.010 grain per actual cubic foot of total exhaust gases.
  - (b) The particulate emissions from B unit baghouse serving sources P027 through P029, and P102 shall not exceed 0.014 grain per actual cubic foot of total exhaust gases.
  - (c) The particulate emissions from C unit baghouse serving sources P029, P032, P033, P035, P036, P040, P041, P050, P411 and P908 shall not exceed 0.014 grain per actual cubic foot of total exhaust gases.
- (8) The particulate emissions from each of the following hot-box core machines shall not exceed 0.0082 grain per actual cubic foot of exhaust gases:
- (a) The seventeen core machines associated with the number 10 core line (OEPA source number P064); and
  - (b) The seven core machines associated with the number 11 core line (OEPA source number P066).
- (9) For the external desulfurization associated with cupola numbers 1 and 7 and the charge bucket loading operation associated with cupola number 7 (OEPA source numbers P419 and P907), the particulate emissions from D unit baghouse serving these sources shall not exceed 0.0055 grain per actual cubic foot of total exhaust gases.
- (10) For the induction holding furnace number 1 (OEPA source number P099), the particulate emissions from the AAF unit baghouse serving this source shall not exceed 0.0050 grain per actual cubic foot of total exhaust gases. Alternatively, the induction holding furnace number 1 (OEPA source number P099) currently vented to the AAF unit baghouse may be vented to the D unit baghouse; and in such case, the emissions from the D unit baghouse shall not exceed 0.0055 grain per actual cubic foot of exhaust gases.
- (11) For the mold line number 1 holding furnace (OEPA source number P110), the total particulate emissions shall not exceed 1.3 pounds per hour.

- (12) For the mold line number 1 iron pouring (OEPA source number P111), the particulate emissions shall not exceed 0.80 pound per hour.
- (13) For the mold line number 1 mold conveyor and No. 1 ML cope and drag punch-up (OEPA source numbers P112 and P114), the total combined particulate emissions from both of these sources shall not exceed 10.5 pounds per hour.
- (14) For the mold line number 1 casting hookups, return sand system, mag belt conveyor, new sand transfer belt conveyor, sand storage bins, and sand cooling system (OEPA source numbers P115 through P120), the total combined particulate emissions from all of these sources shall not exceed 9.6 pounds per hour.
- (15) Reserved.
- (16) For the mold line number 2 iron pouring and mold conveyor (OEPA source numbers P141 and P145), the mold line number 3 iron pouring, cope mold machine, drag mold machine, core handling and mold conveyor (OEPA source numbers P171 through P174, and P177), and the tapping operations associated with cupola number 1 (OEPA source number P901) and with cupola number 2 (OEPA source number P902), the total combined particulate emissions from all of these sources shall not exceed 28.3 pounds per hour.
- (17) For the mold line number 2 cope mold machine (OEPA source number P142), the particulate emissions shall not exceed 1.8 pounds per hour.
- (18) Reserved.
- (19) For the mold line number 2 dredgeout casting split (OEPA source number P146), the particulate emissions shall not exceed 2.2 pounds per hour.
- (20) For the mold line number 2 rotary sand cooling screen (OEPA source number P147), the particulate emissions shall not exceed 4.4 pounds per hour.
- (21) For the mold line number 2 mold conveyor, casting shakeout, drag punchout, cope punchout, sand transfer, mag belt, and sand preparation (OEPA source numbers P148 through P151, and P156 through P158), the total combined particulate emissions from all of these sources shall not exceed 13.2 pounds per hour.
- (22) For the mold line number 2 dredgeout fractionating system (OEPA source number P152), the particulate emissions shall not exceed 1.1 pounds per hour.
- (23) For the mold line number 2 sprue removal, hookup, dredgeout, and casting cooling (OEPA source numbers P153 through P155, and P159) and the mold

line number 3 casting splitter, casting hookup, and dredgeout (OEPA source numbers P187, P189 and P190), the total combined particulate emissions from all of these sources shall not exceed 6.1 pounds per hour.

- (24) For the mold line number 3 mold conveyor (OEPA source number P178), the total particulate emissions shall not exceed 4.4 pounds per hour.
- (25) For the mold line number 3 drag punchout and cope punchout (OEPA source numbers P179 and P180), the particulate emissions shall not exceed 0.0066 grain per actual cubic foot of total exhaust gases.
- (26) For the mold line number 3 sand transfer system, new sand chute, rotary sand cooling screen, sand mullers, casting shakeout, sprue removal and mag belt (OEPA source numbers P181 through P185, P188 and P191), the total combined particulate emissions shall not exceed 4.8 pounds per hour.
- (27) The exhaust gases from mold line number 7 holding furnace (OEPA source number P290) which are not vented to the D unit baghouse shall be vented to stacks D-33 and E-19 and the total combined particulate emissions from stacks D-33 and E-19 shall not exceed 3.0 pounds per hour.
- (28) For the mold line number 7 mold conveyor (OEPA source number P297), the total particulate emissions shall not exceed 3.2 pounds per hour.
- (29) For the mold line number 7 primary and secondary shakeouts, automatic castings extractor, return sand system, and fluid bed sand cooler (OEPA source numbers P293 through P296), the total combined particulate emissions shall not exceed 7.7 pounds per hour.
- (30) For the mold line number 7 block casting shakeout, sand muller, casting cooling, and conveyor equipment and storage hoppers (OEPA source numbers P298 through P301), the particulate emissions from such sources shall be vented to one or more of the following wet collectors and such emissions from wet collectors 6-1, 6-2 and 6-3, from wet collectors 8-1, 8-2 and 8-3, and from wet collector 9-1 shall not exceed 0.010 grain per actual cubic foot of total exhaust gases.
- (31) Reserved.
- (32) Reserved.
- (33) Reserved.
- (34) Reserved .
- (35) Reserved.

- (36) Reserved.
- (37) Reserved.
- (38) For the cupola number 1 (OEPA source number P901), both the following requirements shall be met:
- (a) The particulate emissions from the wet collector serving this source shall not exceed 29.1 pounds per hour.
  - (b) The particulate emissions from the tapping operations associated with this source shall be vented to stack G-36.
- (39) For the cupola number 2 (OEPA source number P902), both the following requirements shall be met:
- (a) The particulate emissions from the wet collector serving this source shall not exceed 27.4 pounds per hour.
  - (b) The particulate emissions from the tapping operations associated with this source shall be vented to stack G-36.
- (40) For the cupola number 3 (OEPA source number P903), both the following requirements shall be met:
- (a) The particulate emissions from the wet collector serving this source shall not exceed 27.4 pounds per hour.
  - (b) The particulate emissions from the tapping operations associated with this source shall be vented to the D-Unit Baghouse and shall not exceed 0.0055 grain per actual cubic foot of exhaust gases.
- (41) Reserved
- (42) Reserved
- (43) For the cupola number 7 (OEPA source number P907), both the following requirements shall be met:
- (a) The particulate emissions from the wet collector serving this source shall not exceed 26.8 pounds per hour.
  - (b) The particulate emissions from stack B-53 serving the tapping operations associated with this source shall not exceed 1.5 pounds per hour.

- (44) Reserved
- (45) For the sand mullors/sand handling system (OEPA source number P912), the particulate emissions from the core room wet collectors 4 and 6 serving this source shall not exceed 0.010 grain per actual cubic foot of total exhaust gases.
- (46) For the bentonite unloading system (OEPA source number P913), the particulate emissions shall not exceed 0.0068 grain per actual cubic foot of total exhaust gases.
- (47) Operating hour restrictions and recordkeeping requirements:
- (a) The operating hours for sources P027, P028, P029, P032, P033, P035 and P036 shall not exceed a total of 71.4 operating hours during any calendar day.
  - (b) Reserved
  - (c) The total operating hours for the cupolas associated with sources P901 through P903 and P907 shall not exceed sixty-four hours during any calendar day. Time intervals during which a cupola is not in a state of blast (standby mode) shall not be included in the determination of daily operating hours. Blast is defined as the period during which air is forced through the tuyeres onto a cupola burden consisting of incandescent coke, limestone and scrap metal.
  - (d) The total operating hours for mold lines numbers 1 through 3, and 7 shall not exceed 64.4 hours during any calendar day.
  - (e) Daily records shall be maintained for the operating times of each source identified in paragraph (I)(47) of this rule to document compliance with the specified hourly operating restrictions. These records shall be maintained by the owner or operator for a period of not less than five years.
- (48) The height of stack G-36 (serving sources P141, P145, P171, P172, P177, and the tapping operations associated with P901 and P902) shall not be less than one hundred thirty feet above ground level. Alternatively, the number 2 mold line iron pouring (P141) and the number 3 mold line iron pouring (P171) currently vented to stack G-36 may be vented to the G unit baghouse; and in such case, the emissions from the G unit baghouse shall not exceed 0.005 grain per actual cubic foot of exhaust gases.
- (49) Reserved.
- (50) The director may establish an alternative emission limitation or control requirement for an emissions unit at the "Ford Motor Company, Cleveland

Casting Plant," which is less stringent than, or inconsistent with, an allowable emission limitation or control requirement contained in paragraph (I) of this rule if the alternative emission limitation or control requirement is specified in a valid permit issued pursuant to rule 3745-31-02 or Chapter 3745-77 of the Administrative Code, and the administrator of the United States environmental protection agency is given at least thirty days notice of the director's proposed issuance of such permit if issued pursuant to rule 3745-31-02 of the Administrative Code or at least forty-five days notice of the director's proposed issuance of such permit if issued pursuant to Chapter 3745-77 of the Administrative Code and does not object to such issuance during the applicable review and comment period or, in the event an objection from the administrator is received, the objection is resolved prior to issuance. Compliance with an alternative emission limitation or control requirement in effect pursuant to this paragraph shall not constitute a violation of paragraph (I) of this rule pending amendment of the paragraph in accordance with paragraph (I)(51) of this rule. To obtain an alternative emission limitation or control requirement, "Ford Motor Company, Cleveland Casting Plant" shall demonstrate, using the United States environmental protection agency air quality modeling guidelines in effect at the time that the complete application is received, that the alternative emission limitation or control requirement will result in ambient air quality that complies with the "National Ambient Air Quality Standards" for particulate matter having an aerodynamic diameter less than or equal to ten micrometers, as set forth at 40 CFR 50.6.

- (51) After the effective date of any permit to install or Title V permit, as that term is defined by paragraph (KK) of rule 3745-77-01 of the Administrative Code, containing an alternative emission limitation or control requirement which is less stringent than, or inconsistent with, an allowable emission limitation or control requirement contained in paragraph (I) of this rule, the director shall amend paragraph (I) of this rule to reflect such alternative emission limitation or control requirement.
- (J) The "General Chemical Corporation" (OEPA premise number 1318222594) or any subsequent owner or operator of the "General Chemical Corporation" facility located at 5000 Warner road, Garfield Heights, Ohio shall not cause or permit the particulate emissions from each of the aluminum sulfate solution production digesters (OEPA source numbers P004, P005, and P006) to exceed 2.2 pounds per hour.
- (K) The "Harval, Incorporated" (OEPA premise number 1318005960) or any subsequent owner or operator of the "Harval, Incorporated" facility located at 1971 Carter road, Cleveland, Ohio shall not cause or permit any visible particulate emissions except for a period of time not to exceed three minutes during any sixty-minute observation period, from the unpaved roadways and parking areas (OEPA source number F001).
- (L) The "Independence Excavating Incorporated" (OEPA premise number 1318225730) or any subsequent owner or operator of the "Independence Excavating Incorporated"

facility located at 4905 Warner road, Garfield Heights, Ohio shall comply with all the following control requirements for particulate matter from the concrete processing operation (OEPA source number F003):

- (1) All of the particulate emissions from this operation shall either be vented to a baghouse or controlled by a wet suppression system.
- (2) If a baghouse is employed, the total combined particulate emissions from all stacks shall not exceed 0.87 pound per hour.
- (3) If a wet suppression system is employed, visible particulate emissions of fugitive dust shall not exceed ten per cent opacity as a six-minute average.

(M) The "Lake Erie Asphalt Products Company" (OEPA premise number 1318220278) or any subsequent owner or operator of the "Lake Erie Asphalt Products Company" facility located at 8200 Old Granger road, Garfield Heights, Ohio shall comply with all the following emission limitations for particulate matter:

- (1) For the unpaved roadways and parking areas (OEPA source number F001), there shall be no visible particulate emissions except for a period of time not to exceed three minutes during any sixty-minute observation period.
- (2) For the paved roadways and parking areas (OEPA source number F001), there shall be no visible particulate emissions except for a period of time not to exceed one minute during any sixty-minute observation period.
- (3) For the asphaltic concrete plant (OEPA source number P901), the particulate emissions shall not exceed 6.0 pounds per hour.

(N) The "Lincoln Electric Company" (OEPA premise number 1318202137) or any subsequent owner or operator of the "Lincoln Electric Company" facility located at 22801 St. Clair Avenue, Cleveland, Ohio shall comply with all the of following emission limitations for particulate matter:

- (1) For boiler number 4 (OEPA source number B003), the particulate emissions shall not exceed 0.11 pound per million Btu of actual heat input.
- (2) For boiler number 3 (OEPA source number B004), the particulate emissions shall not exceed 0.12 pound per million Btu of actual heat input.
- (3) For the rotary iron powder kiln (OEPA source number P901), the particulate emissions shall not exceed 1.8 pounds per hour.
- (4) For the rotary flux kilns A through C (OEPA source numbers P902 through P904), the particulate emissions shall not exceed 2.4 pounds per hour from each kiln.

- (O) The "LTV Steel Company" (OEPA premise number 1318000078) or any subsequent owner or operator of the "LTV Steel Company" facility located at 3341 Jennings road, Cleveland, Ohio shall comply with all the following control requirements for particulate matter:
- (1) For the paved and unpaved roadways and parking areas (OEPA source number F001), visible particulate emissions shall not exceed five per cent opacity, as determined in accordance with paragraph (B)(3) of rule 3745-17-03 of the Administrative Code.
  - (2) For the desulfurization operation associated with the hot metal reladling, desulfurization and slag raking station (OEPA source number F009) and the auxiliary desulfurization station (OEPA source number F013), only one of these desulfurization stations shall be operated at any time.
  - (3) For the hot metal reladling, desulfurization, slag raking, and ladle transfer operations (OEPA source number F009), the total particulate emissions from the baghouse serving this source shall not exceed 21.0 pounds per hour.
  - (4) For the stove stacks associated with blast furnace C-1 (OEPA source number P903), the particulate emissions shall not exceed 11.2 pounds per hour.
  - (5) For the electric arc furnaces number 79 and 80 (OEPA source numbers P901 and P904) and the raw material handling, slag handling, and teeming operations associated with the electric arc furnace shop (OEPA source numbers F006 through F008), the total combined particulate emissions shall not exceed 27.3 pounds per hour.
  - (6) For the machine scarfer (OEPA source number P004), the particulate emissions shall not exceed 0.00 pound per hour.
  - (7) For boilers 26 through 31 (OEPA source numbers B004 through B009), the particulate emissions shall not exceed 0.00 pound per million Btu of actual heat input from each boiler.
  - (8) For boilers 32 through 34 (OEPA source numbers B010 through B012):
    - (a) The particulate emissions shall not exceed 0.040 pound per million Btu of actual heat input from each boiler.
    - (b) Only one boiler shall be operated at any time.
  - (9) For blast furnace C-3 (OEPA source number P902), the particulate emissions shall not exceed 0.00 pound per hour.

- (10) For the numbers 1 and 2 basic oxygen furnaces (OEPA source numbers P905 and P906) at the number 1 shop, the total particulate emissions from all of the stacks of the electrostatic precipitator serving such sources shall not exceed 39.8 pounds per hour.
  - (11) There shall be no processing of raw materials at blast furnace C-3 (OEPA source number F004).
- (P) The "LTV Steel Company" (OEPA premise number 1318001613) or any subsequent owner or operator of the "LTV Steel Company" facility located at 3100 East 45th street, Cleveland, Ohio shall comply with all the following control requirements for particulate matter:
- (1) For boilers A through C (OEPA source numbers B001 through B003), the particulate emissions shall not exceed 0.086 pound per million Btu of actual heat input from each boiler.
  - (2) For the paved and unpaved roadways and parking areas (OEPA source number F001), visible particulate emissions shall not exceed five per cent opacity, as determined in accordance with paragraph (B)(3) of rule 3745-17-03 of the Administrative Code.
  - (3) For the number 2 coke plant quench station (OEPA source number P057):
    - (a) The weekly average concentration of total dissolved solids of the quench water shall not exceed twelve hundred milligrams per liter of water; and
    - (b) The interior of the quench tower shall be equipped with a baffle system which is designed and maintained in accordance with good engineering practice and which provides coverage of not less than ninety-five per cent of the cross-sectional area of the tower.
  - (4) For the blast furnaces C-2 and C-4 (OEPA source numbers P901 and P902), the particulate emissions shall not exceed 0.00 pound per hour from each source.
  - (5) For the stove stacks associated with blast furnaces C-5 and C-6 (OEPA source numbers P903 and P904), the particulate emissions shall not exceed 11.7 pounds per hour from each source.
  - (6) For the charging and tapping operations associated with the numbers 1 and 2 basic oxygen furnaces (OEPA source numbers P905 and P906), the hot metal desulfurization and hot metal transfer station (OEPA source number F011), and the teeming operation (OEPA source number F013), the particulate emissions from the stack of the secondary emission control baghouse serving such sources shall not exceed 10.3 pounds per hour.

- (7) For boiler 234 (OEPA source number B009), the particulate emissions shall not exceed 0.00 pound per million Btu of actual heat input.
  - (8) For the coke oven batteries numbers 1 through 3 at the number 1 coke plant (OEPA source numbers B901 through B903), the particulate emissions shall not exceed 0.00 pound per hour per battery.
  - (9) There shall be no processing of raw materials at blast furnaces C-2 and C-4 (OEPA source number F009).
  - (10) For the number 1 and 2 basic oxygen furnaces (OEPA source numbers P905 and P906) at the number 2 shop, the particulate emissions from the suppressed combustion systems serving these sources shall not exceed 15.0 pounds per hour from each system.
  - (11) For the number 1 coke plant quench stations numbers 1 and 4 (OEPA source numbers P066 and P067), the particulate emissions shall not exceed 0.00 pound per hour.
  - (12) For the coal handling and processing operations at the number 2 coke plant (OEPA source number F006), the total operating hours shall not exceed 16 hours during any calendar day. Daily records shall be maintained of the operating time to document compliance with this restriction. These records shall be maintained by the owner or operator for a period of not less than three years.
  - (13) There shall be no coke handling or processing at the number 1 coke plant (OEPA source number F007).
- (Q) The "Luria Brothers" (OEPA premise number 1318122776) or any subsequent owner or operator of the "Luria Brothers" facility located at 18951 Snow road, Brook Park, Ohio shall comply with both the following emission limitations for particulate matter:
- (1) For the material handling operation (OEPA source number F003) and the material handling operation associated with the automobile shredding line (OEPA source number P901), there shall be no visible particulate emissions.
  - (2) For the automobile shredding line (OEPA source number P901), the particulate emissions shall not exceed 4.0 pounds per hour.
- (R) The "Meech Foundry, Incorporated" (OEPA premise number 1318224005) or any subsequent owner or operator of the "Meech Foundry, Incorporated" facility located at 4730 Warner road, Garfield Heights, Ohio shall comply with all the following control requirements for particulate matter and recordkeeping requirements:

- (1) For the cupola furnace (OEPA source number P901), the particulate emissions shall not exceed 10.8 pounds per hour.
  - (2) For the inoculation operation associated with the cupola furnace (OEPA source number P901), the operating hours shall not exceed 0.1 hour during any calendar day.
  - (3) For the iron pouring and cooling operation associated with the cupola furnace (OEPA source number P901), the operating hours shall not exceed 3.0 hours during any calendar day.
  - (4) Daily records shall be maintained for the operations identified in paragraphs (R)(2) and (R)(3) of this rule to document compliance with the specified hourly operating restrictions.
- (S) The "Ohio Aluminum Industries, Incorporated" (OEPA premise number 1318226416) or any subsequent owner or operator of the "Ohio Aluminum Industries, Incorporated" facility located at 4840 Warner road, Garfield Heights, Ohio shall comply with all the following emission limitations for particulate matter:
- (1) For the sand handling operation associated with the sand reclamation process (OEPA source number F001), the particulate emissions shall not exceed 0.90 pound per hour.
  - (2) For the mold making operation associated with the sand reclamation process (OEPA source number F001), the particulate emissions shall not exceed 0.0055 pound per hour.
  - (3) For the casting shakeout operation associated with the sand reclamation process (OEPA source number F001), the particulate emissions shall not exceed 0.016 pound per hour.
  - (4) For the cleaning and finishing process (OEPA source number P901):
    - (a) The total combined particulate emissions from the control equipment shall not exceed 0.11 pound per hour.
    - (b) There shall be no visible particulate emissions from the cleaning room.
- (T) The "Reilly Industries" (OEPA premise number 1318002735) or any subsequent owner or operator of the "Reilly Industries" facility located at 3201 Independence road, Cleveland, Ohio shall not cause or permit the total combined emission of particulate matter from the coal tar pitch cooling tanks number 50, 52, 127, and 130 through 133 (OEPA source numbers P014 through P017, and P019) to exceed 0.40 pound per hour.

- (U) The "Schloss Paving Company" (OEPA premise number 1318224741) or any subsequent owner or operator of the "Schloss Paving Company" facility located at 13700 McCracken road, Cleveland, Ohio shall comply with all the following emission limitations for particulate matter:
- (1) For the unpaved roadways and parking areas (OEPA source number F001), there shall be no visible particulate emissions except for a period of time not to exceed three minutes during any sixty-minute observation period.
  - (2) For the paved roadways and parking areas (OEPA source number F001), there shall be no visible particulate emissions except for a period of time not to exceed one minute during any sixty-minute observation period.
  - (3) For the asphaltic concrete plant (OEPA source number P901), the particulate emissions shall not exceed 6.0 pounds per hour.
- (V) The "Standard Slag Company" (OEPA premise number 1318002662) or any subsequent owner or operator of the "Standard Slag Company" facility located at Campbell road and Harvard avenue, Cleveland, Ohio shall comply with all the following control requirements for particulate matter:
- (1) For the unpaved roadways and parking areas (OEPA source number F001), there shall be no visible particulate emissions except for a period of time not to exceed three minutes during any sixty-minute observation period.
  - (2) For the paved roadways and parking areas (OEPA source number F001), there shall be no visible particulate emissions except for a period of time not to exceed one minute during any sixty-minute observation period.
  - (3) For the slag storage piles (OEPA source number F002), there shall be no visible particulate emissions except for a period of time not to exceed one minute during any sixty-minute observation period.
  - (4) For the slag processing operations (OEPA source number F005):
    - (a) All of the particulate emissions from this operation shall either be vented to a baghouse or controlled by a wet suppression system.
    - (b) If a baghouse is employed, the total combined particulate emissions from all stacks shall not exceed 4.9 pounds per hour.
    - (c) If a wet suppression system is employed, visible particulate emissions of fugitive dust shall not exceed ten per cent opacity as a six-minute average.
- (W) The "Stein, Incorporated" (OEPA premise number 1318003929) or any subsequent owner or operator of the "Stein, Incorporated" facility located at 3100 East 45th

street, Cleveland, Ohio shall comply with both the following emission limitations for particulate matter:

- (1) For the slag storage piles (OEPA source number F005), there shall be no visible particulate emissions except for a period of time not to exceed one minute during any sixty-minute observation period.
- (2) For the slag processing operations (OEPA source numbers F006 and F007), visible particulate emissions of fugitive dust shall not exceed ten per cent opacity as a six-minute average.

(X) The "Stein, Incorporated" (OEPA premise number 1318005076) or any subsequent owner or operator of the "Stein, Incorporated" facility located at 3341 Jennings road, Cleveland, Ohio shall comply with all the following emission limitations for particulate matter:

- (1) For the unpaved roadways and parking areas (OEPA source number F001), there shall be no visible particulate emissions except for a period of time not to exceed three minutes during any sixty-minute observation period.
- (2) For the slag unloading operation (OEPA source number F002), visible particulate emissions of fugitive dust shall not exceed ten per cent opacity as a six-minute average.
- (3) For the slag processing operation (OEPA source number F003), visible particulate emissions of fugitive dust shall not exceed ten per cent opacity as a six-minute average.
- (4) For the slag storage piles (OEPA source number F004), there shall be no visible particulate emissions except for a period of time not to exceed one minute during any sixty-minute observation period.

(Y) The "T & B Foundry Company" (OEPA premise number 1318000504) or any subsequent owner or operator of the "T & B Foundry Company" facility located at 2469 East 71st street, Cleveland, Ohio shall comply with all the following emission limitations for particulate matter:

- (1) For the unpaved roadways and parking areas (OEPA source number F001), there shall be no visible particulate emissions except for a period of time not to exceed three minutes during any sixty-minute observation period.
- (2) For the paved roadways and parking areas (OEPA source number F001), there shall be no visible particulate emissions except for a period of time not to exceed one minute during any sixty-minute observation period.

- (3) For the iron pouring and cooling operations (OEPA source number F003), there shall be no visible emissions.
- (4) For the cupola furnace (OEPA source number P901), the particulate emissions shall not exceed 14.0 pounds per hour.
- (Z) If any unpaved roadways and parking areas, or portions thereof, identified in paragraphs (C)(1), (E), (K), and (X)(1) of this rule are paved, the paved portions of the roadways and parking areas shall be subject to a limitation of no visible particulate emissions except for a period of time not to exceed one minute during any sixty-minute observation period.

Effective: 02/01/2008

**Additional restrictions on particulate emissions from specific air contaminant sources in Jefferson county.**

[Comment: For dates of non-regulatory government publications, publications of recognized organizations and associations, federal rules, and federal statutory provisions referenced in this rule, see the last paragraph of rule 3745-17-01 of the Administrative Code titled "Incorporation by reference."]

- (A) Compliance with the emission limitations and control requirements specified in this rule shall be achieved in accordance with the time schedules contained in rule 3745-17-04 of the Administrative Code.
- (B) The "Satralloy, Incorporated" (OEPA premise number 1741000060) or any subsequent owner or operator of the "Satralloy, Incorporated" facility located at Mingo Junction-Goulds road, Cross Creek township, Jefferson county, Ohio shall comply with the following emission limitations for particulate matter:
  - (1) For the unpaved roadways and parking areas (OEPA source number F001), there shall be no visible particulate emissions except for a period of time not to exceed three minutes during any sixty-minute observation period.
  - (2) For the paved roadways and parking areas (OEPA source number F001), there shall be no visible particulate emissions except for a period of time not to exceed one minute during any sixty-minute observation period.
- (C) The "Wheeling-Pittsburgh Steel Corporation" (OEPA premise number 0641090010) or any subsequent owner or operator of the "Wheeling-Pittsburgh Steel Corporation" facility located at South Third street, Steubenville, Ohio shall comply with the work practice plan in the appendix to this rule for the control of fugitive dust from the roadways and parking areas (OEPA source number F101).
- (D) The "Wheeling-Pittsburgh Steel Corporation" (OEPA premise number 0641090010) or any subsequent owner or operator of the "Wheeling-Pittsburgh Steel Corporation" facility located at McLister avenue, Mingo Junction, Ohio shall comply with all the following control requirements for particulate matter:
  - (1) For the roadways and parking areas (OEPA source number F001), this facility shall comply with the work practice plan in the appendix to this rule for the control of fugitive dust.
  - (2) For the hot metal transfer operation from railcar to charge ladle (OEPA source number F009), the particulate emissions from the baghouse serving this source shall not exceed 3.5 pounds per hour.

- (3) For the reheat furnaces number 2 through 4 (OEPA source numbers P006 through P008), the particulate emissions from each furnace shall not exceed 6.0 pounds per hour.
- (4) For the blast furnace number 5 (OEPA source number P903):
  - (a) Visible particulate emissions from the casthouses shall not exceed fifteen per cent opacity as a six-minute average at all times.
  - (b) The total particulate emissions from the baghouse serving the casthouses shall not exceed 2.52 pounds per hour.
  - (c) For the clean gas bleeders, all the blast furnace gases shall be vented to a flare system which is designed and operated in accordance with good engineering practice and capable of efficiently combusting the gases. The particulate emissions from the flare system, which are attributable to the uncombusted blast furnace gases, shall not exceed 1.63 pounds per hour.
  - (d) The total particulate emissions from the stove stacks serving source P903 shall not exceed 2.95 pounds per hour.
  - (e) The maximum daily production rate for the blast furnace shall not exceed four thousand five hundred net tons of metal per day. Daily records shall be maintained for the production rate to document compliance with this production restriction. These records shall be maintained by the owner or operator for a period of not less than three years.
- (5) For the basic oxygen furnaces (OEPA source numbers P904 and P905), the total particulate emissions from the scrubbers serving these sources shall not exceed 8.86 pounds per hour.
- (6) For the desulfurization station (OEPA source number P907), the particulate emissions from the baghouse serving this source shall not exceed 3.71 pounds per hour.

## 3745-17-13 Appendix

Work Practice Plan for the Control of Fugitive Dust Emissions  
From Roadways and Parking Areas at the Wheeling-Pittsburgh Steel Corporation,  
Steubenville and Mingo Junction Facilities

## A. Allowable Emission Rates

1. Total combined emissions of particulate matter with an aerodynamic diameter less than or equal to a nominal ten micrometers ("PM<sub>10</sub>") from unpaved roads, parking lots, laydown, entrance, unloading areas and berms, and irregular paved surfaces, and from paved roads, which are located at the Steubenville facility and are identified in Sections B and C of this Appendix, shall not exceed 1.72 pounds per hour.
2. Total combined emissions of PM<sub>10</sub> from unpaved roads, parking lots, laydown, entrance, unloading areas and berms, and irregular paved surfaces, and from paved roads, which are located at the Mingo Junction facility and are identified in Sections B and C of this Appendix, shall not exceed 7.67 pounds per hour.
3. Compliance with the emission limitations specified in Section A.1. and A.2. of this Appendix shall be determined by the methodology set forth in the U.S. Environmental Protection Agency reference document Control of Open Fugitive Dust Sources (EPA-450/3-88-008), Sections 2.0 and 3.0, and using the dust control plans identified in Sections B and C of this Appendix.

## B. Unpaved Roads, Parking Lots, Laydown, Entrance, Unloading Areas and Berms, and Irregular Paved Surfaces—Chemical Suppression

1. The Company shall employ dust control measures on all unpaved surfaces, and irregular paved surfaces that cannot be adequately cleaned under the provisions of Section C of this Appendix, identified in this Section and in accordance with the following:
  - a. All unpaved surfaces and irregular paved surfaces identified in Attachment 1 (map) shall be treated in accordance with the schedule in Attachment 1, following the initial establishment of chemical ground inventory, with a chemical dust suppressant (petroleum resin emulsions, asphalt emulsions or acrylic cements) on a year-round (twelve-month) basis, except as provided under Sections B.1.e., B.1.f. and D below. The dust suppressant application intensity and frequency during the first two months of this program shall be sufficient to achieve the ground inventory specified in Section B.1.d. by the end of the two-month period.

- b. Tri-weekly, monthly and quarterly applications shall be accomplished before the end of the first full week of the tri-week/month/quarter except as provided under Sections B.1.e., B.1.f. and D below.
- c. For each dust suppressant application during the initial two-month period of the dust control program, the concentrated dust suppressant shall be diluted at a ratio of not more than five (5) parts water to one (1) part concentrate and the resulting solution shall be applied at a minimum rate of 1.0 gallon per square yard of unpaved or irregular paved surface. The dust suppressant shall be applied at sufficient intervals and intensities after the initial two-month period as to maintain the ground inventory. Except as provided in Sections B.1.f. and D below, the continuing program shall provide for the application of dust
- d. suppressant specified in Attachment 1 diluted by no more than seven (7) parts water to one part chemical and applied at a rate of not less than 0.5 gallon per square yard of unpaved or irregular paved surface.
- e. A minimum ground inventory of 0.25 gallon of concentrate per square yard of road surface, as specified in Section 3.0 of the USEPA reference document Control of Open Fugitive Dust Sources (EPA-450/3-88-008) shall be maintained.
- f. Applications of dust suppressant may be delayed by not more than three (3) days for any scheduled date upon which the unpaved or irregular paved surface is snow and/or ice covered or has experienced >0.25 inch of rainfall.

In the event of persistent adverse weather conditions such as snow and/or ice cover or excessive rainfall, the Company may petition the Director or his representative verbally with written confirmation within three (3) days for extended exemptions which may be granted as deemed appropriate by the Director or his representative.

- g. Applications of chemical dust suppressant for the second year (after establishment of the ground inventory specified in Section B.1.d.) and beyond may follow the revised schedule, application intensities, and application concentrations shown in Table 11 of Attachment 1.
2. Compliance with Section B.1. shall be determined in accordance with procedures set forth in this Appendix.
  3. Control Equipment

The Company shall ensure the availability, required scheduling, and proper maintenance of spray trucks that are designed and equipped, at minimum, with a 2,000 gallon capacity tank, a spray bar system capable of applying the dust

suppressant solution at a coverage rate of at least 1.3 gallons per square yard of surface, a certified flow metering device calibrated in units of gallons per minute, and an apparatus that will facilitate manual applications of the solution to areas not readily accessible by the spray truck.

#### 4. Recordkeeping and Reporting

- a. The Company shall maintain records relative to the program to control emissions from unpaved roads, parking lots, laydown, entrance, unloading areas and berms, and irregular paved surfaces identified in Attachment 1. These records shall include, at a minimum, the following information:
  - i. Control equipment maintenance records.
  - ii. Scheduled and unscheduled equipment malfunctions and downtime.
  - iii. Meteorological log to include average daily temperature, daily precipitation and unusual meteorological occurrences.
  - iv. The date, type and quantity received for each delivery of chemical dust suppressant.
  - v. For each dust suppressant application date and for each unpaved road, area, or berm, or irregular paved surface identified in Attachment 1, start and stop times, average truck speed, number of passes, amount of solution applied, and the dilution ratio of the solution.
  - vi. Identification of areas where manual spraying was utilized.
- b. These records shall be retained by the Company for five (5) years and shall be made available to the Director or his representative upon request.
- c. A calendar quarterly report shall be submitted to the Director or his representative. The report shall contain the information cited above and a description of any deviations from the control program and the reasons for such deviations. The report shall be certified to be accurate by management and shall be submitted within fifteen (15) days after the end of the quarter.
- d. The Company shall notify the Director or his representative, in writing, of any noncompliance with Section B of this Appendix. Such notice shall be submitted within five (5) days of the non-compliance occurrence and shall include a detailed explanation of the cause of such noncompliance, all remedial actions required, and the date by which compliance was or will be reestablished.

- e. The Company shall submit to the Director or his representative an annual report which demonstrates compliance with the PM<sub>10</sub> emission rates specified in Sections A.1. and A.2. of this Appendix for the unpaved surfaces, and the irregular paved surfaces that cannot be adequately cleaned under the provisions of Section B of this Appendix, at the Mingo Junction and Steubenville facilities. The PM<sub>10</sub> emission rate for each individual network segment identified in Attachment 1 shall be reported along with the total PM<sub>10</sub> emission rate for each facility. The PM<sub>10</sub> emission rates shall be calculated using the methodology specified in Section A.3. of this Appendix and shall reflect the road network as it exists at the end of each calendar year. Each annual report shall be submitted by no later than January 31 of the succeeding year.
5. The Company shall implement the dust control measures of Section B no later than the effective date of this rule.

### C. Paved Roads–Vacuum Sweeping

1. The Company shall employ dust control measures on all paved roads identified in this Section and in accordance with the following:
  - a. All paved roads identified in Attachment 1 (map) of this Appendix shall be cleaned via vacuum sweeping on a daily, year-round (twelve-month) basis except as provided under Sections C.1.a.i., C.1.a.ii., and D below.
    - i. Daily sweeping may be suspended only when there is snow, ice cover, or standing water on the surface. All such suspensions shall be reported and verified as required under Section C.4. (Recordkeeping and Reporting).
    - ii. Irregular paved surfaces that cannot feasibly or adequately be cleaned by vacuum sweeping shall be chemically sprayed in accordance with provisions of Section B.
2. Compliance with Section C.1. shall be determined in accordance with procedures set forth in this Appendix.
3. Control Equipment
  - a. The Company shall ensure the availability, required scheduling, and proper maintenance of vacuum sweeping trucks. The collection hopper of the vacuum truck shall be designed and maintained so as to prevent fugitive dust emissions.
  - b. Material collected by the vacuum sweeping truck shall be handled and disposed of in a manner that minimizes fugitive dust emissions, including but not limited to, wet dumping and chemical treatment or stabilization of

stored material.

#### 4. Recordkeeping and Reporting

- a. The Company shall maintain daily records for the paved road cleaning program. These records shall include, at a minimum, the following information:
  - i. Control equipment maintenance records.
  - ii. Scheduled and unscheduled equipment malfunctions and downtime.
  - iii. Meteorological log to include average daily temperature, daily precipitation and unusual meteorological occurrence.
  - iv. Qualitative description of the road surface conditions.
  - v. Start and stop time, average truck speed, number of passes for each paved road identified in Attachment 1.
  - vi. Identification of areas where chemical treatment was utilized.
  - vii. Qualitative descriptions of areas of unusually high silt loadings from spills and track-ons.
  - viii. Total amount of dust collected by vacuum trucks in pounds or tons.
- b. These records shall be retained by the Company for five (5) years and shall be made available to the Director or his representative upon request.
- c. A calendar quarterly report shall be submitted to the Director or his representative. The report shall contain all of the information cited above and a description of any deviation from the control program and the reasons for such deviation. The report shall be certified to be accurate by Company management and shall be submitted within fifteen (15) days after the end of the quarter.
- d. The Company shall notify the Director or his representative, in writing, of any non-compliance with Section C of this Appendix. Such notice shall be submitted within five (5) days of the non-compliance occurrence and shall include a detailed explanation of the cause of such non-compliance, all remedial actions required and the date by which compliance was or will be reestablished.
- e. The Company shall submit to the Director or his representative an annual report which demonstrates compliance with the PM<sub>10</sub> emission rates specified in Sections A.1. and A.2., of this Appendix for the paved roads

(excluding irregular paved surfaces that cannot be adequately cleaned under the provisions of Section C of this Appendix) at the Mingo Junction and Steubenville facilities. The PM<sub>10</sub> emission rate for each individual network segment identified in Attachment 1 shall be reported along with the total PM<sub>10</sub> emission rate for each facility. The PM<sub>10</sub> emission rates shall be calculated using the methodology specified in Section A.3. of this Appendix and shall reflect the road network as it exists at the end of each calendar year. Each annual report shall be submitted by no later than January 31 of the succeeding year.

5. The Company shall implement the dust control measures of Section C no later than the effective date of this rule.

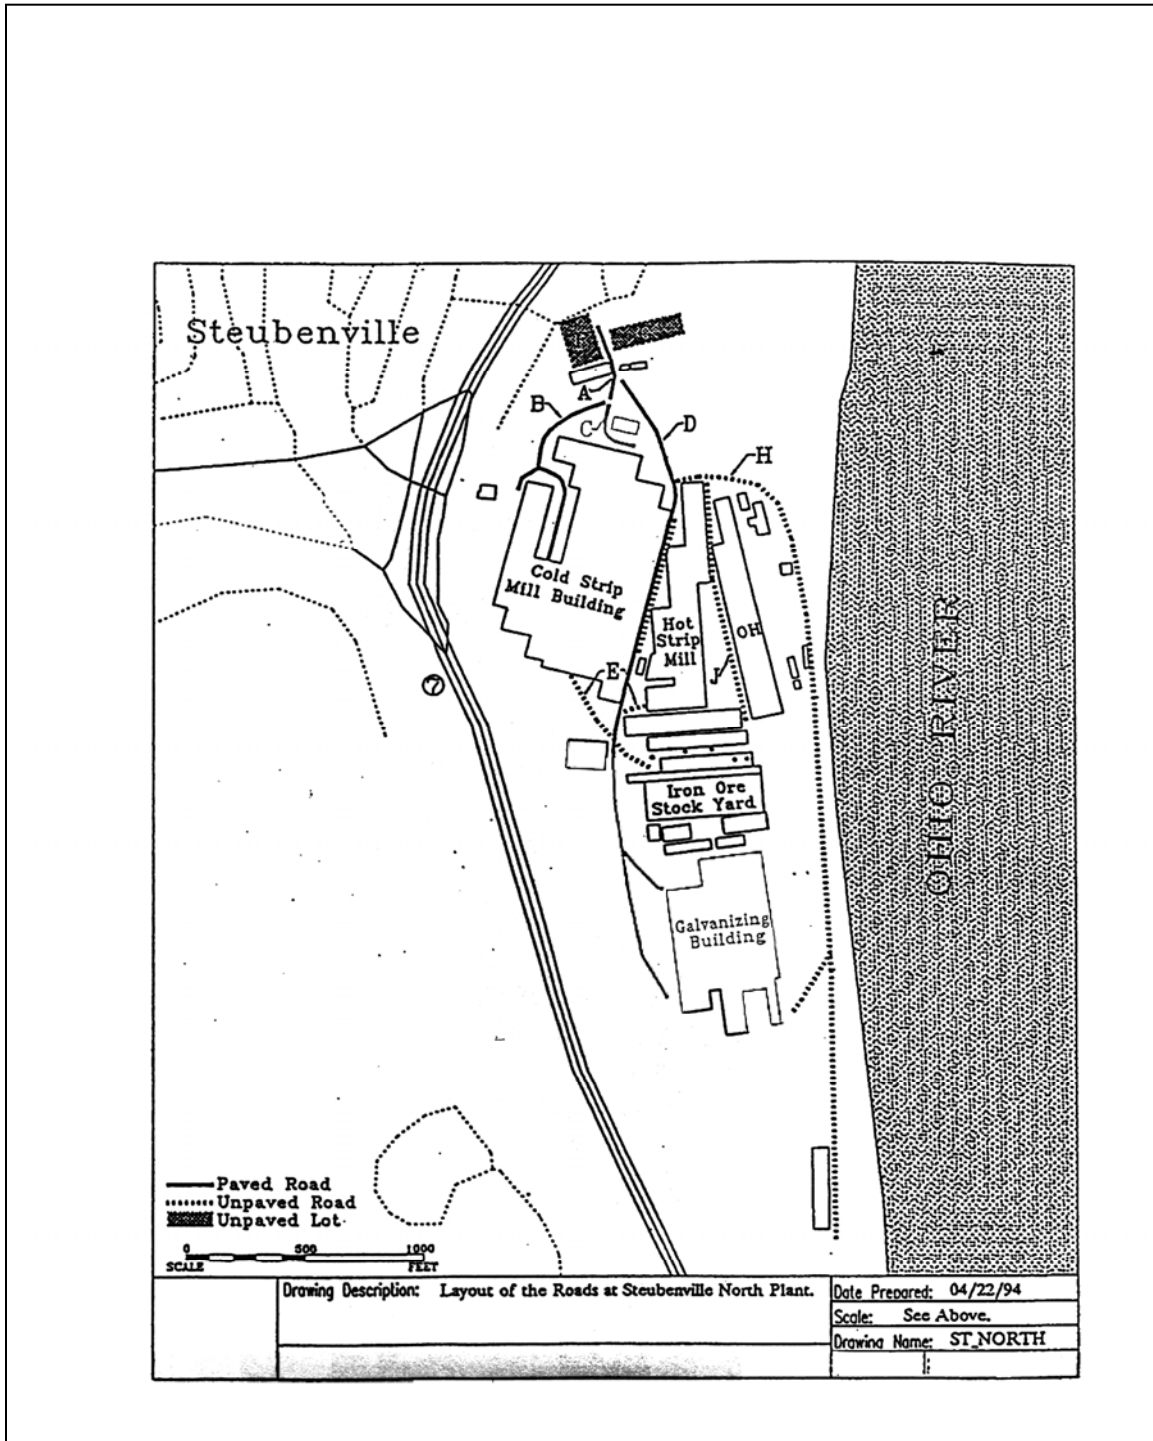

D. Changes to Paved and Unpaved Road/Area Dust Control Programs

1. The Company has the right to petition the Ohio EPA for written approval of definitive treatment methods, treatment schedules and procedures or reporting requirements different from those required herein. No action shall be taken by the Company in employing the alternative practices until the Director or his representative issues a written approval to the Company. Such alternative practices must be demonstrated to the Director or his representative to result in equivalent dust control effectiveness in accordance with Control of Open Fugitive Dust Sources (EPA-450/3-88-008). The Company reserves the right to contest any disapproval of such petition in the appropriate judicial forum.
2. In the event that the Company certifies that all of a roadway or area identified in Attachment 1 has been discontinued, the dust suppression or surface cleaning program for that road or area may be terminated or reduced. If the Company begins to utilize any new roadway, parking lot or other vehicular activity area not shown in Attachment 1, it shall notify the Director or his representative in the reports required under this Appendix and treat or clean the road or area in accordance with the procedures contained herein, unless more stringent requirements are specified in any permit to install issued by the Ohio EPA for such roadway or area.
3. The Director or his representative shall not be precluded from requesting adjustments, including increased chemical suppressant application or cleaning, if on-site inspections reveal that the program contained herein does not prevent excessive visible dust entrainment and emissions from a particular road or area.
4. In the event that an unpaved road or area that has been chemically treated becomes completely hardened and cemented by such treatment so as to become like a paved road as demonstrated by observation, by compaction tests and silt analyses, or in the event that the Company paves any unpaved road or area, that road or area may be treated as a paved surface and cleaned in accordance with the procedures outlined in Section C.

1. Vehicle types and specifications are as follows:

Type	Weight (tons)	Wheels
A	2	4
B	15	7
C	40	11
D	55 empty 130 full	4

153 Mean Annual Days With Rain  
347 Working Days per Year  
Bimonthly means every two months.

- 2. Parking lot traffic is based on Daily Vehicle Passes of nearest road.
- 3. Type D vehicles (slab handlers) travel these areas only.
- 4. Capacity estimated by size.

**Contingency plan requirements for Cuyahoga and Jefferson counties.**

(A) By not later than April 1, 1992, the owner or operator of each facility identified below shall submit to the Ohio EPA approvable control strategies and compliance schedules which meet the following requirements:

(1) The control strategies shall be capable of reducing the particulate emissions from each of the facilities identified below by each of the two levels specified below for each facility:

--

Facility Name (premise number)	Total, required particulate emission reductions for the facility (in pounds per hour at the maximum operating rates)	
	Fifteen per cent reduction level	Twenty-five per cent reduction level
Ford Motor Company (1318120180)	5.7	9.5
United Ready Mix (1318005960)	1.1	1.1
International Mill Service, Incorporated (1741090068)	0.8	0.8
Luria Brothers (1318122776)	4.6	6.7
T & B Foundry Company (1318000504)	1.7	2.8

(2) Except as otherwise provided in this paragraph, the particulate emission reductions specified in paragraph (A)(1) of this rule shall be obtained from the sources identified for each affected facility in rules 3745-17-12 and 3745-17-13 of the Administrative Code. If the required reductions cannot reasonably be obtained from those sources, control strategies may be developed for other sources at the facility in order to meet the required reductions for the facility.

(3) In calculating the control strategy, hourly particulate emission rate for a source, the maximum operating rate for the source shall be used. In addition, for a source identified in rule 3745-17-12 or 3745-17-13 of the Administrative Code, the baseline, hourly particulate emission rate shall be based upon the allowable emission rate specified in those rules and the maximum operating rate; and the control strategy must be designed to reduce the particulate emissions below that baseline, hourly particulate emission rate. For a source which is not identified in rule 3745-17-12 or 3745-17-13 of the Administrative Code, the baseline, hourly particulate emission rate shall be based upon the actual or allowable emission rate, whichever is lower, and the maximum operating rate; and the control strategy must be designed to reduce the particulate emissions below that baseline, hourly particulate emission rate.

- (4) The following information shall be submitted for each source for which a control strategy is developed:
- (a) A description of the source and the existing control equipment and/or control measures;
  - (b) The Ohio EPA application number;
  - (c) The hourly, baseline particulate emission rate, and the assumptions and calculations which were used to derive the emission rate;
  - (d) A description of the type of control equipment and/or control measures which will be employed to reduce the hourly emission rate, including the general design specifications and/or operating parameters;
  - (e) The hourly particulate emission rate that will be achieved by employing the proposed control equipment and/or control measures, and the assumptions and calculations which were used to derive the emission rate; and
  - (f) The approximate total installed cost and annual operating cost for the proposed control equipment and/or control measures, and the assumptions and calculations which were used to derive the costs.
- (5) The schedule for implementing each control strategy shall commence upon a formal determination and notification by the Ohio EPA or the United States environmental protection agency that the county where the facility is located is not in compliance with the ambient air quality standards for PM<sub>10</sub>, as specified in rule 3745-25-02 of the Administrative Code. The schedule shall include dates for the following milestones:
- (a) Award contracts for emission control systems or process modifications, or issue orders for the purchase of component parts to accomplish emission control or process modification.
  - (b) Initiate on-site construction or installation of emission control equipment or process change.
  - (c) Complete on-site construction or installation of emission control equipment or process change.
  - (d) Achieve final compliance.

The owner or operator shall demonstrate to the satisfaction of the director that the schedule is as expeditious as practicable.

- (B) The control strategies and compliance schedules submitted in accordance with paragraph (A) of this rule shall be approved by the director through the issuance, pursuant to division (R) of section 3704.03 of the Ohio Revised Code, of

administrative findings and orders. The findings and orders shall be submitted to and approved by the United States environmental protection agency as a revision to the Ohio state implementation plan for particulates.

- (C) Upon a formal determination and notification by the Ohio EPA or the United States environmental protection agency that Cuyahoga county or Jefferson county is not in compliance with the ambient air quality standards for  $PM_{10}$ , as specified in rule 3745-25-02 of the Administrative Code, the owner or operator of each facility identified in paragraph (A)(1) of this rule shall implement the control strategies and schedules which have been approved by the director. (Such formal determination and notification of nonattainment shall not occur prior to January 1, 1994.) If the determination and notification of nonattainment are based upon a twenty-four-hour average ambient air concentration of  $PM_{10}$  of greater than one hundred fifty micrograms per cubic meter and less than or equal to one hundred seventy-two and one half micrograms per cubic meter, the owner or operator of each affected facility shall implement the set of approved control strategies and compliance schedules which are designed to reduce the hourly particulate emission rate by fifteen per cent or more. If the determination and notification of nonattainment are based upon a twenty-four-hour average ambient air concentration of  $PM_{10}$  of greater than one hundred seventy-two and one half micrograms per cubic meter, the owner or operator of each affected facility shall implement the approved control strategies and compliance schedules which are designed to reduce the hourly particulate emission rate by twenty-five per cent or more.
- (D) Notwithstanding the requirements of paragraph (C) of this rule, if the determination and notification of nonattainment referenced in paragraph (C) of this rule reflects continued nonattainment in only a portion of the county, the director may limit the requirement for implementation of contingency measures to those facilities which are identified in paragraph (A)(1) of this rule and which are located either in that portion of Jefferson County within a two-kilometer radius from the ambient air quality monitor(s) showing continued nonattainment or in that portion of Cuyahoga County within a three-kilometer radius from the ambient air quality monitor(s) showing continued nonattainment.
- (E) For purposes of this rule,  $PM_{10}$  shall be defined and determined in accordance with paragraph (B)(16) of rule 3745-17-01 of the Administrative Code.

3745-18-01      **Definitions and incorporation by reference.**

(A) Except as otherwise provided in paragraph (B) of this rule, the definitions in rule 3745-15-01 of the Administrative Code shall apply to this chapter.

(B) The following definitions shall apply exclusively to this chapter:

- (1) "By-product coke oven gas" means the gas produced during the production of metallurgical coke in slot-type, by-product coke ovens.
- (2) "Calendar day" means the period of twenty-four hours from midnight to midnight.
- (3) "First quarter" means calendar January, February and March.
- (4) "Fuel burning equipment" or "fossil fuel fired steam generator" means any furnace, boiler, apparatus, stack, and all appurtenances thereto, used in the process of burning fuel for the primary purpose of producing heat or power by indirect heat transfer.
- (5) "Fossil fuel" means natural gas, coke oven gas, petroleum, coal and any form of solid, liquid, or gaseous fuel derived from such materials.
- (6) "Fourth quarter" means calendar October, November and December.
- (7) "Incinerator" means any equipment, machine, device, article, contrivance, structure, or part of a structure used to burn refuse or to process refuse material by burning other than by open burning.
- (8) "MM Btu" means million(s) of British thermal units.
- (9) "Natural gas" means a naturally occurring mixture of hydrocarbon and nonhydrocarbon gases found in geologic formations beneath the earth's surface, of which the principal constituent is methane.
- (10) "Owner or operator" means any person who owns, leases, operates, controls, or supervises a facility, building, structure, or installation which directly or indirectly results or may result in emissions of sulfur dioxide.
- (11) "OEPA" means the Ohio environmental protection agency.
- (12) "Primary zinc smelter" means any installation engaged in the production of zinc or zinc oxide from zinc sulfide ore concentrates through the use of pyrometallurgical techniques.

- (13) "Process" means any source operation including any equipment, devices, or contrivances and all appurtenances thereto, for changing any material whatever or for storage or handling of any material, the use of which may cause the discharge of an air contaminant into the open air, but not including that equipment defined as a fossil fuel fired steam generator.
  - (14) "Process weight" means the total weight of all materials introduced into the source operation including solid fuels, but excluding gaseous fuels and liquid fuels when they are used solely as fuels and excluding air introduced for the purpose of combustion.
  - (15) "Rated capacity" or "rated heat input capacity" means the maximum capacity guaranteed by the equipment manufacturer or the maximum normally achieved during use as determined by the director, whichever is greater.
  - (16) "Run" means the net period of time during which an emission sample is collected. Unless otherwise specified, a run may be either intermittent or continuous within the limits of good engineering practice as determined by the director.
  - (17) "Second quarter" means calendar April, May and June.
  - (18) "Stationary gas turbine" means an engine in which a turbine is driven by expanding hot combustion gases. Such an engine typically consists of an axial-flow air compressor, one or more combustion chambers, and the turbine.
  - (19) "Stationary internal combustion engine" means a stationary engine in which combustion occurs within one or more cylinders, converting heat energy into mechanical energy, which in turn drives an electric generator or other mechanical equipment.
  - (20) "Sulfur recovery plant" means any plant that recovers elemental sulfur from any gas stream.
  - (21) "Sulfuric acid production unit" means any facility producing sulfuric acid by the contact process by burning elemental sulfur, alkylation acid, hydrogen sulfide, organic sulfides and mercaptans, or acid sludge.
  - (22) "Third quarter" means calendar July, August and September.
  - (23) "Total rated capacity" means the sum of the rated capacities of all fuel burning equipment connected to a common stack.
- (C) Incorporation by reference. This chapter includes references to certain matter or materials. The text of the incorporated materials is not included in the regulations contained in this chapter. The materials are hereby made a part of the regulations in this chapter. For materials subject to change, only the specific version specified in the regulation are incorporated. Material is incorporated as it exists on the effective

date of this rule. Except for subsequent annual publication of existing (unmodified) Code of Federal Regulation compilations, any amendment or revision to a referenced document is not incorporated unless and until this rule has been amended to specify the new dates.

(1) Availability. The materials incorporated by reference are available as follows:

- (a) Code of Federal Regulations (CFR). Information and copies may be obtained by writing to: "Superintendent of Documents, Attn: New Orders, PO Box 371954, Pittsburgh, PA 15250-7954." The full text of the CFR is also available in electronic format at [www.access.gpo.gov/ecfr/](http://www.access.gpo.gov/ecfr/). The CFR compilations are also available for inspection and copying at most public libraries and "The State Library of Ohio."
- (b) "American Society for Testing and Materials (ASTM)." Information and copies may be obtained by writing to: "ASTM International, 100 Bar Harbor Drive, P.O. Box C700, West Conshohocken, Pennsylvania 19426-2959." These documents are available for purchase at [www.astm.org](http://www.astm.org). ASTM documents are also generally available at local public libraries and "The State Library of Ohio."

(2) Incorporated materials:

- (s) Method 6C; contained in 40 CFR Part 60, Appendix A; "Determination of Sulfur Dioxide Emissions from Stationary Sources (Instrumental Analyzer Procedure); " . as published in the July 1, 2005 Code of Federal Regulations.
- (t) Method 19; contained in 40 CFR Part 60, Appendix A; "Determination of Sulfur Dioxide Removal Efficiency and Particulate Matter, Sulfur Dioxide, and Nitrogen Dioxide Emission Rates; " as published in the July 1, 2005 Code of Federal Regulations.
- (u) Performance Specification 2 contained in Appendix B of 40 CFR Part 60; "Specifications and Test Procedures for Sulfur Dioxide and Nitric Oxides Continuous Emission Monitoring Systems in Stationary Sources;" ; .as published in the July 1, 2005 Code of Federal Regulations.

Effective: 01/23/2006

R.C. 119.032 review dates: 10/28/2005 and 01/23/2011

CERTIFIED ELECTRONICALLY  
Certification

01/13/2006  
Date

Promulgated Under: 119.03  
Statutory Authority: 3745.03(E)  
Rule Amplifies: 3704.03(A) and 3704.03(E)  
Prior Effective Dates: 12/28/79, 5/11/87, 9/01/03

3745-18-02      **Ambient air quality standards; sulfur dioxide.**

This rule was rescinded as of 4/18/09.

The rule language was moved to OAC Rule 3745-25-02

**(A) Attainment dates.**

- (1) The attainment of the ambient air quality standards for sulfur dioxide established in rule 3745-25-02 of the Administrative Code shall be accomplished throughout the state as expeditiously as practicable, but in no event shall such time be later than December 31, 1982 or the date provided in paragraph (A)(2) of this rule, whichever is later.
- (2) The date for attainment of ambient air quality standards for sulfur dioxide established in rule 3745-25-02 of the Administrative Code for the specified counties shall be as follows:
  - (a) Morgan county: July 1, 1989 for the secondary ambient air quality standard;
  - (b) Washington county: July 1, 1989 for the secondary ambient air quality standard;
  - (c) Hamilton county: December 22, 1993 for the primary and secondary ambient air quality standards; and
  - (d) Butler county: March 18, 2003.

**(B) Certification and permit application requirements.**

- (1) Except as otherwise provided in paragraph (B)(2) and paragraphs (B)(4) to (B)(8) of this rule, no later than December 1, 1979, any owner or operator of any sulfur dioxide emissions source subject to, and not specifically exempted from, rules 3745-18-06 to 3745-18-94 of the Administrative Code shall either:
  - (a) Certify in writing to the director that such source is in full compliance with all requirements of Chapter 3745-18 of the Administrative Code. Such certification shall include: equipment description, Ohio environmental protection agency permit application number (if assigned), and all necessary data (consistent with the appropriate permit application appendices) and calculations which confirm the compliance status. The certification shall also include an application for a permit-to-operate such source in accordance with rule 3745-35-02 of the Administrative Code if such source does not possess an effective permit; or
  - (b) Submit an application for a permit to operate or an application for a modification to a permit-to-operate in accordance with rule 3745-35-02 of the Administrative Code. Such application shall include a compliance program which will bring the source into full compliance with all the

requirements of Chapter 3745-18 of the Administrative Code as expeditiously as practicable but in no event later than the dates specified in paragraph (C) of this rule, and identify all reasonable interim control measures.

- (2) No later than December 1, 1979, any owner or operator of any sulfur dioxide emissions source subject to, and not specifically exempted from, rule 3745-18-56 of the Administrative Code (Mahoning county) shall certify in writing to the director, in a form and manner he/she shall specify, all data necessary to establish sulfur dioxide emission limitations based on calendar year 1978 operations.
- (3) For fuel burning equipment, the certification and/or permit applications required by paragraphs (B)(1) and (B)(2) of this rule shall include the test method for determining compliance as specified in paragraph (D) or (E) of rule 3745-18-04 of the Administrative Code, whichever is applicable.
- (4) No later than December 1, 1984, the "United States Steel Corporation, Lorain-Cuyahoga Works" (OEPA premise number 0247080229), shall submit an application for a permit to operate or an application for a modification to a permit-to-operate in accordance with rule 3745-35-02 of the Administrative Code, which application shall include a compliance program which will bring the source into full compliance with all the requirements of paragraphs (E)(5) and (E)(6) of rule 3745-18-53 of the Administrative Code as expeditiously as practicable but in no event later than the date specified in paragraph (C)(5) of this rule, and identify all reasonable interim control measures.
- (5) No later than June 10, 1987, any owner or operator of the "Air Force Plant Number 85" (OEPA premise number 0125040806) shall submit a compliance program which will bring the facility into compliance with all the requirements of either paragraph (P)(1) or (P)(2) of rule 3745-18-31 of the Administrative Code as expeditiously as practicable, and identify all reasonable interim control measures.
- (6) No later than July 15, 1989, any owner or operator of the "LTV Steel Company" (OEPA premise numbers 1318000078 and 1318001613) shall:
  - (a) Submit a compliance program that will bring the facility into compliance with all the requirements of paragraphs (B) and (N) of rule 3745-18-24 of the Administrative Code as expeditiously as practicable, but in no event later than the date specified in paragraph (C)(7) of this rule; and
  - (b) Identify all reasonable interim control measures.

(7) No later than November 30, 1991, any owner or operator of any sulfur dioxide emissions source subject to, and not specifically exempted from, rule 3745-18-37 of the Administrative Code, Hamilton county emissions limits, shall:

(a) Submit a compliance program that will bring the source into full compliance with all the requirements of rule 3745-18-37 of the Administrative Code as expeditiously as practicable, but in no event later than December 22, 1993; and

(b) Identify all reasonable interim control measures.

(8) No later than April 20, 2000, any owner or operator of any sulfur dioxide emissions source subject to, and not specifically exempted from, rule 3745-18-15 of the Administrative Code, Butler county emissions limits, shall:

(a) Submit a compliance program that will bring the source into full compliance with all the requirements of rule 3745-18-15 of the Administrative Code as expeditiously as practicable, but in no event later than the date specified in paragraph (C)(6) of this rule; and

(b) Identify all reasonable interim control measures.

(C) Compliance time schedules.

(1) Except as otherwise provided in paragraphs (C)(2) to (C)(10) of this rule, no owner or operator shall cause, permit, or allow the operation or other use of any air contaminant source in violation of the limitations specified in rules 3745-18-06 to 3745-18-94 of the Administrative Code beyond August 27, 1979.

(2) No owner or operator shall cause, permit, or allow the operator or other use of any air contaminant source in violation of the limits specified in rules 3745-18-15 and 3745-18-83 of the Administrative Code beyond September 1, 1982.

(3) No owner or operator shall cause, permit, or allow the operation or other use of any air contaminant source at the following facilities in violation of the limitations specified in rules 3745-18-06 to 3745-18-94 of the Administrative Code beyond June 17, 1980:

(a) "Allied Chemical Corporation":

(i) Cuyahoga county / 5000 Warner road / Garfield Heights / OEPA premise number 1318222594;

(ii) Lawrence county / South Point / OEPA premise number 0744000009;

- (iii) Lawrence county / "Semet Solvay Ironton Tar Plant" / OEPA premise number 0744010002;
  - (iv) Lawrence county / "Semet Solvay Division" / "Ironton Coke Plant" / Ironton / OEPA premise number 0744010004;
  - (v) Lucas county / "Specialty Chemicals Division" / OEPA premise number 0448010071.
- (b) "Aluminum Company of America": Cuyahoga county / "Cuyahoga Heights Facility" / OEPA premise number 1318170314.
- (c) "Armco Steel Corporation": Muskingum county / "Zanesville Works" / OEPA premise number 0660010006.
- (d) "Ashland Oil, Incorporated":
- (i) Hancock county / "Findlay Plant" / OEPA premise number 0332010020;
  - (ii) Stark county / "Canton Plant" / OEPA premise number 1576000301.
- (e) "Austin Powder Company": Vinton county / "McArthur Facility" / OEPA premise number 0682000000.
- (f) "Chase Bag Company": Cuyahoga county / Chagrin Falls / OEPA premise number 1318130038.
- (g) "Coulton Chemical Corporation": Lucas county / Oregon / OEPA premise number 1677010027.
- (h) "E. I. duPont deNemours and Company":
- (i) Cuyahoga county / Independence road, Cleveland / OEPA premise number 1318000151;
  - (ii) Hamilton county / "Fort Hill Plant" / OEPA premise number 1431350817;
  - (iii) Lucas county / Tremainsville road, Toledo / OEPA premise number 0448010058.
- (i) "Federal Paper Board Company": Jefferson county / North Third street, Steubenville / OEPA premise number 1741050009.
- (j) "General Motors Corporation":

- (i) Cuyahoga county / "Fisher Body," Coit road, Cleveland / OEPA premise number 1318002266;
  - (ii) Cuyahoga county / "Chevrolet Motor Division," Brookpark / OEPA premise number 1318451029;
  - (iii) Erie county / "New Departure-Hyatt" / OEPA premise number 0322020045;
  - (iv) Franklin county / "Fisher Body," Columbus / OEPA premise number 0125040057;
  - (v) Hamilton county / "General Motors Assembly Division" / OEPA premise number 1431370848;
  - (vi) Lorain county / "Fisher Body," Elyria / OEPA premise number 1947040038;
  - (vii) Montgomery county / "Delco Moraine" / OEPA premise number 0857040017;
  - (viii) Montgomery county / "Inland Division" / OEPA premise number 0857040927;
  - (ix) Montgomery county / "Delco Air Conditioning" /OEPA premise number 0857100028;
  - (x) Richland county / "Fisher Body," Mansfield / OEPA premise number 0370000140;
  - (xi) Trumbull county / "Packard Electric," North River road / OEPA premise number 0278080051;
  - (xii) Trumbull county / "Packard Electric," Dana street /OEPA premise number 0278080052.
- (k) "The Goodyear and Tire Rubber Company": Auglaize county / "St. Marys Facility" / OEPA premise number 0306010138.
- (l) "The Gulf Oil Company":
- (i) Hamilton county / Hooven / OEPA premise number 1431080082;
  - (ii) Lucas county / Front street / Toledo / OEPA premise number 0448010060.

- (m) "The Hoover Company": Stark county / "Plant I" / OEPA premise number 1576170258.
- (n) "Interlake Incorporated": Lucas county / Toledo / OEPA premise number 0448010397.
- (o) "Koppers Company, Incorporated": Mahoning county /Youngstown / OEPA premise number 0250110146.
- (p) "Ohio Greenhouse Association":
  - (i) Erie county / "Charles J. Otto Greenhouse" / Berlin township / OEPA premise number 0322000173;
  - (ii) Erie county / "Jacob H. Otto Greenhouse" / Huron /OEPA premise number 0322010174;
  - (iii) Medina county / "Bunker Hill Greenhouse, Incorporated" / Medina / OEPA premise number 1652050088;
  - (iv) Mahoning county / "Canfield Gardens" / OEPA premise number 0250030438.
  - (v) Mahoning county / "Lonardo and Sons" / OEPA premise number 0250000440.
- (q) "Republic Steel Corporation":
  - (i) Cuyahoga county / 3100 East 45th street / OEPA premise number 1318001613;
  - (ii) Lake county / "Lime Plant" / OEPA premise number 0243030257;
  - (iii) Mahoning county / Youngstown / OEPA premise number 0250110464;
  - (iv) Stark county / "Massillon Coke Plant" / OEPA premise number 1576130696;
  - (v) Stark county / "Union Drawn Division," Massillon /OEPA premise number 1576130697;
  - (vi) Stark county / "Central Alloy," Canton / OEPA premise number 1576050694;
  - (vii) Trumbull county / "Warren Township Facility" /OEPA premise number 0278080463.

- (r) "Shell Oil Company":
  - (i) Allen county / "Lima Refinery" / OEPA premise number 0302020012;
  - (ii) Washington county / "Shell Chemical Corporation" / OEPA premise number 0684010011.
- (s) "The Standard Oil Company":
  - (i) Allen county / "Lima Refinery" / OEPA premise number 0302020012;
  - (ii) Cuyahoga county / "Cleveland Asphalt Plant" / OEPA premise number 13180001871;
  - (iii) Lucas county / Oregon / OEPA premise number 0448020007.
- (t) "The Sun Petroleum Products": Lucas county / "Oregon Facility" / OEPA premise number 044801010246.
- (u) "The Timken Company":
  - (i) Crawford county / "Bucyrus Plant" / OEPA premise number 0317010168;
  - (ii) Stark county / "Canton Plant Number 5" / OEPA premise number 1576050614;
  - (iii) Stark county / "Canton Gambrinus Plant" / OEPA premise number 1576000613.
- (v) "United States Steel Company":
  - (i) Ashtabula county / "Conneaut Plant" / OEPA premise number 0204020081;
  - (ii) Cuyahoga county / "Cuyahoga Works" / OEPA premise number 1318171623;
  - (iii) Cuyahoga county / "Lorain-Cuyahoga Works" / OEPA premise number 1318001622;
  - (iv) Lorain county / "Lorain-Cuyahoga Works" / OEPA premise number 1947080229;

- (v) Mahoning county / "Youngstown Facilities" /OEPA premise number 0250110469;
  - (vi) Scioto county / "United States Steel Chemicals" /OEPA premise number 0773000080;
  - (vii) Trumbull county / "McDonald Mills" / OEPA premise number 0278040213.
- (w) "Wheeling-Pittsburgh Steel Corporation":
- (i) Belmont county / Martins Ferry / OEPA premise number 1707090013;
  - (ii) Jefferson county / "Mingo Junction Facility" /OEPA premise number 1741090010;
  - (iii) Jefferson county / "Yorkville Plant" / OEPA premise number 1741120012;
  - (iv) Jefferson county / "Steubenville North" / OEPA premise number 1741150011.
- (x) "White-Westinghouse Corporation":
- (i) Franklin county / "Columbus Products Company" /OEPA premise number 0125040258;
  - (ii) Richland county / "Mansfield Products" / OEPA premise number 0370010182.
- (y) "Jones & Laughlin Steel Corporation": Mahoning county /"Campbell Works" / OEPA premise number 0250090241.
- (z) "Cardinal Operating Company and Buckeye Power, Incorporated": Jefferson county / "Cardinal Plant" / OEPA premise number 0641050002 and 1741050129.
- (aa) "Cincinnati Gas and Electric Company":
- (i) Clermont county / "Beckjord Station" / OEPA premise number 113100008;
  - (ii) Hamilton county / "Miami Fort Station" / OEPA premise number 1431350093.
- (bb) "Cleveland Electric Illuminating Company":

- (i) Ashtabula county / "Ashtabula Plant 'C'" / OEPA premise number 0204000211;
  - (ii) Ashtabula county / "Ashtabula Plant" / OEPA premise number 0204010000;
  - (iii) Cuyahoga county / Canal road, "Steam Heat Plant" /OEPA premise number 1318000244;
  - (iv) Cuyahoga county / "Hamilton Avenue Steam Heat Plant" / OEPA premise number 1318000246;
  - (v) Cuyahoga county / "Lake Shore Plant" / OEPA premise number 1318000245;
  - (vi) Lake county / "Eastlake Plant" / OEPA premise number 0243160009;
  - (vii) Lorain county / "Avon Lake Plant" / OEPA premise number 1947030013.
- (cc) "Columbus Southern Power Company":
- (i) Athens county / "Poston Station" / OEPA premise number 0506000000;
  - (ii) Coshocton county / "Conesville Generating Station" / OEPA premise number 0616000000;
  - (iii) Lawrence county / "Pedro Diesels" / OEPA premise number 0744000000;
  - (iv) Pickaway county / "Pickway Generating Plant" /OEPA premise number 0165000005.
- (dd) "Dayton Power and Light Company":
- (i) Adams county / "J.M. Stuart Station" / OEPA premise number 0701000007;
  - (ii) Montgomery county / "Third Street Station," Dayton / OEPA premise number 0857040014;
  - (iii) Montgomery county / "Longworth Street Station," Dayton / OEPA premise number 0857040016;

- (iv) Montgomery county / "Tait Station" / OEPA premise number 0857100012;
  - (v) Montgomery county / "Hutching Station" / OEPA premise number 0857780013;
  - (vi) Montgomery county / "Yankee Station" / OEPA premise number 0857810015.
- (ee) "Ohio Edison Company":
- (i) Belmont county / "R. E. Burger Plant" / OEPA premise number 0607130015;
  - (ii) Clark county / "Mad River Plant" / OEPA premise number 0812790035;
  - (iii) Clark county / "Rockaway Steam Heat Plant" / OEPA premise number 0812100036;
  - (iv) Columbiana county / "East Palestine Station" / OEPA premise number 1715030150;
  - (v) Huron county / "Norwalk Plant" / OEPA premise number 0339020181;
  - (vi) Jefferson county / "W. H. Sammis Plant" / OEPA premise number 041160017;
  - (vii) Jefferson county / "Toronto Plant" / OEPA premise number 174118018;
  - (viii) Lorain county / "Edgewater Plant" / OEPA premise number 0247080049;
  - (ix) Lorain county / "West Lorain Plant" / OEPA premise number 0247080487;
  - (x) Trumbull county / "Niles Plant" / OEPA premise number 0278060023.
- (ff) "Ohio Power Company":
- (i) Allen county / "Woodcock Plant" / OEPA premise number 0302000010;
  - (ii) Gallia county / "Gavin Plant" / OEPA premise number 0627010056;
  - (iii) Jefferson county / "Tidd Plant" / OEPA premise number 1741050003;

- (iv) Jefferson county / "Cardinal Plant" / OEPA premise number 0641050002;
  - (v) Muskingum county / "Philo Plant" / OEPA premise number 0660000001;
  - (vi) Washington county / "Muskingum River Plant" / OEPA premise number 0684000000.
- (gg) "Ohio Valley Electric Company": Gallia county / "Kyger Creek Station" / OEPA premise number 0627000003.
- (hh) "Toledo Edison Company":
- (i) Defiance county / Carpenter road, Defiance / OEPA premise number 0320010006;
  - (ii) Lucas county / "Acme Station" / OEPA premise number 0448010086;
  - (iii) Lucas county / "Water Street Station" / OEPA premise number 0448010087;
  - (iv) Lucas county / Bay Shore Station" / OEPA premise number 0448020006;
  - (v) Williams county / "Stryker Substation" / OEPA premise number 0386000006.
- (ii) "Youngstown Thermal Corporation": Mahoning county / OEPA premise number 0250110024.
- (4) Notwithstanding the provisions of paragraph (C)(2) of this rule, no owner or operator shall cause, permit, or allow the operation or other use of any air contaminant source in violation of the limit specified in paragraph (S) of rule 3745-18-83 of the Administrative Code beyond April 30, 1983.
- (5) Notwithstanding the provisions of paragraph (C)(1) of this rule, no owner or operator shall cause, permit, or allow the operation or other use of any air contaminant source in violation of the limits specified in paragraphs (E)(5) and (E)(6) of rule 3745-18-53 of the Administrative Code beyond December 31, 1985.
- (6) Notwithstanding the provisions of paragraph (C)(1) of this rule, any owner or operator utilizing low sulfur fuel, including blended or washed coal, or who installs new emission control systems, or who modifies existing emission control systems, or who ceases operation in order to comply with the specified

emission limitations, shall bring any air contaminant source specified in paragraph (C)(6)(a) of this rule into compliance with the limitations specified in rules 3745-18-06 to 3745-18-94 of the Administrative Code as expeditiously as practicable but in no event later than the compliance schedule identified in paragraph (C)(6)(b) of this rule. The compliance time schedule for each source shall commence on the effective date of the applicable emission as specified in rules 3745-18-06 to 3745-18-94 of the Administrative Code.

(a) Air contaminant sources.

- (i) "Columbus Southern Power Company": Athens county / "Poston Station" / OEPA premise number 0605000000 / OEPA source number B001 to B004;
- (ii) "Columbus Southern Power Company": Coshocton county / "Conesville Generating Station" / OEPA premise number 0616000000 / OEPA source numbers B007 and B008; and
- (iii) Sources subject to rule 3745-18-15 of the Administrative Code, Butler county emission limits.

(b) Compliance time schedule.

- (i) No more than eight weeks after the commencement date specified in paragraph (C)(6) of this rule, the owner or operator of a facility specified in paragraph (C)(6)(a) of this rule shall notify the director of the intent to utilize low sulfur fuels, install new emission control systems, modify existing emission control systems, or cease operation to achieve compliance, and if utilizing low sulfur fuel to achieve compliance, the owner or operator shall submit to the director a ten year projection of the amount of fuels by types that will be substantially adequate to enable compliance with the applicable limitation;
- (ii) No more than thirty-two weeks after the commencement date specified in paragraph (C)(6) of this rule, the owner or operator of a facility specified in paragraph (C)(6)(a) of this rule shall submit to the director, if applicable, data demonstrating the availability of the low sulfur fuel projected to meet the emission limits contained in rules 3745-18-07 to 3745-18-94 of the Administrative Code;
- (iii) No more than thirty-six weeks after the commencement date specified in paragraph (C)(6) of this rule, the owner or operator of a facility specified in paragraph (C)(6)(a) of this rule shall submit to the director a statement as to whether modifications to boiler or emission control equipment will be necessary, and if modifications will be necessary, submit preliminary plans for such modifications;

- (iv) No more than forty-two weeks after the commencement date specified in paragraph (C)(6) of this rule, the owner or operator of a facility specified in paragraph (C)(6)(a) of this rule shall submit to the director final plans for equipment modifications necessary to achieve compliance;
- (v) No more than fifty weeks after the commencement date specified in paragraph (C)(6) of this rule, the owner or operator of a facility specified in paragraph (C)(6)(a) of this rule shall award contracts for necessary boiler or emission control modifications, if applicable, and notify the director in writing that such action was taken or, if applicable, submit to the director a detailed schedule for final closure;
- (vi) No more than sixty weeks after the commencement date specified in paragraph (C)(6) of this rule, the owner or operator of a facility specified in paragraph (C)(6)(a) of this rule shall initiate on-site modifications, if applicable, and notify the director that such action was taken;
- (vii) No more than one hundred eighteen weeks after the commencement date specified in paragraph (C)(6) of this rule, the owner or operator utilizing low sulfur fuel to achieve compliance at a facility specified in paragraph (C)(6)(a) of this rule shall complete on-site modifications, if applicable, and notify the director in writing that such action was taken;
- (viii) No more than one hundred twenty-two weeks after the commencement date specified in paragraph (C)(6) of this rule, the owner or operator using low sulfur fuels to achieve compliance at a facility specified in paragraph (C)(6)(a) of this rule shall achieve final compliance with the applicable emission limitations specified in rules 3745-18-06 to 3745-18-94 of the Administrative Code and certify compliance to the director in accordance with rule 3745-18-04 of the Administrative Code;
- (ix) No more than one hundred forty-four weeks after the commencement date specified in paragraph (C)(6) of this rule, the owner or operator installing new emission control systems, or modifying existing emission control systems in order to comply with the emission limitations at a facility specified in paragraph (C)(6)(a) of this rule shall complete on-site modifications or installations and notify the director in writing that such action was taken; and
- (x) No more than one hundred fifty-six weeks after the commencement date specified in paragraph (C)(6) of this rule, the owner or operator installing new emission control systems, or modifying existing

emission control systems in order to comply with the emission limitations at a facility specified in paragraph (C)(6)(a) of this rule shall achieve final compliance with the applicable emission limits specified in rules 3745-18-06 to 3745-18-94 of the Administrative Code and certify compliance to the director in accordance with rule 3745-18-04 of the Administrative Code.

(7)

(a) Notwithstanding the provisions of paragraph (C)(1) of this rule, any owner or operator who utilizes low sulfur fuels, or who installs new emission control systems, or who modifies existing emission control systems, or who ceases operation in order to comply with the specified emission limits, shall bring any subject air contaminant source into compliance with the limits specified in paragraphs (B) and (N) of rule 3745-18-24 of the Administrative Code as expeditiously as practicable but in no event later than the compliance schedule identified in paragraph (C)(7)(b) of this rule. The commencement date of the compliance time schedule shall be the effective date of this rule.

(b) Compliance time schedule.

- (i) No more than eight weeks after the commencement date specified in paragraph (C)(7)(a) of this rule, the owner or operator of a facility specified therein shall notify the director of the intent to utilize low sulfur fuels, install new emission control systems, modify existing emission control systems, or cease operation to achieve compliance, and if utilizing low sulfur fuel to achieve compliance, the owner or operator shall submit to the director a ten year projection of the amount of fuels by types that will be substantially adequate to enable compliance with the applicable emission limits;
- (ii) No more than sixteen weeks after the commencement date specified in paragraph (C)(7)(a) of this rule, the owner or operator of a facility specified therein shall submit to the director, if applicable, data demonstrating the availability of the low sulfur fuel projected to meet the applicable emission limits;
- (iii) No more than twenty-five weeks after the commencement date specified in paragraph (C)(7)(a) of this rule, the owner or operator of a facility specified therein shall submit to the director a statement as to whether modifications to boiler or emission control equipment will be necessary to achieve compliance, and if modifications will be necessary, submit preliminary plans for such modifications;
- (iv) No more than thirty-two weeks after the commencement date specified in paragraph (C)(7)(a) of this rule, the owner or operator of a facility

specified therein shall submit to the director final plans for equipment modifications necessary to achieve compliance;

- (v) No more than forty-eight weeks after the commencement date specified in paragraph (C)(7)(a) of this rule, the owner or operator of a facility specified therein shall award contracts for necessary boiler or emission control modifications, if applicable, and notify the director in writing that such action was taken or, if applicable, submit to the director a detailed schedule for final closure;
- (vi) No more than sixty weeks after the commencement date specified in paragraph (C)(7)(a) of this rule, the owner or operator of a facility specified therein shall initiate on-site modifications, if applicable, and notify the director that such action was taken;
- (vii) No more than one hundred twelve weeks after the commencement date specified in paragraph (C)(7)(a) of this rule, the owner or operator utilizing low sulfur fuel to achieve compliance at a facility specified therein shall complete on-site modifications, if applicable, and notify the director in writing that such action was taken;
- (viii) No more than one hundred twenty-four weeks after the commencement date specified in paragraph (C)(7)(a) of this rule, the owner or operator utilizing low sulfur fuel to achieve compliance at a facility specified therein shall achieve final compliance with the applicable emission limits and certify compliance to the director in accordance with paragraph (B) of this rule;
- (ix) No more than one hundred forty-four weeks after the commencement date specified in paragraph (C)(7)(a) of this rule, the owner or operator installing new emission control systems, or modifying existing emission control systems in order to achieve compliance at a facility specified therein shall complete on-site modifications or installations and notify the director in writing that such action was taken; and
- (x) No more than one hundred fifty-six weeks after the commencement date specified in paragraph (C)(7)(a) of this rule, the owner or operator installing new emission control systems or modifying existing emission control systems in order to achieve compliance at a facility specified therein shall achieve final compliance with the applicable emission limits specified in rules 3745-18-06 to 3745-18-94 of the Administrative Code and certify compliance to the director in accordance with rule 3745-18-04 of the Administrative Code.

- (a) Notwithstanding the provisions of paragraph (C)(1) of this rule and except as provided in paragraph (C)(9) of this rule, any owner or operator who utilizes low sulfur fuels, or who installs new emission control systems, or who modifies existing emission control systems, or who ceases operation in order to comply with the specified emission limits, shall bring any subject air contaminant source into compliance with the limits specified in rule 3745-18-37 of the Administrative Code, Hamilton county emission limits, as expeditiously as practicable but in no event later than the compliance schedule identified in paragraph (C)(8)(b) of this rule. The commencement date of the compliance time schedule shall be the effective date of this rule.
- (b) Compliance time schedule.
- (i) No later than July 31, 1992, the owner or operator of a facility specified in paragraph (C)(8)(a) of this rule shall notify the director of the intent to utilize low sulfur fuels, install new emission control systems, modify existing emission control systems, or cease operation to achieve compliance, and if utilizing low sulfur fuel to achieve compliance, the owner or operator shall submit to the director a ten year projection of the amount of fuels by types that will be substantially adequate to enable compliance with the applicable emission limits;
- (ii) No later than September 25, 1992, the owner or operator of a facility specified in paragraph (C)(8)(a) of this rule shall submit to the director, if applicable, data demonstrating the availability of the low sulfur fuel projected to meet the applicable emission limits;
- (iii) No later than October 9, 1992, the owner or operator of a facility specified in paragraph (C)(8)(a) of this rule shall submit to the director a statement as to whether modifications to boiler or emission control equipment will be necessary to achieve compliance, and if modifications will be necessary, submit preliminary plans for such modifications;
- (iv) No later than January 20, 1993, the owner or operator of a facility specified in paragraph (C)(8)(a) of this rule shall submit to the director final plans for equipment modifications necessary to achieve compliance;
- (v) No later than February 7, 1993, the owner or operator of a facility specified in paragraph (C)(8)(a) of this rule shall award contracts for necessary boiler or emission control modifications, if applicable, and notify the director in writing that such action was taken or, if applicable, submit to the director a detailed schedule for final closure;

- (vi) No later than June 9, 1993, the owner or operator of a facility specified in paragraph (C)(8)(a) of this rule shall initiate on-site modifications, if applicable, and notify the director that such action was taken;
  - (vii) No later than August 4, 1993, the owner or operator utilizing low sulfur fuel to achieve compliance at a facility specified in paragraph (C)(8)(a) of this rule shall complete on-site modifications, if applicable, and notify the director in writing that such action was taken;
  - (viii) No later than September 15, 1993, the owner or operator utilizing low sulfur fuel to achieve compliance at a facility specified in paragraph (C)(8)(a) of this rule shall achieve final compliance with the applicable emission limits and certify compliance to the director in accordance with paragraph (B) of this rule;
  - (ix) No later than November 10, 1993, the owner or operator installing new emission control systems, or modifying existing emission control systems in order to achieve compliance at a facility specified in paragraph (C)(8)(a) of this rule shall complete on-site modifications or installations and notify the director in writing that such action has been taken; and
  - (x) No later than December 22, 1993, the owner or operator installing new emission control systems or modifying existing emission control systems in order to achieve compliance at a facility specified in paragraph (C)(8)(a) of this rule shall achieve final compliance with the applicable emission limits specified in rules 3745-18-06 to 3745-18-94 of the Administrative Code and certify compliance to the director in accordance with rule 3745-18-04 of the Administrative Code.
- (9)
- (a) Notwithstanding the provisions of paragraph (C)(1) of this rule, any owner or operator who utilizes low sulfur fuels, or who installs new emission control systems, or who modifies existing emission control systems, or who ceases operation in order to comply with the specified emission limits, shall bring any subject air contaminant source into compliance with the limits specified in paragraph (BB) of rule 3745-18-37 of the Administrative Code as expeditiously as practicable but in no event later than the compliance schedule identified in paragraph (C)(9)(b) of this rule. The commencement date of the compliance time schedule shall be the effective date of this rule.
  - (b) Compliance time schedule.
    - (i) No later than November 6, 1991, the owner or operator of the facility shall submit to the director a final control plan that describes at a

minimum the steps which will be taken to achieve compliance; and if utilizing low sulfur fuel to achieve compliance, the owner or operator shall submit to the director a ten year projection of the amount of fuels by types that will be substantially adequate to enable compliance with the applicable emission limits;

- (ii) No later than January 1, 1992, the owner or operator of the facility shall submit to the director, if applicable, data demonstrating the availability of the low sulfur fuel projected to meet the applicable emission limits;
  - (iii) No later than August 6, 1992, the owner or operator of the facility shall negotiate and sign all necessary contracts, or issue orders for the purchase of component parts and notify the director in writing that such action was taken;
  - (iv) No later than October 6, 1992, the owner or operator of the facility shall initiate on-site construction or installation and notify the director that such action was taken;
  - (v) No later than November 22, 1993, the owner or operator of the facility shall complete construction, or cease operation of OEPA source number B005, B006 and B007, and shall certify compliance to the director in accordance with paragraph (B) of this rule; and
  - (vi) After December 22, 1993, sources B005, B006 and B007 shall not be operated except in compliance with the requirements of paragraph (BB) of rule 3745-18-37 of the Administrative Code.
- (10) Notwithstanding the provisions of paragraphs (C)(1) to (C)(9) of this rule, the "Columbus Southern Power Company, Picway Generating Plant," or any owner or operator of the sources subject to the emission limit specified in paragraph (B)(1) of rule 3745-18-71 of the Administrative Code, shall bring the subject air contaminant sources into compliance with that limit as expeditiously as practicable, but in no event later than June 30, 2001.

(D) Alternative emission limits.

- (1) Any owner or operator of an air contaminant source specified in paragraphs (D)(1)(a) to (D)(1)(c) of this rule having alternative sulfur dioxide emission limits specified in rules 3745-18-06 to 3745-18-94 of the Administrative Code shall notify the director of the selected emission limits in accordance with the requirements of paragraphs (D)(2)(a) and (D)(2)(b) of this rule.
  - (a) "Henkel Corporation, Emery Group" (OEPA premise number 1431070035); paragraph (D)(1) or (D)(2) of rule 3745-18-37 of the Administrative Code.

- (b) "Ford Motor Company" (OEPA premise number 1431140861); paragraph (V)(1) or (V)(2) of rule 3745-18-37 of the Administrative Code.
- (c) "Cincinnati Gas and Electric Company, Miami Fort Station" (OEPA premise number 1431350093); paragraphs (BB)(2) and (BB)(3) or paragraphs (BB)(7) and (BB)(8) of rule 3745-18-37 of the Administrative Code.

(2)

- (a) No more than eight weeks after the effective date of the applicable emission limits the owner or operator shall notify the director of the selected alternative emission limits and shall bring any subject source into compliance with the selected alternative emission limits as expeditiously as practicable, but in no event later than the compliance schedule specified in paragraph (C)(8) or (C)(9) of this rule.
- (b) If, after the final compliance date, any owner or operator of an air contaminant source specified in paragraphs (D)(1)(a) to (D)(1)(c) of this rule elects to comply with an alternative emission limit not selected under the provisions of paragraph (D)(2)(a) of this rule, such owner or operator shall notify the director at least ninety days prior to the intended date of final compliance with the new limits. Any air contaminant source having alternative emission limits shall continuously comply with one of the alternative emission limits at all times after the final compliance date.

3745-18-04      **Measurement methods and procedures.**

[Comment: For dates of non-regulatory government publications, publications of recognized organizations and associations, federal rules, and federal statutory provisions referenced in this rule, see the last paragraph of rule 3745-18-01 of the Administrative Code titled "Incorporation by Reference."]

- (A) Unless otherwise specified in paragraphs (B) to (E) of this rule, the non-continuous test methods used for determining compliance with the allowable emission limits in rules 3745-18-06 to 3745-18-94 of the Administrative Code shall be those specified in 40 CFR Part 60.
- (B) The test methods and procedures used for determining compliance with the allowable emission limits for any sulfur recovery plant shall be those specified in 40 CFR, Section 60.46.
- (C) The test methods and procedures used for determining compliance with the allowable emission limit for any sulfuric acid production unit or any primary zinc smelter shall be those specified in 40 CFR, Section 60.85.
- (D) Unless otherwise specified in this rule, the test methods and procedures used for determining compliance with the allowable emission limit for any fuel burning equipment burning coal shall be one of the following:
  - (1) Stack gas sampling using Methods 1 through 4, and 6, 6A, 6B or 6C as specified in 40 CFR Part 60, Appendix A and 40 CFR 60.46, at a frequency to be determined by the director; or
  - (2) Continuous emission monitoring using continuous monitoring systems meeting the requirements of "Performance Specification 2" in 40 CFR Part 60, Appendix B and Appendix F with any necessary modifications approved by the director. Emission rates shall be determined using methods specified in 40 CFR 60.45 and 40 CFR 60.47a, 40 CFR 60.47b or 40 CFR 60.47c. Compliance with the applicable sulfur dioxide emission limitation shall be based on daily calculations using an arithmetic average of all data available for the preceding thirty-day period; or
  - (3) Coal sampling and analysis in accordance with Method 19 as specified in 40 CFR Part 60, Appendix A or equivalent methods as approved by the director. The representative sulfur dioxide emission rate from any sample shall be calculated using the formulas in paragraph (F) of this rule. Coal monitoring and compliance determination procedures shall be:
    - (a) Except as specified by the director, for all facilities greater than one thousand million Btus per hour heat input capacity, daily as-fired fuel sampling.

Compliance with the applicable sulfur dioxide emission limit shall be determined based on the weighted arithmetic average of the preceding thirty consecutive daily sample analyses.

- (b) For all facilities greater than one hundred million Btus per hour heat input capacity and less than or equal to one thousand million Btus per hour heat input capacity, monthly composite sampling. Such composite samples shall be composed of either periodic as-fired samples, with the collection frequency determined by the director, or as-received samples with a minimum of one sample per truckload or carload. Compliance with the applicable sulfur dioxide emission limit shall be determined based on the analysis of each monthly composite sample.
  - (c) For all facilities greater than ten million Btus per hour heat input capacity and less than or equal to one hundred million Btus per hour heat input capacity, either monthly composite sampling consistent with paragraph (D)(3)(b) of this rule, or monthly average fuel analysis based on fuel supplier analyses. Fuel supplier analyses shall be obtained for each shipment received during the calendar month. Compliance with the applicable sulfur dioxide emission limit shall be determined based on the weighted arithmetic average of all fuel supplier analyses for each calendar month.
- (4) For the "Cardinal Operating Company and Buckeye Power, Incorporated" (OEPA premise numbers 0641050002 and 1741050129) facilities located at Brilliant, Ohio, fuel analysis using any method approved by the director for determining heat content of the fuel and decimal fraction of sulfur in the fuel utilized during any calendar day period. Alternative methods may be submitted with the certification required by paragraph (B) of rule 3745-18-03 of the Administrative Code. The representative sulfur dioxide emission rate from any sample shall be calculated using the formulas in paragraph (F) of this rule. Compliance with the applicable sulfur dioxide emission limit shall be based on two allowed exceedances in any consecutive thirty-day period. Each day completes a new thirty-day period.
- (5)
- (a) For any fuel burning equipment burning coal at the sources described below, compliance with the applicable sulfur dioxide emission limits shall be determined using the methods described in paragraphs (D)(5)(b) and (D)(5)(c) of this rule. A determination of noncompliance pursuant to either of these methods shall not be refuted by evidence of compliance pursuant to the other method:

- (i) Athens county / "Columbus Southern Power Company, Poston Station" / OEPA premise number 0506000000 / boiler numbers 1 through 4 / OEPA source numbers B001 to B004; and
  - (ii) Coshocton county / "Columbus Southern Power Company, Conesville Generating Station" / OEPA premise number 0616000000 / unit numbers 5 and 6 / OEPA source numbers B007 and B008.
- (b) Compliance shall be determined by stack gas sampling using method specified in 40 CFR 60.46, at a frequency to be determined by the director; or
- (c) Compliance shall be determined by coal sampling and analysis in accordance with Method 19 as specified in 40 CFR Part 60, Appendix A or equivalent methods as approved by the director. The representative sulfur dioxide emission rate from any sample shall be calculated using the formulas in paragraph (F) of this rule. Coal monitoring and compliance determination procedures shall be:
- (i) Except as specified by the director, for all facilities greater than one thousand million Btus per hour heat input capacity, daily as-fired fuel sampling. Compliance with the applicable sulfur dioxide emission limit shall be determined based on the weighted arithmetic average of the preceding thirty consecutive daily sample analyses;
  - (ii) For all facilities greater than one hundred million Btus per hour heat input capacity and less than or equal to one thousand million Btus per hour heat input capacity, monthly composite sampling. Such composite samples shall be composed of either periodic as-fired samples, with the collection frequency determined by the director, or as-received samples with a minimum of one sample per truckload or carload. Compliance with the applicable sulfur dioxide emission limit shall be determined based on the analysis of each monthly composite sample; and
  - (iii) For all facilities greater than ten million Btus per hour heat input capacity and less than or equal to one hundred million Btus per hour heat input capacity, either monthly composite sampling consistent with paragraph (D)(3)(b) of this rule, or monthly average fuel analysis based on fuel supplier analyses. Fuel supplier analyses shall be obtained for each shipment received during the calendar month. Compliance with the applicable sulfur dioxide emission limit shall be determined based on the weighted arithmetic average of all fuel supplier analyses for each calendar month.
- (6) For any fuel burning equipment burning coal at the "ISG Cleveland Incorporated" (OEPA premise numbers 1318000078 and 1318001613) facilities located in

Cleveland, Ohio, compliance shall be determined using the methods described in paragraphs (D)(6)(a) to (D)(6)(c) of this rule.

- (a) Stack gas sampling using methods specified in 40 CFR 60.46, at a frequency to be determined by the director; or
  - (b) Continuous emission monitoring using continuous monitoring systems meeting the requirements of "Performance Specification 2" in 40 CFR Part 60, Appendix B and Appendix F with any necessary modifications approved by the director. Emission rates shall be determined using methods specified in 40 CFR 60.45 and 40 CFR 60.47a. Compliance with the applicable sulfur dioxide emission limits shall be based on daily average calculations; or
  - (c) Coal sampling and analysis in accordance with 40 CFR, Part 60, "Appendix A, Method 19," or equivalent methods as approved by the director. Coal monitoring and compliance determination procedures shall consist of daily, as-fired fuel sampling for all sources greater than one hundred million Btus per hour actual heat input capacity. The representative sulfur dioxide emission rate from any sample shall be calculated using the formulas in paragraph (F) of this rule. Compliance with the applicable sulfur dioxide emission limits shall be determined based on a daily average.
- (7) For any fuel burning equipment burning coal at any sulfur dioxide emissions source subject to, and not specifically exempted from, rule 3745-18-37 of the Administrative Code, Hamilton county emission limits, compliance with the applicable sulfur dioxide emission limits shall be determined using stack gas sampling using Methods 1 through 4, and 6, 6A, 6B or 6C as specified in 40 CFR 60.46.
- (8) For any fuel burning equipment burning coal at any sulfur dioxide emissions source subject to, and not specifically exempted from, rule 3745-18-37 of the Administrative Code, Hamilton county emission limits, emission tracking, recordkeeping, and reporting requirements shall be those described in paragraphs (D)(8)(a) to (D)(8)(e) of this rule.
- (a) Continuous emission monitoring using continuous monitoring systems meeting the requirements of "Performance Specification 2" in 40 CFR Part 60, Appendix B and Appendix F. Emission rates shall be determined using methods specified in 40 CFR 60.45 and 40 CFR 60.47a, 40 CFR 60.47b or 40 CFR 60.47c; or
  - (b) Coal sampling and analysis in accordance with Method 19 as specified in 40 CFR Part 60, Appendix A. Emission tracking procedures shall consist of weekly, as-fired fuel sampling for all sources greater than one hundred million Btus per hour actual heat input capacity. The representative sulfur

dioxide emission rate from any sample shall be calculated using the formulas in paragraph (F) of this rule; or

- (c) Either monthly composite sampling consistent with paragraph (D)(8)(b) of this rule, or fuel supplier analyses, for all sources greater than ten million Btus per hour heat input capacity and less than one hundred million Btus per hour heat input capacity. Fuel supplier analyses shall be obtained for each shipment received. The representative sulfur dioxide emission rate from any sample or fuel supplier analysis shall be calculated using the formulas in paragraph (F) of this rule.
- (d) In lieu of the emission tracking requirements in paragraphs (D)(8)(a) to (D)(8)(c) of this rule, the owners or operators of the following sources shall provide coal sampling and analysis in accordance with Method 19 as specified in 40 CFR Part 60, Appendix A and in accordance with the requirements indicated:
  - (i) "Henkel Corporation, Emery Group" (OEPA premise number 1431070035); boiler numbers 1 and 2 (OEPA source numbers B027 and B028); one representative coal sample per day for analysis. The coal sample shall consist of at least twenty-four sample increments weighing a minimum of two pounds each.
  - (ii) "Procter and Gamble Company" (OEPA premise number 1431390903); boiler numbers 3 and 4 (OEPA source numbers B021 and B022); one representative coal sample per day for analysis. The coal sample shall consist of at least fourteen sample increments weighing a minimum of two pounds each.
  - (iii) "Factory Power Company" (OEPA premise number 1431070076); boiler numbers 3 through 6 (OEPA source numbers B001, B003, B004 and B005); one representative coal sample per week for analysis. The coal sample shall consist of at least two sample increments per boiler and each increment shall weigh a minimum of two pounds each.
  - (iv) "PMC Specialties Group, Division of PMC Incorporated" (OEPA premise number 1431390137); boiler number 2 (OEPA source number B003); one representative coal sample per week for analysis. The coal sample shall consist of at least six sample increments weighing a minimum of 1.5 pounds each.
  - (v) "University Hospital" (OEPA premise number 1431070207); boiler numbers 3 and 4 (OEPA source numbers B008 and B003); one representative coal sample per week for analysis. The coal sample shall consist of at least one sample increment per boiler and each increment shall weigh a minimum of five pounds each.

- (vi) Until December 22, 1993, "University of Cincinnati" (OEPA premise number 1431070849); boiler numbers 1 and 4 (OEPA source numbers B001 and B004); one representative coal sample per week for analysis. The coal sample shall consist of at least one sample increment per boiler and each increment shall weigh a minimum of five pounds each.
  - (vii) "Cincinnati Gas and Electric Company, Miami Fort Station" (OEPA premise number 1431350093); unit numbers 5-1, 5-2, 6, 7 and 8 (OEPA source numbers B005, B006, B007, B015 and B016); one representative coal sample per day for analysis which shall be conducted according to the appropriate ASTM method.
- (e) Any owner or operator required to perform emissions tracking pursuant to paragraph (D)(8) of this rule shall maintain such records for a period of not less than three years and shall make such records available for inspection by and submittal to the director upon request.
- (9) For any fuel burning equipment burning coal at any sulfur dioxide emissions source subject to, and not specifically exempted from, rule 3745-18-15 of the Administrative Code, Butler county emission limits, compliance with the applicable sulfur dioxide emission limits shall be determined using the methods described in paragraphs (D)(9)(a) to (D)(9)(c) of this rule. A determination of noncompliance pursuant to any of these methods shall not be refuted by evidence of compliance pursuant to any other of these methods.
- (a) Stack gas sampling using Methods 1 through 4, and 6, 6A, 6B or 6C as specified in 40 CFR Part 60, Appendix A and 40 CFR 60.46, at a frequency to be determined by the director; or
  - (b) Continuous emission monitoring using continuous monitoring systems meeting the requirements of "Performance Specification 2" as specified in 40 CFR Part 60, Appendix B and Appendix F, with any necessary modifications approved by the director. Emission rates shall be determined using methods specified in 40 CFR 60.45 and 40 CFR 60.47a, 40 CFR 60.47b or 40 CFR 60.47c. compliance with the applicable sulfur dioxide emission limits shall be based on daily average calculations; or
  - (c) Coal sampling and analysis in accordance with Method 9 as specified in 40 CFR Part 60, Appendix A, or equivalent methods as approved by the director. The representative sulfur dioxide emission rate from any sample shall be calculated using the formulas in paragraph (F) of this rule. Coal monitoring and compliance determination procedures shall be:
    - (i) Except as specified by the director, for all facilities greater than one thousand million Btus per hour heat input capacity, daily as-fired fuel

sampling. Compliance with the applicable sulfur dioxide emission limits shall be determined based on a daily average.

- (ii) For all facilities greater than one hundred million Btus per hour heat input capacity and less than or equal to one thousand million Btus per hour heat input capacity, monthly composite sampling. Such composite samples shall be composed of either periodic as-fired samples, with the collection frequency determined by the director, or as-received samples with a minimum of one sample per truckload or carload. Compliance with the applicable sulfur dioxide emission limit shall be determined based on the analysis of each monthly composite sample.
  - (iii) For all facilities greater than ten million Btus per hour heat input capacity and less than or equal to one hundred million Btus per hour heat input capacity, either monthly composite sampling consistent with paragraph (D)(9)(c)(ii) of this rule, or monthly average fuel analysis based on fuel supplier analyses. Fuel supplier analyses shall be obtained for each shipment received during the calendar month. Compliance with the applicable sulfur dioxide emission limit shall be determined based on the weighted arithmetic average of all fuel supplier analyses for each calendar month.
- (E) Unless otherwise specified in this rule, the test methods and procedures used for determining compliance with the allowable emission limit for any fuel burning equipment burning fuels other than coal shall be one of the following:
- (1) Stack gas sampling using Methods 1 through 4, and 6, 6A, 6B or 6C as specified in 40 CFR Part 60, Appendix A and 40 CFR 60.46, at a frequency to be determined by the director; or
  - (2) Continuous emission monitoring using continuous monitoring systems meeting the requirements of "Performance Specification 2" as specified in 40 CFR Part 60, Appendix B and Appendix F with any necessary modifications approved by the director. Emissions rates shall be determined using methods specified in 40 CFR 60.45 and 40 CFR 60.47a, 40 CFR 60.47b or 40 CFR 60.47c. Compliance with the applicable sulfur dioxide emission limitation shall be based on daily calculations using an arithmetic average of all data available for the preceding thirty-day period; or
  - (3) Fuel sampling and analysis in accordance with Method 19 as specified in 40 CFR Part 60, Appendix A or the appropriate ASTM methods, or equivalent methods as approved by the director. In lieu of performing onsite sampling, representative fuel analyses performed by fuel suppliers may be acceptable. The representative sulfur dioxide emission rate from any sample shall be calculated using the formulas in paragraph (F) of this rule. The sampling frequency shall

be, at a minimum, such that a sulfur dioxide emission rate representative of the thirty-day average emission rate can be determined.

- (4) For any fuel burning equipment burning fuels other than coal at the "LTV Steel Company, Incorporated" (OEPA premise numbers 1318000078 and 1318001613) facilities located in Cleveland, Ohio, compliance shall be determined using the methods described in paragraphs (E)(4)(a) to (E)(4)(c) of this rule:
  - (a) Stack gas sampling using Methods 1 through 4, and 6 as specified in 40 CFR 60.46, at a frequency to be determined by the director; or
  - (b) Continuous emission monitoring using continuous monitoring systems meeting the requirements of "Performance Specification 2" as specified in 40 CFR Part 60, Appendix B and Appendix F with any necessary modifications approved by the director. Emission rates shall be determined using methods specified in 40 CFR 60.45 and 40 CFR 60.47a. Compliance with the applicable sulfur dioxide emission limits shall be based on daily average calculations; or
  - (c) Fuel sampling and analysis in accordance with Method 19 as specified in 40 CFR Part 60, Appendix A or the appropriate ASTM methods, or equivalent methods as approved by the director. In lieu of performing on-site sampling, representative fuel analyses performed by the fuel suppliers may be acceptable. The representative sulfur dioxide emission rate from any sample shall be calculated using the formulas in paragraph (F) of this rule. The sampling frequency shall be, at a minimum, such that a sulfur dioxide emission rate representative of the daily average emission rate can be determined.
- (5) For any fuel burning equipment burning fuels other than coal at any sulfur dioxide emissions source subject to, and not specifically exempted from, rule 3745-18-37 of the Administrative Code, Hamilton county emission limits, compliance with the applicable sulfur dioxide emission limits shall be determined using stack gas sampling using Methods 1 through 4 and 6, 6A, 6B or 6C as specified in 40 CFR 60.46.
- (6) For any fuel burning equipment burning fuels other than coal at any sulfur dioxide emissions source subject to, and not specifically exempted from, rule 3745-18-37 of the Administrative Code, Hamilton county emission limits, emission tracking, recordkeeping and reporting requirements shall be those described in paragraphs (E)(6)(a) and (E)(6)(b) of this rule.
  - (a) Continuous emission monitoring using continuous monitoring systems meeting the requirements of "Performance Specification 2" as specified in 40 CFR Part 60, Appendix B and Appendix F. Emission rates shall be

determined using methods specified in 40 CFR 60.45 and 40 CFR 60.47a, 40 CFR 60.47b or 40 CFR 60.47c; or

- (b) Fuel sampling and analysis in accordance with Method 19 as specified in 40 CFR Part 60 Appendix A," or the appropriate ASTM methods. In lieu of performing on-site sampling, representative fuel analyses performed by the fuel suppliers may be acceptable. The representative sulfur dioxide emission rate from any sample shall be calculated using the formulas in paragraph (F) of this rule. The sampling frequency shall be, at a minimum, such that at least one analysis is obtained from each shipment of fuel.
- (7) For any fuel burning equipment burning fuels other than coal at any sulfur dioxide emissions source subject to, and not specifically exempted from, rule 3745-18-15 of the Administrative Code, Butler county emission limits, compliance with the applicable sulfur dioxide emission limits shall be determined using the methods described in paragraphs (E)(7)(a) to (E)(7)(c) of this rule. A determination of noncompliance pursuant to any of these methods shall not be refuted by evidence of compliance pursuant to any other of these methods:
- (a) Stack gas sampling using Methods 1 through 4, and 6, 6A, 6B or 6C as specified in 40 CFR Part 60, Appendix A and 40 CFR 60.46, at a frequency to be determined by the director; or
  - (b) Continuous emission monitoring using continuous monitoring systems meeting the requirements of "Performance Specification 2" as specified in 40 CFR Part 60, Appendix B and Appendix F with any necessary modifications approved by the director. Emission rates shall be determined using methods specified in 40 CFR 60.45 and 40 CFR 60.47a, 40 CFR 60.47b or 40 CFR 60.47c. compliance with the applicable sulfur dioxide emission limits shall be based on daily average calculations; or
  - (c) Fuel sampling and analysis in accordance with Method 19 as specified in 40 CFR Part 60, Appendix A or the appropriate ASTM methods, or equivalent methods as approved by the director. In lieu of performing on-site sampling, representative fuel analyses performed by the fuel suppliers may be acceptable. The representative sulfur dioxide emission rate from any sample shall be calculated using the formulas in paragraph (F) of this rule. The sampling frequency shall be, at a minimum, such that a sulfur dioxide emission rate representative of the thirty-day average emission rate can be determined.
- (F) Sulfur dioxide emissions from fuel samples shall be calculated as follows:
- (1) From solid fuels:

$$ER = (1 \times 10^6)/H \times S \times 1.9$$

where: ER = the emission rate in pounds of sulfur dioxide per MM Btu;

H = the heat content of the solid fuel in Btu per pound;

S = the decimal fraction of sulfur in the solid fuel.

(2) From liquid fuels:

$$ER = (1 \times 10^6)/H \times D \times S \times 1.974$$

where: ER = the emission rate in pounds of sulfur dioxide per MM Btu;

H = the heat content of the liquid fuel in Btu per gallon;

D = the density of the liquid fuel in pounds per gallon; and

S = the decimal fraction of sulfur in the liquid fuel.

(3) From gaseous fuels other than natural gas as specified in paragraph (F)(4) of this rule:

$$ER = (1 \times 10^6)/H \times D \times S \times 1.998$$

where: ER = the emission rate in pounds of sulfur dioxide per MM Btu;

H = the heat content of the gaseous fuel in Btu per standard cubic foot;

D = the density of the gaseous fuel in pounds per standard cubic foot; and

S = the decimal fraction of sulfur in the gaseous fuel.

(4) From natural gas, the sulfur dioxide emission rate shall be considered to be equal to 0.0 pounds of sulfur dioxide per MM Btu.

(G) All data, calculations and reports from any performance test, continuous monitor and/or fuel sample developed for the purpose of demonstrating compliance with rules 3745-18-06 to 3745-18-94 of the Administrative Code shall be retained for a minimum of three years and shall be available for inspection by the director or his representative.

(H) Any owner or operator of any sulfur dioxide emissions source subject to, and not specifically exempted from, rule 3745-18-37 of the Administrative Code, Hamilton county emission limits, shall document any compliance test or applicable emission tracking procedure, shall document compliance with any applicable operating rate

limits and shall retain all data, calculations and reports from any performance test, continuous emission monitor, fuel sample, and/or operating rate monitor utilized for the purpose of demonstrating compliance with the applicable emission limits, emission tracking requirements, and/or operating rate limits for a period of not less than three years and shall make such records available for inspection by and submittal to the director upon request.

- (I) Nothing in this rule shall be interpreted to prevent the director from issuing orders pursuant to section 3704.03 of the Revised Code to require performance testing, continuous emission monitoring, or fuel sampling and/or to require record-keeping and reporting of emission information. Any such data may be used to further evaluate compliance with the requirements of rules 3745-18-06 to 3745-18-94 of the Administrative Code.
  
- (J) Any owner or operator of any sulfur dioxide source subject to, and not specifically exempted from, paragraphs (B)(4), (B)(5), (B)(6), (B)(7), (B)(8), (B)(11), (B)(13) and (B)(14) of rule 3745-18-49 of the Administrative Code, "Lubrizol Corporation" processes "L", "M", "N", "O", "W" and "AC" (OEPA source numbers P011, P012, P013, P014, P022 and P030), shall demonstrate compliance with the combined hourly emission limits by performing emission tests in accordance with Method 6 or Method 6C in 40 CFR Part 60, Appendix A, and by employing the continuous emission rate monitoring system. The combined allowable sulfur dioxide emission limit for these processes for any hour shall be the sum of the individual allowable sulfur dioxide emissions limits for those processes that are in operation during any part of that hour. The combined allowable sulfur dioxide emission limit for these processes for any rolling three hour period shall be the average of the three, one hour allowable limits comprising the three hour period.

**Ambient and meteorological monitoring requirements.**

- (A) The director may require, under the authority of section 3704.03 of the Revised Code, any owner or operator responsible for any source of sulfur dioxide emissions which may be contributing to air pollution to install, operate, and maintain monitoring devices; to maintain records; and file periodic reports with the director.
- (B) Within three months of the receipt of any order under this rule, or within another time period that such order may specify, the owner or operator shall submit to the director an "Ambient Air Quality Monitoring Plan." Such plan shall include an air quality and meteorological measurement network consistent with the objective of obtaining an accurate assessment of the sulfur dioxide air quality and meteorology within the zone impacted by sulfur dioxide emissions from the source. The plan shall follow criteria guidelines furnished by the director for number of instruments; site location; monitoring methods; equipment performance specifications; equipment operation and maintenance; analytical and data reduction quality assurance; and data reporting. The director may issue additional orders pursuant to this paragraph to require that a previously submitted plan be clarified, updated, corrected, supplemented, or otherwise amended.
- (C) Owners or operators of sources with interacting and/or overlapping zones of sulfur dioxide emissions impact may join in cooperative arrangements to satisfy orders issued pursuant to paragraph (B) of this rule.
- (D) The director shall give consideration to any plan submitted by an owner or operator pursuant to paragraph (B) of this rule prior to ordering the owner or operator to install, operate, and maintain monitoring devices and/or keep records and report information.
- (E) Nothing in this rule shall be interpreted to prevent the director from issuing orders pursuant to section 3704.03 of the Revised Code to require the installation, operation, and maintenance of monitoring devices; and/or to require record keeping and reporting of information without first issuing an order pursuant to paragraph (B) of this rule.

3745-18-06      **General emission limit provisions.**

[Comment: For dates of non-regulatory government publications, publications of recognized organizations and associations, federal rules, and federal statutory provisions referenced in this rule, see the last paragraph of rule 3745-18-01 of the Administrative Code titled "Incorporation by Reference."]

- (A) Fuel burning equipment, stationary gas turbines, jet engine test stands and stationary internal combustion engines are exempt from paragraphs (D), (F) and (G) of this rule and from rules 3745-18-07 to 3745-18-94 of the Administrative Code during any calendar day in which natural gas is the only fuel burned.
- (B) Fuel burning equipment, stationary gas turbines, jet engine test stands and stationary internal combustion engines which have rated heat input capacities equal to, or less than, ten MM Btu per hour total rated capacity are exempt from paragraphs (D), (F) and (G) of this rule and from rules 3745-18-07 to 3745-18-94 of the Administrative Code.
- (C) Process equipment which has a rated capacity equal to, or less than, one thousand pounds per hour process weight input is exempt from paragraph (E) of this rule and from rules 3745-18-07 to 3745-18-94 of the Administrative Code.
- (D) Except as otherwise indicated in paragraph (H) of this rule or in rules 3745-18-07 to 3745-18-94 of the Administrative Code, no owner or operator of any oil-fired steam generating unit shall cause or permit the maximum emission of sulfur dioxide from any source to exceed 1.6 pounds of sulfur dioxide per MM Btu actual heat input.
- (E) Except as otherwise indicated in paragraph (H) of this rule or in rules 3745-18-07 to 3745-18-94 of the Administrative Code, no owner or operator of any process equipment shall cause or permit the maximum emission of sulfur dioxide from any source to exceed the amounts indicated by the following equations:

- (1) In Cuyahoga, Lake, Stark, Summit and Trumbull counties:

$$\text{AER} = 20 \text{ P}^{0.67}$$

Where P is the process weight rate in tons per hour and AER is the allowable emission rate in pounds of sulfur dioxide per hour.

- (2) In all counties not listed in paragraph (E)(1) of this rule:

$$\text{AER} = 30 \text{ P}^{0.67}$$

Where P is the process weight rate in tons per hour and AER is the allowable emission rate in pounds of sulfur dioxide per hour.

- (F) Except as otherwise indicated in paragraph (H) of this rule or in rules 3745-18-07 to 3745-18-94 of the Administrative Code, no owner or operator of any stationary gas turbine shall cause or permit the maximum emission of sulfur dioxide from any source to exceed 0.5 pounds of sulfur dioxide per MM Btu actual heat input.
- (G) Except as otherwise indicated in paragraph (H) of this rule or in rules 3745-18-07 to 3745-18-94 of the Administrative Code, no owner or operator of any stationary internal combustion engine shall cause or permit the maximum emission of sulfur dioxide from any source to exceed 0.5 pounds of sulfur dioxide per MM Btu actual heat input.
- (H) Notwithstanding the provisions of paragraphs (D) to (G) of this rule, the requirements of 40 CFR Part 60 "Standards of Performance for New Stationary Sources" shall be followed where applicable.

3745-18-08      **Allen county emission limits.**

(A) No owner or operator of any coal-fired steam generating unit, unless otherwise specified below, shall cause or permit the emission of sulfur dioxide from any source to exceed a maximum of 2.6 pounds of sulfur dioxide per MM Btu actual heat input.

(B) The "Ohio Power Company" (OEPA premise number 0302000010) or any subsequent owner or operator of the "Ohio Power Company, County Line Road and Lake Street, Bluffton, Ohio" shall not cause or permit the emission of sulfur dioxide from boiler numbers 1 through 5 (OEPA source numbers B001 through B005) to exceed a maximum of 1.8 pounds of sulfur dioxide per MM Btu actual heat input from each boiler.

(C) The "Premcor Refining Group, Inc." (OEPA premise number 0302020012) or any subsequent owner or operator of the "Premcor Refining Group, Inc," Lima, Ohio shall not cause or permit the emission of sulfur dioxide from the following sources to exceed the amounts indicated:

(1) Vacuum II heater (OEPA source number B001),

    ISO I and II process heaters (OEPA source number B003),

    PRE 1, 2, 3 process heaters (OEPA source number B006),

    HDS process heater (OEPA source number B008),

    Riley boiler (OEPA source number B009),

    FCC south process heater (OEPA source number B015),

    FCC north process heater (OEPA source number B016),

    Trolumen furnace (OEPA source number B018),

    CO boiler super-heater (OEPA source number B021), and

    V/F regenerator heater (OEPA source number B007),

    A maximum of .15 pounds of sulfur dioxide per MM Btu actual heat input from each boiler.

(2) MEK dewaxing section heater (OEPA source number B013),

    Furforal extraction process heater (OEPA source number B014),

Boiler house boilers (OEPA source number B020),

ISO stabilizer and splitter heater (OEPA source number B002),

Crude II process heaters (OEPA source number B004),

Crude I process heater (OEPA source number B010),

Coke process heater (OEPA source number B011),

Vacuum I process heater (OEPA source number B012), and

Detailer (OEPA source number B005);

A maximum of 1.0 pounds of sulfur dioxide per MM Btu actual heat input from each heater.

- (3) Sulfur recovery unit (OEPA source number P040); a maximum of one hundred pounds of sulfur dioxide per one thousand pounds of sulfur processed at the Claus unit.
  - (4) Trolumen unit (OEPA source number P004); a maximum of 11.0 pounds of sulfur dioxide per ton of product.
  - (5) FCC/CO boiler (OEPA source number P010); a maximum of 0.92 pounds of sulfur dioxide per one thousand pounds of fresh feed.
- (D) The "PCS Nitrogen Ohio L.P." (OEPA premise number 0302020015) or any subsequent owner or operator of the "PCS Nitrogen Ohio L.P, Fort Amanda and Adgate Roads, Lima, Ohio" shall not cause or permit the emission of sulfur dioxide from the following sources to exceed the amounts indicated:
- (1) P.R. numbers 3430 and 3431 (OEPA source numbers B501 and B502); a maximum of 1.27 pounds of sulfur dioxide per MM Btu actual heat input from each boiler.
  - (2) Reforming furnace (OEPA source number B503); a maximum of 1.27 pounds of sulfur dioxide per MM Btu actual heat input.
- (E) The "Ford Motor Company" (OEPA premise number 0302020143) or any subsequent owner or operator of the "Ford Motor Company, Bible Road and North Sugar Street, Lima, Ohio" shall not cause or permit the emission of sulfur dioxide from boiler numbers 104878, 107564, and 107565 (OEPA source numbers B001 through B003) to exceed a maximum of 3.4 pounds of sulfur dioxide per MM Btu actual heat input from each boiler.

- (F) The "Clark Equipment Company" (OEPA premise number 0302020245) or any subsequent owner or operator of the "Clark Equipment Company, 1046 South Main Street, Lima, Ohio" shall not cause or permit the emission of sulfur dioxide from boiler numbers 15047-1 and 15047-2 (OEPA source numbers B001 and B002) to exceed a maximum of 2.54 pounds of sulfur dioxide per MM Btu actual heat input from each boiler.
- (G) The "Oakwood Correctional Facility" (OEPA premise number 0302020256) or any subsequent owner or operator of the "Oakwood Correctional Facility, State Route 65N, Lima, Ohio", shall not cause or permit the emission of sulfur dioxide from boiler numbers 1, 2, and 3 (OEPA source numbers B001 through B003) to exceed a maximum of 5.39 pounds of sulfur dioxide per MM Btu actual heat input from each boiler.
- (H) The "Chemtrade Logistics, Inc." (OEPA premise number 0302000001) or any subsequent owner or operator of the "Chemtrade Logistics, Inc.," Cairo, Ohio shall not cause or permit the emission of sulfur dioxide from the sulfuric acid plant (OEPA source number P001) to exceed a maximum of 35.0 pounds of sulfur dioxide per ton of one hundred per cent acid produced.
- (I) The "Joint Systems Manufacturing Center" (OEPA premise number 0302020027) or any subsequent owner or operator of the "Joint Systems Manufacturing Center," Lima, Ohio shall not cause or permit the emission of sulfur dioxide from boiler numbers 4, 2 and 3 (OEPA source numbers B001 through B003); to exceed a maximum of 4.5 pounds of sulfur dioxide per MM Btu actual heat input from each boiler.

3745-18-10      **Ashtabula County emissions limits.**

- (A) No owner or operator of any coal-fired steam generating unit, unless otherwise specified below, shall cause or permit the emission of sulfur dioxide from any source to exceed a maximum of 7.2 pounds of sulfur dioxide per MM Btu actual heat input.
- (B) The "Millenium Inorganic Chemicals, Inc.- Plant 2" (OEPA premise number 0204010193) or subsequent owner or operator of the "Millenium Inorganic Chemicals, Inc.- Plant 2" facility located on Middle Road, Ashtabula, Ohio shall not cause or permit the emission of sulfur dioxide from boiler BF-101 (OEPA source number B004) to exceed a maximum of 5.9 pounds of sulfur dioxide per MM Btu actual heat input.
- (C) The "RMI Company, Sodium Plant" (OEPA premise number 0204010204) or any subsequent owner or operator of the "RMI Company, Sodium Plant" facility located in Ashtabula, Ohio shall not cause or permit the emission of sulfur dioxide from boiler numbers 1 (621), 2 (622), and 3 (623) (OEPA source numbers B001 through B003) to exceed a maximum of 2.8 pounds of sulfur dioxide per MM Btu actual heat input from each boiler.
- (D) The "Cleveland Electric Illuminating Company, Ashtabula Plant C" (OEPA premise number 0204000211) or any subsequent owner or operator of the "Cleveland Electric Illuminating Company, Ashtabula Plant C" facility located in Ashtabula Township, Ashtabula, Ohio shall not cause or permit the emission of sulfur dioxide from boiler numbers 1 through 4 (OEPA source numbers B001 through B004) to exceed a maximum of 8.2 pounds of sulfur dioxide per MM Btu actual heat input from each boiler.
- (E) The "Cleveland Electric Illuminating Company, Ashtabula Plant" (OEPA premise number 0204010000) or any subsequent owner or operator of the "Cleveland Electric Illuminating Company, Ashtabula Plant" facility located at 2133 Lake Road, Ashtabula, Ohio shall not cause or permit the emission of sulfur dioxide from the following sources to exceed the amounts indicated:
  - (1) Boiler numbers 1 through 6 (OEPA source numbers B001 through B006); a maximum of 2.4 pounds of sulfur dioxide per MM Btu actual heat input from each boiler.
  - (2) Package boiler (OEPA source number B007); a maximum of 2.4 pounds of sulfur dioxide per MM Btu actual heat input.
  - (3) Boiler 7 unit number 5 (OEPA source number B008); a maximum of 9.1 pounds of sulfur dioxide per MM Btu actual heat input.

- (F) The "RMI Environmental Services" (OEPA premise number 0204010080) or any subsequent owner or operator of the "RMI Environmental Services" facility located in Ashtabula, Ohio shall not cause or permit the emission of sulfur dioxide from boiler F-2001 (OEPA source number B002) to exceed a maximum of 2.8 pounds of sulfur dioxide per MM Btu actual heat input.
- (G) The "United States Steel Corporation, Conneaut Plant" (OEPA premise number 0204020081) or any subsequent owner or operator of the "United States Steel Corporation, Conneaut Plant" facility located in Conneaut, Ohio shall not cause or permit the emission of sulfur dioxide from the limestone dryer (OEPA source number P004) to exceed a maximum of 0.45 pounds of sulfur dioxide per ton of process weight.
- (H) The "Elkem Metals Company" (OEPA premise number 0204010003) or any subsequent owner or operator of the "Elkem Metals Company" facility located in Ashtabula, Ohio shall not cause or permit the emission of sulfur dioxide from the vertical lime kiln numbers 3 and 2 (OEPA source numbers P009, P010) to exceed a maximum of 3.1 pounds of sulfur dioxide per ton of process weight input.

3745-18-15 **Butler county emission limits.**

- (A) No owner or operator of any coal-fired steam generating unit, unless otherwise specified below, shall cause or permit the emission of sulfur dioxide from any source to exceed a maximum of 2.4 pounds of sulfur dioxide per MM Btu actual heat input.
- (B) The "Crystal Tissue Company" (OEPA premise number 1409000003) or any subsequent owner or operator of the "Crystal Tissue Company, South Verity Parkway, Lemon Township, Ohio" shall not cause or permit the emission of sulfur dioxide from Riley number 4 and Riley number 3 (OEPA source numbers B001 and B002) to exceed a maximum of 1.6 pounds of sulfur dioxide per MM Btu actual heat input.
- (C) The "AK Steel Corporation, Middletown Works" (OEPA premise number 1409010006) or any subsequent owner or operator of the "AK Steel Corporation, Middletown Works, Crawford Street, Middletown, Ohio" shall not cause or permit the emission of sulfur dioxide from the following sources to exceed the amounts indicated:
  - (1) Boiler numbers 1 through 4 (OEPA source numbers B007 through B010); a maximum of 0.90 pounds of sulfur dioxide per MM Btu actual heat input from each boiler.
  - (2) Slab furnace numbers 1 through 4 (OEPA source numbers P009 through P012); a maximum of 1.1 pounds of sulfur dioxide per MM Btu actual heat input from each furnace.
  - (3) Number 2 coke plant (OEPA source number B918);
    - (a) From the combustion of coke oven gas containing hydrogen sulfide, two hundred eighty grains of hydrogen sulfide per one hundred dry standard cubic feet of coke oven gas; and,
    - (b) From the production of sulfuric acid at the acid plant, a maximum of 26.0 pounds of sulfur dioxide per ton of one hundred percent acid produced. Operation of the acid plant shall not be required to control emissions from the coke plant as long as coke plant emissions are in compliance with subparagraph (C)(3)(a) of this rule.
  - (4) Number 3 coke plant (OEPA source number B919); from the combustion of coke oven gas containing hydrogen sulfide, one hundred grains of hydrogen sulfide per one hundred dry standard cubic feet of coke oven gas.

- (5) Sinter recovery plant (OEPA source number P908); a maximum of 9.8 pounds of sulfur dioxide per ton of product.
  - (6) Number eighty-four building annealing furnaces, open coil annealing furnaces and number sixty-four building annealing furnaces (OEPA source numbers B021 through B023); a maximum of 0.50 pounds of sulfur dioxide per MM Btu actual heat input.
  - (7) Number ninety-four building annealing furnaces (OEPA source number B026); a maximum of 1.6 pounds of sulfur dioxide per MM Btu actual heat input from each furnace.
  - (8) Coke oven gas holder/flare (OEPA source number P067); from the combustion of coke oven gas containing hydrogen sulfide, two hundred eighty grains of hydrogen sulfide per one hundred dry standard cubic feet of coke oven gas.
  - (9) Hot metal desulfurization station (OEPA source number P956); 0.29 pounds of sulfur dioxide per ton of product from the station, and the station is not to be operated simultaneously with P047.
  - (10) Molten iron transfer and desulfurization station (OEPA source number P047); 0.40 pounds of sulfur dioxide per ton of product from the station, and the station is not to be operated simultaneously with P956.
- (D) "Middletown Paperboard" (OEPA premise number 1409010016) or any subsequent owner or operator of "Middletown Paperboard, 426 Vandever Street, Middletown, Ohio" shall not cause or permit the emission of sulfur dioxide from boiler number 1 (OEPA source number B001) to exceed a maximum of 1.6 pounds of sulfur dioxide per MM Btu actual heat input.
- (E) The "Smurfit-Stone Corporation, Middletown Mill" (OEPA premise number 1409010021) or any subsequent owner or operator of the "Smurfit-Stone Corporation, Middletown Mill, 407 Charles Street, Middletown, Ohio" shall not cause or permit the emission of sulfur dioxide from the following sources to exceed the amounts indicated and shall use a stack no lower than the height indicated:
- (1) Boiler number two hundred five (OEPA source number B003); a maximum of 1.6 pounds of sulfur dioxide per MM Btu actual heat input and a minimum stack height of one hundred twenty feet above ground level.
  - (2) Boiler number three hundred fifteen (OEPA source number B004); a maximum of 0.31 pounds of sulfur dioxide per MM Btu actual heat input.
- (F) "Mosinee Holdings, Incorporated" (OEPA premise number 1409010043) or any subsequent owner or operator of "Mosinee Holdings, Incorporated, 901 Manchester Avenue, Middletown, Ohio" shall not cause or permit the emission of sulfur dioxide

from boiler numbers 1 through 4 (OEPA source numbers B001 through B004) to exceed a maximum of 1.4 pounds of sulfur dioxide per MM Btu actual heat input from each boiler and shall use a stack no lower than two hundred feet above ground level for each boiler.

- (G) The "Diamond International Corporation, Mill 1" (OEPA premise number 1409010050) or any subsequent owner or operator of the "Diamond International Corporation, Mill 1, Central Avenue and Carmody Boulevard, Middletown, Ohio" shall not cause or permit the emission of sulfur dioxide from boiler numbers 101, 102 and 109 (OEPA source numbers B001, B002 and B003) to exceed a maximum of 0.0 pounds of sulfur dioxide per MM Btu actual heat input.
- (H) The "Cincinnati Gas and Electric Company, Dick's Creek Station" (OEPA premise number 1409010078) or any subsequent owner or operator of the "Cincinnati Gas and Electric Company, Dick's Creek Station, 632 Todhunter Road, Middletown, Ohio" shall not cause or permit the emission of sulfur dioxide from the following sources to exceed the amounts indicated:
- (1) Unit numbers 1 and 3 through 5 (OEPA source numbers B001 and B003 through B005); a maximum of 0.5 pounds of sulfur dioxide per MM Btu actual heat input from each unit.
  - (2) Unit number 2 (OEPA source number B002); a maximum of 0.0 pounds of sulfur dioxide per MM Btu actual heat input.
- (I) The "Panda Motors Corporation" (OEPA premise number 1409030050) or any subsequent owner or operator of the "Panda Motors Corporation, 1000 Panda Boulevard, Fairfield, Ohio" shall not cause or permit the emission of sulfur dioxide from boiler numbers 1 through 3 (OEPA source numbers B001 through B003) to exceed a maximum of 0.0 pounds of sulfur dioxide per MM Btu actual heat input from each boiler.
- (J) The "Mohawk Fine Papers, Inc. - Becket Mill" (OEPA premise number 1409040014) or any subsequent owner or operator of the "Mohawk Fine Papers, Inc. - Becket Mill, Fourth and Buckeye Streets, Hamilton, Ohio" shall not cause or permit the emission of sulfur dioxide from the following sources to exceed the amounts indicated and shall limit the operation of said sources such that the indicated average operating rates are not exceeded for any calendar day:
- (1) Boiler numbers 1 and 2 (OEPA source numbers B001 and B002); a maximum of 0.0 pounds of sulfur dioxide per MM Btu actual heat input from each boiler.
  - (2) Boiler number 3 (OEPA source number B003); a maximum of 0.29 pounds of sulfur dioxide per MM Btu actual heat input and the average operating rate of twenty seven MM Btu per hour.

- (3) Boiler numbers 4 and 5 (OEPA source numbers B004 and B005); a maximum of 0.29 pounds of sulfur dioxide per MM Btu actual heat input from each boiler and the combined average operating rate of said boilers shall not exceed one hundred fifty-three MM Btu per hour.
- (K) "Mercy Hospital" (OEPA premise number 1409040020) or any subsequent owner or operator of "Mercy Hospital, 116 Dayton Street, Hamilton, Ohio" shall not cause or permit the emission of sulfur dioxide from boiler numbers 1 and 3 through 5 (OEPA source numbers B001 and B003 through B005) to exceed a maximum of 0.0 pounds of sulfur dioxide per MM Btu actual heat input from each boiler.
- (L) "Smart Papers" (OEPA premise number 1409040212) or any subsequent owner or operator of the "Smart Papers, 601 North 'B' Street, Hamilton, Ohio" shall not cause or permit the emission of sulfur dioxide from boiler numbers 10 and 14 (OEPA source numbers B010 and B020) to exceed a maximum of 1.7 pounds of sulfur dioxide per MM Btu actual heat input from each boiler and shall limit the operation such that a combined operating rate of six hundred and three MM Btu per hour is not exceeded for any calendar day.
- (M) The "City of Hamilton" (OEPA premise number 1409040243) or any subsequent owner or operator of the "City of Hamilton, 960 North Third Street, Hamilton, Ohio" shall not cause or permit the emission of sulfur dioxide from the following sources to exceed the amounts indicated and shall limit the operation of said sources such that the indicated average operating rates are not exceeded for any calendar day:
- (1) Boiler numbers 1 and 7 (OEPA source numbers B001 and B002); a maximum of 0.0 pounds of sulfur dioxide per MM Btu actual heat input from each boiler.
  - (2) Boiler number 8 (OEPA source number B008); a maximum of 1.45 pounds of sulfur dioxide per MM Btu actual heat input and average operating rate of three hundred twelve MM Btu per hour.
  - (3) Boiler number 9 (OEPA source number B009); a maximum of 1.2 pounds of sulfur dioxide per MM Btu actual heat input.
  - (4) Riley heat recovery boiler (OEPA source number B010); a maximum of 0.0 pounds of sulfur dioxide per MM Btu actual heat input.
  - (5) Gas/oil turbine peaking units (OEPA source numbers B003 and B004); a maximum of 0.5 pounds of sulfur dioxide per MM Btu actual heat input from each turbine.
- (N) "Miami University" (OEPA premise number 1409090081) or any subsequent owner or operator of "Miami University, U.S. 27 and High Street, Oxford, Ohio" shall not cause or permit the emission of sulfur dioxide from boiler numbers 16268-1 through

16268-3 (OEPA source numbers B010 through B012) to exceed a maximum of 1.6 pounds of sulfur dioxide per MM Btu actual heat input from each boiler.

- (O) "Miller Brewing Company" (OEPA premise number 1409000353) or any subsequent owner or operator of "Miller Brewing Company, 525 Wayne Madison Road, Trenton, Ohio" shall not cause or permit the emission of sulfur dioxide from the following sources to exceed the amounts indicated:
- (1) Boiler numbers 1 and 2 (OEPA source numbers B001 and B002); a maximum of 1.6 pounds of sulfur dioxide per MM Btu actual heat input from each boiler.
  - (2) Boiler numbers 3A and 3B (OEPA source numbers B003 and B007); a maximum of 0.8 pounds of sulfur dioxide per MM Btu actual heat input from each boiler.
- (P) "Cincinnati Gas and Electric Company, Woodsdale Generating Station" (OEPA premise number 1409120656) or any subsequent owner or operator of "Cincinnati Gas and Electric Company, Woodsdale Generating Station, 2100 Woodsdale Road, Trenton, Ohio" shall not cause or permit the emission of sulfur dioxide from combustion turbines numbers 1 through 12 (OEPA source numbers B001 through B012) to exceed a maximum of 0.5 pounds of sulfur dioxide per MM Btu actual heat input from each turbine.
- (Q) "Inland Container Corporation" (OEPA premise number 1409010025) or any subsequent owner or operator of "Inland Container Corporation, 912 Nelbar Street, Middletown, Ohio" shall not cause or permit the emission of sulfur dioxide from boiler numbers 4 through 6 (OEPA source numbers B004 through B006) to exceed a maximum of 1.2 pounds of sulfur dioxide per MM Btu actual heat input from each boiler.

3745-18-24      **Cuyahoga county emission limits.**

(A) No owner or operator of any coal-fired steam generating unit greater than 350 MM Btu actual heat input, unless otherwise specified below, shall cause or permit the emission of sulfur dioxide from any source to exceed a maximum of 1.2 pounds of sulfur dioxide per MM Btu actual heat input.

(B) No owner or operator of any coal-fired steam generating unit between 10 MM Btu per hour and 350 MM Btu per hour, unless otherwise specified below, shall cause or permit the emission of sulfur dioxide from any source to exceed the following equation:

$$EL = 7.014 Q_m^{-0.3014}$$

where  $Q_m$  is the total rated capacity of heat input in MM Btu per hour and EL is the allowable emission rate in pounds of sulfur dioxide per Btu actual heat input.

(C) The "ISG Cleveland Inc." (OEPA premise number 1318001613) or any subsequent owner or operator of the "ISG Cleveland Inc., 3060 Eggers Avenue, Cleveland, Ohio" shall not cause or permit the emission of sulfur dioxide from the following source to exceed the amounts indicated:

(1) Boiler numbers 24 through 34 (OEPA source numbers B002 through B012); a maximum of 0.024 pound of sulfur dioxide per MM Btu actual heat input from each boiler.

(2) 80 inch hot strip mill furnace numbers 1 through 3 (OEPA source numbers P001 through P003); a maximum of 0.024 pound of sulfur dioxide per MM Btu actual heat input from each furnace.

(3) Stoves for blast furnace number C-3 (OEPA source number P902); a maximum of 0.024 pound of sulfur dioxide per MM Btu actual heat input from each stove.

(4) Stoves for blast furnace number C-1 (OEPA source number P903); a maximum of 0.15 pound of sulfur dioxide per MM Btu actual heat input from each stove.

(D) The "Mt. Sinai Hospital of Cleveland" (OEPA premise number 1318000090) or any subsequent owner or operator of the "Mt. Sinai Hospital of Cleveland, 1800 East 105th Street, Cleveland, Ohio" shall not cause or permit the emission of sulfur dioxide from boiler numbers 1 through 3 (OEPA source numbers B001 through B003) to exceed a maximum of 2.0 pounds of sulfur dioxide per MM Btu actual heat input from each boiler.

- (E) The "Zalcon, LLC" (OEPA premise number 1318000151) or any subsequent owner or operator of the "Zalcon, LLC, 2981 Independence Road, Cleveland, Ohio" shall not cause or permit the emission of sulfur dioxide from the following source to exceed the amounts indicated:
- (1) Sulfur burning contact process (OEPA source number P001); a maximum of 0.0 pounds of sulfur dioxide per ton of one hundred per cent acid produced.
  - (2) Boiler number 18 (OEPA source number B001) a maximum of 1.2 pounds of sulfur dioxide per MM Btu actual heat input.
- (F) The "Master Metals, Incorporated" (OEPA premise number 1318000222) or any subsequent owner or operator of the "Master Metals, Incorporated, 2850 West Third, Cleveland, Ohio" shall not cause or permit the emission of sulfur dioxide from the following sources to exceed the amounts indicated:
- (1) Blast furnace process (OEPA source number P001); a maximum of 0.0 pounds of sulfur dioxide per ton of metal charged.
  - (2) Reverb furnace process (OEPA source number P002); a maximum of 10.0 pounds of sulfur dioxide per ton of metal charged.
- (G) The "Cleveland Thermal, LLC" (OEPA premise number 1318000244) or any subsequent owner or operator of the "Cleveland Thermal, LLC, 2274 Canal Road, Cleveland, Ohio" shall not cause or permit the emission of sulfur dioxide from boiler numbers 34 through 38 (OEPA source numbers B001 through B005) to exceed a maximum of 1.38 pounds of sulfur dioxide per MM Btu actual heat input from each boiler.
- (H) The "Cleveland Thermal, LLC" (OEPA premise number 1318000246) or any subsequent owner or operator of the "Cleveland Thermal, LLC, 1901 Hamilton Avenue, Cleveland, Ohio" shall not cause or permit the emission of sulfur dioxide from boiler numbers 1 through 6 (OEPA source numbers B001 through B006) to exceed a maximum of 1.0 pound of sulfur dioxide per MM Btu actual heat input from each boiler.
- (I) The "Forest City Foundries" (OEPA premise number 1318000372) or any subsequent owner or operator of the "Forest City Foundries, 9401 Maywood Avenue, Cleveland, Ohio" shall not cause or permit the emission of sulfur dioxide from the following sources to exceed the amounts indicated:
- (1) Number 1 cupola - North (OEPA source number P001); a maximum of 0.0 pounds of sulfur dioxide per ton of metal charged.
  - (2) Number 2 cupola - South (OEPA source number P002); a maximum of 0.0 pounds of sulfur dioxide per ton of metal charged.

- (J) The "Forest City Foundries" (OEPA premise number 1318000373) or any subsequent owner or operator of the "Forest City Foundries, 2500 West 27th Street Cleveland, Ohio" shall not cause or permit the emission of sulfur dioxide from the following sources to exceed the amounts indicated:
- (1) Number 1 cupola (OEPA source number P001); a maximum of 0.0 pounds of sulfur dioxide per ton of metal charged.
  - (2) Number 2 cupola (OEPA source number P002); a maximum of 0.0 pounds of sulfur dioxide per ton of metal charged.
- (K) The "Harshaw Chemical Company" (OEPA premise number 1318001007) or any subsequent owner or operator of the "Harshaw Chemical Company, 1000 Harvard Avenue, Cleveland, Ohio" shall not cause or permit the emission of sulfur dioxide from the following sources to exceed the amounts indicated:
- (1) Boiler numbers 7 through 9 (OEPA source numbers B001 through B003); a maximum of 1.6 pounds of sulfur dioxide per MM Btu actual heat input from each boiler.
  - (2) Process buss system (OEPA source number P020); a maximum of 19.0 pounds of sulfur dioxide per ton of acid produced.
- (L) The "T.R.W., Incorporated, Main Plant Works" (OEPA premise number 1318001091) or any subsequent owner or operator of the "T.R.W., Incorporated Main Plant Works, 2196 Clarkwood Road, Cleveland, Ohio" shall not cause or permit the emission of sulfur dioxide from boiler number 1 (OEPA source number B001) to exceed a maximum of 1.2 pounds of sulfur dioxide per MM Btu actual heat input.
- (M) The "NASA John H. Glenn Research Center" (OEPA premise number 1318001169) or any subsequent owner or operator of the "NASA John H. Glenn Research Center, 21000 Brookpark Road, Cleveland, Ohio" shall not cause or permit the emission of sulfur dioxide from the following sources to exceed the amount indicated:
- (1) Boiler numbers 1 and 2 (OEPA source numbers B001 and B002); a maximum of 2.8 pounds of sulfur dioxide per MM Btu actual heat input from each boiler.
  - (2) Boiler numbers 4 and 5 (OEPA source numbers B004 and B005); a maximum of 1.2 pounds of sulfur dioxide per MM Btu actual heat input from each boiler.
- (N) The "Metal Blast, Incorporated" (OEPA premise number 1318001716) or any subsequent owner or operator of the "Metal Blast, Incorporated, 871 East 67th Street, Cleveland, Ohio" shall not cause or permit the emission of sulfur dioxide from the

Whiting model number 7 cupola (OEPA source number P001) to exceed a maximum of 0.0 pounds of sulfur dioxide per ton of metal charged.

- (O) The "ISG Cleveland Inc." (OEPA premise number 1318001613) or any subsequent owner or operator of the "ISG Cleveland Inc., 3060 Eggers Avenue, Cleveland, Ohio" shall not cause or permit the emission of sulfur dioxide from the following sources to exceed the maximum amounts indicated, and shall limit the operation of said sources such that the indicated average sulfur dioxide emission rates are not exceeded for any calendar day:
- (1) Boiler numbers A, B and C (OEPA source numbers B001, B002 and B003); a maximum of 0.99 pound of sulfur dioxide per MM Btu actual heat input from each boiler and a daily average not to exceed 828 pounds of sulfur dioxide per hour from all three boilers.
  - (2) Boiler number D (OEPA source number B004); a maximum of 2.45 pounds of sulfur dioxide per MM Btu actual heat input and a daily average not to exceed 1,056 pounds of sulfur dioxide per hour.
  - (3) Boiler numbers 1 and 2 (OEPA source numbers B005 and B006); a maximum of 1.64 pounds of sulfur dioxide per MM Btu actual heat input from each boiler and a daily average not to exceed three hundred fifteen pounds of sulfur dioxide per hour from both boilers.
  - (4) Boiler number 3 (OEPA source number B007); a maximum of 2.39 pounds of sulfur dioxide per MM Btu actual heat input and a daily average not to exceed six hundred eighty-six pounds of sulfur dioxide per hour.
  - (5) 84 inch hot slab mill furnace numbers 1, 2 and 3 (OEPA source numbers P046, P047 and P048); a maximum of 1.26 pounds of sulfur dioxide per MM Btu actual heat input from each furnace and a daily average not to exceed one thousand three hundred sixty-five pounds of sulfur dioxide per hour from all furnaces.
  - (6) Boiler number 234 (OEPA source number B009);  
  
Stoves for blast furnace numbers C-2 and C-4 (OEPA source numbers P901 and P902);  
  
84 inch north and south anneal furnaces (OEPA source numbers P049 and P050);  
  
"P" anneal furnaces (OEPA source number P053); and  
  
Car thaw for coke battery numbers 6 and 7 (OEPA source numbers B905 and B906);

A maximum of 0.024 pound of sulfur dioxide per MM Btu actual heat input from each unit.

- (7) 44 inch mill soaking pit numbers 2 through 8 (OEPA source numbers P027 through P021);

45 inch mill soaking pit numbers 11 through 15 (OEPA source numbers P018 through P014);

Basic oxygen furnace shop number 2 (OEPA source numbers P905 and P906);

Coke oven battery numbers 1 through 4 (OEPA source numbers B901 through B904); and

Car thaw for coke battery numbers 1 through 4 (OEPA source numbers B901 through B904);

From the combustion of coke oven gas containing hydrogen sulfide, a maximum of twenty grains of hydrogen sulfide per one hundred dry standard cubic feet of coke oven gas.

- (8) Casthouses for blast furnace numbers C-5 and C-6 (OEPA source numbers P903 and P904); from the combustion of coke oven gas containing hydrogen sulfide, a maximum of three hundred ninety grains of hydrogen sulfide per one hundred dry standard cubic feet of coke oven gas, and the daily average not to exceed thirty-three pounds of sulfur dioxide per hour from the casthouses for either blast furnace.
- (9) Stoves for blast furnace numbers C-5 and C-6 (OEPA source numbers P903 and P904); from the combustion of coke oven gas containing hydrogen sulfide, a maximum of three hundred ninety grains of hydrogen sulfide per one hundred dry standard cubic feet of coke oven gas, and the daily average not to exceed fifty-three pounds of sulfur dioxide per hour from the stoves for either blast furnace.
- (10) Coke oven battery number 7 (OEPA source number B906); from the combustion of coke oven gas containing hydrogen sulfide, a maximum of three hundred ninety grains of hydrogen sulfide per one hundred dry standard cubic feet of coke oven gas, and the maximum production of hydrogen sulfide in coke oven gas shall not exceed three hundred fifteen pounds of hydrogen sulfide per hour.
- (11) Claus desulfurization plant for coke oven battery number 1 (OEPA source number B901); a daily average not to exceed seventy-eight pounds of sulfur dioxide per hour.

- (12) 10 inch bar mill reheat furnace (OEPA source number P013);
- 12 inch bar mill reheat furnace (OEPA source number P012);
- 98 inch slab mill furnace numbers 1 through 5 (OEPA source numbers P039 through P043);
- Open hearth plant (OEPA source numbers P028 through P031); and
- Sinter plant (OEPA source number P003);
- A maximum of 0.0 pound of sulfur dioxide per MM Btu actual heat input from each unit.
- (13) In addition to the provisions of paragraphs (N)(1), (N)(2) and (N)(14) of this rule, powerhouse number 1, comprised of boiler numbers A through D (OEPA source numbers B001 through B004), shall be limited to the emission of sulfur dioxide not to exceed a daily average of one thousand two hundred fifty-eight pounds of sulfur dioxide per hour from all boilers.
- (14) In addition to the provisions of paragraphs (N)(1) to (N)(4) and (N)(13) of this rule, powerhouse numbers 1 and 3, comprised of boiler numbers A through D and 1 through 3 (OEPA source numbers B001 through B007), shall be limited to the emission of sulfur dioxide not to exceed a daily average of one thousand nine hundred fifty-eight pounds of sulfur dioxide per hour from all boilers.
- (15) Coke oven battery number 6 (OEPA source number B905); from the combustion of coke oven gas containing hydrogen sulfide, a maximum of 0.0 grains of hydrogen sulfide per one hundred dry standard cubic feet of coke oven gas and the maximum production of hydrogen sulfide in coke oven gas shall not exceed two hundred sixty five pounds of hydrogen sulfide per hour.
- (16) From the combustion of fuel oil at any source during any calendar day when coke oven gas is combusted at the facility, a maximum of 0.525 pounds of sulfur per MM Btu heat content.
- (P) The "McGeon-Rohco, Inc." (OEPA premise number 1318365229) or any subsequent owner or operator of the "McGeon-Rohco, Inc., 2910 Harvard Avenue, Cuyahoga Heights, Ohio" shall not cause or permit the emission of sulfur dioxide from the following sources to exceed the amounts indicated:
- (1) Boiler number 1 (OEPA source number B001); a maximum of 2.7 pounds of sulfur dioxide per MM Btu actual heat input.

- (2) Process number 1 (OEPA source number P016); a maximum of 0.0 pound of sulfur dioxide per ton of actual process weight input.
- (Q) The "Aluminum Company of America" (OEPA premise number 1318170314) or any subsequent owner or operator of the "Aluminum Company of America, 1600 Harvard Avenue, Cuyahoga Heights, Ohio" shall not cause or the emission of sulfur dioxide from boiler numbers 1 through 5 (OEPA source numbers B001 through B005) to exceed a maximum of 5.2 pounds of sulfur dioxide per MM Btu actual heat input from each boiler.
- (R) The "Standard Oil Company (Ohio), Cleveland Asphalt Plant" (OEPA premise number 1318001871) or any subsequent owner or operator of the "Standard Oil Company (Ohio), Cleveland Asphalt Plant, 2635 Broadway Avenue, Cleveland, Ohio" shall not cause or permit the emission of sulfur dioxide from boiler numbers 7, 9, and 10 (OEPA source numbers B002, B003, and B004) to exceed 0.0 pounds of sulfur dioxide per MM Btu actual heat input from each boiler.
- (S) The "Fisher Body Division, General Motors Corporation" (OEPA premise number 1318002266) or any subsequent owner or operator of the "Fisher Body Division, General Motors Corporation, East 140th and Coit Roads, Cleveland, Ohio" shall not cause or permit the emission of sulfur dioxide from boiler numbers 7, 8, and 9 (OEPA source numbers B001, B002 and B003) to exceed a maximum of 2.1 pounds of sulfur dioxide per MM Btu actual heat input from each boiler.
- (T) The "Polyclinic Hospital" (OEPA premise number 1318004505) or any subsequent owner or operator of the "Polyclinic Hospital, 6605 Carnegie Avenue, Cleveland, Ohio" shall not cause or permit the emission of sulfur dioxide from boiler numbers 1 and 2 (OEPA source numbers B001 and B002) to exceed a maximum of 5.7 pounds of sulfur dioxide per MM Btu actual heat input from each boiler.
- (U) The "Independent Towel Supply Company" (OEPA premise number 1318002816) or any subsequent owner or operator of the "Independent Towel Supply Company", 1802 Central Avenue, Cleveland, Ohio" shall not cause or permit the emission of sulfur dioxide from boiler numbers 1 and 3 (OEPA source numbers B002 and B003) to exceed 3.2 pounds of sulfur dioxide per MM Btu actual heat input from each boiler.
- (V) The "Medical Center Company" (OEPA premise number 1318003059) or any subsequent owner or operator of the "Medical Center Company", 2250 Circle Drive, Cleveland, Ohio" shall not cause or permit the emission of sulfur dioxide from the following sources to exceed the amounts indicated:
- (1) New boiler numbers 1 and 2 (OEPA source numbers B003 and B004); a maximum of 4.6 pounds of sulfur dioxide per MM Btu actual heat input from each boiler.

- (2) Old boiler numbers 3 through 8 (OEPA source numbers B005 through B008); a maximum of 0.0 pounds of sulfur dioxide per MM Btu actual heat input from each boiler.
- (W) The "Hupp, Incorporated" (OEPA premise number 1318004160) or any subsequent owner or operator of the "Hupp, Incorporated, 1135 Ivanhoe Road, Cleveland, Ohio" shall not cause or permit the emission of sulfur dioxide from boiler numbers 1 through 3 (OEPA source numbers B001 through B003) to exceed a maximum of 3.50 pounds of sulfur dioxide per MM Btu actual heat input from each boiler.
- (X) The "Cleveland Water Department, Division Pumping Station" (OEPA premise number 1318002490) or any subsequent owner or operator of the "Cleveland Water Department, Division Pumping Station 1245 West 45th Street, Cleveland, Ohio" shall not cause or permit the emission of sulfur dioxide from boiler numbers 1 through 6 (OEPA source numbers B001 through B006) to exceed 4.20 pounds of sulfur dioxide per MM Btu actual heat input from each boiler.
- (Y) The "V.A. Medical Center" (OEPA premise number 1318083522) or any subsequent owner or operator of the "V.A. Medical Center", 1000 Brecksville Road, Brecksville, Ohio" shall not cause or permit the emission of sulfur dioxide from boiler numbers 1 through 3 (OEPA source numbers B001 through B003) to exceed a maximum of 2.8 pounds of sulfur dioxide per MM Btu actual heat input from each boiler.
- (Z) The "Ford Motor Company, Cleveland Casting Plant" (OEPA premise number 1318120180) or any subsequent owner or operator of the "Ford Motor Company, Cleveland Casting Plant, 5600 Henry Ford Boulevard, Brookpark, Ohio" shall not cause or permit the emission of sulfur dioxide from boiler numbers 1 through 5 (OEPA source numbers B020 through B024) to exceed a maximum of 4.2 pounds of sulfur dioxide per MM Btu actual heat input from each boiler.
- (AA) The "Ford Motor Company, Cleveland Casting Plant" (OEPA premise number 1318120180) or any subsequent owner or operator of the "Ford Motor Company, Cleveland Casting Plant, 5600 Engle Road, Brookpark, Ohio" shall not cause or permit the emission of sulfur dioxide from numbers 1 through 7 cupola (OEPA source numbers P011 through P017) to exceed a maximum of 6.0 pounds of sulfur dioxide per ton of actual process weight input.
- (BB) The "Chagrin Falls Paper Mill" (OEPA premise number 1318130038) or any subsequent owner or operator of the "Chagrin Falls Paper Mill, 218 Cleveland Street, Chagrin Falls, Ohio" shall not cause or permit the emission of sulfur dioxide from boiler numbers 1 and 2 (OEPA source numbers B001 and B002) to exceed a maximum of 4.20 pounds of sulfur dioxide per MM Btu actual heat input from each boiler.
- (CC) The "General Electric Power Plant" (OEPA premise number 1318182623) or any subsequent owner or operator of the "General Electric Power Plant, Nela Park, East

Cleveland, Ohio" shall not cause or permit the emission of sulfur dioxide from boiler numbers 1 and 4 (OEPA source numbers B001 and B004) to exceed a maximum of 1.6 pounds of sulfur dioxide per MM Btu actual heat input from each boiler.

(DD) The "General Electric Company" (OEPA premise number 1318200203) or any subsequent owner or operator of the "General Electric Company, 21800 Tungsten Road, Euclid, Ohio" shall not cause or permit the emission of sulfur dioxide from the following sources to exceed the amounts indicated:

- (1) Boiler number 1 (OEPA source number B001); a maximum of 1.00 pound of sulfur dioxide per MM Btu actual heat input.
- (2) Boiler number 4 (OEPA source number B004); a maximum of 1.6 pounds of sulfur dioxide per MM Btu actual heat input.

(EE) The "Addressograph Multigraph" (OEPA premise number 1318201633) or any subsequent owner or operator of the "Addressograph Multigraph, 1200 Babbitt Road, Euclid, Ohio" shall not cause or permit the emission of sulfur dioxide from boiler numbers 1 through 3 (OEPA source numbers B001 through B003) to exceed a maximum of 0.0 pounds of sulfur dioxide per MM Btu actual heat input from each boiler.

(FF) The "Lincoln Electric Company" (OEPA premise number 1318202137) or any subsequent owner or operator of the "Lincoln Electric Company, 22801 St. Clair Avenue, Cleveland, Ohio" shall not cause or permit the emission of sulfur dioxide from boiler numbers 2 through 4 (OEPA source numbers B002 through B004) to exceed a maximum of 4.5 pounds of sulfur dioxide per MM Btu actual heat input from each boiler.

(GG) The "General Chemical, Inc." (OEPA premise number 1318222594) or any subsequent owner or operator of the "General Chemical, Inc., 5000 Warner Road, Garfield Heights, Ohio" shall not cause or permit the emission of sulfur dioxide from the following sources to exceed the amounts indicated:

- (1) Number 5 unit sulfuric acid (OEPA source number P001); a maximum of 0.0 pounds of sulfur dioxide per ton of one hundred percent acid produced.
- (2) Number 6 unit sulfuric acid (OEPA source number P002); a maximum of 0.0 pounds of sulfur dioxide per ton of one hundred percent acid produced.

(HH) The "Lear Siegler, Incorporated" (OEPA premise number 1318311012) or any subsequent owner or operator of the "Lear Siegler, Incorporated, 17600 Broadway, Maple Heights, Ohio" shall not cause or permit the emission of sulfur dioxide from boiler number 1 (OEPA source number B001) to exceed a maximum of 0.0 pounds of sulfur dioxide per MM Btu actual heat input.

- (II) The "GMC MFD Parma Plant" (OEPA premise number 1318451029) or any subsequent owner or operator of the "GMC MFD Parma Plant, Stumph Road and Brookpark, Parma, Ohio" shall not cause or permit the emission of sulfur dioxide from the following sources to exceed the amounts indicated:
- (1) Boiler numbers 1 and 2 (OEPA source numbers B001 and B002); a maximum of 1.53 pounds of sulfur dioxide per MM Btu actual heat input from each boiler.
  - (2) Boiler numbers 3 and 4 (OEPA source numbers B003 and B004); a maximum of 1.8 pounds of sulfur dioxide per MM Btu actual heat input from each boiler.
- (JJ) The "Ford Motor Company, Walton Hills Stamping Plant" (OEPA premise number 1318581043) or any subsequent owner or operator of the "Ford Motor Company, Walton Hills Stamping Plant, 7845 Northfield Road, Walton Hills, Ohio" shall not cause or permit the emission of sulfur dioxide from boiler numbers 1 through 3 (OEPA source numbers B002 through B004) to exceed a maximum of 1.2 pounds of sulfur dioxide per MM Btu actual heat input from each boiler.
- (KK) The "Highland View Cuyahoga County Hospital" (OEPA premise number 1318590195) or any subsequent owner or operator of the "Highland View Cuyahoga County Hospital, 3901 Ireland Drive, Warrensville Township, Ohio" shall not cause or permit the emission of sulfur dioxide from the following sources to exceed the amounts indicated:
- (1) Boiler numbers 1 and 2 (OEPA source numbers B001 and B002); a maximum of 1.50 pounds of sulfur dioxide per MM Btu actual heat input from each boiler.
  - (2) Boiler numbers 3 and 4 (OEPA source numbers B003 and B004); a maximum of 2.90 pounds of sulfur dioxide per MM Btu actual heat input from each boiler.
- (LL) The "Cleveland Electric Illuminating Company, Lake Shore Plant" (OEPA premise number 1318000245) or any subsequent owner or operator of the "Cleveland Electric Illuminating Company, Lake Shore Plant, 6800 South Marginal Drive, Cleveland, Ohio" shall not cause or permit the emission of sulfur dioxide from the following sources to exceed the amounts indicated:
- (1) Boiler numbers 91 through 94 (OEPA source numbers B001 through B004); a maximum of 1.9 pounds of sulfur dioxide per MM Btu actual heat input from each boiler.
  - (2) Boiler unit number 18 (OEPA source number B006); a maximum of 1.3 pounds of sulfur dioxide per MM Btu actual heat input.
- (MM) The "City of Cleveland, Division of Light and Power, Lake Road Generating Station" (OEPA premise number 1318000131) or any subsequent owner or operator of the "City of Cleveland, Division of Light and Power, Lake Road Generating

Station, 5251 North Marginal Road, Cleveland, Ohio" shall not cause or permit the emission of sulfur dioxide from the following sources to exceed the amounts indicated:

- (1) Boiler number 6 (OEPA source number B001); a maximum of 4.7 pounds of sulfur dioxide per MM Btu actual heat input.
- (2) Boiler numbers 3, 4, and 5 (OEPA source numbers B005, B004 and B006); a maximum of 0.0 pound of sulfur dioxide per MM Btu actual heat input for each boiler.

(NN) The "Charter Steel, Inc." (OEPA premise number 1318171623) or any subsequent owner or operator of the "Charter Steel, Inc., Cuyahoga Works, 4300 East 49th Street, Cuyahoga Heights, Ohio" shall not cause or permit the emission of sulfur dioxide from the following sources to exceed the amounts indicated:

- (1) Boiler numbers 1 and 2 (OEPA source numbers B001 and B002); a maximum of 0.5 pounds of sulfur dioxide per MM Btu actual heat input from each boiler.
- (2) Boiler numbers 3 through 7 (OEPA source numbers B003 through B007); a maximum of 1.30 pounds of sulfur dioxide per MM Btu actual heat input from each boiler.

(OO) The "Lakeland Sludge Handling Facility" (OEPA premise number 1318203249) or any subsequent owner or operator of the "Lakeland Sludge Handling Facility, 2700 Lakeland Boulevard, Euclid, Ohio" shall not cause or permit the emission of sulfur dioxide from incinerator numbers 1 and 2 (OEPA source numbers N001 and N002) to exceed a maximum of 2.5 pounds of sulfur dioxide per ton of material burned from each incinerator.

(PP) The "Lakewood Incinerator" (OEPA premise number 1318282775) or any subsequent owner or operator of the "Lakewood Incinerator, 12920 Berea Road, Lakewood, Ohio" shall not cause or permit the emission of sulfur dioxide from the following sources to exceed the amounts indicated:

- (1) Furnace numbers 1 through 4 (OEPA source numbers N001 through N004); a maximum of 2.5 pounds of sulfur dioxide per ton of material burned from each furnace.
- (2) Brush burner (OEPA source number N005); a maximum of 2.5 pounds of sulfur dioxide per ton of material burned.

(QQ) The "United States Steel Corporation, Lorain-Cuyahoga Works" (OEPA premise number 1318001622) or any subsequent owner or operator of the "United States Steel Corporation, Lorain-Cuyahoga Works, 2650 Broadway Avenue, Cleveland,

Ohio" shall not cause or permit the emission of sulfur dioxide from the following sources to exceed the amounts indicated:

- (1) Boiler numbers 1 through 6 (OEPA source numbers B001 through B006); a maximum of 0.0 pounds of sulfur dioxide per MM Btu actual heat input from each boiler.
- (2) Blast furnace numbers D-6 and A (OEPA source numbers P001 and P002); a maximum of 0.0 pounds of sulfur dioxide per ton of iron produced.

(RR) The "Reilly Tar and Chemical Corporation" (OEPA premise number 1318002735) or any subsequent owner or operator of the "Reilly Tar and Chemical Corporation, 3201 Independence Road, Cleveland, Ohio" shall not cause or permit the emission of sulfur dioxide from the following sources to exceed the amounts indicated:

- (1) Still number 3 (OEPA source number P003); a maximum of 2.7 pounds of sulfur dioxide per ton of coal tar processed.
- (2) Still number 4 (OEPA source number P004); a maximum of 2.7 pounds of sulfur dioxide per ton of coal tar processed.
- (3) Still number 5 (OEPA source number P005); a maximum of 2.7 pounds of sulfur dioxide per ton of coal tar processed.
- (4) Still number 6 (OEPA source number P006); a maximum of 2.7 pounds of sulfur dioxide per ton of coal tar processed.
- (5) Still number 7 (OEPA source number P007); a maximum of 2.7 pounds of sulfur dioxide per ton of coal tar processed.

**Erie County emission limits.**

- (A) No owner or operator of any coal-fired steam generating unit, unless otherwise specified below, shall cause or permit the emission of sulfur dioxide from any source to exceed a maximum of 2.6 pounds of sulfur dioxide per MM Btu actual heat input.
- (B) The "Charles J. Otto Greenhouse, Incorporated" (OEPA premise number 0322000173) or any subsequent owner or operator of the "Charles J. Otto Greenhouse, Incorporated" facility located at Route Number 1, Berlin Township, Ohio shall not cause or permit the emission of sulfur dioxide from the following sources to exceed the amounts indicated and shall limit the operation of said sources such that the indicated average operating rates are not exceeded for any calendar day:
- (1) Coal boiler (OEPA source number B001); a maximum of 5.5 pounds of sulfur dioxide per MM Btu actual heat input and average operating rates as follows: first quarter, 10 MM Btu per hour; second quarter, 10 MM Btu per hour; third quarter, 8 MM Btu per hour; fourth quarter, 10 MM Btu per hour.
  - (2) Oil boiler (OEPA source number B002); a maximum of 2.0 pounds of sulfur dioxide per MM Btu actual heat input and averaging operating rates as follows: first quarter, 13 MM Btu per hour; second quarter, 13 MM Btu per hour; third quarter, 5 MM Btu per hour; fourth quarter, 13 MM Btu per hour.
- (C) The "Jacob H. Otto Greenhouse" (OEPA premise number 0322010174) or any subsequent owner or operator of the "Jacob H. Otto Greenhouse" facility located on Route Number 1, Huron, Ohio shall not cause or permit the emission of sulfur dioxide from boiler numbers 131083 and 91993 (OEPA source numbers B001 and B002) to exceed a maximum of 5.5 pounds of sulfur dioxide per MM Btu actual heat input from each boiler and shall operate said boilers such that the following combined average operating rates are not exceeded for any calendar day: first quarter, 15 MM Btu per hour; second quarter, 15 MM Btu per hour; third quarter, 10 MM Btu per hour; fourth quarter, 15 MM Btu per hour.
- (D) The "Visteon Corp." (OEPA premise number 0322020042) or any subsequent owner or operator of the "Visteon Corp." facility located at 3020 Tiffin Avenue, Sandusky, Ohio shall not cause or permit the emission of sulfur dioxide from boiler numbers 1 through 3 (OEPA source numbers B001 through B003) to exceed a maximum of 1.6 pounds of sulfur dioxide per MM Btu actual heat input from each boiler.
- (E) The "New Departure-Hyatt" (OEPA premise number 0322020045) or any subsequent owner or operator of the "New Departure-Hyatt" facility located at 2509 Hayes Avenue, Sandusky, Ohio shall not cause or permit the emission of sulfur dioxide from boiler numbers 1 through 3 (OEPA source numbers B001 through B003) to exceed a maximum of 1.6 pounds of sulfur dioxide per MM Btu actual heat input from each boiler.

- (F) The "Huron Lime Company" (OEPA premise number 0322010062) or any subsequent owner or operator of the "Huron Lime Company" facility located at 100 Meeker Street, Huron, Ohio shall not cause or permit the emission of sulfur dioxide from lime kiln numbers 1, 2, 3 (OEPA source numbers P001 through P003) to exceed a maximum of 4.0 pounds of sulfur dioxide per ton of product.
- (G) The "American Crayon Company" (OEPA premise number 0322020005) or any subsequent owner or operator of the "American Crayon Company" facility located at 1706 Hayes Avenue, Sandusky, Ohio shall not cause or permit the emission of sulfur dioxide from boiler number 1 (OEPA source number B001) to exceed a maximum of 6.0 pounds of sulfur dioxide per MM Btu actual heat input and shall operate said boiler such that the following average operating rates are not exceeded for any calendar day: first quarter, 15 MM Btu per hour; second quarter, 15 MM Btu per hour; third quarter, 10 MM Btu per hour; fourth quarter, 10 MM Btu per hour.
- (H) The "Ohio Soldiers and Sailors Home" (OEPA premise number 0322020095) or any subsequent owner or operator of the "Ohio Soldiers and Sailors" Home facility located on Columbus Avenue, Sandusky, Ohio shall not cause or permit the emission of sulfur dioxide from boiler numbers 2 and 3 (OEPA source numbers B002 and B003) to exceed a maximum of 1.6 pounds of sulfur dioxide per MM Btu actual heat input from each boiler and shall operate said boilers such that the following combined average operating rates are not exceeded for any calendar day: first quarter 32 MM Btu per hour; second quarter, 32 MM Btu per hour third quarter, 18 MM Btu per hour; fourth quarter, 18 MM Btu per hour.

Effective: 01/23/2006

**Franklin county emission limits.**

(A) No owner or operator of the following types of facilities, unless otherwise specified in this rule, shall cause or permit the emission of sulfur dioxide from any stack .in excess of the rates specified below:

(1) For fossil fuel-fired steam generating units between 10.0 and 50.0 MM Btu per hour total rated heat input capacity, the emission rate in pounds of sulfur dioxide per MM Btu actual heat input shall be calculated by the following equation:

$$EL = 8.088Qm^{-0.4307}$$

where:

Qm is the total rated heat input capacity in MM Btu per hour, and

EL is the allowable emission rate in pounds of sulfur dioxide per MM Btu actual heat input.

(2) For fossil fuel-fired steam generating units equal to or greater than 50.0 MM Btu per hour total rated heat input capacity, the emission limitation shall be 1.50 pounds of sulfur dioxide per MM Btu actual heat input.

(3) Except as otherwise provided in this rule, no owner or operator of any process equipment shall cause or permit the emission from any stack into the atmosphere of any process gas stream containing sulfur dioxide in excess of 2.40 pounds of sulfur dioxide per ton of actual process weight input.

(B) The "Rickenbacker Air Force Base" (OEPA premise number 0125000827) or any subsequent owner or operator of the "Rickenbacker Air Force Base," Lockbourne, Ohio shall not cause or permit the emission of sulfur dioxide from any stack at this facility in excess of 2.20 pounds of sulfur dioxide per million BTU actual heat input.

(C) The "Capital City Products" (OEPA premise number 0125040021) or any subsequent owner or operator of the "Capitol City Products, 525 West First Avenue, Columbus, Ohio" shall not cause or permit the emission of sulfur dioxide from any stack at this facility in excess of 3.10 pounds of sulfur dioxide per million BTU actual heat input.

(D) The "Clark Grave Vault Company" (OEPA premise number 0125040026) or any subsequent owner or operator of the "Clark Grave Vault Company, 375 East Fifth Avenue, Columbus, Ohio" shall not cause or permit the emission of sulfur dioxide from the following sources to exceed the amount indicated and shall limit the operation of said sources such that the indicated average operating rates are not exceeded for any calendar day:

- (1) Boiler number 1 (OEPA source number B001); a maximum of 5.0 pounds of sulfur dioxide per MM Btu actual heat input and average operating rates as follows: first quarter, thirty-four MM Btu per hour; second quarter, 0.0 MM Btu per hour; third quarter, 0.0 MM Btu per hour; fourth quarter, thirty-four MM Btu per hour.
  - (2) Boiler number 2 (OEPA source number B002); a maximum of 5.0 pounds of sulfur dioxide per MM Btu actual heat input and average operating rates as follows: first quarter, 0.0 MM Btu per hour; second quarter, three MM Btu per hour; third quarter, three MM Btu per hour; fourth quarter, 0.0 MM Btu per hour.
- (E) The "Columbus Coated Fabrics" (OEPA premise number 0125040031) or any subsequent owner or operator of the "Columbus Coated Fabrics, 1280 North Grant Avenue, Columbus, Ohio" shall not cause or permit the emission of sulfur dioxide from boiler numbers 1 and 2 (OEPA source numbers B001 and B002) to exceed a maximum of 5.8 pounds of sulfur dioxide per MM Btu actual heat input from each boiler and shall operate said boilers such that the following combined average operating rates are not exceeded for any calendar day: first quarter, one hundred twenty MM Btu per hour; second quarter, one hundred twenty MM Btu per hour; third quarter, seventy-two MM Btu per hour; fourth quarter, one hundred twenty MM Btu per hour.
- (F) The "Columbus Municipal Light Plant" (OEPA premise number 0125040037) or any subsequent owner or operator of the "Columbus Municipal Light Plant, 580 Dublin Avenue, Columbus, Ohio" shall not cause or permit the emission of sulfur dioxide from boiler numbers 6 and 7 (OEPA source numbers B004 and B005); a maximum of 0.0 pounds of sulfur dioxide per MM Btu actual heat input for each boiler.
- (G) The "Delphi Interior and Lighting Systems" (OEPA premise number 0125040057) or any subsequent owner or operator of the "Delphi Interior and Lighting Systems, 200 Georgesville Road, Columbus, Ohio" shall not cause or permit the emission of sulfur dioxide from boiler numbers 1 through 4 (OEPA source numbers B001 through B004) to exceed a maximum of 1.5 pounds of sulfur dioxide per MM Btu actual heat input from each boiler.
- (H) The "Jeffrey Mining Machinery Division, Dresser Industries, Incorporated" (OEPA premise number 0125040087) or any subsequent owner or operator of the "Jeffrey Mining Machinery Division, Dresser Industries, Incorporated, 274 East First Avenue, Columbus, Ohio" shall not cause or permit the emission of sulfur dioxide from boilers numbers 4850 through 4852 (OEPA source numbers B001 through B003) to exceed a maximum of 3.06 pounds of sulfur dioxide per MM Btu actual heat input from each boiler and shall operate said boilers such that the following combined average operating rates are not exceeded for any calendar day: first quarter, one hundred forty-six MM Btu per hour; second quarter, one hundred forty-

six MM Btu per hour; third quarter, sixty MM Btu per hour; fourth quarter, one hundred forty-six MM Btu per hour.

- (I) The "Atlas Linen and Industrial Supply" (OEPA premise number 0125040205) or any subsequent owner or operator of the "Atlas Linen and Industrial Supply, 171 North Grant Avenue, Columbus, Ohio" shall not cause or permit the emission of sulfur dioxide from boiler number 1 (OEPA source number B001) to exceed a maximum of 1.6 pounds of sulfur dioxide per MM Btu actual heat input and shall operate said boiler such that the following average operating rates are not exceeded for any calendar day: first quarter, EIGHT MM Btu per hour; second quarter, seven MM Btu per hour; third quarter, seven MM Btu per hour; fourth quarter, seven MM Btu per hour.
- (J) The "Defense Construction Supply Center" (OEPA premise number 0125040219) or any subsequent owner or operator of the "Defense Construction Supply Center, 3990 East Broad Street, Columbus, Ohio" shall not cause or permit the emission of sulfur dioxide from boiler numbers 1 through 3 (OEPA source numbers B001 through B003) to exceed a maximum of 3.45 pounds of sulfur dioxide per MM Btu actual heat input from each boiler and shall operate said boilers such that the following combined average operating rates are not exceeded for any calendar day: first quarter, two hundred five MM Btu per hour; second quarter, one hundred sixty-seven MM Btu per hour; third quarter, one hundred sixty-seven MM Btu per hour; fourth quarter, one hundred sixty-seven MM Btu per hour.
- (K) The "Columbus Products Company" (OEPA premise number 0125040319) or any subsequent owner or operator of the "Columbus Products Company, 300 Phillipi Road, Columbus, Ohio" shall not cause or permit the emission of sulfur dioxide from boiler numbers D0244 through D0246 (OEPA source number B001 through B003) to exceed a maximum of 2.20 pounds of sulfur dioxide per MM Btu actual heat input from each boiler.
- (L) The "Ross Laboratories" (OEPA premise number 0125040319) or any subsequent owner or operator of the "Ross Laboratories, 625 Cleveland Avenue, Columbus, Ohio" shall not cause or permit the emission of sulfur dioxide from any stack at this facility in excess of 4.80 pounds of sulfur dioxide per MM Btu actual heat input.
- (M) The "Correctional Medical Center" (OEPA premise number 0125040331) or any subsequent owner or operator of the "Correctional Medical Center, 254 West Spring Street, Columbus, Ohio" shall not cause or permit the emission of sulfur dioxide from the following sources to exceed the amount indicated and shall limit the operation of said sources such that the indicated average operating rates are not exceeded for any calendar day:
- (1) Boiler number 5 (OEPA source number B001); a maximum of 2.42 pounds of sulfur dioxide per MM Btu actual heat input and average operating rates as follows: first quarter, fifty-four MM Btu per hour; second quarter, twenty-seven

MM Btu per hour; third quarter, twenty-seven MM Btu per hour; fourth quarter, fifty-four MM Btu per hour.

- (2) Boiler number 7 (OEPA source number B002); a maximum of 2.42 pounds of sulfur dioxide per MM Btu actual heat input and average operating rates as follows: first quarter, ninety-three MM Btu per hour; second quarter, forty-six MM Btu per hour; third quarter, forty-six MM Btu per hour; fourth quarter, ninety-three MM Btu per hour.
  - (3) Boiler number 8 (OEPA source number B003); a maximum of 2.42 pounds of sulfur dioxide per MM Btu actual heat input and average operating rates as follows: first quarter, thirty-two MM Btu per hour; second quarter, sixteen MM Btu per hour; third quarter, sixteen MM Btu per hour; fourth quarter, thirty-two MM Btu per hour.
- (N) The "Central Ohio Psychiatric Hospital" (OEPA premise number 0125040589) or any subsequent owner or operator of the "Central Ohio Psychiatric Hospital," Columbus, Ohio shall not cause or permit the emission of sulfur dioxide from any stack at this facility in excess of 4.10 pounds of sulfur dioxide per million BTU actual heat input.
- (O) The "Grant Hospital" (OEPA premise number 125040592) or any subsequent owner or operator of the "Grant Hospital, 309 East State Street, Columbus, Ohio" shall not cause or permit the emission of sulfur dioxide from boiler numbers 1 through 3 (OEPA source numbers B001 through B003) to exceed a maximum of 3.8 pounds of sulfur dioxide per MM Btu actual heat input from each boiler and shall operate said boilers such that the following average operating rates are not exceeded for any calendar day for each boiler: first quarter, twenty-eight MM Btu per hour; second quarter, twenty-eight MM Btu per hour; third quarter, twenty-one MM Btu per hour; fourth quarter, twenty-eight MM Btu per hour.
- (P) The "Air Force Plant Number 85" (OEPA premise number 0125040806) or any subsequent owner or operator of the "Air Force Plant Number 85, 4300 East Fifth Avenue, Columbus, Ohio" shall not cause or permit the emission of sulfur dioxide from any stack at this facility in excess of 1.06 pounds of sulfur dioxide per MM Btu actual heat input.
- (Q) The "Capital University" (OEPA premise number 0125042612) or any subsequent owner or operator of the "Capital University, 2199 East Main Street, Columbus, Ohio" shall not cause or permit the emission of sulfur dioxide from boiler numbers 1 through 3 (OEPA source numbers B001 through B003) to exceed a maximum of 1.6 pounds of sulfur dioxide per MM Btu actual heat input from each boiler and shall operate said boilers such that the following average operating rates are not exceeded for any calendar day for each boiler: first quarter, forty-two MM Btu per hour; second quarter, thirty-four MM Btu per hour; third quarter, forty-two MM Btu per hour; fourth quarter, thirty-four MM Btu per hour.

- (R) The "Columbus State Institute" (OEPA premise number 0125042799) or any subsequent owner or operator of the "Columbus State Institute, 1601 West Broad Street, Columbus, Ohio" shall not cause or permit the emission of sulfur dioxide from any stack at this facility in excess of 3.80 pounds of sulfur dioxide per MM Btu actual heat input.
- (S) The "Battelle Memorial Institute" (OEPA premise number 0125040520) or any subsequent owner or operator of the "Battelle Memorial Institute, 505 King Avenue, Columbus, Ohio" shall not cause or permit the emission of sulfur dioxide from boiler number 1 (OEPA source number B001) to exceed 4.4 pounds of sulfur dioxide per MM Btu actual heat input and shall operate said boiler such that the following average operating rates are not exceeded for any calendar day: first quarter, twenty-six MM Btu per hour; second quarter, twenty-six MM Btu per hour; third quarter, seventeen MM Btu per hour; fourth quarter, twenty-six MM Btu per hour.
- (T) "Anheuser-Busch Incorporated" (OEPA premise number 0125040554) or any subsequent owner or operator of "Anheuser-Busch Incorporated, 700 Schrock Road, Columbus, Ohio" shall not cause or permit the emission of sulfur dioxide from boiler numbers 1 through 4 (OEPA source numbers B001 and B002) to exceed 2.4 pounds of sulfur dioxide per MM Btu actual heat input from each boiler and shall operate said boilers such that their combined average operating rate shall not exceed three hundred two MM Btu per hour for any calendar day.
- (U) "ASARCO Incorporated" (OEPA premise number 0125040002) or any subsequent owner or operator of "ASARCO Incorporated, 1353 Windsor Avenue, Columbus, Ohio" shall not cause or permit the emission of sulfur dioxide from the refining kiln, "Wetherill" furnaces, densifying kiln, and roaster acid plant (OEPA source numbers P001 through P004) to exceed the amount prescribed by the following equation:

$$Y = 0.564 X^{0.85}$$

Where "X" is the total sulfur feed expressed as elemental sulfur in the smelter input stream in pounds per hour, and "Y" is the allowable sulfur dioxide emission rate in pounds per hour from all processes combined.

- (V) "Ohio Division, Dayton Malleable Iron" (OEPA premise number 0125040043) or any subsequent owner or operator of "Ohio Division, Dayton Malleable Iron, 1343 Fields Avenue, Columbus, Ohio" shall not cause or permit the emission of sulfur dioxide from the following sources to exceed the amounts indicated:
- (1) Cupolas (OEPA source number P001); a maximum of 1.82 pounds of sulfur dioxide per ton of iron produced.
  - (2) Holding furnaces (OEPA source number P002); a maximum of 1.2 pounds of sulfur dioxide per MM Btu actual heat input.

- (1) Boiler number 4 (OEPA source number B004); a maximum of 0.0 pounds of sulfur dioxide per MM Btu actual heat input.
  - (2) Boiler numbers 5, 6 and 7 (OEPA source numbers B002, B003 and B006); a maximum of 5.5 pounds of sulfur dioxide per MM Btu actual heat input from each boiler and a minimum stack height of sixty-five feet above ground level for each boiler.
  - (3) Boiler number 8 (OEPA source number B007); a maximum of 1.14 pounds of sulfur dioxide per MM Btu actual heat input.
  - (4) Boiler number 4 through 8 (OEPA source numbers B004, B002, B003, B006 and B007); a combined average operating rate 275 MM Btu per hour for any calendar day from boilers burning coal or fuel oil during any calendar day.
- (C) The "Hudepohl Brewing Company" (OEPA premise number 1431070031) or any subsequent owner or operator of the "Hudepohl Brewing Company, 800 West Fifth Street, Cincinnati, Ohio" shall not cause or permit the emission of sulfur dioxide from boiler numbers 1 through 3 (OEPA source numbers B001 through B003) to exceed a maximum of 0.0 pounds of sulfur dioxide per MM Btu actual heat input from each boiler.
- (D) The "Cognis Corporation" (OEPA premise number 1431070035) or any subsequent owner or operator of the "Cognis Corporation, 4900 Este Avenue, Cincinnati, Ohio" shall not cause or permit the emission of sulfur dioxide from the following sources to exceed the amounts indicated; shall use stacks no lower than the stack height indicated and shall limit the operation of said sources such that the indicated average operating rates are not exceeded for any calendar day:
- (1) Boiler numbers 4 and 5 (OEPA source numbers B014 and B015); a maximum of 0.8 pounds of sulfur dioxide per MM Btu actual heat input from each boiler and

a minimum stack height of two hundred thirteen feet above ground level for each boiler.

- (2) Boiler number 1 (OEPA source number B027); a maximum of 1.2 pounds of sulfur dioxide per MM Btu actual heat input.
  - (3) Boiler number 2 (OEPA source number B028); a maximum of 1.2 pounds of sulfur dioxide per MM Btu actual heat input.
  - (4) Boiler number 1, 4, 5 (OEPA source numbers B027, B014 and B015); a combined average operating rate of six hundred ninety-five MM Btu per hour.
  - (5) As an alternative to the requirements specified in paragraph (D)(1) of this rule, after December 22, 1993, and prior to the installation of a stack with minimum stack height of two hundred thirteen feet above ground level serving boiler numbers 4 and 5; for boiler numbers 4 and 5 (OEPA source numbers B014 and B015); a maximum of 0.0 pounds of sulfur dioxide per MM Btu actual heat input from each boiler.
- (E) The "Noveon Hilton-Davis Company" (OEPA premise number 1431070039) or any subsequent owner or operator if the "Noveon Hilton-Davis Company, 2235 Langdon Farm Road, Cincinnati, Ohio" shall not cause or permit the emission of sulfur dioxide from the following sources to exceed the amounts indicated:
- (1) Unit numbers 1, 2, 3, and 5 (OEPA source numbers B004, B005, B006 and B012); a maximum of 0.0 pounds of sulfur dioxide per MM Btu actual heat input from each boiler.
  - (2) Unit number 6 (OEPA source numbers B009); a maximum of 1.88 pounds of sulfur dioxide per MM Btu actual heat input.
  - (3) Unit number 7 (OEPA source number B010); a maximum of 1.2 pounds of sulfur dioxide per MM Btu actual heat input.
  - (4) Oleum storage unloading (OEPA source number P003); a maximum of 0.0 pounds of sulfur dioxide per ton of product unloaded.
  - (5) Sulfonators (OEPA source number P039); a maximum of 0.0 pounds of sulfur dioxide per ton of product.
- (F) The "Unova I.A.S., Cincinnati Machine Division" (OEPA premise number 1431070076) or any subsequent owner or operator of the "Unova I.A.S., Cincinnati Machine Division, Disney Avenue, Cincinnati, Ohio" shall not cause or permit the emission of sulfur dioxide from boiler numbers 3 through 6 (OEPA source numbers B001 and B003 through B005) to exceed a maximum of 2.0 pounds of sulfur dioxide per MM Btu actual heat input from each boiler.

- (G) The "Christ Hospital" (OEPA premise number 1431070132) or any subsequent owner or operator of the "Christ Hospital, 2139 Auburn Avenue, Cincinnati, Ohio" shall not cause or permit the emission of sulfur dioxide from boiler numbers 1 through 3 (OEPA source numbers B001 through B003) to exceed a maximum of 0.0 pounds of sulfur dioxide per MM Btu actual heat input from each boiler.
- (H) The "University Hospital" (OEPA premise number 1431070207) or any subsequent owner or operator of the "University Hospital, 234 Goodman Street, Cincinnati, Ohio" shall not cause or permit the emission of sulfur dioxide from the following sources to exceed the amounts indicated:
- (1) Boiler numbers 4 and 3 (OEPA source numbers B003 and B008); a maximum of 1.45 pounds of sulfur dioxide per MM Btu actual heat input from each boiler.
  - (2) Boiler numbers 2 (OEPA source number B004 and B005); a maximum of 0.24 pounds of sulfur dioxide per MM Btu actual heat input from each boiler.
- (I) The "WCI Machine Tool Company" (OEPA premise number 1431070276) or any subsequent owner or operator of the "WCI Machine Tool Company, Second Street and Eggleston, Cincinnati, Ohio" shall not cause or permit the emission of sulfur dioxide from boiler number 1 (OEPA source number B001) to exceed a maximum of 0.0 pounds of sulfur dioxide per MM Btu actual heat input.
- (J) The "Andrew Jergens Company" (OEPA premise number 1431070624) or any subsequent owner or operator of the "Andrew Jergens Company, 2535 Spring Grove Avenue, Cincinnati, Ohio" shall not cause or permit the emission of sulfur dioxide from boiler number 1 (OEPA source number B003) to exceed a maximum of 2.0 pounds of sulfur dioxide per MM Btu actual heat input.
- (K) The "University of Cincinnati" (OEPA premise number 1431070849) or any subsequent owner or operator of the "University of Cincinnati, Clifton Campus, Cincinnati, Ohio" shall not cause or permit the emission of sulfur dioxide from the following sources to exceed the amounts indicated:
- (1) Boiler numbers 1, 3, and 4 (OEPA source numbers B001, B003 and B004); a maximum of 0.0 pounds of sulfur dioxide per MM Btu actual heat input from each boiler.
  - (2) Boiler number 2 (OEPA source numbers B005); a maximum of 0.3 pounds of sulfur dioxide per MM Btu actual heat input.
  - (3) Boiler numbers 6 and 7 (OEPA source numbers B019 and B020); a maximum of 0.3 pounds of sulfur dioxide per MM Btu actual heat input from each boiler.

- (L) The "Red Bank Distribution, Incorporated" (OEPA premise number 1431070862) or any subsequent owner or operator of the "Red Bank Distribution, Incorporated, 4000 Red Bank Road, Cincinnati, Ohio" shall not cause or permit the emission of sulfur dioxide from boiler numbers 1 through 3 (OEPA source numbers B001 through B003) to exceed a maximum of 0.0 pounds of sulfur dioxide per MM Btu actual heat input from each boiler.
- (M) The "LeBlond Incorporated" (OEPA premise number 1431070918) or any subsequent owner or operator of the "LeBlond Incorporated, Madison and Edward Roads, Cincinnati, Ohio" shall not cause or permit the emission of sulfur dioxide from boiler numbers 1 through 3 (OEPA source numbers B001 through B003) to exceed a maximum of 0.0 pounds of sulfur dioxide per MM Btu actual heat input from each boiler.
- (N) The "Rock-Tenn Products" (OEPA premise number 1431070952) or any subsequent owner or operator of the "Rock-Tenn Products, 3347 Madison Road, Cincinnati, Ohio" shall not cause or permit the emission of sulfur dioxide from boiler number 1 (OEPA source number B001) to exceed a maximum of 2.0 pounds of sulfur dioxide per MM Btu actual heat input.
- (O) The "Cushman Enterprises" (OEPA premise number 1431070970) or any subsequent owner or operator of the "Cushman Enterprises, Beekman and Tremont Streets, Cincinnati, Ohio" shall not cause or permit the emission of sulfur dioxide from boiler numbers 1 and 2 (OEPA source numbers B002 and B003) to exceed a maximum of 0.0 pounds of sulfur dioxide per MM Btu actual heat input from each boiler.
- (P) The "Caraustar Mill Group, Inc." (OEPA premise number 1431071006) or any subsequent owner or operator of the "Caraustar Mill Group, Inc., 5500 Wooster Road, Cincinnati, Ohio" shall not cause or permit the emission of sulfur dioxide from boiler numbers 3 and 4 (OEPA source numbers B003 and B004) to exceed a maximum of 2.0 pounds of sulfur dioxide per MM Btu actual heat input from each boiler.
- (Q) The "Queen City Terminals, Incorporated" (OEPA premise number 1431072036) or any subsequent owner or operator of the "Queen City Terminals, Incorporated, 3801 Kellogg Avenue, Cincinnati, Ohio" shall not cause or permit the emission of sulfur dioxide from boiler number 3 (OEPA source number B003) to exceed a maximum of 0.0 pounds of sulfur dioxide per MM Btu actual heat input.
- (R) The "Chevron, USA Incorporated" (OEPA premise number 1431080082) or any subsequent owner or operator of the "Chevron, USA Incorporated, State Route 128, Hooven Ohio" shall not cause or permit the emission of sulfur dioxide from the following sources to exceed the amounts indicated:
- (1)

CRU hydrocarbon heater HH-1 (OEPA source number B002),  
CRU charge heater PH-1 (OEPA source number B003),  
CRU int. heater PH-2 (OEPA source number B004),  
CRU reboiler heater PM-3 (OEPA source number B005),  
1F-1 crude unit A heater (OEPA source number B006),  
Crude unit V heater 1F-1 (OEPA source number B007),  
Alkylation unit heater 3F-1 (OEPA source number B008),  
FCCU preheater B-2 (OEPA source number B010),  
LB Boiler E1 (OEPA source number B011),  
HP boiler number 21 (OEPA source number B012),  
HP boiler number 22 (OEPA source number B013),  
LP boiler number 2 (OEPA source number B014),  
LP boiler number 3 (OEPA source number B015),  
LP boiler number 4 (OEPA source number B016), and  
Reactor charge heater number 2 PH-4 (OEPA source number B017);

A maximum of 0.0 pounds of sulfur dioxide per MM Btu actual heat input from each unit.

- (2) FCC (OEPA source number P001) and CO boiler number 23 (OEPA source number B001); a maximum of 0.0 pounds of sulfur dioxide per one thousand pounds of fresh feed.

(S) The "Feed Material Production Center, United States Department of Energy" (OEPA premise number 1431110128) or any subsequent owner or operator of the "Feed Material Production Center, United States Department of Energy, Fernald, Ohio" shall not cause or permit the emission of sulfur dioxide from the following sources to exceed the amounts indicated:

- (1) Boiler numbers 1 and 3 (OEPA source numbers B001 and B003); a maximum of 1.33 pounds of sulfur dioxide per MM Btu actual heat input from each boiler.

- (2) Boiler numbers 2 and 4 (OEPA source numbers B002 and B004); a maximum of 0.0 pounds of sulfur dioxide per MM Btu actual heat input from each boiler.
- (T) The "Sisters of Charity, Mount St. Joseph" (OEPA premise number 1431131566) or any subsequent owner or operator of the "Sisters of Charity, Mount St. Joseph, Delhi, Ohio" shall not cause or permit the emission of sulfur dioxide from boiler numbers 1 through 3 (OEPA source numbers B001 through B003) to exceed a maximum of 2.0 pounds of sulfur dioxide per MM Btu actual heat input from each boiler.
- (U) The "Pauline Warfield Lewis Center" (OEPA premise number 1431140591) or any subsequent owner or operator of the "Pauline Warfield Lewis Center, 6600 Paddock Road, Cincinnati, Ohio" shall not cause or permit the emission of sulfur dioxide from boiler numbers 1 and 2 (OEPA source numbers B004 and B005) to exceed a maximum of 2.0 pounds of sulfur dioxide per MM Btu actual heat input from each boiler.
- (V) The "Ford Motor Company" (OEPA premise number 1431140861) or any subsequent owner or operator of the "Ford Motor Company, 3000 Sharon Road, Sharonville, Ohio" shall not cause or permit the emission of sulfur dioxide from the following sources to exceed the amounts indicated and shall limit the operation of said sources such that the indicated average operating rates are not exceeded for any calendar day:
- (1) Boiler numbers 1 through 3 (OEPA source numbers B001 through B003); a maximum of 1.7 pounds of sulfur dioxide per MM Btu actual heat input from each boiler and a combined average operating rate of 244 MM Btu per hour.
  - (2) As alternative to the requirements specified in paragraph (V)(1) of this rule, boiler numbers 1 through 3 (OEPA source numbers B001 through B003); maximum of 1.15 pounds of sulfur dioxide per MM Btu actual heat input from each boiler and a combined average operating rate of 342 MM Btu per hour.
- (W) The "General Electric Company" (OEPA premise number 1431150060) or any subsequent owner or operator of the "General Electric Company, Interstate 75, Evendale, Ohio" shall not cause or permit the emission of sulfur dioxide from boiler numbers 5, 6, and 8 (OEPA source numbers B007, B008 and B009); a maximum of 1.52 pounds of sulfur dioxide per MM Btu actual heat input from each boiler and shall limit the operation of boiler numbers 6 and 8 (OEPA source numbers B008 and B009) such that their combined average operating rate shall not exceed 244 MM Btu per hour for any calendar day.
- (X) The "Formica Corporation" (OEPA premise number 1431150801) or any subsequent owner or operator of the "Formica Corporation, 10155 Reading Road, Evendale, Ohio" shall not cause or permit the emission of sulfur dioxide from boiler numbers 3

through 5 (OEPA source numbers B001 through B003) to exceed a maximum of 2.0 pounds of sulfur dioxide per MM Btu actual heat input from each boiler.

- (Y) The "Jefferson Smurfit Corporation" (OEPA premise number 1431260057) or any subsequent owner or operator of the "Jefferson Smurfit Corporation, Cooper Avenue, Lockland, Ohio" shall not cause or permit the emission of sulfur dioxide from boiler numbers 302 and 301 (OEPA source numbers B002 and B003) to exceed a maximum of 2.0 pounds of sulfur dioxide per MM Btu actual heat input from each boiler.
- (Z) The "Fox Paper Incorporated" (OEPA premise number 1431260171) or any subsequent owner or operator of the "Fox Paper Incorporated, Cooper Avenue, Lockland, Ohio" shall not cause or permit the emission of sulfur dioxide from boiler numbers 2 and 3 (OEPA source numbers B002 and B003) to exceed a maximum of 2.0 pounds of sulfur dioxide per MM Btu actual heat input from each boiler.
- (AA) The "Celotex Corporation" (OEPA premise number 1431260890) or any subsequent owner or operator of the "Celotex Corporation, 320 South Wayne Avenue, Lockland, Ohio" shall not cause or permit the emission of sulfur dioxide from boiler numbers 1 and 2 (OEPA source numbers B001 and B002) to exceed a maximum of 0.0 pounds of sulfur dioxide per MM Btu actual heat input from each boiler.
- (BB) The "Cincinnati Gas and Electric Company, Miami Fort Station" (OEPA premise number 1431350093) or any subsequent owner or operator of the "Cincinnati Gas and Electric Company, Miami Fort Station, Brower Road, Miami Ohio" shall not cause or permit the emission of sulfur dioxide from the following sources to exceed the amounts indicated and shall use stacks no lower than the stack height indicated:
- (1) Unit numbers 3-1, 3-2, 4-1 and 4-2 (OEPA source numbers B001 through B004); a maximum of 0.0 pounds of sulfur dioxide per MM Btu actual heat input from each boiler.
  - (2) Unit numbers 5-1 and 5-2 (OEPA source numbers B005 and B006; a maximum of 5.0 pounds of sulfur dioxide per MM Btu actual heat input from each boiler and a minimum stack height of five hundred ninety feet above ground level for each boiler.
  - (3) Unit number 6 (OEPA source number B007); a maximum of 5.0 pounds of sulfur dioxide per MM Btu actual heat input from each boiler and a minimum stack height of five hundred ninety feet above ground level.
  - (4) Gas turbine numbers GT-1 through GT-6 (OEPA source numbers B008 through B013); a maximum of 0.5 pounds of sulfur dioxide per MM Btu actual heat input.

- (5) Unit number 7 (OEPA source number B015); a maximum of 5.5 pounds of sulfur dioxide per MM Btu actual heat input.
  - (6) Unit number 8 (OEPA source number B016); a maximum of 1.2 pounds of sulfur dioxide per MM Btu actual heat input.
  - (7) As an alternative to the requirements specified in paragraphs (BB)(2) and (BB)(3) of this rule, after December 22, 1993, and prior to the installation of a stack with minimum stack height of 590 feet above ground level serving unit numbers 5-1, 5-2 and 6; for unit numbers 5-1 and 5-2 (OEPA source numbers B005 and B006); a maximum of 0.0 pounds of sulfur dioxide per MM Btu actual heat input from each boiler; and for unit number 6, a maximum of 1.2 pounds of sulfur dioxide per MM Btu actual heat input.
- (CC) The "Chevron Asphalt Company" (OEPA premise number 1431350149) or any subsequent owner or operator of the "Chevron Asphalt Company, 11001 Brower Road, Miami Township, Ohio" shall not cause or permit the emission of sulfur dioxide from the following sources to exceed the amounts indicated:
- (1) Unit numbers F101A, F102, F103 and F103A (OEPA source numbers B001, B002, B003 and B006); a maximum of 0.0 pounds of sulfur dioxide per MM BTU actual heat input from each boiler.
  - (2) Unit numbers F2 and F301 (OEPA source numbers B004 and B005); a maximum of 2.0 pounds of sulfur dioxide per MM Btu actual heat input from each boiler.
- (DD) The "United States Playing Card Company" (OEPA premise number 1431370249) or any subsequent owner or operator of the "United States Playing Card Company, Park and Beech Streets, Norwood, Ohio" shall not cause or permit the emission of sulfur dioxide from boiler numbers 1 and 2 (OEPA source numbers B001 and B002) to exceed a maximum of 2.0 pounds of sulfur dioxide per MM Btu actual heat input from each boiler.
- (EE) The "General Motors Corporation Assembly Division" (OEPA premise number 1431370848) or any subsequent owner or operator of the "General Motors Corporation Assembly Division, 4726 Smith Road, Norwood Ohio" shall not cause or permit the emission of sulfur dioxide from boiler numbers 1 through 3 (OEPA source numbers B001 through B003) to exceed a maximum of 0.0 pounds of sulfur dioxide per MM Btu heat input from each boiler.
- (FF) The "PMC Specialties Group, Division PMC Incorporated" (OEPA premise number 1431390137) or any subsequent owner or operator of the "PMC Specialties Group, Division of PMC Incorporated, 501 Murray Road, St. Bernard, Ohio" shall not cause or permit the emission of sulfur dioxide from the following sources to exceed the amounts indicated:

- (1) Boiler number 1 (OEPA source number B001); a maximum of 2.0 pounds of sulfur dioxide per MM Btu actual heat input.
  - (2) Boiler number 2 (OEPA source number B003); a maximum of 1.6 pounds of sulfur dioxide per MM Btu actual heat input.
- (GG) The "Proctor and Gamble Company" (OEPA premise number 1431390903) or any subsequent owner or operator of the "Proctor and Gamble Company, 520 Spring Grove Avenue, Cincinnati, Ohio" shall not cause or permit the emission of sulfur dioxide from the following sources to exceed the amounts indicated, shall use stacks no lower than the height indicated and shall limit the sources such that the indicated average operating rates are not exceeded for any calendar day:
- (1) Boiler numbers 1 and 2 (OEPA source numbers B001 and B008); a maximum of 1.1 pounds of sulfur dioxide per MM Btu actual heat input from each boiler.
  - (2) At all times that both boiler numbers 3 and 4 (OEPA source numbers B021 and B022) are operating, the combined average operating rate from boiler numbers 1 through 4 (OEPA source numbers B001, B008, B021 and B022) shall not exceed 922 MM Btu per hour for any calendar day.
  - (3) Boiler number 3 (OEPA source number B021); a maximum of 1.50 pounds of sulfur dioxide per MM Btu actual heat input and the average operating rate of 277 MM Btu per hour for any calendar day.
  - (4) Boiler number 4 (OEPA source numbers B022); a maximum of 2.0 pounds of sulfur dioxide per MM Btu actual heat input, the average operating rate of 450 MM Btu per hour for any calendar day and shall use a stack no lower than two hundred thirteen feet above ground level.
- (HH) The "Ralston Purina Company" (OEPA premise number 1431400175) or any subsequent owner or operator of the "Ralston Purina Company, 11301 Mosteller Road, Cincinnati, Ohio" shall not cause or permit the emission sulfur dioxide from boiler number 1 (OEPA source number B001) to exceed a maximum of 2.0 pounds of sulfur dioxide per MM Btu actual heat input.
- (II) The "Cincinnati Electronics Corporation" (OEPA premise number 1431480611) or any subsequent owner or operator of the "Cincinnati Electronics Corporation, 2630 Glendale-Milford Road, Cincinnati, Ohio" shall not cause or permit the emission of sulfur dioxide from boiler number 2 (OEPA source number B002) to exceed a maximum of 2.0 pounds of sulfur dioxide per MM Btu actual heat input.
- (JJ) The "Sterns Technical Textiles Company" (OEPA premise number 1431490901) or any subsequent owner or operator of the "Sterns Technical Textiles Company, Williams and Wyoming Avenues, Cincinnati, Ohio" shall not cause or permit the emission of sulfur dioxide from boiler numbers 47278, 51215, 51223 and 51268

(OEPA source numbers B001 through B004) to exceed a maximum of 2.0 pounds of sulfur dioxide per MM Btu actual heat input from each boiler.

(KK) The "E.I. duPont deNemours and Company, Fort Hill Plant" (OEPA premise number 1431350817) or any subsequent owner or operator of the "E.I. duPont deNemours and Company, Fort Hill Plant, Brower Road, Miami, Ohio" shall not cause or permit the emission of sulfur dioxide from the sulfuric acid plant (OEPA source number P001) to exceed a maximum of 25.0 pounds of sulfur dioxide per ton of one hundred per cent acid produced and shall use a stack no lower than three hundred feet above ground level.

(LL) The "James B. Beam Distilling Company" (OEPA premise number 1431070065) or any subsequent owner or operator of the "James B. Beam Distilling Company, 120 Section Road, Cincinnati, Ohio" shall not cause or permit the emission of sulfur dioxide from boiler numbers 1 through 4 (OEPA source numbers B001 through B004) to exceed a maximum of 0.0 pounds of sulfur dioxide per MM Btu actual heat input from each boiler.

**Jefferson county emission limits.**

- (A) No owner or operator of any coal-fired steam generating unit, unless otherwise specified below, shall cause or permit the emission of sulfur dioxide from any source to exceed a maximum of 1.8 pounds of sulfur dioxide per MM Btu actual heat input.
- (B) No owner or operator of any oil-fired steam generating unit unless otherwise specified below, shall cause or permit the emission of sulfur dioxide from any source to exceed a maximum of 0.8 pounds of sulfur dioxide per MM Btu actual heat input.
- (C) No owner or operator of a by-product coke oven for a facility which utilizes by-product coke oven gas shall cause or permit the combustion of by-product coke oven gas containing hydrogen sulfide in excess of fifty grains of hydrogen sulfide per one hundred dry standard cubic feet of coke oven gas.
- (D) The "Cardinal Operating Company" (OEPA premise number 1741050002) or any subsequent owner or operator of the "Cardinal Operating Company," Brilliant, Ohio shall not cause or permit the emissions of sulfur dioxide from unit numbers 1 and 2 (OEPA source numbers B001 and B002) to exceed a maximum of 7.08 pounds of sulfur dioxide per MM Btu actual heat input from each boiler.
- (E) The "Ohio Power Company, Tidd Plant" (OEPA premise number 1741050003) or any subsequent owner or operator of the "Ohio Power Company, Tidd Plant," Brilliant, Ohio shall not cause or permit the emission of sulfur dioxide from boiler numbers 11, 12, and 21 (OEPA source numbers B001, B002 and B003) to exceed a maximum of 1.58 pounds of sulfur dioxide per MM Btu actual heat input from each boiler.
- (F) The "Federal Paper Board Company, Incorporated" (OEPA premise number 1741050009) or any subsequent owner or operator of the "Federal Paper Board Company, Incorporated, 630 North Third Street, Steubenville, Ohio," shall not cause or permit the emission of sulfur dioxide from boiler numbers 1 and 4 (OEPA source numbers B001 and B004) to exceed the maximum of 1.8 pounds of sulfur dioxide per MM Btu actual heat input from each boiler.
- (G) The "Wheeling-Pittsburgh Steel, Steubenville South Plant" (OEPA premise number 1741090010) or any subsequent owner or operator of the "Wheeling-Pittsburgh Steel, Steubenville South Plant," Mingo Junction, Ohio shall not cause or permit the emission of sulfur dioxide from the following sources to exceed the amounts indicated:
  - (1) Boiler numbers 1 through 12 (OEPA source numbers B001 through B012); a maximum of 2.1 pounds of sulfur dioxide per MM Btu actual heat input from each boiler and a total of one thousand four hundred fifteen tons of sulfur dioxide per any period of three hundred sixty consecutive days.

- (2) Forty-four-inch soaking pits - block numbers 1 through 5 (OEPA source numbers B013 through B017); from the combustion of coke oven gas containing hydrogen sulfide, fifty grains of hydrogen sulfide per one hundred dry standard cubic feet of coke oven gas.
- (H) The "Wheeling-Pittsburgh Steel, Yorkville Plant" (OEPA premise number 1741120012) or any subsequent owner or operator of the "Wheeling-Pittsburgh Steel, Yorkville Plant," Yorkville, Ohio shall not cause or permit the emission of sulfur dioxide from boiler numbers 2 through 10 (OEPA source numbers B001 through B009) to exceed a maximum of 5.62 pounds of sulfur dioxide per MM Btu actual heat input from each boiler.
- (I) The "Wheeling-Pittsburgh Steel, Steubenville North Plant" (OEPA premise number 1741150011) or any subsequent owner or operator of the "Wheeling-Pittsburgh Steel, Steubenville North Plant, South Third Street, Steubenville, Ohio" shall not cause or permit the emission of sulfur dioxide from the following sources to exceed the amounts indicated:
- (1) Boiler numbers 1 through 8 located in number 1 boiler house (OEPA source numbers B001 through B008); a maximum of 4.45 pounds of sulfur dioxide per MM Btu actual heat input from each boiler and a total of one thousand nine hundred eight tons of sulfur dioxide per any period of three hundred sixty five consecutive days.
- (2) Forty-five-inch soaking pits block numbers 1 through 8 (OEPA source numbers B009 through B016); from the combustion of coke oven gas containing hydrogen sulfide, fifty grains of hydrogen sulfide per one hundred dry standard cubic feet of coke oven gas.
- (J) The "National Steel Corporation" (OEPA premise number 1741150013) or any subsequent owner or operator of the "National Steel Corporation, Slack Street, Steubenville, Ohio" shall not cause or permit the emission of sulfur dioxide from boiler numbers 1 through 4 (OEPA source numbers B001 through B004) to exceed a maximum of 1.8 pounds of sulfur dioxide per MM Btu actual heat input from each boiler.
- (K) The "Toronto Paperboard Company" (OEPA premise number 1741180000) or any subsequent owner or operator of the "Toronto Paperboard Company, 421 Loretta Avenue, Toronto, Ohio" shall not cause or permit the emission of sulfur dioxide from boiler number 1 (OEPA source number B001) to exceed a maximum of 6.0 pounds of sulfur dioxide per MM Btu actual heat input.
- (L) The "Ohio Edison Company, W.H. Sammis Plant" (OEPA premise number 1741160017) or any subsequent owner or operator of the "Ohio Edison Company, W.H. Sammis Plant, Route Number 7, Stratton, Ohio" shall not cause or permit the

emission of sulfur dioxide from the following sources to exceed the amounts indicated:

- (1) Auxiliary heating boiler (OEPA source number B001); a maximum of 0.0 pounds of sulfur dioxide per MM Btu actual heat input.
  - (2) Diesel numbers A, B2, B3, and B4 (OEPA source numbers B002, B003, B004, B005, and B006); a maximum of 0.8 pounds of sulfur dioxide per MM Btu actual heat input from each diesel.
  - (3) Boiler numbers 1 through 4 (OEPA source numbers B007 through B010); a maximum of 1.61 pounds of sulfur dioxide per MM Btu actual heat input from each boiler.
  - (4) Boiler numbers 5 through 7 (OEPA source numbers B011 through B013); a maximum of 4.46 pounds of sulfur dioxide per MM Btu actual heat input from each boiler.
  - (5) As an alternative to the requirements specified in paragraphs (L)(3) and (L)(4) of this rule, boiler numbers 1 through 7 (OEPA source numbers B007 through B013); a maximum of 2.91 pounds of sulfur dioxide per MM Btu actual heat input from each boiler. The "Ohio Edison Company, W.H. Sammis Plant" shall notify the director and the administrator at least ninety days prior to the intended date of conversion when changing between the emission limits contained in this paragraph and the emission limits contained in paragraphs (L)(3) and (L)(4) of this rule. "The Ohio Edison Company, W.H. Sammis Plant" shall comply with either the requirements of this paragraph or paragraphs (L)(3) and (L)(4) of this rule.
- (M) The "Ohio Edison Company, Toronto Plant" (OEPA premise number 1741180018) or any subsequent owner or operator of the "Ohio Edison Company, Toronto Plant, Route 7, Toronto, Ohio" shall not cause or permit the emission of sulfur dioxide from boiler numbers 9 through 11 (OEPA source numbers B001 through B003) to exceed the amount indicated in either paragraph (M)(1) or (M)(2) of this rule:
- (1) A maximum of 8.1 pounds of sulfur dioxide per MM Btu actual heat input from each boiler unless the conditions in paragraph (M)(2) of this rule are met; or
  - (2) A maximum of 2.0 pounds of sulfur dioxide per MM Btu actual heat input from each boiler provided that an emission limit of 2.0 pounds of sulfur dioxide per MM Btu actual heat input is approved by U.S. EPA and an emission limit of 2.91 pounds of sulfur dioxide per MM Btu actual heat input is approved by U.S. EPA for the sources specified in paragraph (L)(5) of rule 3745-18-47 of the Administrative Code.

- (N) The "Kaul Clay Company" (OEPA premise number 1741180086) or any subsequent owner or operator of the "Kaul Clay Company, J.F. Kennedy Highway, Toronto, Ohio" shall not cause or permit the emission of sulfur dioxide from boiler numbers 8 and 9 (OEPA source numbers B001 and B002) to exceed a maximum of 2.82 pounds of sulfur dioxide per MM Btu actual heat input from each boiler.
- (O) "Buckeye Power, Incorporated" (OEPA premise number 1741050129) or any subsequent owner or operator of "Buckeye Power, Incorporated," Brilliant, Ohio shall not cause or permit the emission of sulfur dioxide from Cardinal unit number 3 (OEPA source number B002) to exceed a maximum of 2.0 pounds of sulfur dioxide per MM Btu actual heat input.

**Lorain county emission limits.**

(A) Except as otherwise specified in this rule, no owner or operator of any fossil-fuel fired steam generating unit shall cause or permit the emission of sulfur dioxide to exceed the following limits from any stack:

(1) The emission limit for sources between 10.0 and 100.0 MM Btu per hour total rated capacity shall be calculated from the following equation:

$$EL = 21.176 Qm^{-0.5477}$$

where Qm is the total rated capacity in MM Btu per hour and EL is the allowed emission rate in pounds of sulfur dioxide per MM Btu actual heat input; and

(2) The emission limit for sources greater than, or equal to, 100.0 MM Btu per hour total rated capacity shall be 1.70 pounds of sulfur dioxide per MM Btu actual heat input.

(B) The "Cleveland Electric Illuminating Company, Avon Lake Plant" (OEPA premise number 0247030013) or any subsequent owner or operator of the "Cleveland Electric Illuminating Company, Avon Lake Plant, 33570 Lake Road, Avon Lake, Ohio" shall not cause or permit the emission of sulfur dioxide from the following sources to exceed the amounts indicated:

(1) Boiler numbers 1 through 8 and package boiler (OEPA source numbers B001 through B009); a maximum of 0.32 pounds of sulfur dioxide per MM Btu actual heat input from each boiler.

(2) Boiler unit numbers 6 through 9 (OEPA source numbers B014, and B010 through B012); a maximum of 4.65 pounds of sulfur dioxide per MM Btu actual heat input from each unit.

(C) The "Ohio Edison Company, Edgewater Plant" (OEPA premise number 0247080049) or any subsequent owner or operator of the "Ohio Edison Company, Edgewater Plant, 200 Oberlin Avenue, Lorain, Ohio" shall not cause or permit the emission of sulfur dioxide from the following sources to exceed the amounts indicated:

(1) Boiler numbers 11 through 13 (OEPA source numbers B001 through B003); a maximum of 3.4 pounds of sulfur dioxide per MM Btu actual heat input from each boiler.

(2) Combustion turbines "A" and "B" (OEPA source numbers B004 and B005); a maximum of 0.5 pounds of sulfur dioxide per MM Btu actual heat input from each turbine.

- (D) The "Republic Engineered Products, Inc." (OEPA premise number 0247080229) or any subsequent owner or operator of the "Republic Engineered Products, Inc., 1807 East 28th Street, Lorain, Ohio" shall not cause or permit the combustion of coke-oven gas with a total sulfur content expressed as hydrogen sulfide in excess of 368 grains of hydrogen sulfide per one hundred dry standard cubic feet of coke-oven gas and shall not cause or permit the emission of sulfur dioxide from the following sources to exceed the amounts indicated:
- (1) Blast furnace boiler numbers 1 through 9 (OEPA source numbers B001 through B009); a maximum of 1.2 pounds of sulfur dioxide per MM Btu actual heat input from each boiler and a maximum of 1760 pounds of sulfur dioxide per hour from all nine boilers.
  - (2) C.P. boiler numbers 10 through 12 (OEPA source numbers B010 through B012); a maximum of 1.98 pounds of sulfur dioxide per MM Btu actual heat input from each boiler.
  - (3) Blast furnace boiler number 13 (OEPA source number B013); a maximum of 0.31 pounds of sulfur dioxide per MM Btu actual heat input.
  - (4) All other operations, including soaking pit process operations and seamless rotary furnace number 4, a maximum of 1.98 pounds of sulfur dioxide per MM Btu actual heat input from each stack.
  - (5) Soaking pit process operations (OEPA source numbers P006 through P018); a maximum of 279 pounds of sulfur dioxide per hour from all twelve sources.
  - (6) Seamless rotary furnace number 4 (OEPA source number P029); a maximum of 178 pounds of sulfur dioxide per hour.
- (E) The "Oberlin College" (OEPA premise number 0247100408); or any subsequent owner or operator of the "Oberlin College, 173 West Lorain Street, Oberlin, Ohio" shall not cause or permit the emission of sulfur dioxide from the following sources to exceed the amounts indicated:
- (1) Boiler numbers 1 and 2 (OEPA source numbers B001 and B002); a maximum of 7.19 pounds of sulfur dioxide per MM Btu actual heat input from each boiler.
  - (2) Boiler number 4 (OEPA source number B003); a maximum of 0.36 pounds of sulfur dioxide per MM Btu actual heat input.
- (F) The "B.F. Goodrich Company, Chemical Division, Avon Lake General Chemical Plant" (OEPA premise number 0247030004) or any subsequent owner or operator of the "B.F. Goodrich Company, Chemical Division, Avon Lake General Chemical Plant, Walker and Moore Roads, Avon Lake, Ohio" shall not cause or permit the emission of sulfur dioxide to exceed the amounts indicated:

- (1) Boiler numbers 1, 2, 5, and 6 (OEPA source numbers B001 through B003, and B008); a maximum of 0.30 pounds of sulfur dioxide per MM Btu of actual heat input from each boiler.
- (2) Boiler numbers 3 and 4 (OEPA source numbers B007 and B006); a maximum of 5.20 pounds of sulfur dioxide per MM Btu actual heat input from each boiler.

3745-18-54      **Lucas county emission limits.**

- (A) No owner or operator of any coal-fired steam generating unit, unless otherwise specified below, shall cause or permit the emission of sulfur dioxide from any source to exceed a maximum of 1.6 pounds of sulfur dioxide per MM Btu actual heat input.
- (B) The "REXAM Beverage Can Company" (OEPA premise number 0448002007) or any subsequent owner or operator of the "REXAM Beverage Can Company, 10444 Swanton Road, Whitehouse, Ohio" shall not cause or permit the emission of sulfur dioxide from boiler numbers 1 through 3 (OEPA source numbers B001 through B003) to exceed a maximum of 1.0 pounds of sulfur dioxide per MM Btu actual heat input from each boiler.
- (C) The "Mercy Hospital" (OEPA premise number 0448010026) or any subsequent owner or operator of the "Mercy Hospital, 2200 Jefferson Avenue, Toledo, Ohio" shall not cause or permit the emission of sulfur dioxide from boiler numbers 1 through 3 (OEPA source numbers B001 through B003) to exceed a maximum of 1.5 pounds of sulfur dioxide per MM Btu actual heat input from each boiler and shall operate said boilers such that the combined average operating rate does not exceed 35 MM Btu per hour for any calendar day.
- (D) The "Toledo Hospital" (OEPA premise number 0448010037) or any subsequent owner or operator of the "Toledo Hospital, 2142 North Cove Boulevard, Toledo, Ohio" shall not cause or permit the emission of sulfur dioxide from boiler numbers 1 through 3 (OEPA source numbers B001 through B003) to exceed a maximum of 3.5 pounds of sulfur dioxide per MM Btu actual heat input from each boiler.
- (E) The "N.L. Industries, Incorporated, Doehler-Jarvis Castings Division" (OEPA premise number 0448010050) or any subsequent owner or operator of the "N.L. Industries, Incorporated, Doehler-Jarvis Castings Division, 1945 Smead Avenue, Toledo, Ohio" shall not cause or permit the emission of sulfur dioxide from boiler numbers 1 and 2 (OEPA source numbers B001 and B002) to exceed a maximum of 1.0 pounds of sulfur dioxide per MM Btu actual heat input from each boiler.
- (F) The "St. Vincent Medical Center" (OEPA premise number 0448010051) or any subsequent owner or operator of the "St. Vincent Hospital and Medical Center, 2213 Cherry Street, Toledo, Ohio" shall not cause or permit the emission of sulfur dioxide from boiler numbers 1 through 3 (OEPA source numbers B001 through B003) to exceed a maximum of 1.0 pounds of sulfur dioxide per MM Btu actual heat input from each boiler.
- (G) The "N.L. Industries, Incorporated, Doehler-Jarvis Castings Division" (OEPA premise number 0448010057) or any subsequent owner or operator of the "N.L.

Industries, Incorporated, Doehler-Jarvis Castings Division, 400 North Detroit Avenue, Toledo, Ohio" shall not cause or permit the emission of sulfur dioxide from boiler numbers 1 through 4 (OEPA source numbers B001 through B004) to exceed a maximum of 1.5 pounds of sulfur dioxide per MM Btu actual heat input from each boiler.

- (H) The "Gulf Oil Company U.S., Toledo Refinery" (OEPA premise number 0448010060) or any subsequent owner or operator of the "Gulf Oil Company U.S., Toledo Refinery, 2935 Front Street, Toledo, Ohio" shall not cause or permit the emission of sulfur dioxide from the following sources to exceed the amount indicated:
- (1) Boiler numbers 1 through 4 (OEPA source numbers B001 through B004); a maximum of 0.90 pounds of sulfur dioxide per MM Btu actual heat input from each boiler. Not more than one of said boilers shall be operated simultaneously with boiler numbers 21, 22, and CO boiler number 1211.
  - (2) Boiler numbers 21, 22, and 1211 B-2 (OEPA source numbers B005, B006, and B013); a maximum of 1.03 pounds of sulfur dioxide per MM Btu actual heat input from each boiler. Boiler numbers 21, 22, and CO boiler 1211 shall operate simultaneously with not more than one of boiler numbers 1 through 4.
  - (3) Boiler numbers 111 B-1, 111 B-2, and 111 B-3 (OEPA source numbers B007 through B009); a maximum of 1.21 pounds of sulfur dioxide per MM Btu actual heat input from each boiler.
  - (4) Boiler number 412 H-401 (OEPA source number B014); a maximum of 1.29 pounds of sulfur dioxide per MM Btu actual heat input.
  - (5) Boiler numbers 111 B-4, 1211 B-3, 211 H-201, 211, 1311 H-1, 1311 H-2, 1311-H101, and 1311 CRU H-3 (OEPA source numbers B010, B015, B011, B012, B017, B018, B019, and B020); a maximum of 0.04 pounds of sulfur dioxide per MM Btu actual heat input from each unit.
  - (6) CO boiler number 1211 and process D-2 FCC regenerator (OEPA source numbers B016 and P003); a maximum of 1.57 pounds of sulfur dioxide per one thousand pounds of fresh feed. CO boiler number 1211 and boiler numbers 21 and 22 shall operate simultaneously with not more than one of boiler numbers 1 through 4.
  - (7) Process 511-sulfur recovery (OEPA source number P005); a maximum of 0.10 pounds of sulfur dioxide per pound of sulfur processed.
- (I) The "Multifoods Manufacturing, Inc." (OEPA premise number 0448010064) or any subsequent owner or operator of the "Multifoods Manufacturing, Inc., 1250 Laskey Road, Toledo, Ohio" shall not cause or permit the emission of sulfur dioxide from

boiler numbers 3, 2, and 1 (OEPA source numbers B001, B002, and B003) to exceed a maximum of 1.0 pounds of sulfur dioxide per MM Btu actual heat input from each boiler.

- (J) The "Plaskon Products, Incorporated" (OEPA premise number 0448010071) or any subsequent owner or operator of the "Plaskon Products, Incorporated, 2829 Glendale Avenue, Toledo, Ohio" shall not cause or permit the emission of sulfur dioxide from boiler numbers 1 through 3 (OEPA source numbers B001 through B003) to exceed a maximum of 1.62 pounds of sulfur dioxide per MM Btu actual heat input from each boiler. Boiler number 1 shall be operated simultaneously with not more than one of boiler numbers 2 or 3.
- (K) The "Textileather Corporation" (OEPA premise number 0448010075) or any subsequent owner or operator of the "Textileather Corporation, 3729 Twining Street, Toledo, Ohio" shall not cause or permit the emission of sulfur dioxide from boiler numbers 1 and 2 (OEPA source numbers B001 and B002) to exceed a maximum of 1.0 pounds of sulfur dioxide per MM Btu actual heat input from each boiler.
- (L) The "Toledo Edison Company, Acme Station" (OEPA premise number 0448010086) or any subsequent owner or operator of the "Toledo Edison Company, Acme Station, 1401 Front Street, Toledo, Ohio" shall not cause or permit the emission of sulfur dioxide from the following sources to exceed the amounts indicated:
- (1) Boiler numbers 9 through 12 (OEPA source numbers B001 through B004); a maximum of 1.0 pounds of sulfur dioxide per MM Btu actual heat input from each boiler.
  - (2) Boiler numbers 13 through 16, 91, and 92 (OEPA source numbers B005 through B010); a maximum of 1.2 pounds of sulfur dioxide per MM Btu actual heat input from each boiler.
- (M) The "Toledo Edison Company, Water Street Station" (OEPA premise number 0448010087) or any subsequent owner or operator of the "Toledo Edison Company, Water Street Station, 300 Water Street, Toledo, Ohio" shall not cause or permit the emission of sulfur dioxide from boiler numbers 20 through 24, and 81 through 83 (OEPA source numbers B001 through B008) to exceed a maximum of 1.0 pounds of sulfur dioxide per MM Btu actual heat input from each boiler.
- (N) The "Koppers Company, Incorporated" (OEPA premise number 0448011198) or any subsequent owner or operator of the "Koppers Company, Incorporated, 2401 Front Street, Toledo, Ohio" shall not cause or permit the emission of sulfur dioxide from the following sources to exceed the amounts indicated:
- (1) Coke oven battery (OEPA source number P003); 3.38 pounds of sulfur dioxide per ton of actual process weight input.

- (2) Coke plant boiler numbers 1 and 2 (OEPA source numbers B004 and B005); 0.26 pounds of sulfur dioxide per MM Btu actual heat input.
- (O) The "Sun Company, Incorporated (R&M)" (OEPA premise number 0448010246) or any subsequent owner or operator of the "Sun Company, Incorporated (R&M), Woodville Road, Oregon, Ohio" shall not cause or permit the emission of sulfur dioxide from any source to exceed the amounts indicated:
- (1) Except as specified in paragraphs (O)(2) to (O)(9) of this rule, 0.04 pounds of sulfur dioxide per MM Btu actual heat input from any fuel burning unit.
  - (2) Heater number 502 and boiler numbers 1901 through 1906 (OEPA source numbers B007, and B037 through B042); a maximum of 0.0 pounds of sulfur dioxide per MM Btu actual heat input from each unit.
  - (3) FCC unit and CO boilers H-021-03, and H-021-04 (OEPA source numbers P011, B046, and B047); a maximum of 3.00 pounds of sulfur dioxide per one thousand pounds of fresh feed.
  - (4) Boiler number H-1910 (OEPA source number B044); a maximum of 1.80 pounds of sulfur dioxide per MM Btu actual heat input.
  - (5) Heater numbers H-507 and H-508 (OEPA source numbers B010 and B011); a maximum of 1.60 pounds of sulfur dioxide per MM Btu actual heat input from each heater.
  - (6) Heater number H-301 (OEPA source number B001); a maximum of 0.0 pounds of sulfur dioxide per MM Btu actual heat input.
  - (7) Heater number 9401 (OEPA source number B048); a maximum of 1.40 pounds of sulfur dioxide per MM Btu actual heat input.
  - (8) Heater number H-304 (OEPA source number B004); a maximum of 0.90 pounds of sulfur dioxide per MM Btu actual heat input.
  - (9) Amine Claus sulfur recovery unit (OEPA source number P012); a maximum of 0.07 pounds of sulfur dioxide per pound of sulfur processed.
- (P) The "Medical College of Ohio" (OEPA premise number 0448010247) or any subsequent owner or operator of the "Medical College of Ohio, 930 Detroit Avenue, Toledo, Ohio" shall not cause or permit the emission of sulfur dioxide from boiler numbers 1 through 3 (OEPA source numbers B001 through B003) to exceed a maximum of 1.5 pounds of sulfur dioxide per MM Btu actual heat input from each boiler.

- (Q) The "Interlake, Incorporated" (OEPA premise number 0448010397) or any subsequent owner or operator of the "Interlake, Incorporated, 2401 Front Street, Toledo, Ohio" shall not cause or permit the emission of sulfur dioxide from boiler numbers 4, 5 and through 6 (OEPA source numbers B001 through B003) to exceed a maximum of 0.1 pounds of sulfur dioxide per MM Btu actual heat input from each boiler and shall operate said boilers such that their combined average operating rate shall not exceed 300 MM Btu per hour for any calendar day.
- (R) The "Daimler Chrysler Corp." (OEPA premise number 0448010413) or any subsequent owner or operator of the "Daimler Chrysler Corp., 940 North Cove Boulevard, Toledo, Ohio" shall not cause or permit the emission of sulfur dioxide from boiler numbers 1 through 10 (OEPA source numbers B001 through B010); to exceed a maximum of 1.5 pounds of sulfur dioxide per MM Btu actual heat input from each boiler.
- (S) The "Daimler Chrysler Corp." (OEPA premise number 0448010414) or any subsequent owner or operator of the "Daimler Chrysler Corp., 4000 Stickney Avenue, Toledo, Ohio" shall not cause or permit the emission of sulfur dioxide from boiler numbers 1 and 2 (OEPA source numbers B001 and B002) to exceed a maximum of 1.5 pounds of sulfur dioxide per MM Btu actual heat input from each boiler.
- (T) The "University of Toledo" (OEPA premise number 0448010805) or any subsequent owner or operator of the "University of Toledo, 2801 West Bancroft Street, Toledo, Ohio" shall not cause or permit the emission of sulfur dioxide from boiler numbers 2 and 4 (OEPA source numbers B002 and B010) to exceed 1.0 pounds of sulfur dioxide per MM Btu actual heat input from each boiler.
- (U) The "St. Charles Hospital" (OEPA premise number 0448020002) or any subsequent owner or operator of the "St. Charles Hospital, 2600 Navarre Avenue, Oregon, Ohio" shall not cause or permit the emission of sulfur dioxide from boiler numbers 3 through 5 (OEPA source numbers B003 through B005) to exceed a maximum of 1.0 pounds of sulfur dioxide per MM Btu actual heat input from each boiler.
- (V) The "Toledo Edison Company, Bay Shore Station" (OEPA premise number 0448020006) or any subsequent owner or operator of the "Toledo Edison Company, Bay Shore Station, Bay Shore Road, Oregon, Ohio" shall not cause or permit the emission of sulfur dioxide from the following sources to exceed the amounts indicated:
- (1) Boiler numbers 1 through 4 (OEPA source numbers B001 through B004); a maximum of 1.94 pounds of sulfur dioxide per MM Btu actual heat input from each boiler.
  - (2) Bay Shore Peaker (OEPA source number B005); a maximum of 0.4 pounds of sulfur dioxide per MM Btu actual heat input.

- (W) The "BP Products North America, Inc." (OEPA premise number 0448020007) or any subsequent owner or operator of the "BP Products North America, Inc., Toledo Refinery, Cedar Point Road, Oregon, Ohio" shall not cause or permit the emission of sulfur dioxide from the following sources to exceed the amounts indicated:
- (1) Except as specified in paragraphs (W)(2) to (W)(7) of this rule, 0.29 pounds of sulfur dioxide per MM Btu actual heat input from any fuel burning unit.
  - (2) Process numbers PR-6945, PR-6968, and asphalt oxidizer D-1100 (OEPA source numbers P010, P011, and P008); a maximum of 0.40 pounds of sulfur dioxide per ton of actual process weight input for any process.
  - (3) Heater numbers F-1001A, F-1001B, F-1002A, F-1002B, F-1003, F-1004A, and F-1004B (OEPA source number B024); a maximum of 1.00 pounds of sulfur dioxide per MM Btu actual heat input from each heater.
  - (4) Heater number PR-2904 (alky 2 rerun) (OEPA source number B021); a maximum of 0.50 pounds of sulfur dioxide per MM Btu actual heat input.
  - (5) Heater numbers PR-2992, PR-2993, PR-2955, F-260, external asphalt heater, and boiler number PR-2967 (OEPA source numbers B009, B010, B018, B023, B025, and B020); a maximum of 0.57 pounds of sulfur dioxide per MM Btu actual heat input from each unit.
  - (6) PR-1023 FCC regenerator (OEPA source number P007); a maximum of 0.92 pounds of sulfur dioxide per one thousand pounds of fresh feed.
  - (7) Sulfur recovery unit (OEPA source number P009); a maximum of 0.025 per cent by volume of sulfur dioxide at zero per cent oxygen on a dry basis.
- (X) The "Marsulex, Inc." (OEPA premise number 0448020014) or any subsequent owner or operator of the "Marsulex, Inc., 1400 Otter Creek Road, Oregon, Ohio" shall not cause or permit the emission of sulfur dioxide from the contact sulfuric acid plant (OEPA source numbers P001 and P002) to exceed a maximum of 6.50 pounds of sulfur dioxide per ton of one hundred per cent acid produced.
- (Y) The "General Motors Corporation, Chevrolet Motor Division" (OEPA premise number 0448010404) or any subsequent owner or operator of the "General Motors Corporation, Chevrolet Motor Division, 1455 West Alexis Road, Toledo, Ohio" shall not cause or permit the emission of sulfur dioxide from boiler numbers BT-23005 through BT-23007, and BT-23018 (OEPA source numbers B001 through B004) to exceed a maximum of 1.0 pounds of sulfur dioxide per MM Btu actual heat input from each boiler.

**Mahoning county emission limits.**

- (A) No owner or operator of any coal-fired steam generating unit, unless otherwise specified below, shall cause or permit the emission of sulfur dioxide from any source to exceed a maximum of 5.4 pounds of sulfur dioxide per MM Btu actual heat input.
- (B) The "Whitacre-Greer Fireproofing Company" (OEPA premise number 0250000005) or any subsequent owner or operator of the "Whitacre-Greer Fireproofing Company, 1400 South Mahoning Avenue, Alliance, Ohio" shall not cause or permit the emission of sulfur dioxide from kiln numbers 1 and 2 (OEPA source numbers P004 and P005) to exceed a maximum of 20.0 pounds of sulfur dioxide per ton of actual process weight input from each kiln.
- (C) The "Lonardo and Sons Greenhouse" (OEPA premise number 0250000440) or any subsequent owner or operator of the "Lonardo and Sons Greenhouse, 8452 Southern Boulevard, Boardman, Ohio" shall not cause or permit the emission of sulfur dioxide from boiler number 2 (OEPA source number B002) to exceed a maximum of 2.0 pounds of sulfur dioxide per MM Btu actual heat input.
- (D) The "Jones & Laughlin Steel Corporation, Campbell Works" (OEPA premise number 0250090241) or any subsequent owner or operator of the "Jones & Laughlin Steel Corporation, Campbell Works, 20 Walton Street, Struthers, Ohio" shall not cause or permit the emission of sulfur dioxide from the following sources to exceed the amounts indicated:
- (1) Boilerhouse number 5: boiler numbers 1 through 7 (OEPA source numbers B002 through B008); a maximum of 2.7 pounds of sulfur dioxide per MM Btu actual heat input from each boiler.
  - (2) Numbers 1 and 2 seamless pipe mills (OEPA source numbers P016 and P017); from the combustion of coke oven gas containing hydrogen sulfide, 492 grains of hydrogen sulfide per one hundred dry standard cubic feet of coke oven gas.
  - (3) Boilerhouse number 5: boiler numbers 1 through 7 and numbers 1 and 2 seamless pipe mills (OEPA source numbers B002 through B008, P016, and P017); a combined total of 5200 tons of sulfur dioxide per any continuous three-hundred-sixty-five-day period.
  - (4) Battery number 7: by-product coke oven battery (OEPA source number P002); from the combustion of coke oven gas containing hydrogen sulfide, 492 grains of hydrogen sulfide per one hundred dry standard cubic feet of coke oven gas.
  - (5) Battery number 8: by-product coke oven battery (OEPA source number P026); from the combustion of coke oven gas containing hydrogen sulfide, 492 grains of hydrogen sulfide per one hundred dry standard cubic feet of coke oven gas.

- (6) Battery number 9: by-product coke oven battery (OEPA source number P027); from the combustion of coke oven gas containing hydrogen sulfide, 492 grains of hydrogen sulfide per one hundred dry standard cubic feet of coke oven gas.
  - (7) No more than two of coke oven battery numbers 7 through 9 (OEPA source numbers P002, P026, and P027) shall be operated at the same time.
- (E) The "Youngstown Thermal Corporation" (OEPA premise number 0250110024) or any subsequent owner or operator of the "Youngstown Thermal Corporation 205 North Avenue, Youngstown, Ohio" shall not cause or permit the emission of sulfur dioxide from boiler numbers 1 through 4 (OEPA source numbers B001 through B004) to exceed a maximum of 4.7 pounds of sulfur dioxide per MM Btu actual heat input from each boiler.
- (F) The "Koppers Company, Incorporated" (OEPA premise number 0250110146) or any subsequent owner or operator of the "Koppers Company, Incorporated, 1359 Logan Avenue, Youngstown, Ohio" shall not cause or permit the emission of sulfur dioxide from boiler numbers 3 and 4 (OEPA source numbers B001 and B006) to exceed a maximum of 0.85 pounds of sulfur dioxide per MM Btu actual heat input from each boiler.
- (G) The "Republic Steel Corporation" (OEPA premise number 0250110464) or any subsequent owner or operator of the "Republic Steel Corporation, Poland Avenue, Youngstown, Ohio" shall not cause or permit the emission of sulfur dioxide from the following sources to exceed the amounts indicated:
- (1) Number 3 boilerhouse: boiler numbers 1 through 4, number 5 boilerhouse: boiler numbers 1 and 2, and number 1 boilerhouse: boiler numbers 1 and 2 (OEPA source numbers B001, B005, B006, B007, B002, B004, B003, and B008); a maximum of 5.1 pounds of sulfur dioxide per MM Btu actual heat input from each boiler and a total of 4465 tons of sulfur dioxide per any continuous three-hundred-sixty-five-day period.
  - (2) Coke oven batteries "B" and "C" (OEPA source numbers B901 and B902); from the combustion of coke oven gas containing hydrogen sulfide, 450 grains of hydrogen sulfide per one hundred dry standard cubic feet of coke oven gas and a maximum of 2.3 pounds of sulfur dioxide per MM Btu actual heat input.
  - (3) Ingot soaking pit row numbers 1 through 8: coke oven gas-fired soaking pit furnaces (OEPA source number P008); from the combustion of coke oven gas containing hydrogen sulfide, 450 grains of hydrogen sulfide per one hundred dry standard cubic feet of coke oven gas and a maximum of 2.3 pounds of sulfur dioxide per MM Btu actual heat input.

- (4) 16" - 14" bar mill coke oven gas-fired slab reheating furnace (OEPA source number P009); from the combustion of coke oven gas containing hydrogen sulfide, 450 grains of hydrogen sulfide per one hundred dry standard cubic feet of coke oven gas and a maximum of 2.3 pounds of sulfur dioxide per MM Btu actual heat input.
- (5) Continuous stretch reducing reheat furnace (OEPA source number P010); from the combustion of coke oven gas containing hydrogen sulfide, 450 grains of hydrogen sulfide per one hundred dry standard cubic feet of coke oven gas and a maximum of 2.3 pounds of sulfur dioxide per MM Btu actual heat input.
- (6) Pipe galvanizing line (OEPA source number P011); from the combustion of coke oven gas containing hydrogen sulfide, 450 grains of hydrogen sulfide per one hundred dry standard cubic feet of coke oven gas and a maximum of 2.3 pounds of sulfur dioxide per MM Btu actual heat input.
- (H) The "Youngstown Sinter Plant" (OEPA premise number 0250110617) or any subsequent owner or operator of the "Youngstown Sinter Plant, 251 Division Street, Youngstown, Ohio" shall not cause or permit the emission of sulfur dioxide from the Mahoning Valley sinter plant (OEPA source number P001) to exceed a maximum of 3.3 pounds of sulfur dioxide per ton of process weight.

Statutory Authority: 3704.03(E)  
Rule Amplifies: 3704.03(A) and 3704.03(E)  
Prior Effective Dates: 12/28/79

(A) No owner or operator of the following types of facilities, unless otherwise specified in this rule, shall cause or permit the emission of sulfur dioxide from any stack in excess of the rates specified below:

- (1) For fossil fuel-fired steam generating units between 10.0 and 60.0 MM Btu per hour total rated heat input capacity, the emission rate in pounds of sulfur dioxide per MM Btu actual heat input shall be calculated by the following equation:

$$EL = 18.48Qm^{-0.4886}$$

where:

Qm is the total rated capacity of heat input in MM Btu per hour, and

EL is the allowable emission rate in pounds of sulfur dioxide per MM Btu actual heat input.

- (2) For fossil fuel-fired steam generating units equal to or greater than 60 MM Btu per hour total rated heat input capacity, 2.50 pounds of sulfur dioxide per MM Btu actual heat input.
- (3) No owner or operator of any process equipment shall cause or permit the emission of sulfur dioxide from any stack in excess of 80.0 pounds of sulfur dioxide per ton of actual process weight input.

(B) The "Canton Drop Forging and Manufacturing Company" (OEPA premise number 1576000073) or any subsequent owner or operator of the "Canton Drop Forging and Manufacturing Company" facility located at 4575 Southway Street Southwest, Canton, Ohio shall not cause or permit the emission of sulfur dioxide from the following sources to exceed the amounts indicated and the units shall not exceed the operating limits indicated:

- (1) Boiler number 1 (OEPA source number B001); a maximum of 2.5 pounds of sulfur dioxide per MM Btu actual heat input and a maximum heat input rate of 86.0 MM Btu per hour as a three-hour average and 62.5 MM Btu per hour as a twenty-four-hour average.
- (2) The stack height for B001 shall be a minimum of 147.5 feet.
- (3) For boiler numbers 2 and 3 (OEPA source numbers B002 and B003); a maximum of 2.5 pounds of sulfur dioxide per MM Btu actual heat input from each boiler.

- (4) The total fuel oil consumption by all forge-shop furnaces shall not exceed seven hundred seventy-five gallons per hour, eighteen thousand six hundred gallons per day and six million seven hundred eighty-nine thousand gallons per year. [Forge-shop furnaces include emissions units P001 through P010, P016, P017, P019 through P021, P038, P039, P041 and P046.]
- (5) The sulfur content for any fuel oil used in the forge-shop furnaces shall not exceed 0.05 per cent by weight.
- (C) The "ESSROC Cement Corp." (OEPA premise number 1576000074) or any subsequent owner or operator of the "ESSROC Cement Corp." facility located at 8282 Middlebranch Road, Middlebranch, Ohio shall not cause or permit the emission of sulfur dioxide from kiln numbers 1 through 4 (OEPA source numbers P007 through P010) to exceed a maximum of twenty-four pounds of sulfur dioxide per ton of cement produced.
- (D) The "Ford Motor Company, Canton Forge Plant" (OEPA premise number 1576000261) or any subsequent owner or operator of the "Ford Motor Company, Canton Forge Plant" facility located at 3707 Georgetown Road, Canton, Ohio shall not cause or permit the emission of sulfur dioxide from the following sources to exceed the amounts indicated:
- (1) Boiler numbers 1 and 2 (OEPA source numbers B001 and B002) to exceed a maximum of 2.68 pounds of sulfur dioxide per MM Btu actual heat input from each boiler.
  - (2) Boiler numbers 3 and 4 (OEPA source numbers B003 and B004); a maximum of 2.91 pounds of sulfur dioxide per MM Btu actual heat input from each boiler.
- (E) The "Marathon Ashland Petroleum, LLC" (OEPA premise number 1576000301) or any subsequent owner or operator of the "Marathon Ashland Petroleum, LLC" facility located at 2408 Gambrinus Road, Canton, Ohio shall not cause or permit the emission of sulfur dioxide from the following sources to exceed the amounts indicated and shall operate said sources in the manner specified:
- (1)

Rerun reboiler 4-0-B-3	(OEPA source number B014),
Guard case heater 4-2-B-1	(OEPA source number B016),
Reformer heater 4-2-B-2	(OEPA source number B017), and
ISO stripper heater 4-27-B-1	(OEPA source number B021);

A maximum of 0.025 pounds of sulfur dioxide per MM Btu actual heat input from each unit.

- (2) A maximum 1.0 pounds of sulfur dioxide per MM Btu actual heat input for all process heaters and fossil fuel-fired steam-generating units unless otherwise specified in this paragraph.
  - (3) Number 1 boiler 4-16-B-1, number 2 boiler 4-16-B-2, and number 12 boiler 4-16-B-12 (OEPA source number B024, B025, and B027); only two of the three boilers may be operated simultaneously.
  - (4) Sulfur recovery unit (OEPA source number P001); hydrogen gases removed by the amine unit(s) and the overhead gases from the sour water stripper shall be vented to the Claus units, and the emissions from the Claus units shall not exceed a maximum of 2.0 pounds of sulfur dioxide per one hundred pounds of sulfur processed, where the amount of sulfur processed is equal to the amount of sulfur entering the Claus unit plus the amount of any sulfur bypassed to the flare(s) from the amine unit and/or the sour water stripper.
  - (5) FCC (OEPA source number P002); a maximum of 0.62 pounds of sulfur dioxide per one thousand pounds of fresh feed.
- (F) The "Greif Brothers Corporation" (OEPA premise number 1576000431) or any subsequent owner or operator of the "Greif Brothers Corporation" facility located at 9420 Warmington, Southwest, Massillon, Ohio shall not cause or permit the emission of sulfur dioxide from any stack at this facility in excess of 0.50 pound of sulfur dioxide per MM Btu actual heat input.
- (G) The "Canton Metal Alloys" (OEPA premise number 1576000475) or any subsequent owner or operator of the "Canton Metal Alloys" facility located at 1551 Belden Avenue, Southeast, Canton, Ohio shall not cause or permit the emission of sulfur dioxide from the reverberatory lead furnace (OEPA source number P008) to exceed a maximum of twenty pounds of sulfur dioxide per ton of metal charged.
- (H) The "Superior Dairy" (OEPA premise number 1576000519) or any subsequent owner or operator of the "Superior Dairy" facility located at 4719 Navarre Road, Canton, Ohio shall not cause or permit the emission of sulfur dioxide from boiler numbers 1 and 2 (OEPA source numbers B001 and B002) to exceed a maximum of 4.4 pounds of sulfur dioxide per MM Btu actual heat input from each boiler and shall operate said boilers such that their combined average operating rate shall not exceed twenty MM Btu per hour for any calendar day.
- (I) The "Timken Company, Canton Plant Number 5" (OEPA premise number 1576050614) or any subsequent owner or operator of the "Timken Company, Canton Plant Number 5" facility located at 1835 Dueber Avenue, Southwest, Canton, Ohio shall not cause or permit the emission of sulfur dioxide from the following sources to exceed the amount indicated: :

- (1) 3.08 pounds of sulfur dioxide per MM Btu actual heat input for the stack common to boiler numbers 1 CBF-A and 2 CBF-B (OEPA source numbers B001 and B002); and
  - (2) 0.93 pounds of sulfur dioxide per MM Btu actual heat input for boiler 3 CBF-G (OEPA source number B003).
- (J) The "RESCO Products, Inc." (OEPA premise number 1576000771) or any subsequent owner or operator of the "RESCO Products, Inc." facility located at 6878 Osnaburg Road, East Canton, Ohio shall not cause or permit the emission of sulfur dioxide from kiln numbers 5, 7, 8, 9, 10, 11, 12, and 15 (OEPA source numbers P029 through P036) to exceed a maximum of one hundred twenty-nine pounds of sulfur dioxide per ton of product.
- (K) The "Massillon State Hospital" (OEPA premise number 1576001045) or any subsequent owner or operator of the "Massillon State Hospital" facility located at 3000 Erie Street South, Massillon, Ohio shall not cause or permit the emission of sulfur dioxide from any stack at this facility in excess of 5.20 pounds of sulfur dioxide per MM Btu actual heat input.
- (L) The "T&W, Incorporated" (OEPA premise number 1576010081) or any subsequent owner or operator of the "T&W, Incorporated" facility located at 562 West Ely Street, Alliance, Ohio shall not cause or permit the emission of sulfur dioxide from boiler numbers 3001 through 3005 (OEPA source numbers B001 through B005) to exceed a maximum of 4.2 pounds of sulfur dioxide per MM Btu actual heat input from each boiler and shall operate said boilers such that their combined average operating rate shall not exceed two hundred ten MM Btu per hour for any calendar day.
- (M) The "PTC Alliance" (OEPA premise number 1576010407) or any subsequent owner or operator of the "PTC Alliance" facility located at 640 Keystone Street, Alliance, Ohio shall not cause or permit the emission of sulfur dioxide from boiler numbers 1 and 2 (OEPA source numbers B001 and B002) to exceed a maximum of 4.3 pounds of sulfur dioxide per MM Btu actual heat input from each boiler and shall operate said boilers such that the following combined average operating rates are not exceeded for any calendar day: first quarter, sixty-six MM Btu per hour; second quarter, sixty-six MM Btu per hour; third quarter, twenty-five MM Btu per hour; fourth quarter, sixty-six MM Btu per hour.
- (N) The "Babcock and Wilcox Company, Alliance Research Center" (OEPA premise number 1576010601) or any subsequent owner or operator of the "Babcock and Wilcox Company, Alliance Research Center" facility located at 1562 Beeson Street Northeast, Alliance, Ohio shall not cause or permit the emission of sulfur dioxide from boiler numbers H2 and H1 (OEPA source numbers B005 and B006) to exceed a maximum of 2.1 pounds of sulfur dioxide per MM Btu actual heat input from each boiler and shall operate said boilers such that the following combined average

operating rates are not exceeded for any calendar day: first quarter, one hundred nine MM Btu per hour; second quarter, fifty-three MM Btu per hour; third quarter, ten MM Btu per hour; fourth quarter, fifty-three MM Btu per hour.

- (O) The "Timken Company" (OEPA premise number 1576000613) or any subsequent owner or operator of the "Timken Company" facility located on Gambrinus Avenue, Canton, Ohio shall not cause or permit the emission of sulfur dioxide from the following sources to exceed the amount indicated:
- (1) Boiler numbers 3 and 4 (OEPA source numbers B021 and B022); a maximum of 0.0 pounds of sulfur dioxide per MM Btu actual heat input from each boiler;
  - (2) 0.67 pounds of sulfur dioxide per MM Btu actual heat input for fossil fuel-fired steam-generating units unless otherwise specified in paragraph (O)(1) of this rule.
- (P) The "Collins & Aikman Accessory Materials" (OEPA premise number 1576050214) or any subsequent owner or operator of the "Collins & Aikman Accessory Materials" facility located at 1212 Seventh Street, Southwest, Canton, Ohio shall not cause or permit the emission of sulfur dioxide from boiler numbers 3 and 2 (OEPA source numbers B001 and B002) to exceed a maximum of 4.4 pounds of sulfur dioxide per MM Btu actual heat input from each boiler and shall operate said boilers such that the following combined average operating rates are not exceeded for any calendar day: first quarter, fourteen MM Btu per hour; second quarter, fourteen MM Btu per hour; third quarter, thirteen MM Btu per hour; fourth quarter, fourteen MM Btu per hour.
- (Q) The "Union Metal Manufacturing Company" (OEPA premise number 1576050501) or any subsequent owner or operator of the "Union Metal Manufacturing Company" facility located at 1432 Maple Avenue, Northeast, Canton, Ohio shall not cause or permit the emission of sulfur dioxide from boiler numbers 1 and 2 (OEPA source numbers B010 and B011) to exceed a maximum of 5.0 pounds of sulfur dioxide per MM Btu actual heat input from each boiler and shall operate said boilers such that the following combined average operating rates are not exceeded for any calendar day: first quarter, twenty-seven MM Btu per hour; second quarter, twenty-four MM Btu per hour; third quarter, 0.0 MM Btu per hour; fourth quarter, 0.0 MM Btu per hour.
- (R) The "Teledyne-Monarch Rubber Company" (OEPA premise number 1576080470) or any subsequent owner or operator of the "Teledyne-Monarch Rubber Company" facility located at 10 Lincoln Park, Hartsville, Ohio shall not cause or permit the emission of sulfur dioxide from boiler number 3 (OEPA source number B003) to exceed a maximum of 3.4 pounds of sulfur dioxide per MM Btu actual heat input.
- (S) The "Republic Engineered Products, Inc." (OEPA premise number 1576130696) or any subsequent owner or operator of the "Republic Engineered Products, Inc."

facility located at 410 Oberlin Avenue, Southwest, Massillon, Ohio shall not cause or permit the emission of sulfur dioxide from the following sources to exceed the amounts indicated:

- (1) "Massillon Coke Plant" (OEPA source number P028); from the combustion of coke oven gas containing hydrogen sulfide, three hundred fifty grains of hydrogen sulfide per one hundred dry standard cubic feet of coke oven gas or the emission of sulfur dioxide from any stack in excess of 1.70 pounds of sulfur dioxide per MM Btu actual heat input.
  - (2) 4.40 pounds of sulfur dioxide per MM Btu actual heat input from any fossil fuel-fired steam generating unit.
- (T) The "Republic Steel Corporation, Union Drawn Division" (OEPA premise number 1576130697) or any subsequent owner or operator of the "Republic Steel Corporation, Union Drawn Division" facility located at 401 Rose Avenue, Southeast, Massillon, Ohio shall not cause or permit the emission of sulfur dioxide from any fossil-fuel fired steam generating unit stack in excess of 4.40 pounds of sulfur dioxide per MM Btu actual heat input.
- (U) The "Hoover Company, Plant 1" (OEPA premise number 1576170258) or any subsequent owner or operator of the "Hoover Company, Plant 1" facility located at 101 East Maple Street, North Canton, Ohio shall not cause or permit the emission of sulfur dioxide in excess of 8.0 pounds per MM Btu actual heat input for the coal-fired boiler and 0.4 pounds per MM Btu actual heat input for the gas-fired boiler.

Effective: 12/08/2007

**Summit county emission limits.**

(A) No owner or operator of any applicable unit, unless otherwise specified in this rule, shall cause or permit the emission of sulfur dioxide from any stack in excess of the rate indicated in the following:

(1) For fossil fuel fired steam generating units with a total rated heat input capacity between 10.0 and 300 MM Btu per hour, the emission rate in pounds of sulfur dioxide per MM Btu actual heat input shall be calculated in accordance with the following equation:

$$EL = 17.55 Qm^{-0.3933}$$

where:

Qm is the total rated heat input capacity in MM Btu per hour, and

EL is the allowable emission rate in pounds of sulfur dioxide per MM Btu actual heat input.

(2) For fossil fuel-fired steam generating units with a total heat input capacity equal to or greater than 300 MM Btu per hour, 1.80 pounds of sulfur dioxide per MM Btu actual heat input.

(3) Process equipment, unless otherwise specified in this rule, shall not cause or permit the emission of sulfur dioxide from any stack in excess of 17.0 pounds of sulfur dioxide per ton of actual process weight input.

(B) The "Terex Division, General Motors Corporation" (OEPA premise number 1677000044) or any subsequent owner or operator of the "Terex Division, General Motors Corporation, State Route Number 91, Hudson, Ohio" shall not cause or permit the emission of sulfur dioxide from any stack at this facility in excess of 0.85 pounds of sulfur dioxide per MM Btu actual heat input.

(C) The "Western Reserve Psychiatric Habilitation Center" (OEPA premise number 1677000046) or any subsequent owner or operator of the "Western Reserve Psychiatric Habilitation Center, 1756 Sagamore Road, Northfield, Ohio" shall not cause or permit the emission of sulfur dioxide from boiler number 1 (OEPA source number B001) to exceed a maximum of 5.4 pounds of sulfur dioxide per MM Btu actual heat input.

(D) The "Tecumseh Corrugated Box Company" (OEPA premise number 1677000086) or any subsequent owner or operator of the "Tecumseh Corrugated Box Company," Jaite, Ohio shall not cause or permit the emission of sulfur dioxide from fossil fuel-fired steam generating units in excess of the rates specified below:

- (1) 1.70 pounds sulfur dioxide per MM Btu actual heat input for coal-fired units, and
  - (2) 0.70 pound sulfur dioxide per MM Btu actual heat input for oil-fired unit(s).
- (E) The "Ohio Edison Company, Gorge Plant" (OEPA premise number 1677010022) or any subsequent owner or operator of the "Ohio Edison Company, Gorge Plant, 715 East Cuyahoga Falls Avenue, Akron, Ohio" shall not cause or permit the emission of sulfur dioxide from boiler numbers 25 and 26 (OEPA source numbers B001 and B002) to exceed a maximum of 4.07 pounds of sulfur dioxide per MM Btu actual heat input from each boiler.
- (F) The "Ohio Edison Company, Beech Street Steam Heat Plant" (OEPA premise number 1677010023) or any subsequent owner or operator of the "Ohio Edison Company, Beech Street Steam Heat Plant, 40 Beech Street, Akron, Ohio" shall not cause or permit the emission of sulfur dioxide from boiler numbers 1 through 6 (OEPA source numbers B001 through B006) to exceed a maximum of 0.0 pounds of sulfur dioxide per MM Btu actual heat input from each boiler.
- (G) The "Cargill, Incorporated - Salt Division" (OEPA premise number 1677010027) or any subsequent owner or operator of the "Cargill, Incorporated - Salt Division, 2065 Manchester Road, Akron, Ohio" shall not cause or permit the emission of sulfur dioxide from coal-fired boilers at this facility in excess of 4.72 pounds of sulfur dioxide per MM Btu of actual heat input or the emission of sulfur dioxide from oil-fired boilers at this facility in excess of 0.30 pound of sulfur dioxide per MM Btu of actual heat input.
- (H) The "Novean, Inc." (OEPA premise number 1677010029) or any subsequent owner or operator of the "Novean, Inc., West Emerling Avenue, Akron, Ohio" shall not cause or permit the emission of sulfur dioxide from any stack at this facility in excess of 5.22 pounds of sulfur dioxide per MM Btu actual heat input.
- (I) The "B.F. Goodrich Company" (OEPA premise number 1677010051) or any subsequent owner or operator of the "B.F. Goodrich Company, 500 South Main Street, Akron, Ohio" shall not cause or permit the emission of sulfur dioxide from any stack at the facility in excess of the rates specified below:
- (1) 0.51 pound of sulfur dioxide per MM Btu actual heat input for oil-fired boiler 31 (OEPA source number B002);
  - (2) 7.0 pounds of sulfur dioxide per MM Btu actual heat input for coal-fired Boilers #27 and #32 (OEPA source numbers B001 and B003); and
  - (3) boiler 27 shall not be operated simultaneously with boiler 32.

- (J) The "Lockheed Martin Tactical Systems" (OEPA premise number 1677010107) or any subsequent owner or operator of the "Lockheed Martin Tactical Systems, 1210 Massillon Road, Akron, Ohio" shall not cause or permit the emission of sulfur dioxide from the AB powerhouse numbers 1 through 4 (OEPA source numbers B001 through B004) in excess of 1.10 pounds of sulfur dioxide per MM Btu of actual heat input and plant D numbers 1 through 3 (OEPA source numbers B005 through B007) in excess of 1.83 pounds of sulfur dioxide per MM Btu of actual heat input.
- (K) The "Firestone Tire and Rubber Company" (OEPA premise number 1677010129) or any subsequent owner or operator of the "Firestone Tire and Rubber Company, 1200 Firestone Parkway, Akron, Ohio" shall not cause or permit the emission of sulfur dioxide from any stack at this facility in excess of the rates specified below:
- (1) .1.76 pounds of sulfur dioxide per MM Btu of actual heat input from boiler 21 (OEPA source number B001) when oil fired and 2.87 pounds of sulfur dioxide per MM Btu of actual heat input from boilers 22 and 23 (OEPA source numbers B002 and B003) when coal fired.
  - (2) In lieu of meeting the requirements of paragraph (K)(1) of this rule, the owner or operator may elect to comply with the alternate emission limitation of 2.20 pounds of sulfur dioxide per MM Btu of actual heat input from B001, B002 and B003 when all are oil fired.
  - (3) The owner or operator shall operate no more than two of the boilers, B001, B002 and B003, simultaneously whether complying with paragraph (K)(1) or (K)(2) of this rule.
- (L) The "Goodyear Tire and Rubber Company, Plant II" (OEPA premise number 1677010192) or any subsequent owner or operator of the "Goodyear Tire and Rubber Company, Plant II, Martha Avenue, Akron, Ohio" shall not cause or permit the emission of sulfur dioxide from the following sources to exceed the amount indicated:
- (1) 2.24 pounds of sulfur dioxide per MM Btu actual heat input for coal-fired boilers A and B (OEPA source numbers B001 and B002) exiting through stack 4;
  - (2) 2.24 pounds of sulfur dioxide per MM Btu actual heat input for coal-fired boiler C (OEPA source number B003) exiting through stack 5;
  - (3) 2.24 pounds of sulfur dioxide per MM Btu actual heat input for coal-fired boiler D (OEPA source number B004) exiting through stack 6.
  - (4) Sulfur recovery plant (OEPA source number P032); a maximum of 0.1 pounds of sulfur dioxide per pound of sulfur processed.

- (5) In lieu of meeting the requirements of paragraphs (L)(1) to (L)(3) of this rule, the owner or operator may elect to comply with the alternate emission limitations and operating conditions specified below, provided the General Tire and Rubber Company (OEPA premise number 1677010375) or any subsequent owner or operator of the General Tire and Rubber Company complies with paragraph (O)(4) of this rule:
- (a) sulfur dioxide emissions shall not exceed the rates specified below:
    - (i) 4.64 pounds of sulfur dioxide per MM Btu actual heat input for coal-fired boilers A, B, and C exiting through stack 4;
    - (ii) 4.64 pounds of sulfur dioxide per MM Btu actual heat input for coal-fired boiler D exiting through stack 6;
  - (b) the owner or operator shall operate no more than three of the boilers A, B, C, or D simultaneously;
  - (c) the owner or operator shall not operate boiler D simultaneously with boilers A and B.
- (M) The "Goodyear Tire and Rubber Company, Plant I Powerhouse" (OEPA premise number 1677010193) or any subsequent owner or operator of the "Goodyear Tire and Rubber Company, Plant I Powerhouse, 1144 East Market Avenue, Akron, Ohio" shall not cause or permit the emission of sulfur dioxide from the following sources to exceed the amount indicated:
- (1) Boiler number 1 (OEPA source number B001): a maximum of 4.47 pounds of sulfur dioxide per MM Btu actual heat input;
  - (2) Boiler numbers 2 and 3 (OEPA source numbers B002 and B003); a maximum of 0.50 pounds of sulfur dioxide per MM Btu actual heat input from each boiler.
- (N) The "Kittinger Supply Company, Incorporated" (OEPA premise number 1677010372) or any subsequent owner or operator of the "Kittinger Supply Company, Incorporated, 2064 Killian Road, Akron, Ohio" shall not cause or permit the emission of sulfur dioxide from oil-fired boilers in excess of 0.80 pound of sulfur dioxide per MM Btu of actual heat input or the emission of sulfur dioxide from coal-fired boilers in excess of 2.38 pounds of sulfur dioxide per MM Btu of actual heat input.
- (O) The "General Tire and Rubber Company" (OEPA premise number 1677010375) or any subsequent owner or operator of the "General Tire and Rubber Company, One General Street, Akron, Ohio" shall not cause or permit the emission of sulfur dioxide from any stack at this facility in excess of the rates specified below:

- (1) 0.46 pound of sulfur dioxide per MM Btu actual heat input for boiler 1 (OEPA source number B001) when exiting through stack S-35;
  - (2) 0.46 pound of sulfur dioxide per MM Btu actual heat input for boiler 2 (OEPA source number B002) when exiting through stack S-36;
  - (3) 0.46 pound of sulfur dioxide per MM Btu actual heat input for boiler 3 (OEPA source number B003) when exiting through stack S-37.
  - (4) In lieu of meeting the requirements of paragraphs (O)(1) to (O)(3) of this rule, The General Tire and Rubber Company may elect to comply with the alternate emission limitation and operating condition specified below, provided the Goodyear Tire and Rubber Company Plant II (OEPA premise number 1677010192) or any subsequent owner or operator of the Goodyear Tire and Rubber Plant II complies with paragraph (L)(5) of this rule.
    - (a) The General Tire and Rubber Company shall not cause or permit the emission of sulfur dioxide from any stack in excess of 2.47 pounds of sulfur dioxide per MM Btu actual heat input for oil-fired boilers 1, 2, and 3 when exiting through a 175 foot stack.
- (P) The "Midwest Rubber Reclaiming Company" (OEPA premise number 1677020001) or any subsequent owner or operator of the "Midwest Rubber Reclaiming Company, 745 Norton Avenue, Barberton, Ohio" shall not cause or permit the emission of sulfur dioxide from the main boiler (OEPA source number B002) to exceed a maximum of 0.0 pounds of sulfur dioxide per MM Btu actual heat input.
- (Q) The "Seiberling Tire and Rubber Company, Division of Firestone" (OEPA premise number 1677020005) or any subsequent owner or operator of the "Seiberling Tire and Rubber Company, Division of Firestone, 345 Fifteenth Street, Northwest, Barberton, Ohio" shall not cause or permit the emission of sulfur dioxide from any stack at this facility in excess of 1.46 pounds of sulfur dioxide per MM Btu actual heat input.
- (R) The "Ohio Brass Company" (OEPA premise number 1677020007) or any subsequent owner or operator of the "Ohio Brass Company, Ninth and Park Streets, Barberton, Ohio" shall not cause or permit the emission of sulfur dioxide from boiler numbers 1 and 2 (OEPA source numbers B001 and B003) to exceed a maximum of 4.2 pounds of sulfur dioxide per MM Btu actual heat input from each boiler.
- (S) The "PPG Industries, Incorporated" (OEPA premise number 1677020009) or any subsequent owner or operator of the "PPG Industries, Incorporated, 95 Columbia Court, Barberton, Ohio" shall not cause or permit the emission of sulfur dioxide from boiler numbers 3 and 6 through 12 (OEPA source numbers B001 through B008) to exceed a maximum of 0.0 pounds of sulfur dioxide per MM Btu actual heat input from each boiler.

- (T) The "3M Company" (OEPA premise number 1677040002) or any subsequent owner or operator of the "3M Company, 3154 Copley Road, Copley, Ohio" shall not cause or permit the emission of sulfur dioxide from the following sources to exceed the amounts indicated:
- (1) Sulfuric acid plant number 1 (OEPA source number P003); a maximum of 40.0 pounds of sulfur dioxide per ton of one hundred per cent acid produced.
  - (2) Sulfuric acid plant number 2 (OEPA source number P004); a maximum of 6.5 pounds of sulfur dioxide per ton of one hundred per cent acid produced.
- (U) The "Sonoco Products Company" (OEPA premise number 1677090000) or any subsequent owner or operator of the "Sonoco Products Company, 59 North Main Street, Munroe Falls, Ohio" shall not cause or permit the emission of sulfur dioxide from boiler number 3 (OEPA source number B003) to exceed a maximum of 1.6 pounds of sulfur dioxide per MM Btu actual heat input and shall operate said boiler such that the average operating rate shall not exceed thirty-nine MM Btu per hour for any calendar day.
- (V) The "Daimler Chrysler facility" (OEPA premise number 1677130006) or any subsequent owner or operator of the "Daimler Chrysler facility, State Route 82, Twinsburg, Ohio" shall not cause or permit the emission of sulfur dioxide from any stack at this facility in excess of the rates specified below:
- (1) 0.86 pound of sulfur dioxide per MM Btu actual heat input for boiler number B001.
  - (2) 1.19 pounds of sulfur dioxide per MM Btu actual heat input for boiler numbers B002 and B003.

**Trumbull County emission limits.**

- (A) No owner or operator of any coal-fired steam generating unit, unless otherwise specified below, shall cause or permit the emission of sulfur dioxide from any source to exceed a maximum of 5.4 pounds of sulfur dioxide per MM Btu actual heat input.
- (B) The "Denman Tire Corporation" (OEPA premise number 0278000013) or any subsequent owner or operator of the "Denman Tire Corporation" facility located on Diehl South Road, Warren, Ohio shall not cause or permit the emission of sulfur dioxide from boiler numbers 1 and 2 (OEPA source numbers B001 and B002) to exceed a maximum of 5.0 pounds of sulfur dioxide per MM Btu actual heat input from each boiler and shall operate said boilers such that the combined average operating rate shall not exceed 26 MM Btu per hour for any calendar day.
- (C) The "United States Steel Corporation" (OEPA premise number 0278040213) or any subsequent owner or operator of the "United States Steel Corporation" facility located in McDonald, Ohio shall not cause or permit the emission of sulfur dioxide from boiler numbers 1 and 2 (OEPA source numbers B001 and B002) to exceed 2.1 pounds of sulfur dioxide per MM Btu actual heat input from each boiler and shall operate said boilers such that the following combined average operating rates are not exceeded for any calendar day: first quarter, 153 MM Btu per hour; second quarter, 153 MM Btu per hour; third quarter, 87 MM Btu per hour; fourth quarter, 125 MM Btu per hour.
- (D) The "Ohio Edison Company, Niles Plant" (OEPA premise number 0278060023) or any subsequent owner or operator of the Ohio Edison Company, Niles Plant" facility located at 1047 Belmont Avenue, Niles, Ohio shall not cause or permit the emission of sulfur dioxide from the following sources to exceed the amounts indicated:
  - (1) Boiler numbers 1 and 2 (OEPA source numbers B001 and B002); a maximum of 5.7 pounds of sulfur dioxide per MM Btu actual heat input from each boiler.
  - (2) Turbine A (OEPA source number B004); a maximum of 0.5 pounds of sulfur dioxide per MM Btu actual heat input.
- (E) The "Copperweld Specialty Steel Company" (OEPA premise number 0278080015) or any subsequent owner or operator of the "Copperweld Specialty Steel Company" facility located at 4000 Mahoning Avenue, Warren, Ohio shall not cause or permit the emission of sulfur dioxide from boiler numbers 1 and 2 (OEPA source numbers B001 and B002) to exceed a maximum of 4.2 pounds of sulfur dioxide per MM Btu actual heat input from each boiler.
- (F) The "Thomas Steel-Strip Corporation" (OEPA premise number 0278080019) or any subsequent owner or operator of the "Thomas Steel-Strip Corporation" facility located on Delaware Avenue, Northwest, Warren, Ohio shall not cause or permit the

emission of sulfur dioxide from the following sources to exceed the amounts indicated:

- (1) Boiler numbers 3 and 4 (OEPA source numbers B002 and B003); a maximum of 2.6 pounds of sulfur dioxide per MM Btu actual heat input from each boiler.
  - (2) Boiler numbers 5 (OEPA source number B013); a maximum of 1.2 pounds of sulfur dioxide per MM Btu actual heat input.
- (G) The "Delphi Packard Electric Systems" (OEPA premise number 0278080051) or any subsequent owner or operator of the "Delphi Packard Electric Systems" facility located on North River Road, Warren, Ohio shall not cause or permit the emission of sulfur dioxide from the following sources to exceed the amounts indicated:
- (1) Boiler numbers 1 and 2 (OEPA source number B001 and B002); a maximum of 1.1 pounds of sulfur dioxide per MM Btu actual heat input from each boiler.
  - (2) Boiler number 3 (OEPA source number B003); a maximum of 3.0 pounds of sulfur dioxide per MM Btu actual heat input.
- (H) The "Delphi Automotive Systems" (OEPA premise number 0278080052) or any subsequent owner or operator of the "Delphi Automotive Systems" facility located on Dana Street, Northeast, Warren, Ohio shall not cause or permit the emission of sulfur dioxide from the following sources to exceed the amounts indicated:
- (1) Boiler number 1 (OEPA source number B001); a maximum of 3.0 pounds of sulfur dioxide per MM Btu actual heat input.
  - (2) Boiler numbers 2 and 3 (OEPA source numbers B002 and B004); a maximum of 1.1 pounds of sulfur dioxide per MM Btu actual heat input from each boiler.
- (I) The "Republic Steel Corporation" (OEPA premise number 0278080235) or any subsequent owner or operator of the "Republic Steel Corporation" facility located at 1040 Pine Street, Warren Township, Ohio shall not cause or permit the emission of sulfur dioxide from the 56" hot mill furnaces (OEPA source number P001) to exceed a maximum of 1.7 pounds of sulfur dioxide per MM Btu actual heat input.
- (J) The "Republic Steel Corporation" (OEPA premise number 0278080337) or any subsequent owner or operator of the "Republic Steel Corporation" facility located on Main Street, Warren, Ohio shall not cause or permit the emission of sulfur dioxide from the following sources to exceed the amounts indicated:
- (1) Boiler number 1 (OEPA source number B001); a maximum of 3.9 pounds of sulfur dioxide per MM Btu actual heat input.

- (2) Boiler number 2 (OEPA source number B002); a maximum of 1.6 pounds of sulfur dioxide per MM Btu actual heat input.
  - (3) Sinter plant (OEPA source number P002); a maximum of 1.7 pounds of sulfur dioxide per MM Btu actual heat input.
  - (4) Coke battery numbers 1 and 2 (OEPA source numbers P003 and P004); from the combustion of coke oven gas containing hydrogen sulfide, 325 grains of hydrogen sulfide per one hundred dry standard cubic feet of coke oven gas.
- (K) The "Republic Steel Corporation" (OEPA premise number 0278080338) or any subsequent owner or operator of the "Republic Steel Corporation" facility located on Pine Street Extension, Warren, Ohio shall not cause or permit the emission of sulfur dioxide from the soaking pits, rows 1 through 10 (OEPA source numbers P002 through P004) to exceed a maximum of 1.7 pounds of sulfur dioxide per MM Btu actual heat input.

## **Chapter 3745-19: Open Burning Standards**

*Contact:* Lee Burkleca 614-728-1344  
Lee.Burkleca@EPA.State.Oh.US

3745-19-01      **Definitions.**

As used in Chapter 3745-19 of the Administrative Code:

- (A) "Agricultural waste" means any waste material generated by crop, horticultural, or livestock production practices, and includes such items as woody debris and plant matter from stream flooding, bags, cartons, structural materials, and landscape wastes that are generated in agricultural activities, but does not include land clearing waste; buildings; garbage; dead animals; animal waste; motor vehicles and parts thereof; nor economic poisons and containers thereof, unless the manufacturer has identified open burning as a safe disposal procedure.
- (B) "Economic poisons" include but are not restricted to pesticides such as insecticides, fungicides, rodenticides, miticides, nematocides and fumigants; herbicides; seed disinfectants; and defoliant.
- (C) "Emergency burning" means the burning of clean wood waste or deceased animals caused by a natural disaster or an uncontrolled event such as the following:
  - (1) A tornado.
  - (2) High winds.
  - (3) An earthquake.
  - (4) An explosion.
  - (5) A flood.
  - (6) A hail storm, a rain storm, or an ice storm.
- (D) "Garbage" means any waste material resulting from the handling, processing, preparation, cooking and consumption of food or food products.
- (E) "Landscape waste" means any plant waste material, except garbage, including trees, tree trimmings, branches, stumps, brush, weeds, leaves, grass, shrubbery, yard trimmings, and crop residues.
- (F) "Land clearing waste" means plant waste material which is removed from land, including plant waste material removed from stream banks during projects involving more than one property owner, for the purpose of rendering the land useful for residential, commercial, or industrial development. Land clearing waste also includes the plant waste material generated during the clearing of land for new agricultural development.
- (G) "Ohio EPA" means the Ohio environmental protection agency director or agencies delegated authority by the director of the Ohio environmental protection agency

pursuant to section 3704.03 of the Revised Code or the chief of any Ohio environmental protection agency district office.

- (H) "Open burning" means the burning of any materials wherein air contaminants resulting from combustion are emitted directly into the ambient air without passing through a stack or chimney. Open burning includes the burning of any refuse or salvageable material in any device not subject to or designed specifically to comply with the requirements of rule 3745-17-09 or 3745-17-10 of the Administrative Code.
- (I) "Residential waste" means any waste material, including landscape wastes, generated on a one-, two- or three-family residence as a result of residential activities, but not including garbage.
- (J) "Restricted area" means the following:
- (1) Except as provided in paragraph (I)(2) of this rule, the area within the boundary of any municipal corporation established in accordance with the provisions of Title 7 of the Revised Code, plus a zone extending one thousand feet beyond the boundaries of any such municipal corporation having a population of one thousand to ten thousand persons and a zone extending one mile beyond any such municipal corporation having a population of ten thousand persons or more according to the latest federal census.
  - (2) "Restricted area" shall not include any municipal corporation the territory of which is located on an island in Lake Erie except that, during the yearly period between Memorial Day and Labor Day, any such municipal corporation shall be required to comply with the requirements of rule 3745-19-03 of the Administrative Code.
- (K) "Unrestricted area" means all areas outside the boundaries of a restricted area as defined in paragraph (I) of this rule.
- (L) Incorporation by reference. This chapter includes references to certain matter or materials. The text of the incorporated materials is not included in the regulations contained in this chapter. The materials are hereby made a part of the regulations in this chapter. For materials subject to change, only the specific version specified in the regulation are incorporated. Material is incorporated as it exists on the effective date of this rule. Except for subsequent annual publication of existing (unmodified) Code of Federal Regulation compilations, any amendment or revision to a referenced document is not incorporated unless and until this rule has been amended to specify the new dates.
- (1) Availability. The materials incorporated by reference are available as follows:
    - (a) National Fire Protection Association. Information on the National Protection Association codes may be obtained by contacting association at 1 Batterymarch Park, Quincy, Massachusetts 02169-7471, 617-770-3000.

Codes may be ordered [www.nfpa.org/catalog/home/index.asp](http://www.nfpa.org/catalog/home/index.asp). Copies of the code at most public libraries and "The State Library of Ohio."

(2) Incorporated materials.

- (a) NFPA publication 1403; "Standard on Live Fire Training Evolutions, Chapter 4, Acquired Structures;" November 2001 Edition.

3745-19-03      **Open burning in restricted areas.**

[Comment: For dates of non-regulatory government publications, publications of recognized organizations and associations, federal rules, and federal statutory provisions referenced in this rule, see the last paragraph of rule 3745-19-01 of the Administrative Code titled "Incorporation by reference."]

- (A) No person or property owner shall cause or allow open burning in a restricted area except as provided in paragraphs (B) to (D) of this rule or in section 3704.11 of the Revised Code.
  
- (B) Open burning shall be allowed for the following purposes without notification to or permission from the Ohio EPA:
  - (1) Heating tar, welding, acetylene torches, highway safety flares, heating for warmth of outdoor workers and strikers, smudge pots and similar occupational needs.
  
  - (2) Bonfires, campfires and outdoor fireplace equipment, whether for cooking food for human consumption, pleasure, religious, ceremonial, warmth, recreational, or similar purposes, if the following conditions are met:
    - (a) They are fueled with clean seasoned firewood, natural gas or equivalent, or any clean burning fuel with emissions that are equivalent to or lower than those created from the burning of seasoned firewood;
  
    - (b) They are not used for waste disposal purposes; and
  
    - (c) They shall have a total fuel area of three feet or less in diameter and two feet or less in height.
  
  - (3) Disposal of hazardous explosive materials, military munitions or explosive devices that require immediate action to prevent endangerment of human health, public safety, property or the environment and that are excluded from the requirement to obtain a hazardous waste permit pursuant to paragraph (D)(1)(d) of rule 3745-50-45 of the Administrative Code.
  
  - (4) Recognized training in the use of fire extinguishers for commercial or industrial fire prevention.

Fires allowed by paragraphs (B)(1), (B)(2), and (B)(4) of this rule shall not be used for waste disposal purposes and shall be of minimum size sufficient for their intended purpose; the fuel shall be chosen to minimize the generation and emission of air contaminants.

- (C) Open burning shall be allowed for the following purposes with prior notification to the Ohio EPA in accordance with paragraph (B) of rule 3745-19-05 of the Administrative Code:
- (1) Prevention or control of disease or pests, with written or verbal verification to the Ohio EPA from the local health department, cooperative extension service, Ohio department of agriculture, or U.S. department of agriculture, that open burning is the only appropriate disposal method.
  - (2) Bonfires or campfires used for ceremonial purposes that do not meet the requirements of paragraph (B)(2) of this rule, provided the following conditions are met:
    - (a) They have a total fuel area no greater than five feet in diameter by five feet in height and burn no longer than three hours;
    - (b) They are not used for waste disposal purposes; and
    - (c) They are fueled with clean seasoned firewood, natural gas or equivalent, or any clean burning fuel with emissions that are equivalent to or lower than those created from the burning of seasoned firewood.
  - (3) Disposal of agricultural waste generated on the premises if the following conditions are observed:
    - (a) The fire is set only when atmospheric conditions will readily dissipate contaminants;
    - (b) The fire does not create a visibility hazard on the roadways, railroad tracks, or air fields;
    - (c) The fire is located at a point on the premises no less than one thousand feet from any inhabited building not located on said premises;
    - (d) The wastes are stacked and dried to provide the best practicable condition for efficient burning; and
    - (e) No materials are burned which contain rubber, grease, asphalt or liquid petroleum products.
- (D) Open burning shall be allowed for the following purposes upon receipt of written permission from the Ohio EPA, in accordance with paragraph (A) of rule 3745-19-05 of the Administrative Code, provided that any conditions specified in the permission are followed:

- (1) Disposal of ignitable or explosive materials where the Ohio EPA determines that there is no practical alternate method of disposal, excluding those materials identified in paragraph (B)(3) of this rule;
- (2) Instruction in methods of fire fighting or for research in the control of fires as recognized by the State fire marshal division of the Ohio department of commerce and the guidelines set forth in the National Fire Protection Association's (NFPA) publication 1403: "Standard on Live Fire Training Evolutions, Chapter 4, Acquired Structures", provided that the application required in paragraph (A)(1) of rule 3745-19-05 is submitted by the commercial or public entity responsible for the instruction;
- (3) In emergency or other extraordinary circumstances for any purpose determined to be necessary by the director and performed as identified in the appendix of this rule. If deemed necessary, the open burning may be authorized with prior oral approval by the director followed by the issuance of a written permission to open burn within seven working days of the oral approval;
- (4) Recognized horticultural, silvicultural, range, or wildlife management practices;  
and
- (5) Fires and/or pyrotechnic effects, for purposes other than waste disposal, set as part of commercial film-making or video production activities for motion pictures and television.

## 3745-19-03 Appendix

### Open Burning of Storm Debris Conditions for “Extraordinary Circumstances” Approvals Issued to Communities Demonstrating a Severe Economic Hardship for the Disposal of Storm Debris Under rules 3745- 19-03(D)(3) or 3745-19-04(C)(3) of the Administrative Code

If a community is located in an area that was declared a state of emergency by the governor for a natural disaster, such as an ice storm, tornado or flood, and the community has demonstrated a severe economic hardship in accordance with the community hardship table below, that would prevent disposal techniques such as chipping or the use of an air curtain destructor, Ohio EPA under paragraph (D)(3) of rule 3745-19-03 or paragraph (C)(3) of rule 3745-19-04 of the Administrative Code, may allow for the open burning of trees and vegetative wastes provided the local community meets the following guidelines. The local community must request and receive an Ohio EPA open burning permit from the director and the community must follow the following guidelines for open burning of the vegetative material, trees and tree limbs.

1. The material burned must be limited to vegetative material, trees and tree limbs resulting from a natural disaster.
2. All material to be burned shall be dry and in a state to sustain good combustion.
3. No burning shall take place within:
  - a. one hundred feet of any uninhabited structure or powerline;
  - b. three hundred feet of a frequently traveled municipal or township road;
  - c. five hundred feet of any state highway;
  - d. one thousand feet of any interstate highway;
  - e. one-half mile from any school or day care;
  - f. one mile from any hospital, nursing home or any other type of health care facility;
  - g. one thousand feet from any inhabited building;
  - h. one thousand feet from any fuel storage facility with three or less tanks or above ground petroleum or natural gas pipeline; or
  - i. one-half mile from any fuel storage facility with three or more tanks.
4. All fires must be attended at all times during burning until completely extinguished.
5. Burning may not be conducted during unfavorable meteorological conditions such as:
  - a. high winds;
  - b. temperature inversions;
  - c. air stagnation; or

## Appendix (cont)

- a. when a pollution alert or ozone action day has been declared.
6. If at any time a fire creates:
  - a. a threat to public health;
  - b. a nuisance; or
  - c. a fire hazard;the burning shall be extinguished.
7. All burning shall comply with other federal, state, and local laws, rules, and ordinances.
8. Adequate firefighting equipment shall be on-site for extinguishing purposes during burning times.
9. Burning shall be conducted during daylight hours only, and all fires shall be extinguished prior to sunset.
10. The pile to be burned shall be less than or equal to five thousand cubic yards and only one pile may be burned at a time.
11. The district office of Ohio EPA or the local air agency along with the local fire department and health department must be notified at least twenty-four hours in advance of the date and time of the burning.
12. The open burning permit shall be made available at the burning site to state and local officials upon request.
13. The open burning permit shall be valid for no longer than three months from the date of issuance.
14. Any change in the plan must receive an additional approval from the Ohio EPA district office or local air agency, unless the change is to reduce open burning.
15. The Director may add conditions to an approval letter, as necessary, to prevent a public nuisance or protect the public health or the environment. Such conditions may be based on local air quality conditions, including whether the area is a nonattainment county or has been redesignated from nonattainment to attainment status.

Ohio Environmental Protection Agency  
Permit Requirements for Air Curtain destructors Employed for Landscape Waste

The accumulation and open burning with air curtain destructors (ACDs) of storm debris shall be allowed by municipalities upon receipt of written permission from Ohio EPA or the appropriate local air agency, provided the following conditions are met:

1. The material to be burned shall be limited to vegetative material, trees and tree limbs.
2. The ACD shall be at least 0.5 mile from any hospital, day care, nursing home or any other type of health care facility.

## Appendix (cont)

3. The ACD shall be at least five hundred feet from any inhabited building not located on said premises.
4. All material to be burned shall be dry and in a state to sustain good combustion.
5. Burning may not be conducted during unfavorable meteorological conditions such as high winds, temperature inversions, air stagnation, when a pollution alert or ozone action day has been declared. The open burning shall not create a nuisance. The emission of smoke, ashes, dust, dirt, odors or any other substance in such a matter or amount as to endanger the health, safety or welfare of the public or cause unreasonable injury or damage to property, is a public nuisance and is prohibited.
6. All material shall be burned in an open pit which shall be constructed as follows:
  - a. The pit shall be rectangular in shape with four vertical walls.
  - b. The maximum length shall be no longer than the blower manifold.
  - c. The maximum width shall be less than ten feet. A width of six to eight feet is recommended.
  - d. The nozzles are to be directed down into the pit at a twenty-five to thirty degree angle from the horizontal.
7. The ACD may be shut off during start-up for a maximum of twenty-five minutes. Otherwise, the ACD must remain in operation until the fire has been completely extinguished. Smoldering will not be allowed.
8. The burn pit is not to be loaded above two-thirds of its total depth.
9. The loading of the pit shall be done in such a way as to minimize the amount of soil entering the pit.
10. The community must have personnel present at all times when open burning is taking place.
11. The Ohio EPA or local air agency inspector shall be notified when open burning will take place and shall be allowed complete access to the site before, during and after the operation of the ACD.

## Appendix (cont)

## Community Hardship Table

<b>Village/Township/ City Size</b>	<b>Population</b>	<b>Controlled Burning Option</b>	<b>Open Burning Option*</b>
Small Community	Population of less than 5,000	Open burning of storm debris allowed using air curtain destructor if the following conditions apply: (1) area was declared a state of emergency by the governor and (2) disposal of storm debris using other disposal methods exceeds \$5,000.	Open burning of storm debris if the following conditions apply: (1) area was declared a state of emergency by the governor and (2) disposal of storm debris using other disposal methods exceeds \$5,000
Medium Community	Population of greater than 5,000, but less than 25,000	Open burning of storm debris allowed using air curtain destructor if the following conditions apply: (1) area was declared a state of emergency by the governor and (2) disposal of storm debris using other disposal methods exceeds \$10,000.	Open burning of storm debris allowed if the following conditions apply: (1) area was declared a state of emergency by the governor and (2) disposal of storm debris using other disposal methods exceeds \$10,000.
Large Community	Population greater than 25,000	Open burning of storm debris allowed using air curtain destructor if the following conditions apply: (1) area was declared a state of emergency by the governor and (2) disposal of storm debris using other disposal methods exceeds \$20,000.	Open burning of storm debris allowed if the following conditions apply: (1) area was declared a state of emergency by the governor and (2) disposal of storm debris using other disposal methods exceeds \$20,000.

\*Allowed only if specifically approved by the director in response to community's demonstration of severe economic hardship.

3745-19-04      **Open burning in unrestricted areas.**

[Comment: For dates of non-regulatory government publications, publications of recognized organizations and associations, federal rules, and federal statutory provisions referenced in this rule, see the last paragraph of rule 3745-19-01 of the Administrative Code titled "Incorporation by reference."]

- (A) No person or property owner shall cause or allow open burning in an unrestricted area except as provided in paragraphs (B) to (C) of this rule or in section 3704.11 of the Revised Code.
- (B) Open burning shall be allowed for the following purposes without notification to or permission from the Ohio EPA:
  - (1) Heating tar, welding, acetylene torches, highway safety flares, heating for warmth of outdoor workers and strikers, smudge pots and similar occupational needs.
  - (2) Bonfires, campfires and outdoor fireplace equipment, whether for cooking food for human consumption, pleasure, religious, ceremonial, warmth, recreational, or similar purposes, if the following conditions are met:
    - (a) They are fueled with clean seasoned firewood, natural gas or equivalent, or any clean burning fuel with emissions that are equivalent to or lower than those created from the burning of seasoned firewood;
    - (b) They are not used for waste disposal purposes; and
    - (c) They shall have a total fuel area of three feet or less in diameter and two feet or less in height except when such fire is used for ceremonial purposes it may have a total fuel area no greater than five feet in diameter and five feet in height if the ceremonial fire burns no longer than three hours.
  - (3) Disposal of residential waste or agricultural waste generated on the premises if the following conditions are observed:
    - (a) The fire is set only when atmospheric conditions will readily dissipate contaminants;
    - (b) The fire does not create a visibility hazard on the roadways, railroad tracks, or air fields;
    - (c) The fire is located at a point on the premises no less than one thousand feet from any inhabited building not located on said premises;

- (d) The wastes are stacked and dried to provide the best practicable condition for efficient burning; and
  - (e) No materials are burned which contain rubber, grease, asphalt or liquid petroleum products.
- (4) Disposal of hazardous explosive materials, military munitions or explosive devices that require immediate action to prevent endangerment of human health, public safety, property or the environment and that are excluded from the requirement to obtain a hazardous waste permit pursuant to paragraph (D)(1)(d) of rule 3745-50-45 of the Administrative Code.
  - (5) Recognized training in the use of fire extinguishers for commercial or industrial fire prevention.

Fires allowed by paragraphs (B)(1), (B)(2), (B)(3) and (B)(5) of this rule shall not be used for waste disposal purposes, and shall be of the minimum size sufficient for their intended purpose; the fuel shall be chosen to minimize the generation and emission of air contaminants.

- (C) Open burning shall be allowed for the following purposes upon receipt of written permission from the Ohio EPA, in accordance with paragraph (A) of rule 3745-19-05 of the Administrative Code, provided that any conditions specified in the permission are followed:
  - (1) Disposal of ignitable or explosive materials where the Ohio EPA determines that there is no practical alternate method of disposal, excluding those materials identified in paragraph (B)(4) of this rule;
  - (2) Instruction in methods of fire fighting or for research in the control of fire as recognized by the State fire marshal division of the Ohio department of commerce and the guidelines set forth in the National Fire Protection Association's (NFPA) publication 1403: "Standard on Live Fire Training Evolutions, Chapter 4, Acquired Structures", provided that the application required in paragraph (A)(1) of rule 3745-19-05 is submitted by the commercial or public entity responsible for the instruction;
  - (3) In emergency or other extraordinary circumstances for any purpose determined to be necessary by the director and performed as identified in the appendix of rule 3745-19-03 of the Administrative Code. If deemed necessary, the open burning may be authorized with prior oral approval by the director followed by the issuance of a written permission to open burn within seven working days of the oral approval;
  - (4) Disposal of land clearing waste generated on the premises if the following conditions are observed:

- (a) The fire is set only when atmospheric conditions will readily dissipate contaminants;
  - (b) The fire does not create a visibility hazard on roadways, railroad tracks, or air fields;
  - (c) The fire is located at a point on the premises no less than one thousand feet from any inhabited building not located on said premises; and
  - (d) An air curtain destructor or other device or method determined by the director to be at least as effective is used to curtail release of air contaminants;
- (5) Recognized horticultural, silvicultural, range, or wildlife management practices; and
- (6) Fires and/or pyrotechnic effects, for purposes other than waste disposal, set as part of commercial film-making or video production activities for motion pictures and television.
- (D) Open burning shall be allowed for the prevention or control of disease or pests with written or verbal verification to the Ohio EPA from the local health department, cooperative extension service, Ohio department of agriculture, or U.S. department of agriculture, that open burning is the only appropriate disposal method.

Effective: 07/07/2006

R.C. 119.032 review dates: 01/20/2006 and 07/07/2011

Statutory Authority: R.C. Section 3704.03(E)  
Rule Amplifies: R.C. Section 3704.03(A), 3704.03(E)  
Prior Effective Dates: 6/21/76, 10/30/87, 12/20/98, 11/27/00

**(A) Permission:**

- (1) An application for permission to open burn shall be submitted in writing at least ten working days before the fire is to be set. Saturday, Sunday, and legal holidays shall not be considered a working day. It shall be in such form and contain such information as required by the Ohio EPA.
- (2) Except as provided in paragraph (A)(6) and (A)(7) of this rule, such applications shall contain, as a minimum, information regarding:
  - (a) The purpose of the proposed burning;
  - (b) The nature of quantities of material to be burned;
  - (c) The date or dates when such burning will take place;
  - (d) The location of the burning site, including a map showing distances to residences, populated areas, roadways, air fields, and other pertinent landmarks; and
  - (e) The methods or actions which will be taken to reduce the emissions of air contaminants.
- (3) Permission to open burn shall not be granted unless the applicant demonstrates to the satisfaction of the Ohio EPA that open burning is necessary to the public interest; will be conducted in a time, place, and manner as to minimize the emission of air contaminants; and will have no serious detrimental effect upon adjacent properties or the occupants thereof. The Ohio EPA may impose such conditions as may be necessary to accomplish the purpose of Chapter 3745-19 of the Administrative Code.
- (4) Except as provided in paragraph (A)(6) of this rule, permission to open burn must be obtained for each specific project. In emergencies where public health or environmental quality will be seriously threatened by delay while written permission is sought, the fire may be set with oral permission of the Ohio EPA.
- (5) Violations of any of the conditions set forth by the Ohio EPA in granting permission to open burn shall be grounds for revocation of such permission and refusal to grant future permission, as well as for the imposition of other sanctions provided by law.
- (6) The Ohio department of commerce, division of state fire marshal, may request permission to open burn on an annual basis for the purpose of training

firefighters on pre-flashover conditions using the Ohio fire academy's mobile training laboratory at either the academy or at other training sites in Ohio. The annual application required pursuant to paragraph (A)(1) of this rule shall contain information as required in paragraph (A)(2) of this rule, except the information required in paragraphs (A)(2)(c) and (A)(2)(d) of this rule need not be provided unless it is available at the time of submittal of the application. The academy shall contact the appropriate Ohio EPA district office or local air agency at least five working days before each training session of the date or dates when the training session will take place and its location. Saturday, Sunday, and legal holidays shall not be considered a working day.

- (7) For open burning defined under paragraph (D)(2) of rule 3745-19-03 and paragraph (C)(2) of rule 3745-19-04 of the Administrative Code, permission to open burn shall not be granted unless the applicant provides proof of written notice of intent to demolish received by the appropriate Ohio EPA field office in accordance with rule 3745-20-03 of the Administrative Code.

(B) Notification:

- (1) Notification shall be submitted in writing at least ten working days before the fire is to be set. Saturday, Sunday, and legal holidays shall not be considered a working day. It shall be in such form and contain such information as shall be required by the Ohio EPA.
- (2) Such notification shall inform the Ohio EPA regarding:
  - (a) The purpose of the proposed burning;
  - (b) The nature and quantities of materials to be burned;
  - (c) The date or dates when such burning will take place; and
  - (d) The location of the burning site.
- (3) The Ohio EPA, after receiving notification, may determine that the open burning is not allowed under Chapter 3745-19 of the Administrative Code and the Ohio EPA shall notify the applicant to this effect.

**Open burning unilateral order.**

- (A) The director may assess and collect administrative penalties from any person who violates any of the rules in this chapter. Through unilateral orders, the director may assess a violator not more than two hundred-fifty dollars per day for each separate violation of the rules in this chapter for open burning on residential property and not more than one thousand dollars per day for each separate violation of the rules in this chapter for open burning on industrial, commercial, institutional, or municipal property. Commercial property includes construction sites, including, but not limited to, the construction of residential homes, if the sites are not properly permitted under section 3704.11(C) of the Revised Code. A separate violation is assessed for each day (24-hour period) the violation occurs.
  
- (B) The director's authority under paragraph (A) of this rule is in addition to, and not in limitation of, the director's authority under section 3704.06 of the Revised Code to request the attorney general to initiate legal action to seek penalties of not more than twenty-five thousand dollars for each day of each violation for the violation of rules in this chapter.

## **Chapter 3745-20: Asbestos Emission Control**

*Contact:* Tom Buchan 614-644-3607  
Tom.Buchan@EPA.State.Oh.US

3745-20-01      **Definitions and incorporation by reference.**

[Comment: For dates of non-regulatory government publications, publications of recognized organizations and associations, federal rules, and federal statutory provisions referenced in this rule, see the "Incorporation by reference" section at the end of this rule.]

(A) Except as otherwise provided in paragraph (B) of this rule, the definitions in rule 3745-15-01 of the Administrative Code shall apply to this chapter.

(B) The following definitions shall apply exclusively to this chapter:

- (1) "Active waste disposal site" means any disposal site of asbestos materials other than an inactive disposal site.
- (2) "Adequately wet" means sufficiently mix or penetrate with liquid to prevent the release of particulates. If visible emissions are observed coming from asbestos-containing material, then that material has not been adequately wetted. However, the absence of visible emissions is not sufficient evidence of being adequately wet.
- (3) "Asbestos" means the asbestiform varieties of serpentinite (chrysotile), riebeckite (crocidolite), cummingtonite-grunerite, anthophyllite, and actinolite-tremolite, as determined using the method specified in 40 CFR, Part 763, Subpart E, Appendix E, Section 1, Polarized Light Microscopy (PLM).
- (4) "Asbestos-containing waste materials" means mill tailings or any waste that contains commercial asbestos and is generated by a source subject to the provisions of this chapter. This term includes filters from control devices, friable asbestos-containing material, and bags or other similar packaging contaminated with commercial asbestos. As applied to demolition and renovation operations, this term also includes regulated asbestos-containing material waste and materials contaminated with asbestos including disposable equipment and clothing.
- (5) "Asbestos material" means asbestos or any material containing asbestos.
- (6) "Asbestos mill" means any facility engaged in converting, or in any intermediate step in converting, asbestos ore into commercial asbestos. Outside storage of asbestos material is not considered a part of the asbestos mill.
- (7) "Asbestos tailings" means any solid waste that contains asbestos and is a product of asbestos mining or milling operations.

- (8) "Asbestos waste from control devices" means any waste material that contains asbestos and is collected by a pollution control device.
- (9) "Category I nonfriable asbestos-containing material" means asbestos-containing packing, gaskets, resilient floor covering, and asphalt roofing products containing more than one per cent asbestos as determined using the method specified in 40 CFR Part 763, Subpart E, Appendix E, Section 1, Polarized Light Microscopy (PLM).
- (10) "Category II nonfriable asbestos-containing material" means any material, excluding Category I nonfriable asbestos-containing material, containing more than one percent asbestos as determined using the method specified in 40 CFR Part 763, Subpart E, Appendix E, Section 1, Polarized Light Microscopy (PLM), that, when dry, cannot be crumbled, pulverized, or reduced to powder by hand pressure.
- (11) "Commercial asbestos" means any material containing asbestos that is extracted from ore and has value because of its asbestos content.
- (12) "Cutting" means to penetrate with a sharp-edged instrument and includes sawing, but does not include shearing, slicing, or punching.
- (13) "Demolition" means the wrecking, or taking out of any load-supporting structural member of a facility together with any related handling operations or the intentional burning of any facility.
- (14) "Emergency demolition" means any demolition operation conducted under a written order issued by a state or local governmental agency because a facility is structurally unsound and in danger of imminent collapse.
- (15) "Emergency renovation operation" means a renovation operation that was not planned but results from a sudden, unexpected event that, if not immediately attended to, presents a safety or public health hazard, is necessary to protect equipment from damage, or is necessary to avoid imposing an unreasonable financial burden. This term includes operations necessitated by nonroutine failures of equipment.
- (16) "Encapsulate" means to coat, bind or resurface walls, ceilings, pipes or other structures or asbestos-containing materials with suitable products to prevent friable asbestos from becoming airborne.
- (17) "Fabricating" means any processing (including but not limited to cutting, sawing, drilling) of a manufactured product that contains commercial asbestos, with the exception of processing at temporary sites (field fabricating) for the construction or restoration of facilities. In the case of friction products,

fabricating includes bonding, debonding, grinding, sawing, drilling, or other similar operations performed as part of fabricating.

- (18) "Facility" means any institutional, commercial, public, industrial or residential structure, installation, or building (including any structure, installation, or building containing condominiums or individual dwelling units operated as a residential cooperative, but excluding residential buildings having four or fewer dwelling units); any ship; and any active or inactive waste disposal site. For purposes of this definition, any structure, installation or building that contains a loft used as a dwelling is not considered a residential structure, installation or building. Any structure, installation or building that was previously subject to this rule due to its prior use or function is not excluded, regardless of its current use or function.
- (19) "Facility component" means any part of a facility, including but not limited to any structural member, pipe, duct, boiler, tank, reactor, turbine, furnace, or other equipment at or in a facility; or any structural member of a facility.
- (20) "Friable asbestos material" means any material containing more than one per cent asbestos by area, as determined using the method specified in 40 CFR Part 763, Subpart E, Appendix E, Section 1 Polarized Light Microscopy (PLM), that, when dry can be crumbled, pulverized, or reduced to powder by hand pressure. If the asbestos content is less than ten percent as determined by a method other than point counting by Polarized Light Microscopy, verify the asbestos content by point counting using Polarized Light Microscopy.
- (21) "Fugitive source" means any source of emissions not controlled by an air pollution control device.
- (22) "General ventilation device" means any air moving device specifically designed for increasing air flow through an area and exhausting the air through a HEPA filter in such a way that there is no bypass of air around the filter.
- (23) "Glove bag" means a sealed compartment with attached inner gloves used for the handling of asbestos-containing materials.
- (24) "Grinding" means to reduce to powder or small fragments and includes mechanical chipping or drilling.
- (25) "HEPA filter" means a high efficiency particulate air filter certified by the manufacturer to have a collection efficiency of not less than ninety-nine and ninety-seven one hundredths per cent as determined by ASTM D2986-71.
- (26) "In poor condition" means the binding of the material is losing its integrity as indicated by peeling, cracking, or crumbling of the material.

- (27) "Inactive waste disposal site" means any disposal site or portion thereof, which contains asbestos-containing waste materials, but where such material has not been deposited within the past year.
- (28) "Installation" means any building or structure or any group of buildings or structures at a single demolition or renovation site that are under the control of the same owner or operator, or owner or operator under common control.
- (29) "Leak-tight" means that liquids cannot escape or spill out. It also means dust-tight.
- (30) "Local exhaust ventilation and collection system" means equipment designed to collect or capture particulate material at the point of generation and which exhausts air through a HEPA filter so that there is no bypass of air around the filter.
- (31) "Malfunction" means any sudden and unavoidable failure of air pollution control equipment or process equipment, or the failure of a process to operate in a normal or usual manner so that asbestos emissions are increased. Failures of equipment shall not be considered malfunctions if they are caused in any way by poor maintenance, careless operation, or any other preventable upset conditions, equipment breakdown, or process failure.
- (32) "Manufacturing" means the combining of commercial asbestos, or, in the case of woven friction products, the combining of textiles containing commercial asbestos, with any other materials(s), including commercial asbestos, and the processing of this combination into a product. Chlorine production is considered a part of manufacturing.
- (33) "Natural barrier" means a natural object that effectively precludes or deters access. Natural barriers include physical obstacles such as cliffs, lakes, or other large bodies of water, deep and wide ravines, and mountains. Remoteness by itself is not a natural barrier.
- (34) "NESHAP" means national emission standards for hazardous air pollutants.
- (35) "Nonfriable asbestos-containing material" means any material containing more than one percent asbestos as determined using the method specified in 40 CFR Part 763, Subpart E, Appendix E, Section 1, Polarized Light Microscopy (PLM) that, when dry, cannot be crumbled, pulverized, or reduced to powder by hand pressure.
- (36) "Nonscheduled renovation operation" means a renovation operation necessitated by the routine failure of equipment, which is expected to occur within a given period based on past operating experience, but for which an exact date cannot be predicted.

- (37) "Ohio EPA field office" means any Ohio environmental protection agency district office or local air agency.
- (38) "Outside air" means the air outside buildings and structures, including, but not limited to, the air under a bridge or in an open air ferry dock.
- (39) "Owner or operator" means:
- (a) As it applies to rules 3745-20-02 to 3745-20-05 of the Administrative Code, any person who owns, leases, operates, controls, or supervises the facility being demolished or renovated or any person who owns, leases, operates, controls or supervises the demolition or renovation, or both; or
  - (b) As it applies to rules 3745-20-06 to 3745-20-07 of the Administrative Code, any person who owns, leases, operates, controls, or supervises an active or inactive asbestos waste disposal site or operation; or
  - (c) As it applies to rules 3745-20-08 to 3745-20-15 of the Administrative Code, any person who owns, leases, operates, controls, or supervises the activities referenced in those rules.
- (40) "Particulate asbestos material" means finely divided particles of asbestos or material containing asbestos.
- (41) "Planned renovation operations" means any renovation operation, or a number of such operations, in which some regulated asbestos-containing material will be removed or stripped within a given period of time and that can be predicted. Individual nonscheduled operations are included if a number of such operations can be predicted to occur during a given period of time, based on operating experience.
- (42) "Regulated asbestos-containing material" means:
- (a) Friable asbestos material;
  - (b) Category I nonfriable asbestos-containing material that has become friable;
  - (c) Category I nonfriable asbestos-containing material that will be or has been subjected to sanding, grinding, cutting, or abrading; or
  - (d) Category II non friable asbestos-containing material that has a high probability of becoming or has become crumbled, pulverized, or reduced to powder by the forces expected to act on the material in the course of demolition or renovation operations regulated by this chapter.

- (43) "Remove" means to take out regulated asbestos-containing material or facility components that contain or are covered with regulated asbestos-containing material from any facility.
  - (44) "Renovation" means altering a facility or one or more facility components in any way, including the stripping or removal of regulated asbestos-containing material from a facility component. Operations in which load-supporting structural members are wrecked or taken out are demolitions.
  - (45) "Resilient floor covering" means asbestos-containing floor tile, including asphalt and vinyl floor tile, and sheet vinyl floor covering containing more than one percent asbestos as determined using the method specified in 40 CFR Part 763, Subpart E, Appendix E, Section 1, Polarized Light Microscopy (PLM).
  - (46) "Roadways" means surfaces on which vehicles travel. This term includes public and private highways, roads, streets, parking areas, and driveways.
  - (47) "Strip" means to take off regulated asbestos-containing material from any part of a facility or facility components.
  - (48) "Structural member" means any load-supporting member of a facility, such as beams and load supporting walls; or any nonload-supporting member such as ceilings and nonload-supporting walls.
  - (49) "USEPA" means United States environmental protection agency.
  - (50) "Visible emissions" means any emissions that are visually detectable without the aid of instruments, coming from regulated asbestos-containing material or asbestos-containing waste material, or from any asbestos milling, manufacturing, or fabricating operation. This does not include condensed uncombined water vapor.
  - (51) "Waste generator" means any owner or operator of a source subject to this chapter whose act or process produces asbestos-containing waste material.
  - (52) "Waste shipment record" means the shipping document, required to be originated and signed by the waste generator, used to track and substantiate the disposition of asbestos-containing waste material.
  - (53) "Working day" means Monday through Friday and includes holidays that fall on any of the days Monday through Friday.
- (C) Incorporation by reference. This chapter includes references to certain matter or materials. The text of the incorporated materials is not included in the regulations contained in this chapter. The materials are hereby made a part of the regulations in this chapter. For materials subject to change, only the specific version specified in

the regulation are incorporated. Material is incorporated as it exists on the effective date of this rule. Except for subsequent annual publication of existing (unmodified) Code of Federal Regulation compilations, any amendment or revision to a referenced document is not incorporated unless and until this rule has been amended to specify the new dates.

- (1) Availability. The materials incorporated by reference are available as follows:
  - (a) Code of Federal Regulations. Information and copies may be obtained by writing to: "Superintendent of Documents, Attn: New Orders, PO Box 371954, Pittsburgh, PA 15250-7954." The full text of the CFR is also available in electronic format at [www.access.gpo.gov/nara/cfr/](http://www.access.gpo.gov/nara/cfr/). The CFR compilations are also available for inspection and copying at most public libraries and "The State Library of Ohio."
  - (b) Specifications of the "American Society for Testing and Materials." Information and copies may be obtained by writing to: "ASTM International, 100 Bar Harbor Drive, P.O. Box C700, West Conshohocken, Pennsylvania 19426-2959." These documents are available for purchase at [www.astm.org](http://www.astm.org). ASTM documents are also generally available at local public libraries and "The State Library of Ohio."
  - (c) "Standard Specifications for Construction of Roads and Bridges on Federal Highway Projects." Information and copies may be obtained by writing to: "Federal Highway Administration HFPD-3, 400 Seventh Street, SW, Washington D.C. 20590." The full text of the document is also available in electronic format at <http://www.wfl.fhwa.dot.gov/design/specs/>. The document is also available for inspection and copying at most public libraries and "The State Library of Ohio."
- (2) Incorporated materials.
  - (a) 29 CFR 1910.145(d)(4); "Specifications for accident prevention signs and tags;" as published in the July 1, 2006 Code of Federal Regulations.
  - (b) 40 CFR 61.154; "Standard for active waste disposal sites;" as published in the July 1, 2006 Code of Federal Regulations.
  - (c) 40 CFR Part 61, Appendix A; "National Emission Standards for Hazardous Air Pollutants Compliance Status Information Source Report;" 40 FR 48303, Oct. 14, 1975, as amended at 43 FR 8800, March 3, 1978 and 50 FR 46295, Sept. 9, 1985.
  - (d) 40 CFR Part 61, Subpart M; "National Emission Standards for Hazardous Air Pollutants;" 38 FR 8820, Apr. 6, 1973, as amended at 55 FR 48414, Nov. 20, 1990.

- (e) 40 CFR Part 763; "Asbestos;" 52 FR 41846, Oct. 30, 1987.
- (f) 40 CFR Part 763, Appendix E, Subpart E, Section 1; "Polarized Light Microscopy (PLM), Interim Method of the Determination of Asbestos in Bulk Insulation Samples;" 47 FR 23369, May 27, 1982 and 47 FR 38535, Sept. 1, 1982. Redesignated at 60 FR 31922, June 19, 1995.
- (g) ASTM D737-75; "Test Method for Air Permeability of Textile Fabrics," originally approved 1975, reapproved, Dec. 1, 2004.
- (h) ASTM D2986-71, "Standard Test Method for Collection Efficiency of High Efficiency Particulate Air Filter;" approved 1971, as amended on Jan. 15, 1995 and Sept. 10, 1995; and reapproved in 1999.
- (i) Section 401 of FP-03; "Standard Specifications for Construction of Roads and Bridges on Federal Highway Projects;" United States department of transportation, federal highway administration (FHWA); adopted 1985 (FP-85); revised 1996 (FP-96), 2003 (FP-03).

Statutory Authority: 3704.03(E)  
Rule Amplifies: 3704.03(A), 3704.03(E)  
Prior Effective Dates: 05/29/1990, 11/18/2002, 02/25/2004

3745-20-02      **Standards for demolition and renovation, facility inspection, and determination of applicability.**

- (A) Notwithstanding any other exclusion of this rule, and to determine which requirements of this rule and of rules 3745-20-03 and 3745-20-04 of the Administrative Code apply, each owner or operator of any demolition or renovation operation shall have the affected facility or part of the facility where a demolition or renovation operation will occur thoroughly inspected by a certified asbestos hazard evaluation specialist, in accordance with paragraph (C) of rule 3701-34-02 of the Administrative Code prior to the commencement of the demolition or renovation for the presence of asbestos, including category I and category II nonfriable asbestos-containing material.

Note: Inspections pursuant to paragraph (A) of this rule are subject to the Ohio department of health regulations under paragraph (C) of rule 3701-34-02 of the Administrative Code which states in part that no person shall identify, detect, or assess asbestos containing materials, [or] determine appropriate response actions unless he or she is certified as an asbestos hazard evaluation specialist by the director of the Ohio department of health in accordance with Chapter 3710. of the Revised Code.

- (B) The requirements of rules 3745-20-03, 3745-20-04, and 3745-20-05 of the Administrative Code apply to each owner or operator of a demolition or renovation operation as follows:
- (1) If the combined amount of regulated asbestos-containing material is at least two hundred sixty linear feet on pipes or at least one hundred sixty square feet on other facility components, or at least thirty-five cubic feet off facility components where the length or area could not be measured previously in a facility being demolished, all the requirements of rules 3745-20-03, 3745-20-04, and 3745-20-05 of the Administrative Code apply, except as provided in paragraph (B)(3) of this rule.
  - (2) If the combined amount of regulated asbestos-containing material is less than two hundred sixty linear feet on pipes and less than one hundred sixty square feet on other facility components, and less than thirty-five cubic feet off facility components where the length or area could not be measured previously or if there is no asbestos-containing material in a facility being demolished, only the notification requirements of paragraphs (A)(1), (A)(2), (A)(3)(a), and (A)(3)(d)(i) to (A)(3)(d)(iii), and (A)(4)(a) to (A)(4)(h), (A)(4)(m) and (A)(4)(n), and (D)(1) to (D)(3), and (E) of rule 3745-20-03 of the Administrative Code apply.
  - (3) If the operation is an emergency demolition, the requirements of paragraphs (A)(1), (A)(2), (A)(3)(c), (A)(4) {except (A)(4)(i)}, (B), and (C) of rule 3745-

20-03, and paragraphs (A)(4) to (A)(7), (B) and (D) of rule 3745-20-04, and rule 3745-20-05 of the Administrative Code apply.

- (4) In a facility being renovated, including any individual nonscheduled renovation operation, all the requirements of rules 3745-20-03, 3745-20-04 and 3745-20-05 of the Administrative Code apply if the combined amount of regulated asbestos-containing material to be stripped, removed, dislodged, cut, drilled, or similarly disturbed is at least two hundred sixty linear feet on pipes or at least one hundred sixty square feet on other facility components, or at least thirty-five cubic feet off facility components where the length or area could not be measured previously.
  - (a) Paragraph (B)(4) of this rule applies to planned renovation operations involving a series of individual nonscheduled operations, that individually are exempt from this chapter, if the combined amount of regulated asbestos-containing material to be removed or striped during a calendar year, January first through December thirty-first, exceeds two hundred sixty linear feet on pipes or at least one hundred sixty square feet on other facility components or thirty-five cubic feet off facility components.
  - (b) Paragraph (B)(4) of this rule applies to emergency renovation operations if the combined amount of regulated asbestos-containing material to be removed or stripped as a result of the sudden, unexpected event that necessitated the renovation exceeds two hundred sixty linear feet on pipes or at least one hundred sixty square feet on facility components or thirty-five cubic feet off facility components.

**Standard for notification prior to demolition or renovation.**

(A) Each owner or operator to whom this rule applies shall:

- (1) Provide the director of Ohio EPA with written notice of intention to demolish or renovate.
- (2) Delivery of the notice shall be by the United States postal service, commercial delivery service, or hand delivery. Update notice, as necessary, including when the amount of asbestos affected changes by at least twenty percent.
- (3) Postmark or deliver the notice to the Ohio EPA field office having jurisdiction in the county where the demolition or renovation is to occur as follows:
  - (a) At least ten working days before the beginning of any demolition operation, asbestos stripping or removal work, or any other activity including salvage activities and preparations that break up, dislodge or similarly disturb asbestos material if the operation is a demolition or renovation operation subject to this rule; or
  - (b) At least ten working days before the end of the calendar year preceding the year for which notice is being given for individual nonscheduled renovations described in paragraph (B)(4)(a) of rule 3745-20-02 of the Administrative Code; or
  - (c) As early as possible before, but not later than, the following working day if the operation is an emergency demolition, or if the operation is an emergency renovation;
  - (d) For asbestos stripping or removal work in any subject demolition or renovation operation (except for any nonscheduled renovation operations, emergency renovation operations and emergency demolition operations) that will begin on a date other than the one contained in the original notice, notice of the new start date must be provided to the director as follows:
    - (i) When the asbestos stripping or removal operation or demolition operation covered by this paragraph will begin after the date contained in the notice,
      - (a) Notify the Ohio EPA field office of the new start date by telephone as soon as possible before the original start date, and
      - (b) Postmark or deliver to the Ohio EPA field office a written notice of the new start date as soon as possible before, and no later than, the original start date. Delivery of the amended notice shall be by the

United States postal service, commercial delivery service, or hand delivery.

(ii) When the asbestos stripping or removal operation or demolition operation covered by this paragraph will begin on a date earlier than the original start date,

(a) Provide the Ohio EPA field office written notice of the new start date at least ten working days before asbestos stripping or removal work begins.

(b) For demolition covered by paragraph (B)(2) of rule 3745-20-02 of the Administrative Code, provide the Ohio EPA field office written notice of a new start date at least ten working days before commencement of demolition. Delivery of amended notice shall be by the United States postal service, commercial delivery service, or hand delivery.

(iii) In no event shall an operation covered by this paragraph begin on a date other than the date contained in the written notice of the new start date.

(4) Include the following information in the notice:

- (a) An indication of whether the notice is the original or a revised notification;
- (b) Name, address, and telephone number of the facility owner and of the facility operator;
- (c) Name, address, telephone number, and Ohio asbestos hazard abatement contractor license number (if applicable) of the asbestos demolition or renovation operator;
- (d) Location and street address (including building number or name and floor or room number, if appropriate), city, county, and state of the facility being demolished or renovated. Attach to the notification, any site plans, floor plans or other information that may be necessary to enable the operations to be located for inspection;
- (e) Type of operation: demolition or renovation;
- (f) Description of the facility or affected part of the facility including the size (square feet, and number of floors), age, and present and prior use of the facility;
- (g) Estimate of the amount of regulated asbestos-containing material to be removed from the facility in terms of length of pipe in linear feet, surface

area in square feet on other facility components, or volume in cubic feet where the length or area cannot be measured. Also, estimate the approximate amount of category I and category II nonfriable asbestos-containing material in the affected part of the facility that will not be removed before demolition;

- (h) Description of the procedures, including analytical methods, employed to detect the presence of and to estimate the quantity of regulated asbestos-containing material and category I and category II nonfriable asbestos-containing material in the facility;
  - (i) Scheduled starting and completion dates of asbestos removal work or any other activity, such as site preparation that would break up, dislodge, or similarly disturb asbestos material in the demolition or renovation; planned renovation operations involving individual nonscheduled operations shall only include the beginning and ending dates of the report period as described in paragraph (B)(4)(a) of rule 3745-20-02 of the Administrative Code;
  - (j) Description of the planned demolition or renovation work to be performed and method(s) to be employed including demolition or renovation techniques to be used and a description of affected facility components;
  - (k) Description of work practices and engineering controls to be used to comply with the requirements of this chapter, including asbestos removal and waste handling emission control procedures;
  - (l) Name and location of the waste disposal site where the asbestos-containing waste material will be deposited;
  - (m) Scheduled starting and completion dates of demolition or renovation;
  - (n) Description of procedures to be followed in the event that unexpected regulated asbestos-containing material is found or nonfriable asbestos-containing material becomes crumbled, pulverized, or reduced to powder;
  - (o) Name, address, and telephone number of the waste transporter;
  - (p) A certification that at least one person trained as required by paragraph (B) of rule 3745-20-04 of the Administrative Code will supervise the stripping and removal described by this notification.
- (B) In addition to the information required in paragraph (A)(4) of this rule, each owner or operator of an emergency renovation operation shall supply the date and hour that the emergency occurred, a description of the sudden unexpected event, and an explanation of how the event caused an unsafe condition, or would cause equipment

damage or would pose an unreasonable financial burden if not immediately corrected.

- (C) In addition to the information required in paragraph (A)(4) of this rule, each owner or operator of an emergency demolition shall provide the name, title, and authority of the state or local government authority who has ordered the demolition, the date that the order was issued, and the date on which the demolition is ordered to begin. A copy of the order shall be attached to the notification.
- (D) Each owner or operator shall inform the appropriate Ohio EPA field office by telephone or facsimile concerning any of the following changes to information provided by the notice. An amended written notification shall be submitted to that office as soon as possible but not later than one working day following discovery of the change. The changes requiring amended written notification are:
- (1) When the amount of regulated asbestos-containing material affected by the demolition or renovation operations changes by at least twenty per cent;
  - (2) Any deviation in the demolition or renovation schedule or in the methods to be used for asbestos removal or disposal;
  - (3) Any change in the owner or operator; and
  - (4) Any change in the name and location of the selected waste disposal site.
- (E) All notifications required by this rule shall identify the name and title of the person submitting the notification, and shall be signed and dated by the person submitting the notification. The certification required in paragraph (A)(4)(p) of this rule shall acknowledge the existence of laws prohibiting the submission of false or misleading statements and shall certify that the facts contained in the notice are true, accurate and complete.

Effective: 02/02/2007

R.C. 119.032 review dates: 11/13/2006 and 02/02/2012

CERTIFIED ELECTRONICALLY  
Certification

01/23/2007  
Date

Promulgated Under: 119.03  
Statutory Authority: 3704.03(E)  
Rule Amplifies: 3704.03(A), 3704.03(E)  
Prior Effective Dates: 5/29/1990, 11/18/2002

**Demolition and renovation procedures for asbestos emission control.**

- (A) Each owner or operator of a demolition or renovation operation to whom this rule applies shall comply with the following procedures:
- (1) Remove all regulated asbestos-containing material from a facility being demolished or renovated before any activity begins that would break up, dislodge, or similarly disturb the materials or preclude access to the materials for subsequent removal. However, regulated asbestos-containing material need not be removed before demolition, except in accordance with paragraph (E) of this rule, if:
    - (a) It is category I nonfriable asbestos-containing material that is not in poor condition and is not friable.
    - (b) It is on facility components that are encased in concrete or other similarly hard material, and the asbestos-containing materials are adequately wet whenever exposed during demolition.
    - (c) It was not accessible for testing and was, therefore, not discovered until after demolition began and, as a result of the demolition, the material cannot be safely removed. If not removed for safety reasons, the exposed regulated asbestos-containing material and any asbestos-contaminated debris must be treated as asbestos-containing waste material and adequately wet at all times until disposed of.
    - (d) It is category II nonfriable asbestos-containing material, and the probability is low the material will become crumbled, pulverized, or reduced to powder during demolition.
  - (2) When a facility component covered with, coated with or containing regulated asbestos-containing material is being taken out of the facility as units or in sections:
    - (a) Adequately wet all regulated asbestos-containing material exposed during cutting or disjuncting operations; and
    - (b) Carefully lower the units or sections to the floor and to ground level not dropping, throwing, sliding or otherwise damaging or disturbing the regulated asbestos-containing material.
  - (3) Adequately wet regulated asbestos-containing materials when they are being stripped from facility components. In renovation operations, wetting that would

unavoidably damage equipment or cause an unreasonable safety hazard, is not required if the following conditions are met:

- (a) The owner or operator submits a written request to Ohio EPA no less than thirty days prior to the starting date of such operations, asking the director to determine whether wetting to comply with this rule would unavoidably damage equipment or present an unreasonable safety hazard, and supplies the director with adequate information to make this determination; and
  - (b) The director issues a written determination that equipment damage or an unreasonable safety hazard would be unavoidable; and
  - (c) The owner or operator uses alternative emission controls in accordance with the terms of the determination. At a minimum the owner or operator shall use one of the following:
    - (i) A local exhaust ventilation and collection system designed and operated to capture the particulate asbestos materials produced by the stripping and removal of friable asbestos material. The system shall exhibit no visible emissions to the outside air or be designed and operated in accordance with the requirements in rule 3745-20-12 of the Administrative Code.
    - (ii) A glove-bag system designed and operated to contain the particulate asbestos material produced by the stripping of the asbestos materials.
    - (iii) Leak-tight wrapping to contain all regulated asbestos-containing material prior to dismantlement.
  - (d) In renovation operations where wetting would result in equipment damage or a safety hazard, and the methods allowed in paragraph (A)(3)(c) of this rule cannot be used, an alternate method may be used after obtaining written approval from the director based upon a determination that it is equivalent to wetting in controlling emissions. Requests for alternative emission control methods shall be submitted concurrently with the request contained in paragraph (A)(3)(a) of this rule.
  - (e) A copy of the director's written determination shall be displayed at the worksite during the renovation operation.
- (4) After a facility component covered with, coated with or containing regulated asbestos-containing material has been taken out of the facility as a unit or in sections, pursuant to paragraph (A)(2) of this rule, except as provided in paragraph (A)(5) of this rule, either:

- (a) Adequately wet the regulated asbestos-containing material during stripping;  
or
  - (b) During stripping, use a local exhaust ventilation and collection system operated to capture the particulate asbestos material produced by the stripping. The system must exhibit no visible emissions to the outside air or must be designed and operated in accordance with the requirements in rule 3745-20-12 of the Administrative Code; or
  - (c) Encase the regulated asbestos-containing material on the component with a suitable leak-tight container in accordance with rule 3745-20-05 of the Administrative Code. Regulated asbestos-containing material, contained in leak-tight wrapping, that has been removed in accordance with this paragraph need not be wetted.
- (5) For large facility components such as reactor vessels, large tanks, and steam generators, but not beams (which must be handled in accordance with paragraphs (A)(2), (A)(3), and (A)(4) of this rule), the regulated asbestos-containing material is not required to be stripped if all of the following requirements are met:
- (a) The component is removed, stored, transported, and either disposed of or reused without disturbing or damaging the regulated asbestos-containing material.
  - (b) The component is encased in a leak-tight wrapping.
  - (c) The leak-tight wrapping is labeled according to paragraph (D) of rule 3745-20-05 of the Administrative Code. Regulated asbestos-containing material, contained in leak-tight wrapping, that has been removed in accordance with this paragraph need not be wetted.
- (6) For all regulated asbestos-containing material including material that has been removed or stripped:
- (a) Adequately wet the materials and ensure that the materials remain adequately wet until collected and contained or treated in preparation for disposal in accordance with rule 3745-20-05 of the Administrative Code; and
  - (b) Carefully lower the materials to the ground or floor not dropping, throwing, sliding or otherwise damaging or disturbing the material;
  - (c) Transport the materials to the ground via leak-tight chutes, HEPA equipped vacuum transport system, or in leak-tight containers if the materials have

been removed or stripped more than fifty feet above ground level and were not removed as units or in sections.

- (7) When the temperature at the point of wetting is below thirty-two degrees Fahrenheit:
  - (a) Comply with paragraphs (A)(4) and (A)(6) of this rule. The owner or operator need not comply with the other wetting requirements of this rule; and
  - (b) Use a local exhaust ventilation and collection system designed and operated to capture the particulate asbestos materials produced by the stripping and removal of friable asbestos material. The system shall exhibit no visible emissions; and
  - (c) Remove facility components coated or covered with regulated asbestos-containing material as units or sections to the maximum extent possible.
  - (d) During periods when wetting operations are suspended due to freezing temperatures, the owner or operator shall record the temperature in the area containing the facility components at the beginning, middle, and end of each operating day and keep daily temperature records available for inspection by the director or his representative during normal business hours at the demolition or renovation site. The owner or operator shall retain the temperature records for at least two years.
- (B) No regulated asbestos-containing material shall be stripped, removed, or otherwise handled or disturbed at a facility regulated by this chapter unless all of the following provisions are met:
  - (1) At least one authorized representative, trained in the provisions of this chapter and the means of complying with them, is present at the location of operations.
  - (2) The training required in paragraph (B)(1) of this rule shall include, as a minimum, adequate training in the provisions of this chapter for:
    - (a) Definitions;
    - (b) Applicability (including facility inspection, asbestos material identification and classification);
    - (c) Notifications (including contents, delivery requirements and requirements to revise notices);
    - (d) Emission control procedures for removals (including, adequate wetting, encapsulation, removal of facility components in units or sections,

minimizing drop height, waste collection, local exhaust collection and ventilation systems, HEPA filters, negative pressure enclosures and glove-bag procedures);

- (e) Waste disposal work practices (including at least wetting, containers, container labeling, vehicle marking, waste shipment records and transport requirements, waste disposal site requirements);
  - (f) Reporting and record keeping; and
  - (g) Asbestos hazards and worker protection.
- (3) Every two years, the trained on-site authorized representative shall receive refresher training in the provisions of this chapter.
- (4) Evidence that the required training has been completed shall be posted and made available for inspection by the director or his representative at the demolition or renovation site.
- (C) Each owner or operator of any demolition or renovation operation, shall ensure all regulated asbestos-containing materials which have been damaged or made friable by demolition, renovation or adjacent stripping operations are repaired, encapsulated, or removed for disposal in accordance with rule 3745-20-05 of the Administrative Code, prior to the removal of emission controls.
- (D) For emergency demolition operations, adequately wet the portion of the facility that contains regulated asbestos-containing material during the wrecking operation and ensure that the materials remain adequately wet until collected for disposal in accordance with rule 3745-20-05 of the Administrative Code.
- (E) If a facility is demolished by intentional burning, or if demolition debris is to be burned, all regulated asbestos-containing material including category I and category II nonfriable asbestos-containing material must be removed in accordance with this chapter before burning.

Effective: 02/02/2007

3745-20-05      **Standard for asbestos waste handling.**

[Comment: For dates of non-regulatory government publications, publications of recognized organizations and associations, federal rules, and federal statutory provisions referenced in this rule, see the last paragraph of rule 3745-20-01 of the Administrative Code titled "Incorporation by reference."]

- (A) All asbestos-containing waste material shall be deposited as soon as is practical by the waste generator at:
- (1) A waste disposal site in Ohio operated in accordance with the provisions of rule 3745-20-06 of the Administrative Code, or
  - (2) A waste disposal site not in Ohio operated in accordance with the provisions of 40 CFR 61.154, or
  - (3) A site that converts regulated asbestos-containing material and asbestos-containing waste material into nonasbestos (asbestos-free) material in accordance with the provisions of rule 3745-20-13 of the Administrative Code.
- (B) Each owner or operator of any demolition, renovation, manufacturing, fabricating or spraying operation to whom this rule applies, shall discharge no visible emissions to the outside air during the collection, processing (including incineration), packaging, transporting, or deposition of any asbestos-containing waste material, and use one of the methods specified in paragraphs (B)(1) to (B)(4) of this rule:
- (1) Adequately wet asbestos-containing waste material as follows:
    - (a) Mix control device asbestos waste to form a slurry; adequately wet other asbestos-containing waste material; and
    - (b) Discharge no visible emissions to the outside air from collecting, mixing, wetting, and handling operations, or use the methods specified by rule 3745-20-12 of the Administrative Code to clean emissions containing particulate asbestos material before they escape to, or are vented to, the outside air; and
    - (c) After wetting, seal all asbestos-containing waste material while wet in durable leak-tight containers or wrapping that complies with paragraph (C) of this rule.
  - (2) For facilities demolished in accordance with paragraph (A)(1) of rule 3745-20-04 or paragraph (D) of rule 3745-20-04 of the Administrative Code, where asbestos was not removed prior to demolition, keep asbestos-containing waste material adequately wet at all times during and after demolition, and during handling,

loading, transport and disposal at an active waste disposal site. Asbestos-containing waste materials covered by this paragraph shall either be sealed in leak-tight containers that comply with paragraph (C) of this rule or may be transported in bulk by leak-tight transport vehicles or containers that are securely covered or enclosed and cause no visible emissions.

- (3) Process asbestos-containing waste material into nonfriable forms, as follows:
- (a) Form all asbestos-containing waste material into nonfriable pellets or other shapes;
  - (b) Discharge no visible emissions to the outside air from collection and processing operations, including incineration, or use the method specified by rule 3745-20-12 of the Administrative Code to clean emissions containing particulate asbestos material before they escape to, or are vented to, the outside air.
- (4) Use an alternative emission control and waste treatment method that has received prior approval by the director according to paragraph (A)(3) of rule 3745-20-04 of the Administrative Code.
- (5) As applied to demolition and renovation, the requirements of paragraphs (B) and (C) of this rule do not apply to category I nonfriable asbestos-containing material waste and category II nonfriable asbestos-containing material waste that has not been crumbled, pulverized, or reduced to powder.
- (C) Each waste generator shall ensure that asbestos waste containers shall meet the following minimum standards:
- (1) All containers of asbestos-containing waste material and wrapped material shall be labeled, using permanent markings with letters of sufficient size and contrast so as to be readily visible and legible, as follows:

--

<p>"DANGER CONTAINS ASBESTOS FIBERS AVOID CREATING DUST CANCER AND LUNG DISEASE HAZARD</p> <p>R.Q., ASBESTOS CLASS 9 NA 2212, III"</p>
--

For wrapped material or material to be transported off the facility site, label the containers or wrapped material with the name of the waste generator and the location at which the waste was generated.

- (2) Asbestos-containing waste materials shall be sealed in plastic bags having a thickness of at least 0.006 inch (six-mils). A second clean, leak-tight plastic bag having a thickness of at least 0.006 inch (six-mils) shall fully contain the first bag; or
- (3) A combination of a 0.006 inch (six-mils) plastic bag and a leak-tight steel, plastic, or fiber drum, or reinforced disposal box, leak-tight polypropylene woven fabric bag, or similar suitable and durable container. Drums shall be fitted with a matching lid and lock-rims, and boxes shall be banded and sealed with reinforced tape or in accordance with manufacturers recommendations; or
- (4) Facility components removed in units or sections, or materials that will not fit into containers without additional breaking, shall be sealed with at least 0.012 inch (twelve mils) of leak-tight plastic or at least 0.010 inch (ten mils) of leak-tight polypropylene woven fabric; or
- (5) Asbestos-containing waste materials, facility components, and contaminated debris may be disposed of using an alternative disposal system or may be processed into nonfriable forms using an alternative emission control and waste treatment system or method, which has received the prior written approval of the director.
  - (a) To obtain approval for an alternative asbestos waste disposal system or emission control and waste treatment method, the applicant must submit:
    - (i) Complete details regarding the reason that an alternative disposal system or emission control and waste treatment system or method is requested; and
    - (ii) The estimated quantity of materials to be disposed of or treated using this system or method; and
    - (iii) A description of the disposal system or treatment method and an operating plan describing the methods which are to be utilized to ensure that there are no visible emissions during the collection, treatment, transport and disposal of the asbestos-containing waste materials; and
    - (iv) The name(s) and address(es) of the waste disposal or treatment site(s) where the system will be utilized contingent upon the director's approval.
  - (b) Any owner or operator using an approved alternative waste disposal system or emission control and waste treatment method shall operate the system in accordance with the conditions of the director's approval.

(D) Each waste generator shall mark vehicles used to transport asbestos-containing waste material during the loading and unloading of waste so that the signs are visible.

- (1) Display the following legend in the lower panel of a sign which conforms to the requirements for twenty inch by fourteen inch upright sign specified in 29 CFR 1910.145(d)(4):

--

"DANGER ASBESTOS DUST HAZARD CANCER AND LUNG DISEASE HAZARD Authorized Personnel Only"
--

- (2) In the legend use letter sizes and styles of a visibility at least equal to the following specifications: one inch sans serif, gothic or block, in the first and second line; and at least three-fourths inches sans serif, gothic or block, in the third line; and fourteen point gothic in the fourth line. Spacing between any two lines must be at least equal to the height of the upper of the two lines.

(E) For all asbestos-containing waste material transported off the facility site, each waste generator and owner or operator of a waste disposal site shall maintain waste shipment records. The waste shipment record shall be legible, complete, signed and dated by the waste generator and waste disposal site operator as follows:

- (1) The waste shipment record shall include the following information:
- (a) The name of the work site or facility where the asbestos-containing waste was generated, the mailing address, and telephone number of the facility owner.
  - (b) The name, mailing address and telephone number of the owner or operator (waste generator) responsible for handling, packing, marking and labeling the asbestos-containing waste material.
  - (c) The name, mailing address, telephone number and site location of the active waste disposal site designated by the generator to receive the asbestos-containing waste material for disposal.
  - (d) The name and address of the local, state or USEPA regional agency responsible for administering the asbestos NESHAP program.
  - (e) A description of the asbestos-containing waste materials included in the waste shipment.
  - (f) The number and type of containers included in the waste shipment.

- (g) The approximate volume of asbestos-containing waste material included in the waste shipment in cubic yards.
  - (h) Special handling instructions or additional information relative to the waste shipment the waste generator may specify.
  - (i) A certification that the contents of this consignment are fully and accurately described by proper shipping name and are classified, packed, marked, and labeled, and are in all respects in proper condition for transport by highway according to applicable international and government regulations.
  - (j) The name, address and telephone number of the transporter.
  - (k) A signature by the transporter to acknowledge receipt of the asbestos-containing waste shipment described by the waste generator in paragraphs (E)(1)(a) to (E)(1)(i) of this rule.
  - (l) A discrepancy indication space to be completed by the owner or operator of the waste disposal site if any improperly contained asbestos waste is observed or if there is any discrepancy in the quantity of asbestos shipped and the quantity of asbestos waste received at the asbestos waste disposal site.
  - (m) A signature by the waste disposal site owner or operator to acknowledge receipt of the asbestos-containing waste shipment described by the waste generator in paragraphs (E)(1)(a) to (E)(1)(i) of this rule except as noted in the discrepancy indication space.
- (2) The waste generator and the owner or operator of the waste disposal site shall conform to the following procedures:
- (a) Before releasing the waste shipment for off-site disposal the waste generator shall complete the information required by paragraphs (E)(1)(a) to (E)(1)(h) of this rule, and sign and date on the date of shipment, the certification required by paragraph (E)(1)(i) of this rule.
  - (b) Upon receiving the waste shipment the waste disposal site operator shall:
    - (i) Sign and date the waste shipment record making note of any improperly contained asbestos-containing waste material or any discrepancy in the quantity or waste received on the discrepancy indication space and provide a copy of the waste shipment record to the transporter for his receipt and records.

- (ii) As soon as possible and no longer than thirty days after receipt of the waste, send the original completed copy of the signed waste shipment record to the waste generator and retain the remaining copy for the waste disposal site record.
  - (iii) Upon discovering a discrepancy between the quantity of waste designated on the waste shipment records and the quantity actually received, attempt to reconcile the discrepancy with the waste generator. If the discrepancy is not resolved within fifteen days after receiving the waste, immediately report the discrepancy in writing to the local, state, or USEPA regional office responsible for administering the asbestos NESHAP program for the waste generator, and, if different, the local, state, or USEPA regional office responsible for administering the asbestos NESHAP program for the disposal site. Describe the discrepancy and attempts to reconcile it, and submit a copy of the waste shipment record along with the report to Ohio EPA.
- (3) When the waste generator does not receive a completed waste shipment record signed by the owner or operator of the designated disposal site, within thirty-five days of the date the waste was accepted by the initial transporter, the waste generator shall contact the transporter and/or the owner or operator of the designated disposal site to determine the status of the waste shipment.
- (4) The waste generator shall report in writing to the Ohio EPA field office where notification was submitted if a copy of the waste shipment record, signed by the owner or operator of the designated waste disposal site, is not received by the waste generator within forty-five days of the date the waste was accepted by the initial transporter. Include in the report the following information:
  - (a) A copy of the waste shipment record for which a confirmation of delivery was not received; and
  - (b) A cover letter signed by the waste generator explaining the efforts taken to locate the asbestos waste shipment and the results of those efforts.
- (5) The waste generator and waste disposal site owner or operator, shall retain a copy of all waste shipment records for at least two years.
- (F) Each waste generator or facility owner shall furnish upon request, and make available for inspection by the director or his representative, all records required to be maintained under this rule.
- (G) When removing or transporting asbestos-containing waste material to a disposal site, each owner or operator of any demolition or renovation operation to whom this rule applies shall prepare and secure any load of asbestos-containing waste material in a

manner that prevents any visible emissions, load loss, and spillage or leakage of liquids.

**Standard for active asbestos waste disposal sites.**

- (A) Each owner or operator of an active asbestos waste disposal site shall cause or permit no visible emissions to the outside air; or shall comply with the requirements of paragraph (B) of this rule.
- (B) Rather than meet the no visible emissions requirement of paragraph (A) of this rule, each owner or operator of an active asbestos waste disposal site that receives waste that contains asbestos-containing material shall comply with the following:
  - (1) There shall be no visible emissions to the outside air from asbestos-containing waste materials during the on-site transportation, transfer, deposition or compacting operations.
  - (2) Deposition and burial operations shall be conducted in a manner which prevents handling by equipment or persons that causes asbestos-containing waste materials to be broken-up or dispersed before the materials are buried.
  - (3) As soon as practicable after deposition of the asbestos-containing waste materials but no later than at the end of each operating day, the asbestos-containing waste material deposited at the site during the operating day shall be covered with at least twelve inches of compacted nonasbestos-containing material. Alternatively, an owner or operator of an active waste disposal site may apply for approval of the director to utilize alternative control methods to bind dust, control wind erosion or convert asbestos to nonfriable forms.
  - (4) During the unloading, deposition, burial and initial compaction of asbestos-containing waste materials, the owner or operator of the active waste disposal site shall establish a restricted area adequate to deter the unauthorized entry of the general public and any unauthorized personnel from any location within one hundred feet of the operations; and
  - (5) Shall display the following information on a sign not less than twenty by fourteen inches, so that it is visible at all entrances and at intervals of three hundred feet or less along the property line or fencing immediately surrounding the restricted area using letter sizes and styles of a visibility at least equal to the following specifications: one inch sans serif, gothic or block in the first and second line; and at least three-fourths inches sans serif, gothic or block in the third line; and fourteen point gothic in the fourth line. Spacing between any two lines must be at least equal to the height of the upper of the two lines:

--

"ASBESTOS WASTE DISPOSAL SITE  
 | DO NOT CREATE DUST |  
 BREATHING ASBESTOS IS

## HAZARDOUS TO YOUR HEALTH"

- (C) For all asbestos-containing waste material received, the owner or operator of the active waste disposal site shall:
- (1) Maintain waste shipment records, in accordance with paragraph (E) of rule 3745-20-05 of the Administrative Code.
  - (2) Maintain until closure records of the location, depth, area, and quantity in cubic yards of asbestos-containing waste material within the disposal site on a map or diagram of the disposal area.
  - (3) Retain a copy of all other records and reports required by this chapter for at least two years.
- (D) The owner or operator of the active waste disposal site shall furnish all records required under this rule upon request and make them available during normal business hours for inspection by the director or his representative.
- (E) Upon closure of the facility, the owner or operator of the active waste disposal site shall comply with all the provisions of rule 3745-20-07 of the Administrative Code and shall submit a copy of the records of the asbestos waste disposal locations and quantities to the director.
- (F) The owner or operator of the active waste disposal site shall notify the director in writing at least forty-five days prior to excavating or otherwise disturbing any asbestos-containing waste material that has been deposited at a waste disposal site and covered. If the excavation will begin on a date other than the one contained in the original notice, provide notice of the new start date to the director at least ten working days before excavation begins. In no event shall excavation begin earlier than the date specified in the original notification. Include the following information in the notice:
- (1) Scheduled starting and completion dates.
  - (2) Reason for disturbing the waste.
  - (3) Procedures to be used to control emissions during the excavation, storage, transport, and ultimate disposal of the excavated asbestos-containing waste material. If deemed necessary, the director may require changes in the emission control procedures to be used.
  - (4) Location of any temporary storage site and the final disposal site.

Effective: 02/02/2007

R.C. 119.032 review dates: 11/13/2006 and 02/02/2012

CERTIFIED ELECTRONICALLY

01/23/2007  
Date

Promulgated Under: 119.03  
Statutory Authority: 3704.03(E)  
Rule Amplifies: 3704.03(A), 3704.03(E)  
Prior Effective Dates: 11/18/2002

**Standard for inactive asbestos waste disposal sites.**

[Comment: For dates of non-regulatory government publications, publications of recognized organizations and associations, federal rules, and federal statutory provisions referenced in this rule, see the last paragraph of rule 3745-20-01 of the Administrative Code titled "Incorporation by reference."]

(A) Each owner or operator of an inactive asbestos waste disposal site shall either:

- (1) Discharge no visible emissions to the outside air from an inactive asbestos waste disposal site; or
- (2) Cover the asbestos-containing waste material with at least six inches of compacted nonasbestos-containing material, and grow and maintain a cover of vegetation on the area adequate to prevent exposure of the asbestos-containing waste material; or
- (3) Cover the asbestos-containing waste material with at least two feet of compacted nonasbestos-containing material, and maintain the cover to prevent exposure of the asbestos-containing waste material.

(B) Unless a natural barrier adequately deters access by the general public, each owner or operator of an inactive asbestos waste disposal site shall install and maintain warning signs and fencing as follows, or comply with paragraph (A)(2) or (A)(3) of this rule.

- (1) Display warning signs at all entrances and at intervals of three hundred feet or less along the property line of the site or along the perimeter of the sections of the site where asbestos-containing waste material was deposited. The warning signs must:
  - (a) Be posted in such a manner and location that a person can easily read the legend; and
  - (b) Conform to the requirements for a twenty inch by fourteen inch upright format warning sign and display the following legend in the lower panel with letter sizes of at least one inch sans serif, gothic or block. Spacing between any two lines must be at least equal to the height of the upper of the two lines:

--

"ASBESTOS WASTE DISPOSAL SITE  
| DO NOT CREATE DUST |  
BREATHING ASBESTOS IS HAZARDOUS TO  
YOUR HEALTH"

- (2) Fence the perimeter of the site in a manner adequate to deter access by the general public.
  - (3) Upon request and submission of appropriate information, the director will determine whether a fence or a natural barrier adequately deters access by the public.
  - (4) When requesting a determination on whether a natural barrier adequately deters public access, supply information enabling the director to determine whether a fence or a natural barrier adequately deters access by the general public.
- (C) The owner or operator may use an alternative control method that has received prior approval of the director rather than comply with the requirements of paragraph (A) or (B) of this rule.
- (D) Each owner or operator of an inactive asbestos waste disposal site shall notify the director in writing at least forty-five days prior to excavating or otherwise disturbing or removing any asbestos-containing waste material. If the excavation will begin on a date other than the one contained in the original notice, notice of the new start date must be provided to the director at least ten working days before excavation begins. In no event shall excavation begin earlier than the date specified in the original notification. Each owner or operator shall include the following information in the notice:
- (1) Scheduled starting and completion dates.
  - (2) Reason for disturbing the waste.
  - (3) Procedures to be used to control emissions during the excavation, storage, transport, and ultimate disposal of the excavated asbestos-containing waste material. If deemed necessary, the director may require changes in the emission control procedures to be used.
  - (4) Location of any temporary storage site including names and address(es) and the final disposal site.
- (E) Within sixty days of a site becoming inactive and after November 20, 1990, record a notation of the presence of asbestos-containing waste material on the deed to the facility property and on any other instrument that would normally be examined during a title search; this notation will, in perpetuity, notify any potential purchaser of the property that:
- (1) The land has been used for the disposal of asbestos-containing waste material;  
and

- (2) The survey plot and record of the location and quantity of asbestos-containing waste disposed of within the disposal site required in paragraph (C)(2) of rule 3745-20-06 of the Administrative Code has been filed with the director; and
- (3) The site is subject to Chapter 3745-20 of the Administrative Code and 40 CFR Part 61, Subpart M.

(A) Any owner or operator of a new source to which this chapter applies with the exception of sources subject to rules 3745-20-04 (demolition and renovation), 3745-20-09 (roadways), 3745-20-14 (insulating), and 3745-20-15 (spraying) of the Administrative Code, and which has an initial start up date preceding November 20, 1990, was required to provide the following information to the director postmarked or delivered by February 18, 1991. In the case of a new source that does not have an initial start up date preceding November 20, 1990, the information shall be provided by the owner or operator, postmarked or delivered, within ninety days of the initial start up date of that source. Any owner or operator of an existing source was required to provide the following information to the director within ninety days of November 20, 1990, unless the owner or operator of the existing source has previously provided this information to the director:

- (1) A description of the emission control equipment used for each process; and
- (2) If a fabric filter device is used to control emissions,
  - (a) The airflow permeability in cubic feet per minute per square foot if the fabric filter device uses a woven fabric, and, if the fabric is synthetic, whether the fill yarn is spun or not spun; and
  - (b) The density in ounces per square yard, the minimum thickness in inches, and the airflow permeability in cubic feet per minute per square foot, if the fabric filter device uses a felted fabric.
- (3) If a HEPA filter is used to control emissions, the certified efficiency.
- (4) For asbestos waste disposal handling sources subject to rule 3745-20-05 of the Administrative Code:
  - (a) A brief description of each process that generates asbestos-containing waste material; and
  - (b) The average volume of asbestos-containing waste material disposed of, measured in cubic yards per day; and
  - (c) The emission control methods used in all stages of waste disposal; and

- (d) The type of disposal site or treatment site used for ultimate disposal, the name of the site operator, and the name and location of the disposal site.
- (5) For active waste disposal and inactive waste disposal sites subject to rules 3745-20-06 and 3745-20-07 of the Administrative Code:
- (a) A brief description of the site; and
  - (b) The method or methods used to comply with the standard, or alternative procedures to be used.
- (B) Any changes in the information provided for paragraph (A) of this rule by any existing source shall be provided to the director, postmarked or delivered, within thirty days after the change.
- (C) All owners and operators of sources except roadways, demolition and renovation, spraying, and insulating materials shall comply with this paragraph. In addition to the information required in paragraph (A) of this rule, the owner or operator of each existing source or each new source which had an initial start up before the effective date of this rule shall provide the following information in writing to the director within ninety days after the effective date of this rule. The information described in this rule must be reported using the format provided in 40 CFR Part 61, Appendix A:
- (1) Name and address of the owner or operator.
  - (2) The location of the source.
  - (3) The type of hazardous air pollutants potentially emitted by the stationary source.
  - (4) A brief description of the nature, size, design, and method of operation of the stationary source including the operating design capacity of the source. The description must identify each point or fugitive source of emission for each hazardous air pollutant.
  - (5) The average weight per month of the hazardous materials being processed by the source over the last twelve months preceding the date of the report.
  - (6) A description of the existing control equipment for each emission point including:
    - (a) Each control device for each hazardous air pollutant; and
    - (b) Estimated control efficiency (per cent) for each control device.
  - (7) A statement by the owner or operator of the source as to whether the source can comply with the standards within ninety days after the effective date.

- (D) Any changes in the information provided for paragraph (C) of this rule by any existing source shall be provided to the director, postmarked or delivered, within thirty days after the change.
  
- (E) No person shall install or operate a new source regulated under rule 3745-20-06, 3745-20-10, 3745-20-11, or 3745-20-13 of the Administrative Code unless the owner or operator applies for and obtains from the Ohio EPA a permit-to-install in accordance with the requirements of Chapter 3745-31 of the Administrative Code and a permit-to-operate in accordance with the requirements of Chapter 3745-35 of the Administrative Code.

3745-20-09      **Standard for roadways.**

[Comment: For dates of non-regulatory government publications, publications of recognized organizations and associations, federal rules, and federal statutory provisions referenced in this rule, see the last paragraph of rule 3745-20-01 of the Administrative Code titled "Incorporation by reference."]

No person may construct or maintain a roadway with asbestos tailings or asbestos-containing waste material on that roadway, unless, for asbestos tailings:

- (A) It is a temporary roadway on an area of asbestos ore deposits (asbestos mine); or
- (B) It is a temporary roadway at an active asbestos mill site and is encapsulated with a resinous or bituminous binder. The encapsulated road surface must be maintained at a minimum frequency of once per year to prevent dust emissions; or
- (C) It is encapsulated in asphalt concrete meeting the United States department of transportation, federal highway administration specifications contained in Section 401 of FP-03; "Standard Specifications for Construction of Roads and Bridges on Federal Highway Projects," or their equivalent.

**Standards for asbestos mills and manufacturing.**

- (A) This standard applies to asbestos mills and to the following manufacturing operations using commercial asbestos.
- (1) The manufacture of cloth, cord, wicks, tubing, tape, twine, rope, thread, yarn, roving, lap, or other textile materials.
  - (2) The manufacture of cement products.
  - (3) The manufacture of fireproofing and insulating materials.
  - (4) The manufacture of friction products.
  - (5) The manufacture of paper, millboard, and felt.
  - (6) The manufacture of floor tile.
  - (7) The manufacture of paints, coatings, caulks, adhesives, and sealants.
  - (8) The manufacture of plastics and rubber materials.
  - (9) The manufacture of chlorine utilizing asbestos diaphragm technology.
  - (10) The manufacture of shotgun shell wads.
  - (11) The manufacture of asphalt concrete.
- (B) Each owner or operator of an asbestos mill or any of the asbestos manufacturing operations to which this rule applies shall either:
- (1) Discharge no visible emissions to the outside air from these operations or from any building or structure in which they are conducted or from any other fugitive sources; or
  - (2) Use the methods specified by rule 3745-20-12 of the Administrative Code to clean emissions from these operations containing particulate asbestos material before they escape to, or are vented to, the outside air; or
  - (3) Monitor each potential source of asbestos emissions from any part of the manufacturing facility, including air cleaning devices, process equipment, and buildings housing material processing and handling equipment, at least once on each day of operation, during daylight hours for visible emissions to the outside air during periods of operation. The monitoring shall be by visual observation of at least fifteen seconds duration per source of emissions; or

- (4) Inspect each air cleaning device at least once each week for proper operation and for changes that signal the potential for malfunctions to the maximum extent possible without dismantling other than opening the device, including the presence of tears, holes, and abrasions in filter bags and for dust deposits on the clean side of bags. For air cleaning devices that cannot be inspected on a weekly basis according to this paragraph, submit to the Ohio EPA field office, and revise as necessary, a written maintenance plan to include, at a minimum, the following:
  - (a) Maintenance schedule.
  - (b) Recordkeeping plan.
- (5) Maintain records of the results of visible emission monitoring and air cleaning device inspections using a form with the following information.
  - (a) Date and time of each inspection.
  - (b) Presence or absence of visible emissions.
  - (c) Condition of fabric filters, including presence of any tears, holes and abrasions.
  - (d) Presence of dust deposits on clean side of fabric filters.
  - (e) Brief description of corrective actions taken, including date and time.
  - (f) Daily hours of operation for each air cleaning device.
- (6) Furnish upon request, and make available at the affected facility during normal business hours for inspection by the director or his representative, all records required under this rule.
- (7) Retain a copy of all monitoring and inspection records for at least two years.
- (8) Submit semiannually a copy of the visible emission monitoring records to the Ohio EPA field office if visible emissions occurred during the report period. Semiannual reports shall be postmarked by the thirtieth day following the end of the six-month period.

3745-20-11      **Standard for fabricating.**

- (A) This rule applies to the following fabricating operations using commercial asbestos:
- (1) The fabrication of cement building products.
  - (2) The fabrication of friction products except those operations that primarily install asbestos friction materials on motor vehicles.
  - (3) The fabrication of cement or silicate board for ventilation hoods; ovens; electrical panels; laboratory furniture, bulkheads, partitions, and ceilings for marine construction; and flow control devices for the molten metal industry.
- (B) Each owner or operator of any of the fabricating operations to which this rule applies shall either:
- (1) Discharge no visible emissions to the outside air from any of the operations, or from any building or structure in which they are conducted, or from any other fugitive sources; or
  - (2) Use the methods specified by rule 3745-20-12 of the Administrative Code to clean emissions containing particulate asbestos material before they escape to, or are vented to, the outside air; or
  - (3) Monitor each potential source of asbestos emissions from any part of the fabricating facility, including air cleaning devices, process equipment, and buildings that house equipment for material processing and handling, at least once each day of operation, during daylight hours, for visible emissions to the outside air during periods of operation. The monitoring shall be by visual observation of at least fifteen seconds duration per source of emissions; or
  - (4) Inspect each air cleaning device to the maximum extent possible without dismantling other than opening the device at least once each week for proper operation and for changes that signal the potential for malfunctions, including the presence of tears, holes, and abrasions in filter bags and for dust deposits on the clean side of bags. For air cleaning devices that cannot be inspected on a weekly basis according to this paragraph, submit to the Ohio EPA field office, and revise as necessary, a written maintenance plan to include, at a minimum, the following:
    - (a) Maintenance schedule.
    - (b) Recordkeeping plan.

- (5) Maintain records of the results of daily visible emission monitoring and weekly air cleaning device inspections, and include the following information:
  - (a) Date and time of each inspection.
  - (b) Presence or absence of visible emissions.
  - (c) Condition of fabric filters, including presence of any tears, holes, and abrasions.
  - (d) Presence of dust deposits on clean side of fabric filters.
  - (e) Brief description of corrective actions taken, including date and time.
  - (f) Daily hours of operation for each air cleaning device.
- (6) Furnish upon request and make available at the affected facility during normal business hours for inspection by the director or his representative, all records required under this rule.
- (7) Retain a copy of all monitoring and inspection records for at least two years.
- (8) Submit semiannually a copy of the visible emission monitoring records to the Ohio EPA field office if visible emissions occurred during the report period. Semiannual reports shall be postmarked by the thirtieth day following the end of the six-month period.

3745-20-12      **Air cleaning.**

[Comment: For dates of non-regulatory government publications, publications of recognized organizations and associations, federal rules, and federal statutory provisions referenced in this rule, see the last paragraph of rule 3745-20-01 of the Administrative Code titled "Incorporation by reference."]

(A) The owner or operator who uses air cleaning, as specified in this chapter of the Administrative Code shall:

- (1) Use fabric filter collection devices, except as noted in paragraph (B) of this rule, as follows:
  - (a) Ensure that the airflow permeability, as determined by ASTM D737-75, does not exceed thirty cubic feet per minute per square foot for woven fabrics or thirty-five cubic feet per minute per square foot for felted fabrics, except that forty cubic feet per minute per square foot for woven and forty-five cubic feet per minute per square foot for felted fabrics is allowed for filtering air from asbestos ore dryers; and
  - (b) Ensure that felted fabric weighs at least fourteen ounces per square yard and is at least one-sixteenth inch thick throughout; and
  - (c) Avoid the use of synthetic fabrics that contain fill yarn other than that which is spun.
- (2) Properly install, use, operate, and maintain all air-cleaning equipment authorized by this rule. Bypass devices may be used only during upset or emergency conditions and then only for so long as it takes to shut down the operation generating the particulate asbestos material.
- (3) For fabric filter collection devices installed after January 10, 1989, provide for easy inspection for faulty bags.

(B) There are the following exceptions to paragraph (A)(1) of this rule.

- (1) If the use of fabric creates a fire or explosion hazard, or if the director determines that a fabric filter is not feasible, the director may authorize as a substitute the use of wet collectors designed to operate with a unit contacting energy of at least forty inches water gauge pressure.
- (2) Use a HEPA filter that is manufacturer certified to be at least 99.97 per cent efficient for 0.3 micron particles.

- (3) The director may authorize the use of filtering equipment other than described in paragraphs (A)(1), (B)(1) and (B)(2) of this rule if the owner or operator demonstrates to the director's satisfaction that it is equivalent to the described equipment in filtering particulate asbestos material.

Prior Effective Dates: 11/18/2002

**Standard for operations that convert asbestos-containing waste material into nonasbestos (asbestos-free) material.**

- (A) Each owner or operator of an operation that converts regulated asbestos-containing material and asbestos-containing waste material into nonasbestos (asbestos-free) material shall obtain from the director a permit-to-install pursuant to Chapter 3745-31 of the Administrative Code to construct the facility and a permit-to-operate the facility pursuant to Chapter 3745-35 of the Administrative Code.
- (1) To obtain a permit-to-install the owner or operator shall submit a completed application in accordance with Chapter 3745-31 of the Administrative Code, and provide the director with the following information:
    - (a) Description of waste feed handling and temporary storage,
    - (b) Description of process operating conditions,
    - (c) Description of the handling and temporary storage of the end product,
    - (d) Description of the protocol to be followed when analyzing output materials by transmission electron microscopy,
    - (e) Performance test protocol, including provisions for obtaining information required under paragraph (A)(2) of this rule.
    - (f) The director may require that a demonstration of the process be performed prior to issuing the permit to install.
  - (2) Prior to being issued a permit to operate, the owner or operator shall conduct a start-up performance test. Test results shall include:
    - (a) A detailed description of the types and quantities of nonasbestos material, regulated asbestos-containing material, and asbestos-containing waste material processed, including but not limited to asbestos cement products, friable asbestos insulation, plaster, wood, plastic, wire, etc. Test feed is to include the full range of materials that will be encountered in actual operation of the process.
    - (b) Results of analyses, using polarized light microscopy, that document the asbestos content of the wastes processed.
    - (c) Results of analyses, using transmission electron microscopy, that document that the output materials are free of asbestos. Samples for analysis are to be collected as eight-hour composite samples (one two hundred gram (seven ounce) sample per hour), beginning with the initial introduction of regulated

asbestos-containing material or asbestos-containing waste material and continuing until the end of the performance test.

- (d) A description of operating parameters, such as temperature and residence time, defining the full range over which the process is expected to operate to produce nonasbestos (asbestos-free) materials. Specify the limits for each operating parameter within which the process will produce nonasbestos (asbestos-free) materials.
- (e) The length of the test.

(B) During the initial ninety days of operation, each owner or operator of an operation that converts regulated asbestos-containing material and asbestos-containing waste material into nonasbestos (asbestos-free) material, shall:

- (1) Continuously monitor and log the operating parameters identified during start-up performance tests that are intended to ensure the production of nonasbestos (asbestos-free) output material.
- (2) Monitor input materials to ensure that they are consistent with the test feed materials described during start-up performance tests in paragraph (A)(2)(a) of this rule.
- (3) Collect and analyze samples, taken as ten-day composite samples (one two hundred gram (seven ounce) sample collected every eight hours of operation) of all output material for the presence of asbestos. Composite samples may be for fewer than ten days. Transmission electron microscopy (TEM) shall be used to analyze the output material for the presence of asbestos. During the initial ninety-day period, all output materials must be stored on-site until analysis shows the material to be asbestos-free or disposed of as asbestos-containing waste material in accordance with rule 3745-20-05 of the Administrative Code.

(C) After the initial ninety days of operation each owner or operator of an operation that converts regulated asbestos-containing material and asbestos-containing waste material into nonasbestos (asbestos-free) material shall:

- (1) Continuously monitor and record the operating parameters identified during start-up performance testing and any subsequent performance testing.
- (2) Continuously monitor any output produced during a period of deviation from the range of operating conditions established to ensure the production of nonasbestos (asbestos-free) material.
- (3) Output materials shall be:

- (a) Disposed of as asbestos-containing waste material according to rule 3745-20-05 of the Administrative Code, or
  - (b) Recycled as waste feed during process operation within the established range of operating conditions, or
  - (c) Stored temporarily on-site in a leak-tight container until analyzed for asbestos content. Any product material that is not asbestos-free shall be either disposed of as asbestos-containing waste material or recycled as waste feed to the process.
- (4) Collect and analyze monthly composite samples (one two hundred gram (seven ounce) sample collected every eight hours of operation) of the output material. Transmission electron microscopy shall be used to analyze the output material for the presence of asbestos.
- (D) Each owner or operator of an operation that converts regulated asbestos-containing material and asbestos-containing waste material into nonasbestos (asbestos-free) material shall discharge no visible emissions to the outside air from any part of the operation, or use the methods specified by rule 3745-20-12 of the Administrative Code to clean emissions containing particulate asbestos material before they escape to, or are vented to, the outside air.
- (E) Each owner or operator of an operation that converts regulated asbestos-containing material and asbestos-containing waste material into nonasbestos (asbestos-free) material shall maintain records on-site and include the following information:
- (1) Results of start-up performance testing and all subsequent performance testing, including operating parameters, feed characteristic, and analyses of output materials;
  - (2) Results of the composite analyses required during the initial ninety days of operation under paragraph (B) of this rule;
  - (3) Results of the monthly composite analyses required under paragraph (C) of this rule;
  - (4) Results of continuous monitoring and logs of process operating parameters required under paragraphs (B) and (C) of this rule;
  - (5) The information on waste shipments received as required in paragraph (B) of rule 3745-20-06 of the Administrative Code;
  - (6) For output materials where no analyses were performed to determine the presence of asbestos, record the name and location of the purchaser or disposal

site to which the output materials were sold or deposited, and the date of sale or disposal;

(7) Retain records required by this rule for at least two years.

(F) Each owner or operator of an operation that converts regulated asbestos-containing material and asbestos-containing waste material into nonasbestos (asbestos-free) material shall submit the following reports to the director:

(1) A report for each analysis of product composite samples performed during the initial ninety days of operation.

(2) A quarterly report, including the following information concerning activities during each consecutive three-month period:

(a) Results of analyses of monthly product composite samples;

(b) A description of any deviation from the operating parameters established during performance testing, the duration of the deviation, and steps taken to correct the deviation;

(c) Disposition of any product produced during a period of deviation, including whether it was recycled, disposed of as asbestos-containing waste material, or stored temporarily on-site until analyzed for asbestos content;

(d) The information on waste disposal activities as required in paragraph (B)(2) of rule 3745-20-06 of the Administrative Code.

(G) Output material, found to be asbestos free according to paragraph (C)(3) of this rule, is not subject to any of the provisions of this chapter. Output materials in which asbestos is detected, or output materials produced when the operating parameters deviated from those established during the start-up performance testing, unless shown by transmission electron microscopy analysis to be asbestos-free, shall be considered to be asbestos-containing waste and shall be handled and disposed of according to rules 3745-20-05 and 3745-20-06 of the Administrative Code or reprocessed while all of the established operating parameters are being met.

3745-20-15      **Standard for spraying.**

[Comment: For dates of non-regulatory government publications, publications of recognized organizations and associations, federal rules, and federal statutory provisions referenced in this rule, see the last paragraph of rule 3745-20-01 of the Administrative Code titled "Incorporation by reference."]

- (A) No owner or operator of an operation in which asbestos-containing materials are spray applied on buildings, structures, pipes, and conduits, shall use material containing more than one per cent asbestos, as determined using the method specified in 40 CFR Part 763, Subpart E, Appendix E, Section 1, Polarized Light Microscopy (PLM), except as provided in paragraph (C) of this rule.
- (B) The owner or operator of an operation in which asbestos-containing materials that contain more than one per cent asbestos, as determined using the method specified in 40 CFR Part 763, Subpart E, Appendix E, Section 1, Polarized Light Microscopy (PLM), are spray applied on equipment and machinery, except as provided in paragraph (C) of this rule, shall:
  - (1) Notify the director at least twenty days before beginning the spraying operation. Include the following information in the notice:
    - (a) Name and address of owner or operator.
    - (b) Location of spraying operation.
    - (c) Procedures to be followed to meet the requirements of this rule.
  - (2) Discharge no visible emissions to the outside air from spray-on application of asbestos-containing material or use the methods specified by rule 3745-20-12 of the Administrative Code to clean emissions containing particulate asbestos material before they escape to, or are vented to, the outside air.
- (C) The requirements of paragraphs (A) and (B) of this rule do not apply to the spray-on application of materials where the asbestos fibers in the materials are encapsulated with a bituminous or resinous binder during spraying and the materials are not friable after drying.
- (D) Owners or operators of sources subject to this rule are exempt from the requirements of Chapters 3745-31, and 3745-35, and rule 3745-20-08 of the Administrative Code.

3745-21-01      **Definitions.**

[Comment: For dates of non-regulatory government publications of recognized organizations and associations, federal rules, and federal statutory provisions referenced in this rule, see the last paragraph of this rule titled "Incorporation by reference".]

(A) Except as otherwise provided in this rule, the definitions in rule 3745-15-01 of the Administrative Code shall apply to this chapter.

(B) As used in Chapter 3745-21 of the Administrative Code:

- (1) "ASTM" means the American society for testing and materials also known as ASTM international.
- (2) "Btu" means British thermal unit.
- (3) "Btu per hour-foot-degree-Fahrenheit" means British thermal unit per hour-foot-degree-Fahrenheit.
- (4) "CTG" means control technology guideline. A CTG is a USEPA guidance document that triggers a responsibility under Section 182(b)(2) of the Clean Air Act for states to submit reasonably available control technology (RACT) rules for stationary sources of VOC emissions as part of their state implementation plans. Each CTG contains a presumptive norm for RACT for a specific category, based on USEPA's evaluation of that category. The following rules promulgated by the Ohio environmental protection agency cover categories for which USEPA has issued a CTG:
  - (a) Paragraphs (C), (D), (E), (F), (G), (H), (I), (J), (K), (L), (M), (O), (P), (Q), (R), (T), (U), (W), (X), (Y), (Z), (BB), (CC), (DD), (EE), and (DDD) of rule 3745-21-09 of the Administrative Code; and
  - (b) Rules 3745-21-13, 3745-21-15, 3745-21-19, and 3745-21-20 of the Administrative Code.
- (5) "DC" means direct current.
- (6) "Day" means a period of twenty-four consecutive hours beginning at midnight local time, or beginning at a time consistent with a facility's operating schedule.
- (7) "Exempt solvent" means any of the compounds which are specifically identified in paragraph (B)(6) of this rule as not being volatile organic compounds.
- (8) "Incinerator" means a combustion apparatus designed for high temperature operation in which solid, semisolid, liquid, or gaseous combustible wastes are ignited and burned.

- (9) "Non-CTG" means all other stationary sources of VOC emissions for which the USEPA has not developed a control technology guideline document.
- (10) "Organic compound" means any chemical compound containing carbon excluding carbon monoxide, carbon dioxide, carbonic acid, metallic carbides, metallic carbonates, ammonium carbonate, methane (except methane from landfill gases), and ethane.
- (11) "Permit-to-install and operate" or "PTIO" means a permit-to-install and a permit-to-operate applicable to air contaminant sources not located at facilities subject to Chapter 3745-77 of the Administrative Code.
- (12) "Potential to emit" means the maximum capacity of a facility or stationary source to emit an organic compound or VOC under its physical and operational design. Any physical or operational limitation on the capacity of the facility or stationary source to emit an organic compound or VOC, including air pollution control equipment and restrictions on hours of operation or on the type or amount of material combusted, stored or processed, shall be treated as part of its design if the limitation or the effect it would have on emissions is federally enforceable or legally and practicably enforceable by the state.
- (13) "USEPA" means United States environmental protection agency.
- (14) "Volatile organic compound" or "VOC" means any organic compound which participates in atmospheric photochemical reactions. (This includes any organic compound other than the following compounds: methane, ethane, methyl chloroform (1,1,1-trichloroethane), CFC-113 (1,1,2-trichloro-1,2,2-trifluoroethane), methylene chloride, CFC-11 (trichlorofluoromethane), CFC-12 (dichlorodifluoromethane), HCFC-22 (chlorodifluoromethane), HFC-23 (trifluoromethane), CFC-114 (1,2-dichloro-1,1,2,2-tetrafluoroethane), CFC-115 (chloropentafluoroethane), HCFC-123 (1,1,1-trifluoro-2,2-dichloroethane), HFC-134a (1,1,1,2-tetrafluoroethane), HCFC-141b (1,1-dichloro-1-fluoroethane), HCFC-142b (1-chloro-1,1-difluoroethane), HCFC-124 (2-chloro-1,1,1,2-tetrafluoroethane), HFC-125 (pentafluoroethane), HFC-134 (1,1,2,2-tetrafluoroethane), HFC-143a (1,1,1-trifluoroethane), HFC-152a (1,1-difluoroethane), PCBTF (parachlorobenzotrifluoride), cyclic, branched, or linear completely methylated siloxanes, acetone, perchloroethylene (tetrachloroethylene), HCFC-225ca (3,3-dichloro-1,1,1,2,2-pentafluoropropane), HCFC-225cb (1,3-dichloro-1,1,2,2,3-pentafluoropropane), HFC 43-10mee (1,1,1,2,3,4,4,5,5,5-decafluoropentane), HFC-32 (difluoromethane), HFC-161 (ethylefluoride), HFC-236fa (1,1,1,3,3,3-hexafluoropropane), HFC-245ca (1,1,2,2,3-pentafluoropropane), HFC-245ea (1,1,2,3,3-pentafluoropropane), HFC-245eb (1,1,1,2,3-pentafluoropropane), HFC-245fa (1,1,1,3,3-pentafluoropropane), HFC-236ea (1,1,1,2,3,3-hexafluoropropane), HFC-365mfc (1,1,1,3,3-pentafluorobutane), HCFC-31 (chlorofluoromethane), HCFC-151a (1-chloro-1-fluoroethane), HCFC-123a (1,2-dichloro-1,1,2-trifluoroethane), C<sub>4</sub>F<sub>9</sub>OCH<sub>3</sub> or HFE-7100 (1,1,1,2,2,3,3,4,4-nonafluoro-4-methoxy-butane),

(CF<sub>3</sub>)<sub>2</sub>CF<sub>2</sub>OCH<sub>3</sub>(2-(difluoromethoxymethyl) -1,1,1,2,3,3,3-heptafluoropropane), C<sub>4</sub>F<sub>9</sub>OC<sub>2</sub>H<sub>5</sub> or HFE-7200 (1-ethoxy-1,1,2,2,3,3,4,4,4-nonafluorobutane), (CF<sub>3</sub>)<sub>2</sub>CF<sub>2</sub>OC<sub>2</sub>H<sub>5</sub> (2-(ethoxydifluoromethyl) -1,1,1,2,3,3,3-heptafluoropropane), methyl acetate, n-C<sub>3</sub>F<sub>7</sub>OCH<sub>3</sub> or HFE-7000 (1,1,1,2,2,3,3-heptafluoro-3-methoxy-propane), HFE-7500 (3-ethoxy-1,1,1,2,3,4,4,5,5,6,6,6-dodecafluoro-2-(trifluoromethyl) hexane), HFC 227ea (1,1,1,2,3,3,3-heptafluoropropane), methyl formate, t-butyl acetate, dimethyl carbonate, propylene carbonate, any organic compound listed in 40 CFR 51.100(s)(1) or (s)(5), and any class of perfluorocarbon compounds that consists of (a) cyclic, branched, or linear, completely fluorinated alkanes, (b) cyclic, branched, or linear, completely fluorinated ethers with no unsaturations, (c) cyclic, branched, or linear, completely fluorinated tertiary amines with no unsaturations, or (d) sulfur-containing perfluorocarbons with no unsaturations and with sulfur bonds only to carbon and fluorine. These compounds have been determined to have negligible photochemical reactivity. For purposes of determining compliance with emission limits, VOC will be measured by the approved test methods. Where such a method also inadvertently measures compounds with negligible photochemical reactivity, an owner or operator may exclude these negligibly reactive compounds when determining compliance with an emission standard.)

(C) As used in rule 3745-21-07 of the Administrative Code (pertaining to the control of emissions of organic materials from stationary sources):

- (1) (Reserved)
- (2) "Effluent water separator" means any tank, box, sump, or other container in which any volatile photochemically reactive material floating on or entrained or contained in water entering such tank, box, sump, or other container is physically separated and removed from such water prior to outfall, drainage, or recovery of such water.
- (3) "Liquid organic material" means any organic material which is a liquid at standard conditions.
- (4) "Organic material" means any chemical compound containing carbon, excluding carbon monoxide, carbon dioxide, carbonic acid, metallic carbides, metallic carbonates, and ammonium carbonate.
- (5) "Photochemically reactive material" means any liquid organic material with an aggregate of more than twenty per cent of its total volume composed of the chemical compounds classified below or which exceed any of the following individual percentage composition limitations, referred to the total volume of liquid:
  - (a) A combination of hydrocarbons, alcohols, aldehydes, esters, ethers or ketones having an olefinic or cyclo-olefinic type of unsaturation except perchloroethylene: five per cent;

- (b) A combination of aromatic hydrocarbons with eight or more carbon atoms to the molecule except ethylbenzene: eight per cent;
- (c) A combination of ethylbenzene, ketones having branched hydrocarbon structures, trichloroethylene or toluene: twenty per cent.

Whenever any organic material or any constituent of an organic material may be classified from its chemical structure into more than one of the above groups of organic compounds, it shall be considered as a member of the most reactive chemical group, that is, that group having the least allowable per cent of the total volume of liquid.

- (6) "Submerged fill pipe" means any fill pipe with the discharge opening entirely submerged when the liquid level is six inches above the bottom of the tank; or when applied to a tank which is loaded from the side, shall mean any fill pipe with the discharge opening entirely submerged when the liquid level is eighteen inches above the bottom of the tank.
  - (7) "Volatile photochemically reactive material" means any photochemically reactive material which has a vapor pressure of 1.5 pounds per square inch absolute or greater under actual storage conditions.
- (D) As used in paragraphs (B), (C), (D), (E), (F), (G), (H), (I), (J), (K), (S), (U), (Y), (FF), (HH), (II) and (PP) of rule 3745-21-09 of the Administrative Code (pertaining to coating lines and printing lines) and in rules 3745-21-04, 3745-21-10 and 3745-21-18 of the Administrative Code:
- (1) "Adhesion primer" means a coating used to promote adhesion of a topcoat on surfaces such as trim moldings, door locks and door sills, where sanding is impractical.
  - (2) "Airless spray" means a spray coating method in which the coating is atomized by forcing it through a small nozzle opening at high pressure. The coating is not mixed with air before exiting from the nozzle opening.
  - (3) "Antique motor vehicle" means a motor vehicle, but not a reproduction thereof, manufactured more than twenty five years prior to the current year which has been maintained in or restored to a condition which is substantially in conformance with manufacturer specifications.
  - (4) "Aqueous coating" means a water-based surface coating applied directly over ink on a printed substrate for the purpose of enhancing or protecting the printed surface.
  - (5) "As applied" means the formulation of a coating during the application on or impregnation into a substrate, including any dilution solvents or thinners added at the source before application of the coating.

- (6) "Automobile" means a passenger car or passenger car derivative capable of seating not more than twelve passengers.
- (7) "Automobile or light-duty truck assembly plant" means a facility where automobile and/or light-duty truck bodies, frames and associated parts, are assembled for eventual inclusion into a finished product ready for sale to vehicle dealers. Customizers, body shops and other repainters are excluded from this definition.
- (8) "Automotive elastomeric coating" means a coating designed for application over surfaces of flexible mobile equipment and mobile equipment components, such as elastomeric bumpers.
- (9) "Automotive impact-resistant coating" means a coating designed to resist chipping caused by road debris.
- (10) "Automotive jambing clearcoat" means a fast-drying, ready-to-spray clearcoat applied to surfaces such as door jambs and trunk and hood edges to allow for quick closure.
- (11) "Automotive lacquer" means a thermoplastic coating applied directly to bare metal surfaces of mobile equipment and mobile equipment components which dries primarily by solvent evaporation, and which is resoluble in its original solvent.
- (12) "Automotive low-gloss coating" means a coating which exhibits a gloss reading less than or equal to twenty-five on a sixty-degree-glossmeter.
- (13) "Automotive multi-colored topcoat" means a topcoat that exhibits more than one color, is packaged in a single container, and camouflages surface defects on areas of heavy use, such as cargo beds and other surfaces of trucks and other utility vehicles.
- (14) "Automotive pretreatment" means a primer that contains a minimum of 0.5 per cent acid, by weight, that is applied directly to bare metal surfaces of mobile equipment and mobile equipment components to provide corrosion resistance and to promote adhesion of subsequent coatings.
- (15) "Automotive primer-sealer" means a coating applied to mobile equipment and mobile equipment components prior to the application of a topcoat for the purpose of providing corrosion resistance, promoting adhesion of subsequent coatings, promoting color uniformity, and promoting the ability of the undercoat to resist penetration by the topcoat.
- (16) "Automotive primer-surfacer" means a coating applied to mobile equipment and mobile equipment components prior to the application of topcoat for the purpose

of filling surface imperfections in the substrate; providing corrosion resistance; or promoting adhesion of subsequent coatings.

- (17) "Automotive specialty coating" means coatings including, but not limited to, elastomeric coatings, adhesion promoters, low gloss coatings, bright metal trim repair coatings, jamming clearcoats, impact resistant coatings, rubberized asphaltic underbody coatings, uniform finish blenders, weld-through primers applied to automotive surfaces and lacquer topcoats applied to a classic motor vehicle or to an antique motor vehicle.
- (18) "Automotive topcoat" means a coating or series of coatings applied over an automotive primer-surfacer, automotive primer-sealer or existing finish on the surface of mobile equipment and mobile equipment components for the purpose of protection or beautification.
- (19) "Automotive touch up repair" means the application of automotive topcoat finish materials to cover minor finishing imperfections equal to or less than one inch in diameter.
- (20) "Automotive/transportation plastic parts" means the interior and exterior plastic components of automobiles, trucks, tractors, lawnmowers, and other like mobile equipment intended for primary use on land, with the exception of the following: plastic parts coated on the main (body) paint line in automobile and light duty truck assembly plants and truck assembly plants, and plastic parts coated during the refinishing or final repair of automobiles, trucks, tractors, lawnmowers and other like mobile equipment.
- (21) "Basecoat" means, for can coating lines, the exterior base coating of a two-piece can or the exterior and interior base coating of a three-piece can or three-piece can end; and basecoat means, for automotive/transportation plastic parts coating lines, the highly pigmented, often metallic first coating in a two-step topcoat system which is followed by a clearcoat, resulting in a finish with high-gloss characteristics.
- (22) "Business machine plastic parts" means the plastic housings and other exterior plastic components of electronic office equipment and musical equipment, including, but not limited to the following: computers, monitors, printers and keyboards, facsimile machines, copiers, microfiche readers, cellular and standard phones, and pencil sharpeners. This definition excludes internal electrical components of business machines.
- (23) "Can" means a single walled metal container constructed wholly of tin plate, terne plate, black plate (including tin-free steel), waste plate, aluminum sheet, or impact extrusions designed for packaging products. It excludes "steel pails" defined as single walled shipping containers having capacities of one gallon or greater and which are cylindrically constructed of steel of twenty-nine-gauge or heavier.

- (24) "Capture system" means all equipment, including but not limited to hoods, ducts, fans, ovens and dryers, used to contain, collect, and route VOC vapors released from a coating line or printing line.
- (25) "Classic motor vehicle" means a motor vehicle, but not a reproduction thereof, manufactured at least fifteen years prior to the current year which has been maintained in or restored to a condition which is substantially in conformity with manufacturer specifications and appearance.
- (26) "Clearcoat" means a transparent coating usually applied over a colored, opaque coat to improve gloss and provide protection to the colorcoat below.
- (27) "Clear coating" means a varnish or any coating which is transparent or lacks pigment.
- (28) "Coating or surface coating" means a material applied onto or saturated within a substrate for decorative, protective or functional purposes. Such materials include, but are not limited to, paints, varnishes, sealers, adhesives and inks.
- (29) "Coating applicator" means an apparatus used to apply a surface coating.
- (30) "Coating line" means an operation consisting of a series of one or more coating applicators and any associated flash-off areas, drying areas and ovens wherein a surface coating is applied, dried, and/or cured. It is not necessary for an operation to have an oven, or flash-off area, or drying area in order to be included within this definition.
- (31) "Coil" means a flat metal sheet or strip that is packaged in a roll and that has a thickness of 0.006 inch or more.
- (32) "Commercial motor vehicle and mobile equipment refinishing operation" means any company or individual, other than the original manufacturer, that applies a coating containing a VOC as a pretreatment, primer, sealant, basecoat, clear coat, or topcoat to mobile equipment for commercial purposes.
- (33) "Control system" means any device or combination of devices designed to recover or incinerate VOC vapors received from a capture system.
- (34) "Dip coating" means a method of applying coatings to a substrate by submersion into and removal from a coating bath.
- (35) "Electrostatic application" means a method of applying coating particles or coating droplets to a grounded substrate by electrically charging them.
- (36) "Electric-insulating and thermal-conducting coating" means a coating that displays an electrical insulation of at least one thousand volts DC per mil on a flat test plate and an average thermal conductivity of at least 0.27 Btu per hour-foot-degree-Fahrenheit.

- (37) "Enamel" means a type of surface coating in which drying occurs by evaporation of the solvent and polymerization of the pigmented drying oils.
- (38) "End sealing compound" means a synthetic rubber or plastic compound which is applied onto can ends and which functions as a gasket when the end is assembled on the can.
- (39) "Electrodeposition" means the application of a surface coating to an object by immersing the object into a water bath containing the surface coating material and inducing an electric potential between the object and the bath.
- (40) "Electromagnetic interference/radio interference shielding coatings" or "EMI/RFI shielding coatings" means coatings used on business machine plastic housings to attenuate electromagnetic and radio frequency interference signals that would otherwise pass through the plastic housing.
- (41) "Excluding water" means subtracting the volume of water and other volatile materials which are not VOC.
- (42) "Exterior base coating" means a coating applied to the exterior of a can to provide exterior protection to the metal and/or to provide background for the lithographic or printing operation.
- (43) "Exterior bottom end" means the outside surface of the bottom side of a two-piece can.
- (44) "Extreme high-gloss coating" means a coating which, when tested by ASTM D523-80, shows a reflectance of seventy-five or more on a sixty degree meter.
- (45) "Extreme performance coating" means a coating designed for exposure to any of the following: year-round outdoor weather, temperatures consistently above two hundred three degrees Fahrenheit, detergents, scouring, solvents, corrosive materials, corrosive atmospheres or similar harsh conditions.
- (46) "Extrusion coater" means an apparatus in which a coating material is applied by means of a slotted die to a moving substrate, which is fed from an unwinding roll.
- (47) "Fabric coating" means a coating applied to a textile substrate by dipping or by means of a knife or roll coater.
- (48) "Final repair" means a surface coating which is applied off the main production line or after trim assembly to repair topcoat imperfections.
- (49) "Flashoff area" means the area of a facility through which coated materials travel from the coating applicator to the oven.

- (50) "Flexible coating" means a paint with the ability to withstand dimensional changes.
- (51) "Flexographic packaging printing line" means a means a flexographic printing line in which surface coatings are applied to paper, paperboard, metal foil, plastic film, or other substrates which are subsequently formed into packaging products or labels for articles.
- (52) "Flexographic printing line" means a printing line in which each roll printer uses a roll with raised areas for applying an image to the substrate. The image carrier on the roll is made of rubber or other flexible elastomeric material.
- (53) "Flow coat" means a non-atomized technique of applying coatings to a substrate with a fluid nozzle in a fan pattern with no air supplied to the nozzle.
- (54) "Food can ends" means can ends used for cans that store food products other than soft drinks or alcoholic beverages.
- (55) "Fountain solution" means a surface coating applied to the plate roll of an offset lithographic printing line for the purpose of wetting only the nonimage areas so that they are not ink receptive.
- (56) "Gloss reducers" means low gloss coatings formulated to eliminate glare for safety purposes on interior surfaces of a vehicle, as specified under the United States department of transportation motor vehicle safety standards.
- (57) "Guidecoat" means a surface coating applied to the body of an automobile or light-duty truck between the electrodeposition prime coat and the topcoat.
- (58) "Hand application methods" means the application of coatings by manually held non-mechanically operated equipment. Such equipment includes paintbrushes, hand rollers, caulking guns, trowels, spatulas, syringe daubers, rags, and sponges.
- (59) "Heat-resistant coating" means a coating that must withstand a temperature of at least four hundred degrees Fahrenheit during normal use.
- (60) "High bake coatings" means coatings designed to cure at temperatures above one hundred ninety-four degrees Fahrenheit.
- (61) "High performance architectural aluminum coating" means a coating that is applied to aluminum used in architectural subsections and that meets the requirements of publication number AAMA 2605-02, "Voluntary Specification, Performance Requirements and Test Procedures for Superior Performing Organic Coatings on Aluminum Extrusions and Panels," of the Architectural Aluminum Manufacturer's Association.

- (62) "High volume, low pressure sprayer" or "HVLP sprayer" means an air atomized sprayer that operates at a maximum air pressure of ten pounds per square inch gauge (psig) as measured at the nozzle.
- (63) "Ink" means a coating applied by a roll printer.
- (64) "Interior base coating" means a coating applied to the interior of a can.
- (65) "Interior body coating" means a coating applied subsequent to the application of an interior base coating to the interior of a can body.
- (66) "Knife coater" means an apparatus in which a coating material is applied to a moving substrate, which is fed from an unwinding roll, by drawing the substrate beneath a knife (blade) that is designed to spread the coating evenly over the width of the substrate.
- (67) "Lacquer" means a type of surface coating in which drying occurs by evaporation of the solvent and deposition of the resin and any pigment.
- (68) "Large appliance" means door, case, lid, panel, interior part, and/or interior support part of a residential or commercial washer, dryer, range, refrigerator, freezer, water heater, dishwasher, trash compactor, air conditioner, ovens, microwave ovens, or other similar product.
- (69) "Light-duty truck" means a motor vehicle rated at eight thousand five hundred pounds gross weight or less which is designed primarily for highway use and for the transportation of property, or is a derivative of such vehicle.
- (70) "Line" means the same as "coating line."
- (71) "Lithographic printing line" means a printing line, except that the substrate is not necessarily fed from an unwinding roll, in which each roll printer uses a roll where both the image and nonimage areas are essentially in the same plane (planographic).
- (72) "Low bake coatings" means coatings designed to cure at temperatures below one hundred ninety-four degrees Fahrenheit.
- (73) "Magnet wire coating" means a coating of electrically insulating varnish or enamel which is applied to aluminum or copper wire prior to its formation into an electromagnetic coil.
- (74) "Metal furniture" means any metal part of household, business, institutional or office furniture, excluding hardware. Such furniture includes, but is not limited to, cabinets, cases, desks, chairs, tables, partitions, shelving, lockers, storage racks, indoor waste receptacles and fixtures.

- (75) "Metallic coating" means a coating which contains more than five grams of metal particles per liter of coating, as applied.
- (76) "Miscellaneous metal part or product" means any metal part or metal product except the following: cans, coils, metal furniture, large appliances, and aluminum or copper wire prior to its formation into an electromagnetic coil.
- (77) "Mobile equipment" means any equipment that may be drawn or is capable of being driven on a roadway, including, but not limited to, automobiles, trucks, truck bodies, truck trailers, cargo vaults, utility bodies, camper shells, construction equipment, farming equipment, and motorcycles.
- (78) "Multi-component coating" means a coating requiring the addition of a separate reactive resin, commonly known as a catalyst or hardener, before application to form an acceptable dry film.
- (79) "Non-flexible coating" means a paint without the ability to withstand dimensional changes.
- (80) "Offset lithographic printing line" means a lithographic printing line where the image is applied from a plate roll to an intermediate (blanket) roll and then transferred onto the substrate.
- (81) "One-component coating" means a coating that is ready for application as it comes out of its container to form an acceptable dry film. A thinner, necessary to reduce the viscosity, is not considered a component.
- (82) "Oven" means a chamber within which heat is used for one or more of the following purposes: dry, bake, cure or polymerize a surface coating or ink.
- (83) "Overvarnish" means a surface coating applied directly over ink on the exterior of a can.
- (84) "Packaging rotogravure printing line" means a rotogravure printing line in which surface coatings are applied to paper, paperboard, metal foil, plastic film, or other substrates which are subsequently formed into packaging products or labels for articles.
- (85) "Paper coating" means a coating applied by dipping or by means of a knife, roll or extrusion coater to paper, paperboard, pressure sensitive tapes or labels, plastic film, or metal foil. Excluded from this definition are coatings used in substrate formation within a papermaking system and coatings applied within a printing line which is in compliance with the emission requirements contained in paragraph (Y) of rule 3745-21-09 of the Administrative Code.
- (86) "Papermaking system" means all equipment used to convert pulp into paper, paperboard or market pulp, including the stock storage and preparation systems, the paper or paperboard machines, and the paper machine white water system,

broke recovery systems, and the systems involved in calendering, drying, on-machine coating, slitting, winding and cutting.

- (87) "Paper treater" means a coating line in which a uniform layer of phenolic or melamine resin is applied by dipping a continuously moving paper substrate into the resin and then using rollers to squeeze the excess resin from the paper.
- (88) "Pretreatment coating" is a coating which contains no more than twelve per cent solids by weight, and at least one-half per cent acid, by weight, is used to provide surface etching, and is applied directly to metal surfaces to provide corrosion resistance, adhesion, and ease of stripping.
- (89) "Plastic part" means a product, or piece of a product, made from a substance that has been formed from resin through the application of pressure or heat or both.
- (90) "Prime coat" means a surface coating which is used to aid the adhesion of a topcoat to a surface and/or prevent corrosion of the metal being coated. For the purpose of emission limitations, guidecoat and surfacer are included in the definition of prime coat.
- (91) "Primer" means any coating formulated and applied to a substrate to provide a firm bond between the substrate and subsequent coats.
- (92) "Printing line" means an operation consisting of a series of one or more roll printers and any associated in-line roll coaters, in-line extrusion coaters, drying areas and ovens wherein one or more surface coatings are applied, dried, and/or cured. It is not necessary for an operation to have an oven or drying area in order to be included within this definition.
- (93) "Publication rotogravure printing line" means a rotogravure printing line in which surface coatings are applied to paper which is subsequently formed into books, catalogues, brochures, directories, newspaper supplements or other types of printed materials.
- (94) "Resist coat" means a coating that is applied to a plastic part before metallic plating to prevent deposits of metal on portions of the plastic part.
- (95) "Roll coat" means a coating method using a machine that applies coating to a substrate by continuously transferring coating through a pair or set of oppositely rotating rollers.
- (96) "Roll coater" means an apparatus in which a uniform layer of coating material is applied by means of a roll or rolls across the entire width of a moving substrate, which is fed from an unwinding roll.
- (97) "Roll printer" means an apparatus in which a surface coating is applied by means of a roll or rolls with only partial coverage across the width of a moving

substrate, which is fed from an unwinding roll. The partial coverage results in the formation of words, designs or pictures on the substrate.

- (98) "Rotogravure printing line" means a printing line in which each roll printer uses a roll with recessed areas for applying an image to the substrate.
- (99) "Safety-indicating coating" means a coating which changes physical characteristics, such as color, to indicate unsafe conditions.
- (100) "Single coat" means a single film of coating applied directly to the substrate omitting the primer application.
- (101) "Side-seam" means the welded, cemented, or soldered seam of a three-piece can.
- (102) "Soft coat" means any coating that provides a soft tactile feel similar to leather and a rich leather like appearance when applied to plastic interior automotive parts and exterior business machine parts.
- (103) "Solar-absorbent coating" means a coating which has as its prime purpose the absorption of solar radiation.
- (104) "Solid-film lubricant" means a very thin coating consisting of a binder system containing as its chief pigment material one or more of molybdenum disulfide, graphite, polytetrafluoroethylene (PTFE) or other solids that act as a dry lubricant between faying surfaces.
- (105) "Sound-proofing material" means a surface coating applied for the primary purpose of reducing the transmission of noise into or through the coated object.
- (106) "Steel pail or drum" means any single walled shipping container which has a capacity of one gallon or greater and which is cylindrically constructed of steel of twenty-nine gauge or heavier.
- (107) "Stencil coating" is an ink or a coating which is rolled or brushed onto a template or stamp in order to add identifying letters and/or numbers to metal parts and products.
- (108) "Surfacer" means a surface coating applied to the body of an automobile or light-duty truck between the electrodeposition prime coat and the topcoat.
- (109) "Texture coat" means a coating applied to a plastic part which, in its finished form, consists of discrete raised spots of coating.
- (110) "Topcoat" means one or more surface coatings, excluding final repair, which are applied after the prime coat for desired aesthetic effects.

- (111) "Transfer efficiency" means the percentage of total coating solids employed by a coating applicator which adheres to the object being coated.
  - (112) "Vacuum metallizing" means a process whereby metal is vaporized and deposited on a substrate in a vacuum chamber.
  - (113) "Varnish coating" means an oil-based surface coating applied directly over ink on a printed substrate for the purpose of enhancing or protecting the printed surface.
  - (114) "Vinyl coating" means a coating or ink applied to the surface of vinyl coated fabric, vinyl sheets, or other vinyl products by means of a knife coater, roll coater, or roll printer. For purposes of this rule, "vinyl coating" shall not include organisol or plastisol coatings.
  - (115) "Zinc rich primer coating" means any coating which contains primarily zinc pigment on a weight basis, which is applied as a prime coat to a metal part or product prior to assembly, and which is dried at ambient or in-plant temperature.
- (E) As used in paragraphs (L), (M), (T) and (Z) of rule 3745-21-09 of the Administrative Code (pertaining to storage tanks and to petroleum refinery equipment) and in rules 3745-21-04, 3745-21-10 and 3745-21-21 of the Administrative Code:
- (1) "Component" means any piece of equipment which has the potential to leak organic compounds into the atmosphere. Such equipment includes, but is not limited to, pump seals, compressor seals, seal oil degassing vents, pipeline valves, pressure relief devices, process drains and open ended pipes.
  - (2) "Condensate" means any organic compound separated from natural gas which condenses due to changes in the temperature and/or pressure and remains liquid at standard conditions.
  - (3) "Crude oil" means a naturally occurring mixture which consists of hydrocarbons and/or sulfur, nitrogen and/or oxygen derivatives of hydrocarbons and which is a liquid at standard conditions.
  - (4) "Custody transfer" means the transfer of produced crude oil and/or condensate, after processing and/or treating in the producing operations, from storage tanks or automatic transfer facilities to pipelines or any other forms of transportation.
  - (5) "External floating roof tank" means an open top storage vessel with a cover, consisting of a double deck or pontoon single deck, which rests upon and is supported by the contained liquid and which is equipped with a closure seal or seals to close the space between the roof edge and tank wall.
  - (6) "Firebox" means the chamber or compartment of a boiler or furnace in which materials are burned, but does not mean the combustion chamber of an incinerator.

- (7) "Fixed roof tank" means a steel cylindrical shell with a permanently affixed roof.
- (8) "Flexible wiper primary seal" means a continuous sealing device mounted on the floating roof and equipped with an elastomeric blade which contacts the tank wall. It uses its own stiffness or other mechanical means to maintain contact with the tank wall.
- (9) "Gas service" means equipment which processes, transfers or contains an organic compound or mixture of organic compounds in the gaseous phase.
- (10) "Internal floating roof" means a cover or roof in a fixed roof tank which rests upon and is supported by the petroleum liquid being contained and is equipped with a closure seal or seals to close the space between the roof edge and tank shell.
- (11) "Liquid-mounted primary seal" means a seal constructed of an elastomeric coated fabric envelope and mounted onto the floating roof in such a manner that it touches the surface of the stored liquid.
- (12) "Liquid service" means equipment which processes, transfers or contains an organic compound or mixture of organic compounds in the liquid phase.
- (13) "Maximum true vapor pressure" means the equilibrium partial pressure exerted by the stored VOL, at the temperature equal to the highest calendar-month average of the VOL storage temperature for VOL's stored above or below the ambient temperature or at the local maximum monthly average temperature as reported by the national weather service for VOL's stored at the ambient temperature, as determined:
  - (a) In accordance with methods described in American petroleum institute bulletin 2517, "Evaporation Loss From External Floating Roof Tanks";
  - (b) As obtained from standard reference texts;
  - (c) As determined by ASTM method D2879-83; or
  - (d) Any other method approved by the agency.
- (14) "Mechanical shoe primary seal" means a seal constructed of metal sheets (shoes) which are joined together to form a ring, springs or levers which attach the shoes to the floating roof and hold the shoes against the tank wall, and a coated fabric which is suspended from the shoes to the floating roof.
- (15) "Petroleum liquids" means crude oil, condensate, and any finished or intermediate products manufactured or extracted in a petroleum refinery.

- (16) "Petroleum refinery" means any facility engaged in producing gasoline, kerosene, distillate fuel oils, residual fuel oils, lubricants, or other products through distillation of crude oil, or through redistillation, cracking, extraction, or reforming of unfinished crude oil derivatives.
- (17) "Process unit turnaround" means a work practice or operational procedure that stops production from a refinery unit or part of a refinery unit. An unscheduled work practice or operational procedure that stops production from a refinery unit or part of a refinery unit for less than twenty-four hours is not a process unit turnaround. The use of spare equipment and technically feasible bypassing of equipment without stopping production are not process unit turnarounds.
- (18) "Refinery fuel gas" means any gas which is generated by a petroleum refinery process unit and which is combusted, including any gaseous mixture of natural gas and fuel gas.
- (19) "Refinery unit" means equipment assembled to produce intermediate or final products from crude oil, unfinished crude oil derivatives, or other intermediates. A refinery unit can operate independently if supplied with sufficient feed or raw materials and sufficient storage facilities for the product.
- (20) "Rim-mounted secondary seal" means a continuous sealing device located over the primary seal, mounted on the floating roof and extended to the tank wall. This device is not a weather shield.
- (21) "Shoe-mounted secondary seal" means a continuous sealing device extending from the top of the shoe (see the definition of mechanical shoe primary seal) to the tank wall.
- (22) "True vapor pressure" means the equilibrium partial pressure exerted by a petroleum liquid as determined in accordance with methods described in American petroleum institute publication 2517, "Evaporation Loss from External Floating-Roof Tanks."
- (23) "Vacuum producing system" means any reciprocating, rotary, or centrifugal blower or compressor, or any jet ejector or device that takes suction from a pressure below atmospheric and discharges against atmospheric pressure.
- (24) "Valves not externally regulated" means valves that have no external controls, such as in-line valves.
- (25) "Vapor-mounted primary seal" means a seal constructed of an elastomeric coated fabric envelope and mounted onto the floating roof in such a manner that it does not touch the surface of the stored liquid.
- (26) "Volatile organic liquid" or "VOL" means any organic liquid which can emit VOCs as defined in this rule.

(27) "Wastewater separator" means a device in which oil- contaminated water is skimmed to remove the floating oil prior to the discharge or further treatment of the water.

(28) "Weather shield" means a device which is attached to a floating roof to protect the fabric of a liquid-mounted or vapor-mounted primary seal from weather and debris, thereby generally providing a longer primary seal life. The device is usually of leaf-type construction and has numerous radial joints to allow for roof movement or irregularities in the tank wall.

(F) As used in paragraph (N) of rule 3745-21-09 of the Administrative Code (pertaining to the use of cutback asphalts and emulsified asphalts in road construction and maintenance) and in rule 3745-21-04 of the Administrative Code:

(1) "Asphalt" means a dark brown to black cement-like material (solid, semisolid, or liquid in consistency) in which the predominating constituents are bitumens which occur in nature as such or which are obtained as residue in refining petroleum.

(2) "Asphalt paving mixture" means a mixture of mineral aggregate and cutback asphalt, emulsified asphalt, or other asphaltic material.

(3) "Cutback asphalt" means a mixture of asphalt and petroleum solvents (distillates), produced by blending those materials or by distilling petroleum.

(4) "Dense-graded mix" means an asphalt paving mixture in which the air voids are less than ten per cent when compacted, as determined by ASTM D3203-94.

(5) "Emulsified asphalt" means an emulsion of water and asphalt which may also contain emulsifying agents, special additives, and petroleum solvents (distillates).

(6) "Maintenance mix" means an asphalt paving mixture for patching holes, depressions, and distressed areas in existing pavements.

(7) "Open-graded mix" means an asphalt paving mixture in which the air voids are equal to or greater than ten per cent when compacted, as determined by ASTM D3203-94.

(8) "Prime coat" means an application of low-viscosity cutback asphalt or emulsified asphalt to an absorptive surface, designed to penetrate, bond and stabilize the existing surface and to promote adhesion between it and the construction course that follows.

(G) As used in paragraph (O) of rule 3745-21-09 of the Administrative Code (pertaining to solvent metal cleaning) and in rules 3745-21-04 and 3745-21-10 of the Administrative Code:

- (1) "Cold cleaner" means a batch-operated device that employs a solvent for cleaning and removing soils from metal surfaces by spraying, brushing, flushing, agitation or immersion while maintaining the solvent below its boiling point. Wipe cleaning is not included in this definition.
  - (2) "Conveyorized degreaser" means a continuous-operated device for cleaning and removing soils from metal surfaces by the use of either non-vaporized or vaporized solvents.
  - (3) "Electronic component" means all portions of an electronic assembly, including, but not limited to, circuit board assemblies, printed wire assemblies, printed circuit boards, soldered joints, ground wires, bus bars, and associated electronic component manufacturing equipment such as screens and filters.
  - (4) "Freeboard height" means:
    - (a) For a cold cleaner, the distance from the solvent surface to the top edge of the degreaser tank; and
    - (b) For an open top vapor degreaser, the distance from the top of the vapor zone to the top of the degreaser tank.
  - (5) "Freeboard ratio" means the freeboard height divided by the width of the degreaser air/solvent area. The same units of measurement should be used for all dimensions.
  - (6) "Open top vapor degreaser" means a batch-operated device for cleaning and removing soils from metal surfaces by condensing hot solvent vapor on the colder metal parts.
  - (7) "Solvent" means any VOC which is liquid at standard conditions and which is used as a cleaning agent.
  - (8) "Solvent metal cleaning" means a process that employs a solvent for cleaning and removing soils from metal surfaces.
- (H) As used in paragraphs (P), (Q), (R), (V), (GG), and (DDD) of rule 3745-21-09 of the Administrative Code (pertaining to bulk gasoline plants, bulk gasoline terminals, gasoline dispensing facilities, and gasoline tank trucks) and in rules 3745-21-04 and 3745-21-10 of the Administrative Code:
- (1) "Bottom filling" means the filling of a delivery vessel through an opening that is flush with the bottom of the delivery vessel's compartment.
  - (2) "Bulk gasoline plant" means a gasoline storage and distribution facility which receives gasoline primarily via delivery vessel, stores it in one or more stationary tanks, and subsequently dispenses it via delivery vessel.

(3) "Bulk gasoline terminal" means a gasoline storage and distribution facility which receives gasoline primarily via pipeline, ship, or barge; stores it in one or more stationary tanks; and subsequently dispenses it primarily via delivery vessel.

(4) "CARB certification" and "CARB certified" means:

(a) Subject to executive orders, approval letters, equipment advisories, and equivalent test procedures issued by California air resources board for phase I and phase II vapor control systems, parts, components, and test procedures used at gasoline dispensing facilities as follows:

(i) Issued on or before March 31, 2001 under pre-enhanced vapor recovery (pre-EVR) standards and certification procedures and issued after March 31, 2001 as a correction or revision, not related to enhanced vapor recovery (EVR) standards, of phase I and phase II vapor control systems, parts, components, and test procedures previously approved under pre-EVR standards, however, gasoline dispensing facilities in Ohio shall not be subject to any provision or statement that specifies an expiration or decertification due to EVR standards and certification procedures; or

(ii) Issued after March 31, 2001 under EVR standards and certification procedures for parts and components to be used in conjunction with pre-EVR systems, however, gasoline dispensing facilities in Ohio shall not be subject to any provision or statement that specifies an expiration or decertification due to EVR standards and certification procedures.

Additionally, where an owner or operator of a gasoline dispensing facility elects to use phase I or phase II vapor control systems, parts, components, or test procedures subject to executive orders, approval letters, equipment advisories, and equivalent test procedures issued by California air resources board under EVR standards and certification procedures, "CARB certification" and "CARB certified" shall also mean such executive orders, approval letters, equipment advisories, and equivalent test procedures issued by California air resources board under EVR standards and certification procedures. (Executive orders that begin with "G" generally refer to pre-EVR systems, but may include provisions or statements on expiration or decertification due to EVR standards. Executive orders that begin with "VR" generally refer to EVR systems.)

(b) Subject to executive orders, approval letters, equipment advisories, and equivalent test procedures issued by California air resource board that become effective for portable fuel containers and spouts on or after July 1, 2007.

- (5) "E85" means a fuel blend nominally consisting of eighty five per cent ethanol and fifteen per cent gasoline that meets the requirements of ASTM D5798-99(2004) for fuel ethanol.
- (6) "Delivery vessel" means a tank truck, a tank equipped trailer, a railroad tank car, or other mobile source, except ship or barge, equipped with a storage tank used for the transport of gasoline from a source of supply to stationary tanks at a gasoline dispensing facility or bulk gasoline plant.
- (7) "External floating roof" means a storage vessel cover in an open top tank consisting of a double deck or pontoon single deck which rests upon and is supported by the petroleum liquid being contained and is equipped with a closure seal or seals to close the space between the roof edge and tank shell.
- (8) "Gasoline" means any petroleum distillate which is used as a motor fuel and has a Reid vapor pressure of 4.0 pounds or greater.
- (9) "Gasoline dispensing facility" means any site where gasoline is dispensed to motor vehicle gasoline tanks from stationary storage tanks.
- (10) "Gasoline dispensing pump" means an individual unit at a gasoline dispensing facility with a dispensing nozzle where a specific grade of gasoline is dispensed to motor vehicle gasoline tanks.
- (11) "Gasoline tank truck" means any truck or trailer equipped with a storage tank which is used for the transport of gasoline to a stationary storage tank at a gasoline dispensing facility, bulk gasoline plant or bulk gasoline terminal.
- (12) "Independent small business marketer" means any owner of a gasoline dispensing facility engaged in the marketing of gasoline who would be required to pay for procurement and installation of a vapor control system pursuant to paragraph (DDD) of rule 3745-21-09 of the Administrative Code, except any owner that:
  - (a) Is a refiner;
  - (b) Controls, is controlled by, or is under common control with a refiner;
  - (c) Is otherwise directly or indirectly affiliated (as determined under the regulations of the USEPA) with a refiner or with a person who controls, is controlled by, or is under a common control with a refiner (unless the sole affiliation referred to herein is by means of a supply contract or an agreement or contract to use as a trademark, trade name, service mark, or other identifying symbol or name owned by such refiner or any such person); or
  - (d) Receives less than fifty per cent of his annual income from refining or marketing of gasoline.

For purposes of this definition, the term "refiner" shall not include any refiner whose total refinery capacity (including the refinery capacity of any person who controls, is controlled by, or is under common control with, such refiner) does not exceed sixty-five thousand barrels per day, and the term "control" of a corporation means ownership of more than fifty per cent of its stock.

- (13) "Internal floating roof" means a cover or roof in a fixed roof tank which rests upon and is supported by the petroleum liquid being contained and is equipped with a closure seal or seals to close the space between the roof edge and tank shell.
- (14) "Reid vapor pressure" means the absolute vapor pressure of volatile crude oil and volatile nonviscous petroleum liquids except liquefied petroleum gases as determined by ASTM D6897-03a.
- (15) "Submerged fill pipe" means any fill pipe the discharge opening of which is entirely submerged when the liquid level is six inches above the bottom of the tank, or when applied to a tank which is loaded from the side, shall mean any fill pipe the discharge opening of which is entirely submerged when the liquid level is eighteen inches above the bottom of the tank.
- (16) "Top submerged filling" means the filling of a delivery vessel by means of a fill pipe which descends through an open hatch on the top of the delivery vessel to within six inches of the bottom of the delivery vessel's compartment.
- (17) "Topping off" means attempting to pump additional gasoline into a motor vehicle fuel tank after the dispensing nozzle has shut off automatically because the tank is full.
- (18) "Ullage" means the maximum storage tank capacity, in gallons, minus the gallons of gasoline present in the tank.
- (19) "Vapor balance system" means a combination of pipes or hoses which create a closed system between the vapor spaces of an unloading tank and a receiving tank such that vapors displaced from the receiving tank are transferred to the tank being unloaded.
- (20) "Vapor collection system" means a vapor transport system which forces vapors from a delivery vessel or storage tank into a vapor control system.
- (21) "Vapor control system" means control equipment designed to recover or incinerate organic compounds received from the vapor collection system.
- (22) "Vapor tight" means free of any vapor leaks to the extent possible based upon good engineering design and practice.

(I) As used in paragraph (W) of rule 3745-21-09 of the Administrative Code (pertaining to synthesized pharmaceutical manufacturing facilities) and in rule 3745-21-04 of the Administrative Code:

- (1) "Production equipment exhaust system" means a device for collecting and directing out of the work area any fugitive emissions of organic compounds from openings on reactors, centrifuges and other vessels for the purpose of protecting workers from excessive exposure to such emissions.
- (2) "Surface condenser" means a device which cools a gas stream to a temperature at which vapors are removed by means of condensation, where the coolant does not directly contact the condensed vapors.
- (3) "Synthesized pharmaceutical manufacturing facility" means a facility in which drugs are produced by means of chemical synthesis.

(J) As used in paragraph (X) of rule 3745-21-09 of the Administrative Code (pertaining to rubber tire manufacturing facilities) and in rules 3745-21-04 and 3745-21-10 of the Administrative Code:

- (1) "Bead dipping" means the dipping of an assembled tire bead into a solvent based cement.
- (2) "Capture system" means any device or combination of devices designed to contain, collect, and route VOC vapors released from an operation at a rubber tire manufacturing facility.
- (3) "Control system" means any device or combination of devices designed to recover or incinerate VOC vapors received from a capture system.
- (4) "Green tires" means assembled tires before molding and curing have occurred.
- (5) "Green tire spraying" means the spraying of green tires, both inside and outside, with release compounds which help remove air from the tire during molding and prevent the tire from sticking to the mold after curing.
- (6) "Recapped tread stock" means vulcanized or unvulcanized rubber which is used for recapping tire carcasses and which is delivered to a recapping facility with a cement coating on one side.
- (7) "Rubber tire manufacturing facility" means a facility in which rubber tires or recapped tread stock are manufactured on a mass production basis.
- (8) "Tread end cementing" means the application of a solvent based cement to the tire tread ends.
- (9) "Undertread cementing" means the application of a solvent based cement to the underside of a tire tread.

(K) As used in paragraphs (AA) and (BB) of rule 3745-21-09 of the Administrative Code (pertaining to dry cleaning facilities) and in rules 3745-21-04 and 3745-21-10 of the Administrative Code:

- (1) "Cartridge filter" means a discrete filter unit containing one or more disposable cartridges that contain both filter paper and activated carbon which trap and remove contaminants from the cleaning solvent.
- (2) "Dry cleaning facility" means a facility engaged in the cleaning of articles of fabric in an essentially nonaqueous cleaning solvent by means of one or more washes in solvent, extraction of excess solvent by spinning, and drying by tumbling in an air stream. The facility includes, but is not limited to, washers, dryers, filtration and purification systems, waste disposal systems, holding tanks, pumps, and attendant piping and ductwork.
- (3) "Dryer" means a machine used to remove cleaning solvent from articles, after washing and removing of excess cleaning solvent.
- (4) "Manufacturer's rated capacity" means the capacity per load that is typically found on the manufacturer's name plate located on the equipment or in the manufacturer's equipment specifications.
- (5) "Perchloroethylene dry cleaning facility" means a dry cleaning facility that uses perchloroethylene as the cleaning solvent.
- (6) "Petroleum dry cleaning facility" means a dry cleaning facility that uses petroleum solvent as the cleaning solvent.
- (7) "Petroleum solvent" means a material that is produced by petroleum distillation, that is composed mainly of hydrocarbons having a range of eight to twelve carbon atoms per molecule, and that exists as a liquid under standard conditions.
- (8) "Solvent filter" means a discrete filter unit containing a porous medium that traps and removes contaminants from the cleaning solvent.
- (9) "Solvent recovery dryer" means a class of dryers that employ a condenser to condense and recover solvent vapors evaporated in a closed-loop stream of heated air.

(L) As used in paragraph (CC) of rule 3745-21-09 of the Administrative Code (pertaining to continuous, polystyrene resin manufacturing process) and in rule 3745-21-04 of the Administrative Code:

- (1) "Continuous, polystyrene resin manufacturing process" means a process unit in which polystyrene resin is produced by the continuous polymerization or copolymerization of styrene monomer.

- (2) "Material recovery section" means the section of the continuous, polystyrene resin manufacturing process that includes the vacuum devolatilizer and its associated condenser and vacuum system, and the styrene recovery distillation column and its associated condenser and vacuum system.
  - (3) "Styrene recovery distillation column" means a distillation column used to separate and recover styrene monomer from the vacuum devolatilizer stream containing unreacted styrene monomer and byproducts.
  - (4) "Vacuum devolatilizer" means a device in which the products from a polystyrene reactor are separated into a stream containing unreacted styrene monomer and byproducts and a stream containing molten polystyrene.
- (M) As used in paragraph (DD) of rule 3745-21-09 of the Administrative Code (pertaining to leaks from process units that produce organic chemicals) and in rules 3745-21-04 and 3745-21-10 of the Administrative Code:
- (1) "Btu/scf" means British thermal unit(s) per standard cubic feet.
  - (2) "Closed vent system" means a system that is not open to the atmosphere and that is composed of piping, connections, and if necessary, flow inducting devices that transport gas or vapor from a piece or pieces of equipment to control equipment.
  - (3) "Connector" means a flanged, screwed, welded, or other joined fitting used to connect two pipelines or a pipeline and a piece of process equipment.
  - (4) "Distance piece" means an open or enclosed casing through which the piston rod travels, separating the compressor cylinder from the crankcase.
  - (5) "Double block and bleed system" means two block valves connected in series with a bleed valve or line that can vent the line between the two block valves.
  - (6) "Equipment" means a pump, compressor, pressure relief device, sampling connection system, openended valve or line, valve, flange, connector, closed vent system, and any other device or system within a process unit.
  - (7) "First attempt at repair" means to take rapid action for the purpose of stopping or reducing leakage from equipment.
  - (8) (Reserved)
  - (9) "In gas/vapor service" means that the piece of equipment contains or contacts process fluid that is in the gaseous state at the operating conditions.
  - (10) "In heavy liquid service" means that the piece of equipment is not in gas/vapor service or in light liquid service.

- (11) "In light liquid service" means that the piece of equipment contains or contacts process fluid that meets the conditions specified in paragraph (O)(3) of rule 3745-21-10 of the Administrative Code.
- (12) "Insitu sampling system" means a nonextractive sampler or an in-line sampler.
- (13) "In vacuum service" means that the piece of equipment is operating at an internal pressure that is at least 0.7 pound per square inch below ambient pressure.
- (14) "In VOC service" means that the piece of equipment contains or contacts a process fluid that is at least ten per cent VOC by weight.
- (15) "Liquids dripping" means any visible leakage from the seal including spraying, misting, clouding, and ice formation.
- (16) "Open-ended valve or line" means any valve having one side of the valve seat in contact with the process fluid and one side open to the atmosphere, either directly or through open piping, but excluding any pressure relief valve.
- (17) "Ppmv" means parts per million by volume.
- (18) "Pressure release" means the emission of materials resulting from system pressure being greater than set pressure of the pressure relief device.
- (19) "Pressure relief device" means a pressure relief valve or a rupture disk.
- (20) "Pressure relief valve" means any valve designed to open when the process pressure exceeds a set pressure, allowing the release of vapors or liquids until the process pressure is reduced to its normal operating level.
- (21) "Process unit" means equipment assembled to produce, as intermediate or final products, one or more organic chemicals. A process unit can operate independently if supplied with sufficient feed or raw materials and sufficient storage facilities for the product.
- (22) "Process unit shutdown" means a work practice or operational procedure that stops production for a process unit or part of a process unit. An unscheduled work practice or operational procedure that stops production from a process unit or part of a process unit for less than twenty-four hours is not a process unit shutdown. The use of spare equipment and technically feasible bypassing of equipment without stopping production are not process unit shutdowns.
- (23) "Repaired" means that leaking equipment are successfully adjusted, or otherwise altered, in order to eliminate the leak.

- (24) "Rupture disk" means a disk made of a material that ruptures when the process pressure exceeds a set pressure, allowing the release of vapors or liquids until the process pressure is reduced to ambient pressure.
- (25) "Sensor" means a device that measures a physical quantity or the change in a physical quantity such as temperature, flow rate, "pH," or liquid level.
- (N) As used in paragraph (EE) of rule 3745-21-09 of the Administrative Code (pertaining to air oxidation processes that produce organic chemicals) and in rule 3745-21-04 of the Administrative Code:
- (1) "Air oxidation process" means a unit operation or process wherein organic chemicals are produced by reacting one or more compounds with oxygen which is supplied as air or air enriched with oxygen.
  - (2) "Process vent stream" means any gas stream within the air oxidation process that vents to the ambient air.
- (O) (Reserved).
- (P) As used in paragraph (LL) of rule 3745-21-09 of the Administrative Code (pertaining to "The Lubrizol Corporation"):
- (1) "Air-bearing vent stream" means a process vent stream that contains a mixture of air and organic vapors.
  - (2) "Reactor process" means reactor vessel equipment and associated material recovery equipment that are assembled to produce an organic chemical.
  - (3) "Reactor process vent stream" means any gas stream within the reactor process that is vented to the ambient air, an enclosed combustion device, or a flare.
  - (4) "Wastewater separator" means a device in which contaminated water is skimmed to remove the floating organic materials prior to the discharge or further treatment of the water.
- (Q) As used in paragraph (MM) of rule 3745-21-09 of the Administrative Code (pertaining to "PPG Industries, Inc."):
- (1) "Control system" means any device or combination of devices designed to recover or incinerate VOC vapors received from a capture system.
  - (2) "Grinding mill" means a device used to grind or disperse pigment throughout a paint.
  - (3) "Paint manufacturing facility" means a facility engaged in the production of paints and includes, but is not limited to, mixing tanks, paint transfer equipment,

grinding mills, equipment cleaning stations, and process tanks for paint tinting and thinning.

(R) As used in paragraph (NN) of rule 3745-21-09 of the Administrative Code (pertaining to "Midwest Mica and Insulation Company"):

- (1) "Mica coating or laminating line" means a series of one or more coating applicators and any associated flash-off areas, drying areas, and ovens wherein an adhesive coating or binder is applied to mica.
- (2) "Oven" means a chamber within which heat is used for one or more of the following purposes: dry, bake, cure or polymerize an adhesive coating or binder.

(S) As used in paragraph (OO) of rule 3745-21-09 of the Administrative Code (pertaining to "Armco Inc. - Middletown Works"):

- (1) "Aluminum coating operation" means an operation wherein a layer of aluminum is applied to the surface of metal coil by immersion into a bath of molten aluminum.
- (2) "Anti-galling material" means a coating material applied directly to metal coil for the purpose of protecting the surface of the coil from damage during shipment.
- (3) "Metal coil treatment operation" means any operation where coating materials are applied directly to metal coil for the purpose of lubrication, rust prevention, or galling prevention.
- (4) "Rolling oil" means a coating material which is applied directly to metal coil, for the purpose of lubrication, prior to processing at any temper mill.
- (5) "Rust preventive oil" means a coating material which is applied directly to metal coil after processing at any temper mill or shear.

(T) As used in paragraph (YY) of rule 3745-21-09 of the Administrative Code (pertaining to "PMC Specialties Group"), paragraph (ZZ) of rule 3745-21-09 of the Administrative Code (pertaining to "Firestone Synthetic Rubber & Latex Company"), and paragraph (BBB) of rule 3745-21-09 of the Administrative Code (pertaining to "BF Goodrich Company Akron Chemical Plant"):

- (1) "Air-bearing vent stream" means a process vent stream that contains a mixture of air and organic vapors.
- (2) "Reactor process" means reactor vessel equipment and associated material recovery equipment that are employed to produce an organic chemical.
- (3) "Reactor process vent stream" means any gas stream within the reactor process that is vented to control equipment or to the ambient air.

(U) As used in rule 3745-21-12 of the Administrative Code:

Except as otherwise provided in this paragraph, the definitions in rule 3745-15-01 of the Administrative Code and paragraph (B) of rule 3745-21-01 of the Administrative Code shall apply to rule 3745-21-12 of the Administrative Code (pertaining to "Control of Volatile Organic Compound Emissions from Commercial Bakery Oven Facilities").

- (1) "Baker's per cent" means, for a given ingredient, the weight of that ingredient per 100 pounds of flour, expressed as a percentage.
- (2) "Bakery oven" means an oven which bakes yeast-leavened products.
- (3) "Commercial bakery oven facility" means an establishment that is primarily engaged in the manufacture, for sale at wholesale or retail, of fresh or frozen bread, bread-type rolls, or dry bakery products, including biscuits, crackers, or cookies, in which the products are made using yeast leavening.
- (4) "Purge stack" means a bakery oven stack used only for exhausting residual gases from the bakery oven during burner ignition.
- (5) "Spike yeast" means any yeast added to the dough beyond the initial yeast added to the dough.
- (6) "Spiking time" means the elapsed time between the addition of the spike yeast to the dough and the placement of the dough into the oven.
- (7) "Subject to this rule" means the commercial bakery oven facility has met the applicability criteria of paragraph (A)(1) of rule 3745-21-12 of the Administrative Code and is subject to the requirements of paragraphs (D) to (I) of rule 3745-21-12 of the Administrative Code.
- (8) "Total uncontrolled potential to emit" means the capability at maximum capacity of a commercial bakery oven facility to emit VOC under its physical and operational design, excluding air pollution control equipment. Any physical or operational limitation on the capacity of the commercial bakery oven facility to emit VOC, including restrictions on the hours of operation or on the type or amount of material processed, but not including restrictions pertaining to air pollution control equipment, shall be treated as part of its physical and operational design if the limitation or the effect it would have on VOC emissions is federally enforceable.
- (9) "Uncontrolled bakery oven" means a bakery oven in which the oven's VOC emissions are not vented to a VOC emission control device.
- (10) "Yeast action time" means the elapsed time between the initial addition of the yeast and the placement of the dough into the oven.

(V) As used in rule 3745-21-13 of the Administrative Code:

Except as otherwise provided in this paragraph, the definitions in rule 3745-15-01 of the Administrative Code and paragraph (B) of rule 3745-21-01 of the Administrative Code shall apply to rule 3745-21-13 of the Administrative Code (pertaining to "Control of Volatile Organic Compound Emissions from Reactors and Distillation Units Employed in SOCFI Chemical Production").

- (1) "Batch operation" means a noncontinuous operation in which a discrete quantity or batch of feed is charged into a unit operation within a process unit and distilled or reacted at one time. Batch operation includes noncontinuous operations in which the equipment is fed intermittently or discontinuously. Addition of raw material and withdrawal of product do not occur simultaneously in a batch operation. After each batch operation, the equipment is generally emptied before a fresh batch is started.
- (2) "Boiler" means any enclosed combustion device that extracts useful energy in the form of steam and is not an incinerator or a process heater.
- (3) "Btu" means British thermal unit.
- (4) "Car-seal" means a seal that is placed on a device that is used to change the position of a valve (e.g., from opened to closed) in such a way that the position of the valve cannot be changed without breaking the seal.
- (5) "Combustion device" means an individual unit of equipment, such as an incinerator, flare, boiler, or process heater, used for combustion of a vent stream discharged from the process vent.
- (6) "Compliance test" means the collection of data resulting from the execution of a test method used to demonstrate compliance with an emission limit or control requirement based on the average of three runs.
- (7) "Continuous record" means documentation, either in hard copy or computer readable form, of data values measured at least once every fifteen minutes and recorded as follows:
  - (a) Each measured value; or
  - (b) Block average values for fifteen-minute or shorter periods calculated from all measured data values during each period or at least one measured data value per minute if measured more frequently than once per minute; or
  - (c) Values under an alternative recordkeeping that is implemented in accordance with paragraph (H)(8) of rule 3745-21-13 of the Administrative Code.

- (8) "Continuous recorder" means a data recording device that either records an instantaneous data value at least once every fifteen minutes or records fifteen-minute or more frequent block average values.
- (9) "Control device" means any combustion device or recapture device. A recovery device is not considered a control device.
- (10) "Distillation operation" means an operation separating one or more feed stream(s) into two or more exit stream(s), each exit stream having component concentrations different from those in the feed stream(s). The separation is achieved by the redistribution of the components between the liquid and vapor-phase as they approach equilibrium within the distillation unit.
- (11) "Distillation unit" means a device or vessel in which distillation operations occur, including all associated internals (such as trays or packing) and accessories (such as reboiler, condenser, vacuum pump, steam jet, etc.), plus any associated recovery system.
- (12) "Engineering assessment" means best estimate of a vent stream parameter (e.g., flow rate, VOC concentration, VOC emission rate, net heating value, etc.) that includes, but is not limited to, the following:
- (a) Previous test results provided the tests are representative of current operating practices at the process unit.
  - (b) Bench-scale or pilot-scale test data representative of the process under representative operating conditions.
  - (c) Maximum flow rate, VOC emission rate limit, VOC concentration limit, or net heating value limit specified or implied within a permit applicable to the process vent.
  - (d) Design analysis based on accepted chemical engineering principles, measurable process parameters, or physical or chemical laws or properties. Examples of analytical methods include, but are not limited to:
    - (i) Use of material balances based on process stoichiometry to estimate maximum VOC concentrations.
    - (ii) Estimation of maximum flow rate based on physical equipment design such as pump or blower capacities.
    - (iii) Estimation of VOC concentrations based on saturation conditions.
    - (iv) Estimation of maximum expected net heating value based on the vent stream concentration of each organic compound or, alternatively, as if all organic compounds in the vent stream were the organic compound with the highest heating value.

- (13) "Flame zone" means the portion of the combustion chamber in a boiler or process heater occupied by the flame envelope.
- (14) "Flow indicator" means a device that indicates whether gas flow is present in a vent stream.
- (15) "Fuel gas system" means the off-site and on-site piping and flow and pressure control system that gathers gaseous stream(s) generated by on-site operations, may blend them with other sources of gas, and transports the gaseous stream for use as fuel gas in combustion devices or in-process combustion equipment such as furnaces and gas turbines either singly or in combination.
- (16) "Group 1 process vent" means a process vent for which a control device is required due to the TRE index value being less than or equal to 1.0. Also, monitoring of the control device is required, except when the control device is a boiler or process heater specified under paragraph (F)(1)(b) or (F)(1)(c) of rule 3745-21-13 of the Administrative Code.
- (17) "Group 2A process vent" means a process vent from a recovery system for which monitoring of the recovery system is required due to the TRE index value being less than or equal to 4.0, but a control device is not required due to the TRE index value being greater than 1.0.
- (18) "Group 2B process vent" means a process vent for which a control device and monitoring are not required due to any of the following:
- (a) the VOC concentration is less than five hundred ppmv; or
  - (b) the flow rate is less than 0.30 scfm; or
  - (c) the TRE index value is greater than 1.0 for a vent stream not from a recovery system; or
  - (d) the TRE index value is greater than 4.0 for a vent stream from a recovery system.
- (19) "Halogenated vent stream" means a vent stream determined to have a mass emission rate of halogen atoms contained in organic compounds equal to or greater than 0.99 pound per hour.
- (20) "Halogens and hydrogen halides" means hydrogen chloride (HCl), chlorine (Cl<sub>2</sub>), hydrogen bromide (HBr), bromine (Br<sub>2</sub>), and hydrogen fluoride (HF).
- (21) "Incinerator" means an enclosed combustion device that is used for destroying organic compounds. Auxiliary fuel may be used to heat waste gas to combustion temperatures. Any energy recovery section present is not physically formed into one manufactured or assembled unit with the combustion section; rather, the

energy recovery section is a separate section following the combustion section and the two are joined by ducts or connections carrying flue gas. The above energy recovery section limitation does not apply to an energy recovery section used solely to preheat the incoming vent stream or combustion air.

- (22) "Monitoring device" means the total equipment used to measure and record (if applicable) process parameters.
- (23) "Nonhalogenated vent stream" means a vent stream that is not a halogenated vent stream.
- (24) "Organic monitoring device" means a device used to indicate the concentration level of organic compounds based on a detection principle such as infrared, photoionization, or thermal conductivity.
- (25) "Permit" means a permit issued by the director pursuant to Chapter 3745-31 or 3745-77 of the Administrative Code.
- (26) "Ppmv" means parts per million by volume.
- (27) "Primary fuel" mean the fuel that provides the principal heat input to the device. To be considered primary, the fuel must be able to sustain operation without the addition of other fuels.
- (28) "Process heater" means a device that transfers heat liberated by burning fuel to fluids contained in tubes, including all fluids except water that is heated to produce steam.
- (29) "Process unit" means equipment assembled and connected by pipes or ducts to produce, as a product (by-product, co-product, intermediate, or final product), one or more SOCFI chemicals. A process unit can operate independently if supplied with sufficient feed or raw materials and sufficient product storage facilities.
- (30) "Process vent" means the point of discharge to the atmosphere (or the point of entry into a control device, if any) of a gas stream from a distillation unit or reactor. Gas streams excluded from this definition are the following:
  - (a) A relief valve discharge.
  - (b) A leak from any device or equipment within a reactor or distillation unit (e.g., a leak from a pump, compressor, relief valve, or sampling system).
  - (c) A gas stream going to a fuel gas system.
  - (d) A gas stream exiting a control device used to comply with rule 3745-21-13 of the Administrative Code.

- (e) A gas stream transferred to other processes (on-site or off-site) for reaction or other use in another process (i.e., for chemical value as a product, isolated intermediate, by-product, or co-product, or for heat value).
  - (f) A gas stream transferred for fuel value (i.e., net positive heating value), use, reuse, or for sale for fuel value, use, or reuse.
  - (g) A gas stream exiting an analyzer.
- (31) "Product" means any SOCFI chemical which is produced for sale as a final product as that chemical, or for use in the production of other chemicals or compounds. By-products, co-products, and intermediates are considered to be products.
- (32) "Reactor" means a device or vessel in which reactor processes occur, including the product separator, any associated vacuum pump or steam jet, and any associated recovery system.
- (33) "Reactor process" means a process in which one or more chemicals, or reactants other than air, are combined or decomposed in such a way that their molecular structures are altered and one or more new organic compounds are formed.
- (34) "Recapture device" means an individual unit of equipment capable of and used for recovering chemicals from a gas stream, but not normally or primarily for use, reuse, or sale. For example, a recapture device may recover chemicals primarily for disposal or for air pollution control. Recapture devices include, but are not limited to, absorbers, carbon adsorbers, and condensers.
- (35) "Recovery device" means an individual unit of equipment, such as an absorber, carbon adsorber, or condenser, capable of and used for the purpose of recovering chemicals from a gas stream for fuel value (i.e., net positive heating value), use, reuse, or for sale for fuel value, use, or reuse.
- (36) "Recovery system" means an individual recovery device or series of such devices applied to the same vent stream.
- (37) "Relief valve" means a valve used only to release an unplanned, nonroutine discharge. A relief valve discharge results from an operator error, a malfunction such as a power failure or equipment failure, or other unexpected cause that requires immediate venting of gas from process equipment in order to avoid safety hazards or equipment damage.
- (38) "Run" means the net period of time during which an emission sample is collected or a test method is conducted.
- (39) "Scfm" means standard cubic feet per minute.

- (40) "Sensor" means a device that measures a physical quantity or the change in a physical quantity, such as temperature, pressure, flow rate, pH, or liquid level.
- (41) "Shutdown" means for purposes including, but not limited to, periodic maintenance, replacement of equipment, or repair, the cessation of operation of a reactor, distillation unit, or equipment required or used to comply with rule 3745-21-13 of the Administrative Code.
- (42) "SOCMI chemical" means a chemical listed in "Control of Volatile Organic Compound Emissions from Reactor Processes and Distillation Operations Processes in the Synthetic Organic Chemical Manufacturing Industry, Appendix A List of Synthetic Organic Chemical Manufacturing Industry Chemicals, Table A-1 List of Synthetic Organic Chemical Manufacturing Industry Chemicals" in the column titled reactor and distillation CTG, EPA-450/4-91-031.
- (43) "Specific gravity monitoring device" means a unit of equipment used to monitor specific gravity and having a minimum accuracy of +/- 0.02 specific gravity units.
- (44) "Start-up" means the setting into operation of a reactor, distillation unit, or equipment required or used to comply with this rule. Start-up includes initial start-up, operation solely for testing equipment, and transitional conditions due to changes in product.
- (45) "Steam jet ejector" means a steam nozzle that discharges a high-velocity jet across a suction chamber that is connected to the equipment to be evacuated.
- (46) "Subject to this rule" means the reactor or distillation unit has met the applicability criteria of paragraph (A)(1) of rule 3745-21-13 of the Administrative Code.
- (47) "Temperature monitoring device" means a unit of equipment used to monitor temperature and having a minimum accuracy of plus or minus one per cent of the temperature being monitored expressed in degrees Celsius or plus or minus 0.5 degree Celsius, whichever is greater.
- (48) "Total organic compounds" or "TOC" means those compounds measured according to the procedures of USEPA method 18.
- (49) "Total resource effectiveness index value" or "TRE index value" means a measure of the supplemental total resource requirement per unit reduction of VOC associated with a vent stream, based on vent stream flow rate, emission rate of VOC, net heating value, and corrosion properties (whether or not the vent stream contains halogenated compounds) as determined using the equation in paragraph (E)(8)(a) of rule 3745-21-13 of the Administrative Code. The TRE index is a decision tool used to determine if the annual cost of controlling a given gas stream is reasonable when considering the emissions reduction achieved.

- (50) "TRE determination test" means the collection of data resulting from the execution of test methods used to demonstrate process vent flow rate and concentration, that are used to determine the process vent flow rate, net heating value, emission rates of TOC, VOC, and halogen atoms, each based on the average of three runs, for the determination of the TRE index value of a process vent.
- (51) "Vent stream" means the gas stream flowing through the process vent.
- (52) "Visible emission" means the observation of an emission of opacity or optical density above the threshold of vision.

(W) As used in rule 3745-21-14 of the Administrative Code:

Except as otherwise provided in this paragraph, the definitions in rule 3745-15-01 of the Administrative Code and paragraph (B) of rule 3745-21-01 of the Administrative Code shall apply to rule 3745-21-14 of the Administrative Code (pertaining to "Control of Volatile Organic Compound Emissions from Batch Operations").

- (1) "Aggregate" means the summation of all process vents containing VOC within a process.
- (2) "Batch operation" means a noncontinuous operation in which a discrete quantity or batch of feed is charged into a unit operation within a batch process train and processed at one time. Batch operation includes noncontinuous operations in which the equipment is fed intermittently or discontinuously. Addition of raw material and withdrawal of product do not occur simultaneously in a batch operation. After each batch operation, the equipment is generally emptied before a fresh batch is started.
- (3) "Batch cycle" means a manufacturing event of an intermediate or product from start to finish in a batch process train.
- (4) "Batch process train" means the collection of equipment (e.g., reactors, filters, dryers, distillation columns, extractors, crystallizers, blend tanks, neutralizer tanks, digesters, surge tanks and product separators) configured to produce a specific product or intermediate by a batch operation. A batch process train terminates at the point of storage or product handling of the product or intermediate being produced in the batch process train. Irrespective of the product being produced, a batch process train which is independent of other processes shall be considered a single batch process train for purposes this rule.
- (5) "Boiler" means any enclosed combustion device that extracts useful energy in the form of steam.

- (6) "Continuous recorder" means a data recording device that either records an instantaneous data value at least once every fifteen minutes or records fifteen-minute or more frequent block average values.
- (7) "Control device" means any device or combination of devices designed to recover or destroy VOC vapors received from the process vents. A recovery device which is a required part of the process, for example, but not limited to, condensers operating under reflux conditions, is not a control device.
- (8) "Emission event" shall be defined as a discrete period of venting that is associated with a unit operation. For example, a displacement of vapor resulting from the charging of a unit operation with VOC will result in a discrete emission event that will last through the duration of the charge and will have an average flow rate equal to the rate of the charge. The expulsion of expanded unit operation vapor space when the vessel is heated is also an emission event. Both of these examples of emission events and others may occur in the same unit operation during the course of the batch cycle. If the flow rate measurement for any discrete period of venting is zero, then such event is not an emission event for purposes of rule 3745-21-14 of the Administrative Code.
- (9) "Flame zone" means the portion of the combustion chamber in a boiler occupied by the flame envelope.
- (10) "Incinerator" means any enclosed combustion device that is used for destroying organic compounds. Auxiliary fuel may be used to heat waste gas to combustion temperatures. Any energy recovery section present is not physically formed into one section; rather, the energy recovery system is a separate section following the combustion section and the two are joined by ducting or connections that carry fuel gas.
- (11) "MmHg" means millimeters of mercury.
- (12) "Permit" means a permit issued by the director pursuant to Chapter 3745-31 or 3745-77 of the Administrative Code.
- (13) "Ppmv" means parts per million by volume.
- (14) "Process vent" means a vent gas stream that is discharged from a unit operation or multiple unit operations within the same batch process train that are manifolded together into a common header. A process vent begins at the inlet to the control device prior to mixing with vent gas streams from other process trains or unrelated operations, or in the absence of a control device, at the point of discharge to the atmosphere. Not included in this definition are exhaust streams from exhaust hood and building ventilation fans which are used to provide ventilation for workers and not to collect and discharge emissions from specific unit operations. Process vents exclude relief valve discharges, leaks

from equipment, vents from storage tanks, vents from transfer or loading operations, and vents from wastewater.

- (15) "Recovery device" means an individual unit of equipment, such as an absorber, carbon adsorber, or condenser, capable of and used for the purpose of recovering chemicals for use, reuse, or sale.
  - (16) "Recovery system" means an individual recovery device or series of such devices applied to the same vent stream.
  - (17) "Standard industrial classification code" or "SIC code" means a series of four-digit codes devised by the office of management and budget (OMB) of the federal government to classify establishments according to the type of economic activity in which they are engaged.
  - (18) "Scfm" means standard cubic feet per minute.
  - (19) "Subject to this rule" means the facility has met the applicability criteria of paragraph (A)(1) of rule 3745-21-14 of the Administrative Code, or the batch process train is at a facility that has met the applicability criteria of paragraph (A)(1) of rule 3745-21-14 of the Administrative Code.
  - (20) "Unit operation" means one or more pieces of process equipment used to make a single change to the physical or chemical characteristics of one or more process streams. Equipment used for these purposes includes, but is not limited to, reactors, filters, dryers, distillation columns, extractors, crystallizers, blend tanks, neutralizer tanks, digesters, surge tanks, and product separators.
- (X) As used in rule 3745-21-15 of the Administrative Code:

Except as otherwise provided in this paragraph, the definitions in rule 3745-15-01 of the Administrative Code and paragraph (B) of rule 3745-21-01 of the Administrative Code shall apply to rule 3745-21-15 of the Administrative Code (pertaining to "Control of Volatile Organic Compound Emissions from Wood Furniture Manufacturing Operations").

- (1) "Adhesive" means any chemical substance that is applied for the purpose of bonding two surfaces together other than by mechanical means. Products used on humans and animals, adhesive tape, contact paper, or any other product with an adhesive incorporated onto or in an inert substrate shall not be considered adhesives.
- (2) "Aerosol adhesive" means an adhesive that is dispensed from a pressurized container as a suspension of fine solid or liquid particles in gas.
- (3) "As applied" means the VOC and solids content of the coating that is actually used for coating the substrate. It includes the contribution of materials used for in-house dilution of the coating.

- (4) "Basecoat" means a coat of colored material, usually opaque, that is applied before graining inks, glazing coats, or other opaque finishing materials, and is usually topcoated for protection.
- (5) "Capture device" means a hood, enclosed room, floor sweep, or other means of collecting solvent emissions or other pollutants into a duct so that the pollutant can be directed to a control device such as an incinerator or carbon adsorber.
- (6) "Capture efficiency" means the fraction of all organic vapors generated by a process that are directed to a control device.
- (7) "Capture system" means one or more capture devices intended to collect emissions generated by a finishing operation in the use of finishing materials, both at the point of application and at subsequent points where emissions from the finishing materials occur, such as flashoff, drying, or curing. Multiple capture devices that collect emissions generated by a finishing operation are considered a single capture system.
- (8) "Car-seal" means a seal that is placed on a device that is used to change the position of a valve (e.g., from opened to closed) in such a way that the position of the valve cannot be changed without breaking the seal.
- (9) "Certified product data sheet" or "CPDS") means documentation furnished by a coating supplier or an outside laboratory that provides the VOC content in percent by weight, the solids content in per cent by weight, other contents that may be of interest in per cent by weight, and the density of a coating (finishing material or strippable stray booth material) or solvent, based on formulation data or measurement methods. For data based on a measurement method, the measurement method should be identified within the CPDS. The purpose of the CPDS is to assist the facility in demonstrating compliance with the emission limitations presented in paragraphs (D) and (E) of rule 3745-21-15 of the Administrative Code. Therefore, the VOC content should represent the maximum VOC emission potential of the coating or solvent. A CPDS includes, but is not limited to, technical data sheets, material specification sheets, material safety data sheets, and laboratory test reports pertaining to a coating or solvent.
- (10) "Cleaning operations" means operations in which organic solvent is used to remove coating materials from equipment used in wood furniture manufacturing operations.
- (11) "Coating" means a protective, decorative, or functional film applied in a thin layer to a surface. Such materials include, but are not limited to, paints, topcoats, varnishes, sealers, stains, washcoats, basecoats, enamels, inks, and temporary protective coatings. Aerosol spray paints used for touch-up and repair are not considered coatings under rule 3745-21-15 of the Administrative Code.

- (12) "Coating operation" means those activities in which a coating is applied to a substrate and is subsequently air-dried, cured in an oven, or cured by radiation.
- (13) "Compliant coating" means a finishing material or strippable spray booth material that meets the VOC content limits specified in paragraphs (D) and (E) of rule 3745-21-15 of the Administrative Code.
- (14) "Continuous coater" means a finishing system that continuously applies finishing materials onto furniture parts moving along a conveyor. Finishing materials that are not transferred to the part are recycled to a reservoir. Several types of application methods can be used with a continuous coater including spraying, curtain coating, roll coating, dip coating, and flow coating.
- (15) "Continuous compliance" means that the affected source is meeting the emission limitations and other requirements of the rule at all times and is fulfilling all monitoring and recordkeeping provisions of the rule in order to demonstrate compliance.
- (16) "Continuous recorder" means a data recording device that either records an instantaneous data value at least once every fifteen minutes or records fifteen-minute or more frequent block average values.
- (17) "Control device" means any equipment that reduces the quantity of an air pollutant that is emitted to the air. The device may destroy or secure the pollutant for subsequent recovery and includes, but is not limited to, thermal oxidizers, catalytic oxidizers, regenerative carbon adsorbers, and concentrators.
- (18) "Control device efficiency" means the ratio of the pollutant released by a control device and the pollutant introduced to the control device.
- (19) "Conventional air spray" means a spray coating method in which the coating is atomized by mixing it with compressed air and applied at an air pressure greater than ten pounds per square inch (gauge) at the point of atomization. Airless and air assisted airless spray technologies are not conventional air spray because the coating is not atomized by mixing it with compressed air. Electrostatic spray technology is also not considered conventional air spray because an electrostatic charge is employed to attract the coating to the workpiece.
- (20) "Day" means a period of twenty-four consecutive hours beginning at midnight local time, or beginning at a time consistent with a facility's operating schedule.
- (21) "Dip coater" means a finishing operation that applies finishing materials by means of dip coating onto furniture parts.
- (22) "Emission" means the release or discharge, whether directly or indirectly, of VOC into the ambient air.

- (23) "Enamel" means a coat of colored material, usually opaque, that is applied as a protective topcoat over a basecoat, primer, or previously applied enamel coat. In some cases, another finishing material may be applied as a topcoat over the enamel. Under rule 3745-21-15 of the Administrative Code, an enamel is a topcoat.
- (24) "Finishing material" means a coating used in the wood furniture manufacturing industry. Such materials include, but are not limited to, stains, basecoats, washcoats, enamels, sealers, and topcoats. Under rule 3745-21-15 of the Administrative Code, adhesives and nonpermanent final finish materials shall not be considered finishing materials.
- (25) "Finishing operation" means those operations in which a finishing material is applied to a substrate and is subsequently air-dried, cured in an oven, or cured by radiation.
- (26) "Flow indicator" means a device that indicates whether gas flow is present in a vent stream.
- (27) "Gluing operation" means those operations in which adhesives are used to join components, for example, to apply a laminate to a wood substrate or foam to fabric.
- (28) "Monitoring device" means the total equipment used to measure and record (if applicable) process parameters.
- (29) "Natural draft opening" means any opening in a room, building, or total enclosure that remains open during operation of the finishing operation and that is not connected to a duct in which a fan is installed. The rate and direction of the natural draft across such an opening is a consequence of the difference in pressures on either side of the wall or barrier containing the opening.
- (30) "Noncompliant coating" means a finishing material or strippable spray booth material that has a VOC content greater than the VOC content limit specified in paragraphs (D) and (E) of rule 3745-21-15 of the Administrative Code.
- (31) "Nonpermanent final finish material" means a material such as a wax, polish, nonoxidizing oil, or similar substance that must be periodically reapplied to a surface over its lifetime to maintain or restore the reapplied material's intended effect.
- (32) "Operating parameter value" means a minimum or maximum value established for a control device, capture system, or process parameter that, if achieved by itself or in combination with one or more other operating parameter values, determines that an owner or operator has complied with an applicable emission limit.

- (33) "Organic monitoring device" means a device used to indicate the concentration level of organic compounds based on a detection principle such as infrared, photoionization, or thermal conductivity.
- (34) "Overall control efficiency" means the efficiency of a VOC emission control system, calculated as the product of the capture system and control device efficiencies, expressed as a percentage.
- (35) "Permanent total enclosure" or "PTE" means a permanently installed enclosure that meets the criteria for a PTE in accordance with USEPA method 204 specified within paragraph (C)(3)(c) of rule 3745-21-10 of the Administrative Code, and that directs all the exhaust gases from the enclosure to a control device.
- (36) "Permit" means a permit issued by the director pursuant to Chapter 3745-31 or 3745-77 of the Administrative Code.
- (37) "Responsible official" has the meaning given to it in rule 3745-77-01 of the Administrative Code.
- (38) "Sealer" means a finishing material used to seal the pores of a wood substrate before additional coats of finishing material are applied. Special purpose finishing materials that are used in some finishing systems to optimize aesthetics are not sealers.
- (39) "Solids" means the nonvolatile portion of the coating that makes up the dry film.
- (40) "Solvent" means a liquid used in a coating to dissolve or disperse constituents and/or to adjust viscosity. It evaporates during drying and does not become a part of the dried film.
- (41) "Stain" means any color coat having a solids content by weight of no more than 8.0 per cent that is applied in single or multiple coats directly to the substrate. It includes, but is not limited to, nongrain raising stains, equalizer stains, prestains, sap stains, body stains, no-wipe stains, penetrating stains, and toners.
- (42) "Strippable spray booth material" means a coating that:
- (a) is applied to a spray booth wall to provide a protective film to receive over spray during finishing operations;
  - (b) is subsequently peeled off and disposed; and
  - (c) reduces or eliminates the need to use VOC solvents to clean spray booth walls due to achieving the other two provisions of this definition.
- (43) "Subject to this rule" means the facility has met the applicability criteria of paragraph (A) of rule 3745-21-15 of the Administrative Code.

- (44) "Substrate" means the surface onto which a coating is applied (or into which a coating is impregnated).
- (45) "Temperature monitoring device" means a unit of equipment used to monitor temperature and having a minimum accuracy of plus or minus one per cent of the temperature being monitored expressed in degrees Celsius or plus or minus 0.5 degree Celsius, whichever is greater.
- (46) "Thinner" means a volatile liquid that is used to dilute coatings (to reduce viscosity, color strength, and solids, or to modify drying conditions).
- (47) "Topcoat" means the last film-building finishing material that is applied in a finishing system. Nonpermanent final finishes are not topcoats.
- (48) "Touchup and repair" means the application of finishing materials to cover minor finishing imperfections.
- (49) "VOC emission control system " means the combination of capture and control devices used to reduce VOC emissions to the atmosphere.
- (50) "VOC solvent" means a VOC liquid used for dissolving or dispersing constituents in a coating, adjusting the viscosity of a coating, or cleaning equipment. When used in a coating, the VOC solvent evaporates during drying and does not become a part of the dried film.
- (51) "Washcoat" means a transparent special purpose finishing material having a solids content by weight of 12.0 per cent by weight or less. Washcoats are applied over initial stains to protect, to control color, and to stiffen the wood fibers in order to aid sanding.
- (52) "Washoff operations" means those operations in which VOC solvent is used to remove coating from wood furniture or a wood furniture component.
- (53) "Wood furniture" means any product made of wood, a wood product such as rattan or wicker, or an engineered wood product such as particleboard that is manufactured under any of the following standard industrial classification (SIC) codes : 2434, 2511, 2512, 2517, 2519, 2521, 2531, 2541, 2599, or 5712.
- (54) "Wood furniture component" means any part that is used in the manufacture of wood furniture. Examples include, but are not limited to, drawer sides, cabinet doors, seat cushions, and laminated tops. However, foam seat cushions manufactured and fabricated at a facility that does not engage in any other wood furniture or wood furniture component manufacturing operation are excluded from this definition.

- (55) "Wood furniture manufacturing operations" means the finishing, gluing, cleaning, and washoff operations associated with the production of wood furniture or wood furniture components.

(Y) As used in rule 3745-21-16 of the Administrative Code:

Except as otherwise provided in this paragraph, the definitions in rule 3745-15-01 of the Administrative Code and paragraph (B) of rule 3745-21-01 of the Administrative Code shall apply to rule 3745-21-16 of the Administrative Code (pertaining to "Control of Volatile Organic Compound Emissions from Industrial Wastewater").

- (1) "Affected industrial category" means any of the following industrial categories:
- (a) Organic chemicals, plastics, and synthetic fibers manufacturing industry under standard industrial classification (SIC) codes 2821, 2823, 2824, 2865, and 2869.
  - (b) Pesticides manufacturing industry under SIC code 2879.
  - (c) Pharmaceutical manufacturing industry under SIC codes 2833, 2834, and 2836.
  - (d) Hazardous waste treatment, storage, and disposal facilities industry under SIC codes 4952, 4953, and 4959.
- (2) "Affected residual" means a residual that is removed from an affected VOC wastewater stream.
- (3) "Affected VOC" means VOC with a Henry's Law Constant greater than or equal to  $1.8 \times 10^{-6}$  atm-m<sup>3</sup>/mole (0.1 y/x) at twenty-five degrees Celsius.
- (4) "Affected VOC wastewater stream" means a process wastewater stream from a process unit at an affected industrial category with either an annual average concentration of affected VOC greater than or equal to ten thousand parts per million by weight (ppmw) or an annual average concentration of affected VOC greater than or equal to one thousand ppmw and an annual average flow rate greater than or equal to 10.0 liters per minute (2.64 gallons per minute), as determined in accordance with paragraph (I) of rule 3745-21-16 of the Administrative Code (relating to "Determination of Wastewater Characteristics"). The following are excluded from this definition:
- (a) Maintenance wastewaters;
  - (b) Stormwater from segregated sewers;
  - (c) Water from fire-fighting and deluge systems, including testing of such systems;

- (d) Spills;
  - (e) Water from safety showers;
  - (f) Samples of a size not greater than reasonably necessary for the method of analysis that is used;
  - (g) Equipment leaks;
  - (h) Wastewater drips from procedures such as disconnecting hoses after cleaning lines; and
  - (i) Noncontact cooling water.
- (5) "Annual average concentration" means the flow-weighted annual average concentration, as determined according to the procedures specified 40 CFR 60.782(b).
- (6) "Annual average flow rate" means the annual average flow rate, as determined according to the procedures specified in paragraph (I) of rule 3745-21-16 of the Administrative Code.
- (7) "Closed biological treatment process" means a tank or surface impoundment where biological treatment occurs and VOC emissions from the treatment process are routed either to a control device by means of a closed vent system or to a fuel gas system by means of hard-piping. The tank or surface impoundment has a fixed roof, as defined in this rule, or a floating flexible membrane cover that meets the requirements specified in paragraph (I) of rule 3745-21-16 of the Administrative Code.
- (8) "Closed-vent system" means a system that is not open to the atmosphere and is composed of hard-piping, ductwork, connections, and, if necessary, flow inducing devices that transport gas or vapor from an emission point to a control device.
- (9) "Combustion device" means an individual unit of equipment, such as a flare, incinerator, process heater, or boiler, used for the combustion of volatile organic compound emissions.
- (10) "Continuous seal" means a seal that forms a continuous closure that completely covers the space between the wall of the storage vessel and the edge of the floating roof. A continuous seal may be a vapor-mounted, liquid-mounted, or metallic shoe seal. A continuous seal may be constructed of fastened segments so as to form a continuous seal.
- (11) "Continuously monitor and record" means to measure data values of a parameter at least once every fifteen minutes and to record either each measured data value or block average values for a fifteen-minute or shorter time period. A block

average value is the average of all measured data values during the time period; or if data values are measured more frequently than once per minute, the average of measured data values taken at least once per minute during the time period.

- (12) "Control device means" any combustion device, recovery device for vapor vents, or recapture device. Such equipment includes, but is not limited to, absorbers, carbon adsorbers, condensers, incinerators, flares, boilers, and process heaters. For a steam stripper, a primary condenser is not considered a control device.
- (13) "Cover" means a device or system which is placed on or over a waste management unit containing wastewater or residuals so that the entire surface area is enclosed to minimize air VOC emissions. A cover may have openings necessary for operation, inspection, and maintenance of the waste management unit such as access hatches, sampling ports, and gauge wells provided that each opening is closed when not in use. Examples of covers include a fixed roof installed on a wastewater tank, a lid installed on a container, and an air-supported enclosure installed over a waste management unit.
- (14) "Ductwork" means a conveyance system such as those commonly used for heating and ventilation systems. It is often made of sheet metal and often has sections connected by screws or crimping. Hard-piping is not ductwork.
- (15) "Enhanced biological treatment process" means an aerated, thoroughly mixed treatment unit(s) that contains biomass suspended in water followed by a clarifier that removes biomass from the treated water and recycles recovered biomass to the aeration unit. The mixed liquor volatile suspended solids (biomass) is greater than one kilogram per cubic meter throughout each aeration unit. The biomass is suspended and aerated in the water of the aeration unit(s) by either submerged air flow or mechanical agitation. A thoroughly mixed treatment unit is a unit that is designed and operated to approach or achieve uniform biomass distribution and organic compound concentration throughout the aeration unit by quickly dispersing the recycled biomass and the wastewater entering the unit.
- (16) "External floating roof" means a pontoon-type or double-deck-type cover that rests on the liquid surface in a storage vessel or waste management unit with no fixed roof.
- (17) "Fixed roof" means a cover that is mounted on a waste management unit or storage vessel in a stationary manner and that does not move with fluctuations in liquid level.
- (18) "Floating roof" means a cover consisting of a double deck, pontoon single deck, internal floating cover or covered floating roof, which rests upon and is supported by the liquid being contained, and is equipped with a closure seal or seals to close the space between the roof edge and waste management unit.

- (19) "Fbio" means site-specific fraction of VOC biodegraded, unitless.
- (20) "Fe" means fraction emitted value, unitless.
- (21) "Fm" means compound-specific fraction measured factor, unitless.
- (22) "Fr" means fraction removed value for VOC, unitless.
- (23) "Fuel gas system" means the off-site and on-site piping and control system that gathers gaseous stream(s) generated by on-site operations, may blend them with other sources of gas, and transports the gaseous stream for use as fuel gas in combustion devices or in in-process combustion equipment such as furnaces and gas turbines, either singly or in combination.
- (24) "Hard-piping" means pipe or tubing that is manufactured and properly installed using good engineering judgment and standards, such as ANSI B31-3.
- (25) "Incinerator" means an enclosed combustion device that is used for destroying organic compounds. Auxiliary fuel may be used to heat waste gas to combustion temperatures. Any energy recovery section present is not physically formed into one manufactured or assembled unit with the combustion section; rather, the energy recovery section is a separate section following the combustion section and the two are joined by ducts or connections carrying flue gas. The above energy recovery section limitation does not apply to an energy recovery section used solely to preheat the incoming vent stream or combustion air.
- (26) "Individual drain system" means the stationary system used to convey wastewater streams or residuals to a waste management unit or to discharge or disposal. The term includes hard-piping, all process drains and junction boxes, together with their associated sewer lines and other junction boxes, manholes, sumps, and lift stations, conveying wastewater streams or residuals. A segregated storm water sewer system, which is a drain and collection system designed and operated for the sole purpose of collecting rainfall-runoff at a facility, and which is segregated from all other individual drain systems, is excluded from this definition.
- (27) "Internal floating roof" means a cover that rests or floats on the liquid surface (but not necessarily in complete contact with it) inside a waste management unit that has a fixed roof.
- (28) "Junction box" means a manhole or a lift station, or access point to a wastewater sewer line.
- (29) "Liquid-mounted seal" means a foam or liquid-filled seal mounted in contact with the liquid between the wall of the storage vessel or waste management unit and the floating roof. The seal is mounted continuously around the circumference of the vessel or unit.

- (30) "Maintenance wastewater" means wastewater generated by the draining of process fluid from components in the process unit into an individual drain system prior to or during maintenance activities. Maintenance wastewater can be generated during planned and unplanned shutdowns and during periods not associated with a shutdown. Any generation of wastewater that is routine or is generated by designed manufacturing processes is not maintenance wastewater. Examples of activities that can generate maintenance wastewaters include descaling heat exchanger tubing bundles, cleaning of distillation column traps, draining of low legs and high point bleeds, draining of pumps into an individual drain system and draining of portions of the process unit for repair.
- (31) "Maximum true vapor pressure" means the equilibrium partial pressure exerted by the organics in the stored or transferred liquid at the temperature equal to the highest calendar-month average of the liquid storage or transfer temperature for liquids stored or transferred above or below the ambient temperature or at the local maximum monthly average temperature as reported by the national weather service for liquids stored or transferred at the ambient temperature, as determined:
- (a) In accordance with methods described in American Petroleum Institute Bulletin 2517, "Evaporation Loss From External Floating Roof Tanks;" or
  - (b) As obtained from standard reference texts; or
  - (c) As determined by ASTM D2879-97; or
  - (d) Any other method approved by the director.
- (32) "Mechanical shoe seal" means metal sheets that are held vertically against the wall of the storage vessel by springs, weighted levers, or other mechanisms and connected to the floating roof by braces or other means. A flexible coated fabric (envelope) spans the annular space between the metal sheet and the floating roof.
- (33) "Oil-water separator" or "organic-water separator" means a waste management unit, used to separate oil or organics from water. An oil-water or organic-water separator consists of not only the separation unit but also the forebay and other separator basins, skimmers, weirs, grit chambers, sludge hoppers, and bar screens that are located directly after the individual drain system and prior to additional treatment units such as an air flotation unit, clarifier, or biological treatment unit. Examples of an oil-water or organic-water separator include, but are not limited to, an American Petroleum Institute separator, parallel-plate interceptor, and corrugated-plate interceptor with the associated ancillary equipment.
- (34) "Open biological treatment process" means a biological treatment process that is not a closed biological treatment process as defined in this rule.

- (35) "Plant" means the same as facility.
- (36) "Point of generation" means the location where process wastewater exits a process unit.
- (37) "Point of determination" means each point where process wastewater exits a process unit.
- (38) "Pressure relief valve" means a valve used only to release an unplanned, non-routine discharge. A relief valve discharge can result from an operator error, a malfunction such as a power failure or equipment failure, or other unexpected cause that requires immediate venting of gas from process equipment in order to avoid safety hazards or equipment damage.
- (39) "Process drain" means any opening (including a covered or controlled opening) that is installed or used to receive or convey wastewater into the wastewater system.
- (40) "Process unit" means the smallest set of process equipment that can operate independently and includes all operations necessary to achieve its process objective.
- (41) "Process wastewater" means wastewater which, during manufacturing or processing, comes into direct contact with or results from the production or use of any raw material, intermediate product, finished product, by-product, or waste product. Examples are product tank drawdown or feed tank drawdown; water formed during a chemical reaction or used as a reactant; water used to wash impurities from organic products or reactants; water used to cool or quench organic vapor streams through direct contact; and condensed steam from jet ejector systems pulling vacuum on vessels containing organics.
- (42) "RCRA" means the Resource Conservation and Recovery Act.
- (43) "Recapture device" means an individual unit of equipment capable of and used for the purpose of recovering chemicals, but not normally for use, reuse, or sale. For example, a recapture device may recover chemicals primarily for disposal. Recapture devices include, but are not limited to, absorbers, carbon adsorbers, and condensers.
- (44) "Recovery device" means an individual unit of equipment capable of and normally used for the purpose of recovering chemicals for fuel value (i.e., net positive heating value), use, reuse or for sale for fuel value, use, or reuse. Examples of equipment that may be recovery devices include absorbers, carbon adsorbers, condensers, oil-water separators or organic-water separators, or organic removal devices such as decanters, strippers, or thin-film evaporation units. For purposes of the monitoring, recordkeeping, and reporting requirements of this subpart, recapture devices are considered recovery devices.

- (45) "Residual" means any liquid or solid material containing VOC that is removed from a wastewater stream by a waste management unit or treatment process that does not destroy organic compounds (nondestructive unit). Examples of residuals from nondestructive wastewater management units are: the organic layer and bottom residue removed by a decanter or organic-water separator and the overheads from a steam stripper or air stripper. Examples of materials which are not residuals are: silt; mud; leaves; bottoms from a steam stripper or air stripper; and sludges, ash, or other materials removed from wastewater being treated by destructive devices such as biological treatment units and incinerators.
- (46) "Sewer line" means a lateral, trunk line, branch line, or other conduit including, but not limited to, grates, trenches, etc., used to convey wastewater streams or residuals to a downstream waste management unit.
- (47) "Single-seal system" means a floating roof having one continuous seal that completely covers the space between the wall of the storage vessel and the edge of the floating roof. This seal may be a vapor-mounted, liquid-mounted, or metallic shoe seal.
- (48) "Steam jet ejector" means a steam nozzle which discharges a high-velocity jet across a suction chamber that is connected to the equipment to be evacuated.
- (49) "Steam stripper" means a column (including associated stripper feed tanks, condensers, or heat exchangers) used to remove compounds from wastewater.
- (50) "Surface impoundment" means a waste management unit which is a natural topographic depression, manmade excavation, or diked area formed primarily of earthen materials (although it may be lined with manmade materials), which is designed to hold an accumulation of liquid wastes or waste containing free liquids. A surface impoundment is used for the purpose of treating, storing, or disposing of wastewater or residuals, and is not an injection well. Examples of surface impoundments are equalization, settling, and aeration pits, ponds, and lagoons.
- (51) "Tank drawdown" means any material or mixture of materials discharged from a product tank, feed tank, or intermediate tank for the purpose of removing water or other contaminants from the tank.
- (52) "Temperature monitoring device" means a unit of equipment used to monitor temperature and having a minimum accuracy of (a) plus or minus one per cent of the temperature being monitored expressed in degrees Celsius or (b) plus or minus 0.5 degree Celsius, whichever number is greater (i.e., has the highest absolute value).
- (53) "Treatment process" means a specific technique that removes or destroys the organics in a wastewater or residual stream such as a steam stripping unit (steam stripper), thin-film evaporation unit, waste incinerator, biological treatment unit,

or any other process applied to wastewater streams or residuals to comply with paragraph (D)(8) or (E) of rule 3745-21-16 of the Administrative Code. Most treatment processes are conducted in tanks. Treatment processes are a subset of waste management units.

- (54) "Vapor-mounted seal" means a continuous seal that completely covers the annular space between the wall of the storage vessel or waste management unit and the edge of the floating roof and is mounted such that there is a vapor space between the stored liquid and the bottom of the seal.
- (55) "Waste management unit" means the equipment, structure(s), or device(s) used to convey, store, treat, or dispose of wastewater streams or residuals. Examples of waste management units include: wastewater tanks, surface impoundments, individual drain systems, and biological wastewater treatment units. Examples of equipment that may be waste management units include containers, air flotation units, oil-water separators or organic-water separators, or organic removal devices such as decanters, strippers, or thin-film evaporation units. If such equipment is used for recovery then it is part of a process unit and is not a waste management unit.
- (56) "Wastewater stream" means a stream that contains process wastewater.
- (57) "Wastewater tank" means a stationary waste management unit that is designed to contain an accumulation of wastewater or residuals and is constructed primarily of non-earthen materials (e.g., wood, concrete, steel, plastic) which provide structural support. Wastewater tanks used for flow equalization are included in this definition.
- (58) "Water seal controls" means a seal pot, p-leg trap, or other type of trap filled with water (e.g., flooded sewers that maintain water levels adequate to prevent air flow through the system) that creates a water barrier between the water level of the seal and the atmosphere. The water level of the seal must be maintained in the vertical leg of a drain in order to be considered a water seal.
- (59) "Wet weather retention basin" means an impoundment or tank that is used to store rainfall runoff that would exceed the capacity of the wastewater treatment system until it can be returned to the wastewater treatment system or, if the water meets the applicable discharge limits, discharged without treatment. These units may also be used to store wastewater during periods when the wastewater treatment system is shut down for maintenance or emergencies.

(Z) As used in rule 3745-21-17 of the Administrative Code:

Except as otherwise provided in this paragraph, the definitions in rule 3745-15-01 of the Administrative Code and paragraph (B) of rule 3745-21-01 of the Administrative Code shall apply to rule 3745-21-17 of the Administrative Code (pertaining to portable fuel containers).

- (1) "Fuel" means all gasoline, gasoline-alcohol mixtures or blends, diesel, kerosene or petroleum derivatives, having a true vapor pressure within the range of 1.5 to eleven pounds per square in absolute (psia) (10.3 to 75.6) for use in internal combustion engines or aircraft.
- (2) "Manufacturer" means any person who imports, manufactures, assembles, packages, repackages, or re-labels a portable fuel container or spout or both portable fuel container and spout.
- (3) "Nominal capacity" means the volume indicated by the manufacturer that represents the maximum recommended filling level.
- (4) "Outboard engine" means a spark-ignition marine engine that, when properly mounted on a marine water-craft in the position to operate, houses the engine and drive unit external to the hull of the marine water-craft.
- (5) "Person" means any individual, public or private corporation, political subdivision, government agency, department or bureau of the State, municipality, industry, co-partnership, association, firm, estate or any legal entity whatsoever.
- (6) "Portable fuel container" means any container or vessel with a nominal capacity of ten gallons or less intended for reuse that is designed, or used, sold, advertised or offered for sale primarily for receiving, transporting, storing, and dispensing fuel or kerosene. Portable fuel containers do not include containers permanently embossed, or affixed with a permanent durable label with wording indicating such containers are solely intended for use with non-fuel or non-kerosene products.
- (7) "Spout" means any device that can be firmly attached to a portable fuel container for conducting pouring or fueling through which the contents of a portable fuel container can be dispensed.
- (8) "Target fuel tank" means any receptacle that receives fuel from a portable fuel container.

(AA) As used in rule 3745-21-19 of the Administrative Code:

- (1) "Ablative coating" means a coating that chars when exposed to open flame or extreme temperatures, as would occur during the failure of an engine casing or during aerodynamic heating. The ablative char surface serves as an insulative barrier, protecting adjacent components from the heat or open flame.
- (2) "Adhesion promoter" means a very thin coating applied to a substrate to promote wetting and form a chemical bond with the subsequently applied material.
- (3) "Adhesive bonding primer" means a primer applied in a thin film to aerospace components for the purpose of corrosion inhibition and increased adhesive bond

strength by attachment. There are two categories of adhesive bonding primers: primers with a design cure at two hundred fifty degrees Fahrenheit or below and primers with a design cure above two hundred fifty degrees Fahrenheit.

- (4) "Adhesive primer" means a coating that:
  - (a) Inhibits corrosion and serves as a primer applied to bare metal surfaces or prior to adhesive application; or
  - (b) Is applied to surfaces that can be expected to contain fuel, however, fuel tank coatings are excluded from this category.
- (5) "Aerosol coating" means a coating expelled from a handheld, pressurized, non-refillable container in a finely divided spray when a valve on the container is depressed.
- (6) "Aerospace manufacturing or rework facility" means any facility that produces, reworks, or repairs in any amount any commercial, civil, or military aerospace vehicle or component.
- (7) "Aerospace vehicle or component" means any fabricated part, processed part, assembly of parts, or completed unit, with the exception of electronic components, of any aircraft including but not limited to airplanes, helicopters, missiles, rockets, and space vehicles.
- (8) "Aircraft fluid systems" means those systems that handle hydraulic fluids, fuel, cooling fluids, or oils.
- (9) "Aircraft transparency" means the aircraft windshield, canopy, passenger windows, lenses and other components which are constructed of transparent materials.
- (10) "Antichafe coating" means a coating applied to areas of moving aerospace components that may rub during normal operations or installation.
- (11) "Antique aerospace vehicle or component" means an aircraft or component thereof that was built at least thirty years ago. An antique aerospace vehicle would not routinely be in commercial or military service in the capacity for which it was designed.
- (12) "Aqueous cleaning solvent" means a solvent in which water is at least eighty percent of the solvent as applied. Detergents, surfactants, and bioenzyme mixtures and nutrients may be combined with the water along with a variety of additives, such as organic solvents (e.g., high boiling point alcohols), builders, saponifiers, inhibitors, emulsifiers, pH buffers, and antifoaming agents. Aqueous solutions must have a flash point greater than ninety-three degrees Celsius (two hundred degrees Fahrenheit) (as reported by the manufacturer), and the solution must miscible with water.

- (13) "Bearing coating" means a coating applied to an antifriction bearing, a bearing housing, or the area adjacent to such a bearing in order to facilitate bearing function or to protect base material from excessive wear. A material shall not be classified as a bearing coating if it can also be classified as a dry lubricative material or a solid film lubricant.
- (14) "Bonding maskant" means a temporary coating used to protect selected areas of aerospace parts from strong acid or alkaline solutions during processing for bonding.
- (15) "Caulking and smoothing compounds" means semi-solid materials which are applied by hand application methods and are used to aerodynamically smooth exterior vehicle surfaces or fill cavities such as bolt hole accesses. A material shall not be classified as a caulking and smoothing compound if it can also be classified as a sealant.
- (16) "Chemical agent-resistant coating" or "CARC" means an exterior topcoat designed to withstand exposure to chemical warfare agents or the decontaminants used on these agents.
- (17) "Chemical milling maskant" means a coating that is applied directly to aluminum components to protect surface areas when chemical milling the component with a Type I or Type II etchant. Type I chemical milling maskants are used with a Type I etchant and Type II chemical milling maskants are used with a Type II etchant. This definition does not include bonding maskants, critical use, line sealer maskants, and seal coat maskants. Additionally, maskants that must be used with a combination of Type I or II etchants and any of the above types of maskants (i.e., bonding, critical use and line sealer, and seal coat) are also exempt from this subpart. (See also Type I and Type II etchant definitions.)
- (18) "Cleaning operation" means collectively spray gun, hand wipe, and flush cleaning operations.
- (19) "Cleaning solvent" means a liquid material used for hand wipe, spray gun, or flush cleaning. This definition does not include solutions that contain VOC at concentrations less than 0.1 per cent by weight for carcinogens and less than 1.0 per cent by weight for non-carcinogens, as determined from manufacturer's representations.
- (20) "Clear coating" means a transparent coating usually applied over a colored opaque coating, metallic substrate, or placard to give improved gloss and protection to the color coat. A clearcoat refers to any transparent coating without regard to substrate.

- (21) "Coating" means a material that is applied to the surface of an aerospace vehicle or component to form a decorative or functional solid film, or the solid film itself.
- (22) "Coating line" means an operation consisting of a series of one or more coating applicators and any associated flash-off areas, drying areas and ovens wherein a coating is applied, dried, and/or cured. It is not necessary for an operation to have an oven, or flash-off area, or drying area in order to be included within this definition.
- (23) "Coating operation" means the use of a spray booth, tank, or other enclosure or any area, such as a hangar, for the application of a single type of coating (e.g., primer). The use of the same spray booth, tank, or other enclosure or area for the application of another type of coating (e.g., topcoat) constitutes a separate coating operation for which compliance determinations are performed separately.
- (24) "Commercial exterior aerodynamic structure primer" means a primer used on aerodynamic components and structures that protrude from the fuselage, such as wings and attached components, control surfaces, horizontal stabilizers, vertical fins, wing-to-body fairings, antennae, and landing gear and doors, for the purpose of extended corrosion protection and enhanced adhesion.
- (25) "Commercial interior adhesive" means materials used in the bonding of passenger cabin interior components. These components must meet the FAA fire worthiness requirements.
- (26) "Compatible epoxy primer" means a primer that is compatible with the filled elastomeric coating and is epoxy based. This compatible substrate primer is an epoxy-polyamide primer used to promote adhesion of elastomeric coatings such as impact-resistant coatings.
- (27) "Compatible substrate primer" means a primer that is either a compatible epoxy primer or an adhesive primer.
- (28) "Confined space" means a space that:
- (a) Is large enough and so configured that an employee can bodily enter and perform assigned work;
  - (b) Has limited or restricted means for entry or exit (for example, fuel tanks, fuel vessels, and other spaces that have limited means of entry); and
  - (c) Is not suitable for continuous employee occupancy.
- (29) "Corrosion prevention compound" means a coating that provides corrosion protection by displacing water and penetrating mating surfaces, forming a

protective barrier between the metal surface and moisture. Coatings containing oils or waxes are excluded from this category.

- (30) "Critical use and line sealer maskant" means a temporary coating, not covered under other maskant categories, used to protect selected areas of aerospace parts from strong acid or alkaline solutions such as those used in anodizing, plating, chemical milling and processing of magnesium, titanium, or high strength steel, high precision aluminum chemical milling of deep cuts, and aluminum chemical milling of complex shapes. Materials used for repairs or to bridge gaps left by scribing operations (i.e., line sealer) are also included in this category.
- (31) "Cryogenic flexible primer" means a primer designed to provide corrosion resistance, flexibility, and adhesion of subsequent coating systems when exposed to loads up to and surpassing the yield point of the substrate at cryogenic temperatures (minus two hundred seventy-five degrees Fahrenheit and below).
- (32) "Cryoprotective coating" means a coating that insulates cryogenic or subcooled surfaces to limit propellant boil-off, maintain structural integrity of metallic structures during ascent or re-entry, and prevent ice formation.
- (33) "Cyanoacrylate adhesive" means a fast-setting, single component adhesive that cures at room temperature. It is also known by the tradename "super glue."
- (34) "DOD" means the United States department of defense, including military departments and defense agencies, acting through either the secretary of defense or the designee of the secretary.
- (35) "Dry lubricative material" means a coating consisting of lauric acid, cetyl alcohol, waxes, or other non-cross linked or resin-bound materials which act as a dry lubricant.
- (36) "Electric or radiation-effect coating" means a coating or coating system engineered to interact, through absorption or reflection, with specific regions of the electromagnetic energy spectrum, such as the ultraviolet, visible, infrared, or microwave regions. Uses include, but are not limited to, lightning strike protection, electromagnetic pulse protection, and radar avoidance. Coatings that have been designated "classified" by the department of defense are exempt.
- (37) "Electrostatic discharge and electromagnetic interference coating" or "EMI coating" means a coating applied to space vehicles, missiles, aircraft radomes, and helicopter blades to disperse static energy or reduce electromagnetic interference.
- (38) "Electrostatic spray" means a method of applying a spray coating in which an electrical charge is applied to the coating and the substrate is grounded. The coating is attracted to the substrate by the electrostatic potential between them.

- (39) "Elevated temperature Skydrol-resistant commercial primer" means a primer applied primarily to commercial aircraft (or commercial aircraft adapted for military use) that must withstand immersion in phosphate-ester hydraulic fluid (Skydrol 500b or equivalent) at the elevated temperature of one hundred fifty degrees Fahrenheit for one thousand hours.
- (40) "Epoxy polyamide topcoat" means a coating used where harder films are required or in some areas where engraving is accomplished in camouflage colors.
- (41) "Exterior primer" means the first layer and any subsequent layers of identically formulated coating applied to the exterior surface of an aerospace vehicle or component where the component is used on the exterior of the aerospace vehicle. Exterior primers are typically used for corrosion prevention, protection from the environment, functional fluid resistance, and adhesion of subsequent exterior topcoats. Coatings that are defined as specialty coatings are not included under this definition.
- (42) "FAA" means the federal aviation administration, department of transportation, United States.
- (43) "Fire-resistant (interior) coating" means:
- (a) For civilian aircraft, a coating used on passenger cabin interior parts that are subject to the FAA fireworthiness requirements;
  - (b) For military aircraft, a coating used on parts that are subject to the flammability requirements of MIL-STD-1630A and MIL-A-87721; and
  - (c) For space applications, a coating used on parts that are subject to the flammability requirements of SE-R-0006 and SSP 30233.
- (44) "Flexible primer" means a primer that meets flexibility requirements such as those needed for adhesive bond primed fastener heads or on surfaces expected to contain fuel. The flexible coating is required because it provides a compatible, flexible substrate over bonded sheet rubber and rubber-type coatings as well as a flexible bridge between the fasteners, skin, and skin-to-skin joints on outer aircraft skins. This flexible bridge allows more topcoat flexibility around fasteners and decreases the chance of the topcoat cracking around the fasteners. The result is better corrosion resistance.
- (45) "Flight test coating" means a coating applied to aircraft other than missiles or single-use aircraft prior to flight testing to protect the aircraft from corrosion and to provide required marking during flight test evaluation.
- (46) "Fuel tank adhesive" means an adhesive used to bond components exposed to fuel and must be compatible with fuel tank coatings.

- (47) "Fuel tank coating" means a coating applied to fuel tank components for the purpose of corrosion and/or bacterial growth inhibition and to assure sealant adhesion in extreme environmental conditions.
- (48) "General aviation" or "GA" means that segment of civil aviation that encompasses all facets of aviation except air carriers, commuters, and military. General aviation includes charter and corporate-executive transportation, instruction, rental, aerial application, aerial observation, business, pleasure, and other special uses.
- (49) "General aviation rework facility" means any aerospace facility with the majority of its revenues resulting from the reconstruction, repair, maintenance, repainting, conversion, or alteration of general aviation aerospace vehicles or components.
- (50) "Hand wipe cleaning operation" means removing contaminants such as dirt, grease, oil, and coatings from an aerospace vehicle or component by physically rubbing it with a material such as a rag, paper, or cotton swab that has been moistened with a cleaning solvent.
- (51) "High temperature coating" means a coating designed to withstand temperatures of more than three hundred fifty degrees Fahrenheit.
- (52) "High volume low pressure spray equipment" or "HVLP spray equipment" means spray equipment that is used to apply coating by means of a spray gun that operates at 10.0 pounds per square inch gauge of atomizing air pressure or less at the air cap.
- (53) "Insulation covering" means material that is applied to foam insulation to protect the insulation from mechanical or environmental damage.
- (54) "Intermediate release coating" means a thin coating applied beneath topcoats to assist in removing the topcoat in depainting operations and generally to allow the use of less hazardous depainting methods.
- (55) "Lacquer" means a clear or pigmented coating formulated with a nitrocellulose or synthetic resin to dry by evaporation without a chemical reaction. Lacquers are resolvable in their original solvent.
- (56) "Large commercial aircraft" means an aircraft of more than one hundred ten thousand pounds, maximum certified take-off weight manufactured for non-military use.
- (57) "Leak" means any visible leakage, including misting and clouding.
- (58) "Limited access space" means internal surfaces or passages of an aerospace vehicle or component that cannot be reached without the aid of an airbrush or a spray gun extension for the application of coatings.

- (59) "Metalized epoxy coating" means a coating that contains relatively large quantities of metallic pigmentation for appearance and/or added protection.
- (60) "Mold release" means a coating applied to a mold surface to prevent the molded piece from sticking to the mold as it is removed.
- (61) "Nonstructural adhesive" means an adhesive that bonds nonload bearing aerospace components in noncritical applications and is not covered in any other specialty adhesive categories.
- (62) "Operating parameter value" means a minimum or maximum value established for a control equipment or process parameter that, if achieved by itself or in combination with one or more other operating parameter values, determines that an owner or operator has complied with an applicable emission limitation.
- (63) "Optical anti-reflection coating" means a coating with a low reflectance in the infrared and visible wavelength ranges that is used for antireflection on or near optical and laser hardware.
- (64) "Part marking coating" means coatings or inks used to make identifying markings on materials, components, and/or assemblies. These markings may be either permanent or temporary.
- (65) "Pretreatment coating" means an organic coating that contains at least 0.5 percent acids by weight and is applied directly to metal surfaces to provide surface etching, corrosion resistance, adhesion, and ease of stripping.
- (66) "Primer" means the first layer and any subsequent layers of identically formulated coating applied to the surface of an aerospace vehicle or component. Primers are typically used for corrosion prevention, protection from the environment, functional fluid resistance, and adhesion of subsequent coatings. Primers that are defined as specialty coatings are not included under this definition.
- (67) "Radome" means the nonmetallic protective housing for electromagnetic transmitters and receivers (e.g., radar, electronic countermeasures, etc.).
- (68) "Rain erosion-resistant coating" means a coating or coating system used to protect the leading edges of parts such as flaps, stabilizers, radomes, engine inlet nacelles, etc. against erosion caused by rain impact during flight.
- (69) "Research and development operation" means an operation whose purpose is for research and development of new processes and products, that is conducted under the close supervision of technically trained personnel and is not involved in the manufacture of final or intermediate products for commercial purposes, except in a de minimis manner.

- (70) "Rocket motor bonding adhesive" means an adhesive used in rocket motor bonding applications.
- (71) "Rocket motor nozzle coating" means a catalyzed epoxy coating system used in elevated temperature applications on rocket motor nozzles.
- (72) "Rubber-based adhesive" means a quick setting contact cement that provide a strong, yet flexible bond between two mating surfaces that may be of dissimilar materials.
- (73) "Scale inhibitor" means a coating that is applied to the surface of a part prior to thermal processing to inhibit the formation of scale.
- (74) "Screen print ink" means a inks used in screen printing processes during fabrication of decorative laminates and decals.
- (75) "Seal coat maskant" means an overcoat applied over a maskant to improve abrasion and chemical resistance during production operations.
- (76) "Sealant" means a material used to prevent the intrusion of water, fuel, air, or other liquids or solids from certain areas of aerospace vehicles or components. There are two categories of sealants: extrudable/rollable/brushable sealants and sprayable sealants.
- (77) "Self-priming topcoat" means a topcoat that is applied directly to an uncoated aerospace vehicle or component for purposes of corrosion prevention, environmental protection, and functional fluid resistance. More than one layer of identical coating formulation may be applied to the vehicle or component.
- (78) "Semiaqueous cleaning solvent" means a solution in which water is a primary ingredient (greater than sixty per cent of the solvent solution as applied must be water.)
- (79) "Silicone insulation material" means an insulating material applied to exterior metal surfaces for protection from high temperatures caused by atmospheric friction or engine exhaust. These materials differ from ablative coatings in that they are not "sacrificial."
- (80) "Solids" means the nonvolatile portion of the coating that after drying makes up the dry film.
- (81) "Solid film lubricant" means a very thin coating consisting of a binder system containing as its chief pigment material one or more of the following: molybdenum, graphite, polytetrafluoroethylene, or other solids that act as a dry lubricant between faying surfaces.
- (82) "Space vehicle" means a man-made device, either manned or unmanned, designed for operation beyond earth's atmosphere. This definition includes

integral equipment such as models, mock-ups, prototypes, molds, jigs, tooling, hardware jackets, and test coupons. Also included is auxiliary equipment associated with test, transport, and storage, which through contamination can compromise the space vehicle performance.

- (83) "Specialty coating" means a coating that, even though it meets the definition of a primer, topcoat, or self-priming topcoat, has additional performance criteria beyond those of primers, topcoats, and self-priming topcoats for specific applications. These performance criteria may include, but are not limited to, temperature or fire resistance, substrate compatibility, antireflection, temporary protection or marking, sealing, adhesively joining substrates, or enhanced corrosion protection. A listing of specialty coatings is found in paragraph (D)(1)(b) of rule 3745-21-19 of the Administrative Code.
- (84) "Specialized function coating" means a coating that fulfills extremely specific engineering requirements that are limited in application and are characterized by low volume usage. This category excludes coatings covered in other specialty coating categories.
- (85) "Spray gun" means a device that atomizes a coating or other material and projects the particulates or other material onto a substrate.
- (86) "Structural autoclavable adhesive" means an adhesive used to bond load carrying aerospace components that is cured by heat and pressure in an autoclave.
- (87) "Structural non-autoclavable adhesive" means an adhesive cured under ambient conditions that is used to bond load carrying aerospace components or other critical functions, such as nonstructural bonding in the proximity of engines.
- (88) "Surface preparation" means the removal of contaminants from the surface of an aerospace vehicle or component or the activation or reactivation of the surface in preparation for the application of a coating.
- (89) "Temporary protective coating" means a coating applied to provide scratch or corrosion protection during manufacturing, storage, or transportation. Two types include peelable protective coatings and alkaline removable coatings. These materials are not intended to protect against strong acid or alkaline solutions. Coatings that provide this type of protection from chemical processing are not included in this category.
- (90) "Thermal control coating" means a coatings formulated with specific thermal conductive or radiative properties to permit temperature control of the substrate.
- (91) "Topcoat" means a coating that is applied over a primer on an aerospace vehicle or component for appearance, identification, camouflage, or protection. Topcoats that are defined as specialty coatings are not included under this definition.

- (92) "Touchup and repair coating" means a coating used to cover minor coating imperfections appearing after the main coating operation.
- (93) "Type II etchant" means a chemical milling etchant that is a strong sodium hydroxide solution containing amines.
- (94) "Type I etchant" means a chemical milling etchant that contains varying amounts of dissolved sulfur and does not contain amines.
- (95) "VOC composite vapor pressure" means the sum of the partial pressures of the compounds defined as VOC in this rule, as determined according to the procedures specified in paragraph (S) of rule 3745-21-10 of the Administrative Code.
- (96) "Waterborne (water-reducible) coating" means a coating which contains more than five per cent water by weight as applied in its volatile fraction.
- (97) "Wet fastener installation coating" means a primer or sealant applied by dipping, brushing, or daubing to fasteners that are installed before the coating is cured.
- (98) "Wing coating" means a corrosion-resistant topcoat that is resilient enough to withstand the flexing of the wings.

(BB) As used in rule 3745-21-20 of the Administrative Code.

- (1) "Add-on control system" means an air pollution control device such as a carbon adsorber or incinerator that reduces pollution in an air stream by destruction or removal prior to discharge to the atmosphere.
- (2) "Air flask coating" means any special composition coating applied to interior surfaces of high pressure breathing air flasks to provide corrosion resistance and that is certified safe for use with breathing air supplies.
- (3) "Antenna coating" means any coating applied to equipment through which electromagnetic signals must pass for reception or transmission.
- (4) "Antifoulant coating" means any coating that is applied to the underwater portion of a vessel to prevent or reduce the attachment of biological organisms and that is registered with the USEPA as a pesticide under the Federal Insecticide, Fungicide, and Rodenticide Act.
- (5) "As applied" means the condition of a coating at the time of application to the substrate, including any thinning solvent.
- (6) "As supplied" means the condition of a coating before any thinning, as sold and delivered by the coating manufacturer to the user.

- (7) "Batch" means the product of an individual production run of a coating manufacturer's process. A batch may vary in composition from other batches of the same product.
- (8) "Bitumens" mean black or brown materials that are soluble in carbon disulfide and consist mainly of hydrocarbons.
- (9) "Bituminous resin coating" means any coating that incorporates bitumens as a principal component and is formulated primarily to be applied to a substrate or surface to resist ultraviolet radiation and/or water.
- (10) "Chemical Agent Resistant Coating" or "CARC" means a military exterior coating.
- (11) "Coating" means any material that can be applied as a thin layer to a substrate and which cures to form a continuous solid film.
- (12) "Cold-weather time period" means any time during which the ambient temperature is below 4.5 degrees Celsius (forty degrees Fahrenheit) and coating is to be applied.
- (13) "Container of coating" means the container from which the coating is applied, including but not limited to a bucket or pot.
- (14) "Cure volatiles" means reaction products which are emitted during the chemical reaction which takes place in some coating films at the cure temperature. These emissions are other than those from the solvents in the coating and may, in some cases, comprise a significant portion of total VOC emissions.
- (15) "Epoxy coating" means any thermoset coating formed by reaction of an epoxy resin (i.e., a resin containing a reactive epoxide with a curing agent).
- (16) "General use coating" means any coating that is not a specialty coating.
- (17) "Heat resistant coating" means any coating that during normal use must withstand a temperature of at least two hundred four degrees Celsius (four hundred degrees Fahrenheit).
- (18) "High-gloss coating" means any coating that achieves at least eighty-five per cent reflectance on a sixty-degree meter when tested by ASTM D523-89(1999).
- (19) "High-temperature coating" means any coating that during normal use must withstand a temperature of at least four hundred twenty-six degrees Celsius (eight hundred degrees Fahrenheit).
- (20) "Inorganic zinc (high-build) coating" means a coating that contains eight pounds per gallon (nine hundred sixty grams per liter) or more elemental zinc

incorporated into an inorganic silicate binder that is applied to steel to provide galvanic corrosion resistance.

- (21) "Interior coating" means any coating used on interior surfaces aboard United States military vessels pursuant to a coating specification that requires the coating to meet specified fire retardant and low toxicity requirements, in addition to the other applicable military physical and performance requirements.
- (22) "Marine coating" means any coating that is applied to ships.
- (23) "Maximum allowable thinning ratio" means the maximum volume of thinner that can be added per volume of coating without violating the VOC content limits of paragraph (D)(1) of rule 3745-21-20 of the Administrative Code.
- (24) "Military exterior coating" means any exterior topcoat applied to military or USCG vessels that are subject to specific chemical, biological, and radiological washdown requirements.
- (25) "Mist coating" means any low viscosity, thin film, epoxy coating applied to an inorganic zinc primer that penetrates the porous zinc primer and allows the occluded air to escape through the paint film prior to curing.
- (26) "Navigational aids coating" means any coating applied to USCG buoys or other USCG waterway markers when they are recoated aboard ship at their usage site and immediately returned to the water.
- (27) "Nonskid coating" means any coating applied to the horizontal surfaces of a marine vessel for the specific purpose of providing slip resistance for personnel, vehicles, or aircraft.
- (28) "Nonvolatiles" means substances that do not evaporate readily. This term refers to the film-forming material of a coating.
- (29) "Normally closed" means a container or piping system is closed unless an operator is actively engaged in adding or removing material.
- (30) "Nuclear coating" means any protective coating used to seal porous surfaces such as steel (or concrete) that otherwise would be subject to intrusion by radioactive materials. These coatings must be resistant to long-term (service life) cumulative radiation exposure (ASTM D4082-89), relatively easy to decontaminate (ASTM D4256-89(1994)e1), and resistant to various chemicals to which the coatings are likely to be exposed (ASTM D3912-80). [For nuclear coatings, see the general protective requirements outlined by the United States nuclear regulatory commission in a report entitled "Regulatory Guide 1.54 - Service Level I, II and III Protective Coatings Applied to Nuclear Plants"]
- (31) "Operating parameter value" means a minimum or maximum value established for a control device or process parameter that, if achieved by itself or in

combination with one or more other operating parameter values, determines that an owner or operator has complied with an applicable emission limitation.

- (32) "Organic zinc coating" means any coating derived from zinc dust incorporated into an organic binder that contains more than eight pounds of elemental zinc per gallon (nine hundred sixty grams per liter) of coating, as applied, and that is used for the expressed purpose of corrosion protection.
- (33) "Pleasure craft" means any marine or fresh-water vessel used by individuals for noncommercial, nonmilitary, and recreational purposes that is less than twenty meters in length. A vessel rented exclusively to or chartered by individuals for such purposes shall be considered a pleasure craft.
- (34) "Pretreatment wash primer" means any coating that contains a minimum of 0.5 per cent acid, by mass, and is applied only to bare metal to etch the surface and enhance adhesion of subsequent coatings.
- (35) "Repair and maintenance of thermoplastic coating" means any vinyl, chlorinated rubber, or bituminous resin coating that is applied over the same type of existing coating to perform the partial recoating of any in-use commercial vessel. (This definition does not include coal tar epoxy coatings, which are considered "general use" coatings.)
- (36) "Rubber camouflage coating" means any specially formulated epoxy coating used as a camouflage topcoat for exterior submarine hulls and sonar domes.
- (37) "Sealant coating for thermal spray aluminum" means any epoxy coating applied to thermal spray aluminum surfaces at a maximum thickness of one dry mil.
- (38) "Ship" means any marine or fresh-water vessel used for military or commercial operations, including self-propelled vessels, those propelled by other craft (barges), and navigational aids (buoys). This definition includes, but is not limited to, all military and USCG vessels, commercial cargo and passenger (cruise) ships, ferries, barges, tankers, container ships, patrol and pilot boats, and dredges. For purposes of rule 3745-21-20 of the Administrative Code, pleasure crafts and offshore oil and gas drilling platforms are not considered ships.
- (39) "Shipbuilding and/or ship repair operations" means any building, repair, repainting, converting, or alteration of ships.
- (40) "Solids" means nonvolatiles.
- (41) "Special marking coating" means any coating that is used for safety or identification applications, such as markings on flight decks and ships' numbers.
- (42) "Tack coating" means any thin film epoxy coating applied at a maximum thickness of two dry mils to prepare an epoxy coating that has dried beyond the time limit specified by the manufacturer for the application of the next coat.

- (43) "Thinner" means a liquid that is used to reduce the viscosity of a coating and that evaporates before or during the cure of a film.
- (44) "Thinning ratio" means the volumetric ratio of thinner to coating, as supplied.
- (45) "Thinning solvent" means thinner.
- (46) "Undersea weapons systems coating" means any coating applied to any component of a weapons system intended to be launched or fired from under the sea.
- (47) "USCG" means the United States coast guard.
- (48) "Weld-through preconstruction primer" means a coating that provides corrosion protection for steel during inventory, is typically applied at less than one mil dry film thickness, does not require removal prior to welding, is temperature resistant (burn back from a weld is less than 1.25 centimeters (0.5 inch)), and does not normally require removal before applying film-building coatings, including inorganic zinc high-build coatings. When constructing new vessels, there may be a need to remove areas of weld-through preconstruction primer due to surface damage or contamination prior to application of film-building coatings.

(CC) (Reserved)

(DD) As used in rule 3745-21-22 of the Administrative Code (pertaining to the control of VOC emissions from lithographic and letterpress printing operations).

- (1) "Alcohol" means any of the following compounds, when used as a fountain solution additive for offset lithographic printing: ethanol, n-propanol, and isopropanol.
- (2) "Alcohol substitutes" means nonalcohol additives that contain VOCs and are used in the fountain solution. Some additives are used to reduce the surface tension of water; others are added to prevent piling (ink build-up).
- (3) "Automatic blanket wash system" means equipment used to clean lithographic blankets which can include, but is not limited to those utilizing a cloth and expandable bladder, brush, spray, or impregnated cloth system.
- (4) "Cleaning material" means with respect to a surface coating operation or graphic arts operation, a liquid solvent or solution used to clean the operating surfaces of a printing press and its parts. For purposes of this standard, cleaning solutions include, but are not limited to blanket wash, roller wash, metering roller cleaner, plate cleaner, impression cylinder washes, rubber rejuvenators, and other cleaners used for cleaning a press, press parts, or to remove dried ink or coating from areas around the press.

- (5) "Capture system" means all equipment, including but not limited to hoods, ducts, fans, ovens and dryers, used to contain, collect, and route VOC vapors released from a coating line or printing line.
- (6) "Control system" means any device or combination of devices designed to recover or incinerate VOC vapors received from a capture system.
- (7) "Composite partial pressure" means the sum of the partial pressures of the VOC compounds in a solvent.
- (8) "Dampening system" means equipment used to deliver the fountain solution to the lithographic plate.
- (9) "Fountain solution" means a mixture of water and other volatile and non-volatile chemicals and additives used in lithographic printing operations that maintains the quality of the printing plate including preventing debris build up (e.g., spray power, paper fiber, coating particles, dried ink particles, and other materials), and increases viscosity and reduces the surface tension of the water so that it spreads easily across the printing plate surface. The fountain solution wets the nonimage area so that the ink is maintained within the image areas. Non-volatile additives include mineral salts and hydrophilic gums. Alcohol and alcohol substitutes are the most common VOC additives used to reduce the surface tension of the fountain solution.
- (10) "Fountain solution batch" means a supply of fountain solution that is prepared and used without alteration until completely used or removed from the printing process. For the purposes of this rule, this term may apply to solutions prepared in either discrete batches or solutions that are continuously blended with automatic mixing units.
- (11) "Fountain solution reservoir" means the collection tank that accepts fountain solution recirculated from printing unit(s). In some cases, the tanks are equipped with cooling coils for refrigeration of the fountain solution.
- (12) "Heatset" means a lithographic printing process where the printing inks are set by the evaporation of the ink oils in a heatset dryer.
- (13) "Heatset dryer" means a hot air dryer used in heatset lithography to heat the printed substrate and to promote the evaporation of ink oils.
- (14) "Inking system" means a series of rollers used to meter ink onto the lithographic plate. The system can include agitators, pumps, totes, and other types of ink containers.
- (15) "Lithographic printing or lithographic printing operation" means a planographic printing process where the image and nonimage areas are chemically differentiated; the image area is oil receptive and the nonimage area is water

receptive. This method differs from other printing methods, where the image is typically printed from a raised or recessed surface. A lithographic printing operation includes, but is not limited to, a heatset web lithographic printing operation, a coldset web offset lithographic printing operation, and a sheet-fed offset lithographic printing operation.

- (16) "Non-heatset lithographic printing" means a lithographic printing process where the printing inks are set by absorption and/or oxidation of the ink oil, not by evaporation of the ink oils in a dryer. Use of an infrared heater or printing conducted using ultraviolet-cured or electron beam-cured inks is considered non-heatset.
  - (17) "Offset lithography" means a printing process that transfers the ink film from the lithographic plate to an intermediary surface (blanket), which, in turn, transfers the ink film to the substrate.
  - (18) "Press" means a printing production assembly composed of one or more units used to produce a printed substrate including any associated coating, spray powder application, heatset web dryer, ultraviolet or electron beam curing units, or infrared heating units.
  - (19) "Sheet-fed lithographic printing" means a non-heatset lithographic printing process where individual sheets of substrate are fed into the press sequentially.
  - (20) "Unit" means the smallest complete printing component, composed of inking and dampening systems, of a printing press.
  - (21) "Web" means a lithographic printing process where a continuous roll of substrate is fed into a press.
  - (22) "Letterpress printing" means a printing method where the image area is raised relative to the non-image area and the ink is transferred to the paper directly from the image surface.
  - (23) "Raoult's Law" means the vapor pressure of the solvent in an ideal solution is equal to the mole fraction of the solvent times the vapor pressure of the pure solvent.
- (EE) As used in rule 3745-21-23 of the Administrative Code (pertaining to the control of VOC emissions from industrial cleaning solvents).
- (1) "Composite partial pressure" means the sum of the partial pressures of the VOC compounds in a solvent.
- (FF) As used in rule 3745-21-24 of the Administrative Code (pertaining to the control of VOC emissions from flat wood paneling coatings).

- (1) "Class 2 hardboard paneling finishes" means finishes which meet the specifications of Voluntary Product Standard PS-59-73 as approved by the American national standards institute.
  - (2) "Flat wood paneling" means a printed interior panel made of hardwood plywood and thin particle board, natural finish hardwood plywood, hardwood paneling, baseboard, wood flat stock, veneers, doors, door skins, wood flat product skins, tileboard and wallboard.
  - (3) "Hardboard" means a panel manufactured primarily from inter-felted ligno-cellulosic fibers which are consolidated under heat and pressure in a hot press.
  - (4) "Hardwood plywood" means a plywood whose surface layer is a veneer of hardwood.
  - (5) "Natural finish hardwood plywood panel" means a panel whose original grain pattern is enhanced by essentially transparent finishes frequently supplemented by fillers and toners.
  - (6) "Panel" means a flat piece of wood or wood product usually rectangular and used inside homes and mobile homes for wall decorations.
  - (7) "Printed interior panel" means a panel whose grain or natural surface is obscured by fillers and basecoats upon which a simulated grain or decorative pattern is printed.
  - (8) "Thin particleboard" means a manufactured board one-quarter inch or less in thickness made of individual wood particles which have been coated with a binder and formed into flat sheets by pressure.
  - (9) "Tileboard" means a paneling that has a colored waterproof surface coating.
  - (10) "Wood flat stock" means an interior panel containing wood including but not limited to redwood stocks, plywood panels, particle boards, composition hardboards, and any other panels containing solid wood or wood product.
- (GG) As used in rule 3745-21-25 of the Administrative Code (pertaining to control of VOC emissions from reinforced plastic composites production operations).
- (1) "Add-on control device" means an air pollution control device, such as a thermal oxidizer or carbon adsorber that reduces pollution in an air stream by destruction or removal before discharge to the atmosphere.
  - (2) "AP-42" means the USEPA document "Compilation of Air Pollutant Emissions Factors, Volume I: Stationary Point and Area Sources."
  - (3) "Atomized mechanical application means" application of resin or gel coat with spray equipment that separates the liquid into a fine mist. This fine mist may be

created by forcing the liquid under high pressure through an elliptical orifice, bombarding a liquid stream with directed air jets, or a combination of these techniques.

- (4) "Bulk molding compound" or "BMC" means a putty-like molding compound containing resin(s) in a form that is ready to mold. In addition to resins, BMC may contain catalysts, fillers, and reinforcements. Bulk molding compound can be used in compression molding and injection molding operations to manufacture reinforced plastic composites products.
- (5) "BMC manufacturing" means a process that involves the preparation of BMC.
- (6) "Centrifugal casting" means a process for fabricating cylindrical composites, such as pipes, in which composite materials are positioned inside a rotating hollow mandrel and held in place by centrifugal forces until the part is sufficiently cured to maintain its physical shape.
- (7) "Charge" means the amount of SMC or BMC that is placed into a compression or injection mold necessary to complete one mold cycle.
- (8) "Cleaning" means removal of composite materials, such as cured and uncured resin from equipment, finished surfaces, floors, hands of employees, or any other surfaces.
- (9) "Clear production gel coat" means an unpigmented, quick-setting resin used to improve the surface appearance and/or performance of composites. It can be used to form the surface layer of any composites other than those used for molds in tooling operations.
- (10) "Closed molding" means a grouping of processes for fabricating composites in a way that VOC-containing materials are not exposed to the atmosphere except during the material loading stage (e.g., compression molding, injection molding, and resin transfer molding). Processes where the mold is covered with plastic (or equivalent material) prior to resin application, and the resin is injected into the covered mold are also considered closed molding.
- (11) "Composite means" a shaped and cured part produced by using composite materials.
- (12) "Composite materials" means the raw materials used to make composites. The raw materials include styrene-containing resins. They may also include gel coat, monomer, catalyst, pigment, filler, and reinforcement.
- (13) "Compression molding" means a closed molding process for fabricating composites in which composite materials are placed inside matched dies that are used to cure the materials under heat and pressure without exposure to the atmosphere. The addition of mold paste or in-mold coating is considered part of

the closed molding process. The composite materials used in this process are generally SMC or BMC.

- (14) "Compression/injection molding" means a grouping of processes that involves the use of compression molding and/or injection molding.
- (15) "Continuous casting" means a continuous process for fabricating composites in which composite materials are placed on an in-line conveyor belt to produce cast sheets that are cured in an oven.
- (16) "Continuous lamination" means a continuous process for fabricating composites in which composite materials are typically sandwiched between plastic films, pulled through compaction rollers, and cured in an oven. This process is generally used to produce flat or corrugated products on an in-line conveyor.
- (17) "Continuous lamination/casting" means a grouping of processes that involves the use of continuous lamination and/or continuous casting.
- (18) "Controlled oven VOC emissions" means VOC emissions emitted to the atmosphere from an oven's control device.
- (19) "Controlled wet-out area VOC emissions" means VOC emissions emitted to the atmosphere from a wet-out area's control device.
- (20) "Corrosion-resistant gel coat" means a gel coat used on a product made with a corrosion-resistant resin that has a corrosion-resistant end-use application.
- (21) "Corrosion-resistant end-use applications" means applications where the product is manufactured specifically for an application that requires a level of chemical inertness or resistance to chemical attack above that required for typical reinforced plastic composites products. These applications include, but are not limited to, chemical processing and storage; pulp and paper production; sewer and wastewater treatment; power generation; potable water transfer and storage; food and drug processing; pollution or odor control; metals production and plating; semiconductor manufacturing; petroleum production, refining, and storage; mining; textile production; nuclear materials storage; swimming pools; and cosmetic production, as well as end-use applications that require high strength resins.
- (22) "Corrosion-resistant industry standard" means any of the following standards: ASME RTP-1 or Sect. X; ASTM D5364, D3299, D4097, D2996, D2997, D3262, D3517, D3754, D3840, D4024, D4160, D4161, D4162, D4184, D3982, or D3839; ANSI/AWWA C950; UL 215, 1316 or 1746, IAPMO PS-199, or written customer requirements for resistance to specified chemical environments.
- (23) "Corrosion-resistant product" means a product made with a corrosion-resistant resin and is manufactured to a corrosion-resistant industry standard, or a food

contact industry standard, or is manufactured for corrosion-resistant end-use applications involving continuous or temporary chemical exposures.

- (24) "Corrosion-resistant resin" means a resin that either:
- (a) Displays substantial retention of mechanical properties when undergoing ASTM C-581 coupon testing, where the resin is exposed for six months or more to one of the following materials: material with a pH equal to or greater than 12.0 or a pH less than or equal to 3.0, oxidizing or reducing agents, organic solvents, or fuels or additives as defined in 40 CFR 79.2. In the coupon testing, the exposed resin needs to demonstrate a minimum of fifty per cent retention of the relevant mechanical property compared to the same resin in unexposed condition. In addition, the exposed resin needs to demonstrate an increased retention of the relevant mechanical property of at least twenty percentage points when compared to a similarly exposed general-purpose resin. For example, if the general-purpose resin retains forty-five per cent of the relevant property when tested as specified above, then a corrosion-resistant resin needs to retain at least sixty-five per cent (forty-five per cent plus twenty per cent) of its property. The general-purpose resin used in the test needs to have an average molecular weight of greater than one thousand, be formulated with a one to two ratio of maleic anhydride to phthalic anhydride and one hundred per cent diethylene glycol, and a styrene content between forty-three to forty-eight per cent; or
  - (b) Complies with industry standards that require specific exposure testing to corrosive media, such as UL 1316, UL 1746, or ASTM F-1216.
- (25) "CR/HS means" corrosion-resistant and/or high strength.
- (26) "Doctor box" means the box or trough on an SMC machine into which the liquid resin paste is delivered before it is metered onto the carrier film.
- (27) "Fiberglass boat" means a vessel in which either the hull or deck is built from a composite material consisting of a thermosetting resin matrix reinforced with fibers of glass, carbon, aramid, or other material.
- (28) "Filament application" means an open molding process for fabricating composites in which reinforcements are fed through a resin bath and wound onto a rotating mandrel. The materials on the mandrel may be rolled out or worked by using nonmechanical tools prior to curing. Resin application to the reinforcement on the mandrel by means other than the resin bath, such as spray guns, pressure-fed rollers, flow coaters, or brushes is not considered filament application.
- (29) "Filled resin" means that fillers have been added to a resin such that the amount of inert substances is at least ten per cent by weight of the total resin plus filler mixture. Filler putty made from a resin is considered a filled resin.

- (30) "Fillers" means inert substances dispersed throughout a resin, such as calcium carbonate, alumina trihydrate, hydrous aluminum silicate, mica, feldspar, wollastonite, silica, and talc. Materials that are not considered to be fillers are glass fibers or any type of reinforcement and microspheres.
- (31) "Fire retardant gel coat" means a gel coat used for low-flame spread/low-smoke products for which resin is used.
- (32) "Fluid impingement technology" means a spray gun that produces an expanding non-misting curtain of liquid by the impingement of low-pressure uninterrupted liquid streams.
- (33) "Food contact industry standard" means a standard related to food contact application contained in food and drug administration's regulations at 21 CFR 177.2420.
- (34) "Gel coat" means a quick-setting resin used to improve surface appearance and/or performance of composites. It can be used to form the surface layer of any composites other than those used for molds in tooling operations.
- (35) "Gel coat application" means a process where either clear production, pigmented production, white/off-white or tooling gel coat is applied.
- (36) "High performance gel coat" means a gel coat used on products for which national sanitation foundation, United States department of agriculture, ASTM, durability, or other property testing is required.
- (37) "High strength gel coat" means a gel coat applied to a product that requires high strength resin.
- (38) "High strength resin" means a polyester resin which has a casting tensile strength of ten thousand pounds per square inch or more and which is used for manufacturing products that have high strength requirements such as structural members and utility poles.
- (39) "Injection molding" means a closed molding process for fabricating composites in which composite materials are injected under pressure into a heated mold cavity that represents the exact shape of the product. The composite materials are cured in the heated mold cavity.
- (40) "Low flame spread/low smoke products" means products that meet the following requirements:
- (a) The products shall meet both the applicable flame spread requirements and the applicable smoke requirements.
  - (b) Interior or exterior building application products shall meet an ASTM E-84 flame spread index of less than or equal to twenty-five, and smoke

developed index of less than or equal to four hundred fifty, or pass national fire protection association 286 room corner burn test with no flash over and total smoke released not exceeding one thousand meters square.

- (c) Mass transit application products shall meet an ASTM E-162 flame spread index of less than or equal to thirty-five and ASTM E662 smoke density Ds @ 1.5 minutes less than or equal to one hundred and Ds @ four minutes less than to equal to two hundred.
  - (d) Duct application products shall meet ASTM E084 flame spread index less than or equal to twenty-five and smoke developed index less than or equal to fifty on the interior and/or exterior of the duct.
- (41) "Manual resin application" means an open molding process for fabricating composites in which composite materials are applied to the mold by pouring or by using hands and nonmechanical tools, such as brushes and rollers. Materials are rolled out or worked by using nonmechanical tools prior to curing. The use of pressure-fed rollers and flow coaters to apply resin is not considered manual resin application.
  - (42) "Mechanical resin application" means an open molding process for fabricating composites in which composite materials (except gel coat) are applied to the mold by using mechanical tools such as spray guns, pressure-fed rollers, and flow coaters. Materials are rolled out or worked by using nonmechanical tools prior to curing
  - (43) "Mixing" means the blending or agitation of resin or gel coat in vessels that are 5.00 gallons (18.9 liters) or larger, and includes the mixing of putties or polyputties. Mixing may involve the blending of resin or gel coat with filler, reinforcement, pigments, catalysts, monomers, and any other additives
  - (44) "Mold" means a cavity or matrix into or onto which the composite materials are placed and from which the product takes its form.
  - (45) "Monomer" means an organic compound that combines with itself or other similar compounds by a cross-linking reaction to become a part of a cured thermoset resin.
  - (46) "Monomer content" means the per cent, by weight, of monomer (styrene, methyl methacrylate, and any other monomer) contained in the resin or gel coat prior to the addition of fillers, catalyst, and promoters.
  - (47) "Neat gel coat" means the gel coat as purchased from the supplier, but not including any inert fillers.
  - (48) "Neat gel coat plus" means neat gel coat plus any VOC-containing materials that are added to the gel coat by the supplier or the facility, excluding catalysts and promoters. Neat gel coat plus does include any additions of styrene or

methyl methacrylate monomer in any form, including in catalysts and promoters.

- (49) "Neat resin" means the resin as purchased from the supplier, but not including any inert fillers.
- (50) "Neat resin plus" means neat resin plus any VOC-containing materials that are added to the resin by the supplier or the facility. Neat resin plus does not include any added filler, reinforcements, catalysts, or promoters. Neat resin plus does include any additions of styrene or methyl methacrylate monomer in any form, including in catalysts and promoters.
- (51) "Nonatomized mechanical application" means the use of application tools other than brushes to apply resin and gel coat where the application tool has documentation provided by its manufacturer or user that this design of the application tool has been VOC emissions tested, and the test results showed that use of this application tool results in VOC emissions that are no greater than the VOC emissions predicted by the applicable nonatomized application equation(s) in table 1 to subpart WWWW of 40 CFR 63. In addition, the device shall be operated according to the manufacturer's directions, including instructions to prevent the operation of the device at excessive spray pressures. Examples of nonatomized application include flow coaters, pressure fed rollers, and fluid impingement spray guns.
- (52) "Noncorrosion-resistant resin" means any resin other than a corrosion-resistant resin or a tooling resin.
- (53) "Noncorrosion-resistant product" means any product other than a corrosion-resistant product or a mold.
- (54) "Non-routine manufacture" means that the facility manufactures parts to replace worn or damaged parts of a reinforced plastic composites product, or a product containing reinforced plastic composite parts, that was originally manufactured in another facility. For a part to qualify as non-routine manufacture, it shall be used for repair or replacement, and the manufacturing schedule shall be based on the current or anticipated repair needs of the reinforced plastic composites product, or a product containing reinforced plastic composite parts.
- (55) "Operation" means a specific process typically found at a reinforced plastic composites facility. Examples of operations are noncorrosion-resistant manual resin application, corrosion-resistant mechanical resin application, pigmented gel coat application, mixing and VOC-containing materials storage.
- (56) "Open molding" means a process for fabricating composites in a way that VOC-containing materials are exposed to the atmosphere. Open molding includes processes such as manual resin application, mechanical resin application, filament application, and gel coat application. Open molding also includes

application of resins and gel coats to parts that have been removed from the open mold.

- (57) "Pigmented gel coat" means a gel coat that has a color, but does not contain ten per cent of more titanium dioxide by weight. It can be used to form the surface layer of any composites other than those used for molds in tooling operations.
- (58) "Plastic composite" means the same as composite.
- (59) "Polymer casting" means a process for fabricating composites in which composite materials are ejected from a casting machine or poured into an open, partially open, or closed mold and cured. After the composite materials are poured into the mold, they are not rolled out or worked while the mold is open, except for smoothing the material and/or vibrating the mold to remove bubbles. The composite materials may or may not include reinforcements. Products produced by the polymer casting process include cultured marble products and polymer concrete.
- (60) "Preform injection" means a form of pultrusion where liquid resin is injected to saturate reinforcements in an enclosed system containing one or more chambers with openings only large enough to admit reinforcements. Resin, which drips out of the chamber(s) during the process, is collected in closed piping or covered troughs and then into a covered reservoir for recycle. Resin storage vessels, reservoirs, transfer systems, and collection systems are covered or shielded from the ambient air. Preform injection differs from direct die injection in that the injection chambers are not directly attached to the die.
- (61) "Prepreg materials" means reinforcing fabric received precoated with resin which is usually cured through the addition of heat.
- (62) "PTE" means permanent total enclosure as defined in paragraph (X) of rule 3745-21-01 of the Administrative Code.
- (63) "Pultrusion" means a continuous process for manufacturing composites that have a uniform cross-sectional shape. The process consists of pulling a fiber-reinforcing material through a resin impregnation chamber or bath and through a shaping die, where the resin is subsequently cured. There are several types of pultrusion equipment, such as open bath, resin injection, and direct die injection equipment.
- (64) "Reinforced plastic composites production" means operations in which reinforced and/or nonreinforced plastic composites or plastic molding compounds are manufactured using thermoset resins and/or gel coats that contain styrene to produce plastic composites. The resins and gel coats may also contain materials designed to enhance the chemical, physical, and/or thermal properties of the product. Reinforced plastic composites production also includes cleaning, mixing, VOC-containing materials storage, and repair operations associated with the production of plastic composites.

- (65) "Repair" means application of resin or gel coat to a part to correct a defect, where the resin or gel coat application occurs after the part has gone through all the steps of its typical production process, or the application occurs outside the normal production area. For the purpose of rule 3745-21-25 of the Administrative Code, rerouting a part back through the normal production line, or part of the normal production line, is not considered repair.
- (66) "Resin" means any of a class of organic polymers of natural or synthetic origin used in reinforced plastic composite products to surround and hold fibers, and is solid or semi-solid in the cured state.
- (67) "Resin transfer molding" means a process for manufacturing composites whereby catalyzed resin is transferred or injected into a closed mold in which fiberglass reinforcement has been placed.
- (68) "Sheet molding compound" or "SMC" means a ready-to-mold putty-like molding compound that contains resin(s) processed into sheet form. The molding compound is sandwiched between a top and a bottom film. In addition to resin(s), it may also contain catalysts, fillers, chemical thickeners, mold release agents, reinforcements, and other ingredients. Sheet molding compound can be used in compression molding to manufacture reinforced plastic composites products.
- (69) "Shrinkage controlled resin" means a resin that when promoted, catalyzed, and filled according to the resin manufacturer's recommendations demonstrates less than 0.3 per cent linear shrinkage when tested according to ASTM D2566.
- (70) "SMC manufacturing" means a process which involves the preparation of SMC.
- (71) "Thermoset resin" means a resin that does not become soft or return to a liquid state when it is heated.
- (72) "Tooling gel coat" means a gel coat that is used to form the surface layer of molds. Tooling gel coats generally have high heat distortion temperatures, low shrinkage, high barcol hardness, and high dimensional stability.
- (73) "Tooling resin" means a resin that is used to produce molds. Tooling resins generally have high heat distortion temperatures, low shrinkage, high barcol hardness, and high dimensional stability.
- (74) "Uncontrolled oven VOC emissions" means those VOC emissions emitted from the oven through closed vent systems to the atmosphere and not to a control device. These VOC emissions do not include VOC emissions that may escape into the workplace through the opening of panels or doors on the ovens or other similar fugitive VOC emissions in the workplace.
- (75) "Uncontrolled wet-out area VOC emissions" means any or all of the following:

- (a) VOC emissions from wet-out areas that do not have any capture and control;
  - (b) VOC emissions that escape from wet-out area enclosures; and
  - (c) VOC emissions from wet-out areas that are captured by an enclosure, but are vented to the atmosphere and not to an add-on control device.
- (76) "Unfilled" means that there has been no addition of fillers to a resin or that less than ten per cent of fillers by weight of the total resin plus filler mixture has been added.
- (77) "Vapor suppressant" means an additive, typically a wax, that migrates to the surface of the resin during curing and forms a barrier to seal in the styrene and reduce styrene emissions.
- (78) "Vapor-suppressed resin" means a resin containing a vapor suppressant added for the purpose of reducing styrene emissions during curing.
- (79) "VOC-containing materials storage" means an ancillary process within reinforced plastic composites production that involves keeping VOC-containing materials, such as resins, gel coats, catalysts, monomers, and cleaners, in containers or bulk storage tanks for any length of time. Containers may include small tanks, totes, vessels, and buckets.
- (80) "Wet-out area" means the area within a continuous lamination process or continuous casting process where the resin is applied extending to the point prior to entering the oven.
- (81) "White and off-white gel coat" means a gel coat that contains ten per cent or more titanium dioxide by weight.
- (HH) Reference to materials. This chapter includes references to certain matter or materials. The text of the referenced materials is not included in the rules contained in this chapter. Information on the availability of the referenced materials as well as the date of, and/or the particular edition or version of the material is included in this rule. For materials subject to change, only the specific versions specified in this rule are referenced. Material is referenced as it exists on the effective date of this rule. Except for subsequent annual publication of existing (unmodified) Code of Federal Regulation compilations, any amendment or revision to a referenced document is not applicable unless and until this rule has been amended to specify the new dates.
- (1) Availability. The referenced materials are available as follows:
- (a) "American National Standards Institute" (ANSI). Information and copies of publications may be obtained by writing to: "Global Engineering Documents 15 Inverness Way, East Englewood, CO 80112." Publications are also available for ordering at

<http://webstore.ansi.org/ansidocstore/default.asp>. The ANSI publications are also available for inspection and copying at most public libraries and "The State Library of Ohio."

- (b) "American Petroleum Institute" (API). Information and copies of publications may be obtained by writing to: "API Publications Global Engineering Documents, 15 Inverness Way East, M/S C303B, Englewood, CO 80112-5776." Publications are also available for ordering at [www.global.ihp.com](http://www.global.ihp.com). The API publications are also available for inspection and copying at most public libraries and "The State Library of Ohio."
- (c) "American Society for Testing Materials" (ASTM). Information and copies of documents may be obtained by writing to: "ASTM International, 100 Bar Harbor Drive, P.O. Box C700, West Conshohocken, Pennsylvania 19426-2959." These documents are also available for purchase at [www.astm.org](http://www.astm.org). ASTM documents are also available for inspection and copying at most public libraries and "The State Library of Ohio."
- (d) "Architectural Aluminum Manufacturers Association" (AAMA). Information and copies of documents may be obtained by writing to: "AAMA, 1827 Walden Office Square, Suite 550 Schaumburg, IL 60173." These documents are also available for purchase at [www.aamanet.org](http://www.aamanet.org). AAMA documents are also available for inspection and copying at most public libraries and "The State Library of Ohio."
- (e) "California air resources board" (CARB) certification. Information and copies of executive orders, approval letters, equipment advisories, certification procedures and equivalent test procedures may be obtained by writing to: "California Air Resources Board, Monitoring and Laboratory Division, P.O. Box 2815, Sacramento, CA, 95812-2815" or by calling (916) 327-0900. The full text of all CARB certification documents are also available in electronic format at <http://www.arb.ca.gov/vapor/vapor.htm>."
- (f) "California Code of Regulations." Copies of regulations may be obtained by writing to: " West Customer Service, P.O. Box 64833, St. Paul, MN 55164-0833" or by calling 1-800-888-3600. The full text of regulations are also available in electronic format at <http://ccr.oal.ca.gov/>."
- (g) Clean Air Act. Information and copies may be obtained by writing to: "Superintendent of Documents, Attn: New Orders, PO Box 371954, Pittsburgh, PA 15250-7954." The full text of the Act as amended in 1990 is also available in electronic format at [www.epa.gov/oar/caa/](http://www.epa.gov/oar/caa/). A copy of the Act is also available for inspection and copying at most public libraries and "The State Library of Ohio."
- (h) "Code of Federal Regulations" (CFR). Information and copies may be obtained by writing to: "Superintendent of Documents, Attn: New Orders, PO Box 371954, Pittsburgh, PA 15250-7954." The full text of the CFR is

also available in electronic format at [www.access.gpo.gov/nara/cfr/](http://www.access.gpo.gov/nara/cfr/). The CFR compilations are also available for inspection and copying at most public libraries and "The State Library of Ohio."

- (i) Compilation of air pollutant emission factors, AP-42. Information and copies may be obtained by writing to: "Superintendent of Documents, Attn: New Orders, PO Box 371954, Pittsburgh, PA 15250-7954." The full text of the compilation of air pollutant emission factors, AP-42, is also available in electronic format at <http://www.epa.gov/ttn/chief/ap42/index.html>. The compilation of air pollutant emission factors, AP-42, are also available for inspection and copying at most public libraries and "The State Library of Ohio."
- (j) "Control of Volatile Organic Compound Emissions from Reactor Processes and Distillation Operations Processes in the Synthetic Organic Chemical Manufacturing Industry." Information and copies may be obtained by writing to: "U.S. EPA/NSCEP, P.O. Box 42419, Cincinnati, Ohio 45242-0419." This document is also available for ordering at <http://yosemite.epa.gov/ncepihom/nsCatalog.nsf/SearchPubs?OpenForm>. A copy of the this document is also available for inspection and copying at most public libraries and "The State Library of Ohio."
- (k) Federal Insecticide, Fungicide, and Rodenticide Act. Information and copies may be obtained by writing to: "Superintendent of Documents, Attn: New Orders, PO Box 371954, Pittsburgh, PA 15250-7954." The full text of the Act is also available in electronic format at [www.epa.gov/oar/caa/](http://www.epa.gov/oar/caa/). A copy of the Act is also available for inspection and copying at most public libraries and "The State Library of Ohio."
- (l) "Federal Register" (FR). Information and copies may be obtained by writing to: "Superintendent of Documents, Attn: New Orders, PO Box 371954, Pittsburgh, PA 15250-7954." Online access to the Federal Register is available at <http://www.gpoaccess.gov/nara/index.html>. A copy of the Federal Register is also available for inspection and copying at most public libraries and "The State Library of Ohio."
- (m) "Guidance for estimating capital and annual costs of air pollution systems." Information and copies may be ordered by writing to the Ohio EPA at: "122 South Front Street, Columbus, Ohio, 43215". This document is also available in electronic format at <http://www.epa.state.oh.us/dapc/engineer/eguides.html>. A copy of the document is also available for inspection and copying at most public libraries and "The State Library of Ohio."
- (n) "Guidelines for determining capture efficiency." Information and copies may be obtained by writing to: "Office of Air Quality Planning and Standards (OAQPS), TTN/OAR P&G Webmaster, Mail Code D143-02, Research Triangle Park, NC, 27711." This document is also available in electronic

format at <http://www.epa.gov/ttncaaa1/t1/meta/m28508.html>. A copy of the document is also available for inspection and copying at most public libraries and "The State Library of Ohio."

- (o) "Methods and Guidance for Analysis of Water." Information and copies may be ordered by writing to: "National Technical Information Service, Springfield, Virginia, 22161." or by calling 1-703-605-6000. This document is also available for ordering at <http://www.ntis.gov/index.asp>. A copy of the document is also available for inspection and copying at most public libraries and "The State Library of Ohio".
- (p) "Motor Vehicle Safety Standards." Information and copies may be obtained by writing to: "U.S. Government Printing Office, Superintendent of Documents, Mail Stop SSOP, Washington, DC 20402-9328." These documents are also available in electronic format at <http://www.gpoaccess.gov/cfr/index.html>. A copy of the documents are also available for inspection and copying at most public libraries and "The State Library of Ohio."
- (q) "National Fire Protection Association" (NFPA). Information on the National Fire Protection Association codes may be obtained by contacting the association at " 1 Batterymarch Park, Quincy, Massachusetts 02169-7471," or by calling 617-770-3000. Codes may be ordered on line at [www.nfpa.org/catalog/home/index.asp](http://www.nfpa.org/catalog/home/index.asp). Copies of the code are available at most public libraries and "The State Library of Ohio."
- (r) "Protocol for Determining the Daily Volatile Organic Compound Emission Rate of Automobile and Light-Duty Truck Topcoat Operations." EPA 450-3-88-018. Information and copies may be ordered by writing to: "US EPA Office of Air Quality Planning and Standards (OAQPS) TTN EMC, Research Triangle Park, NC 27711 " or by calling 1-919-541-5233 . A copy of protocol is also available for inspection and copying at most public libraries and "The State Library of Ohio."
- (s) "Regulatory Guide 1.54 - Service Level I, II and III Protective Coatings Applied to Nuclear Plants;" Information and copies may be obtained by writing to: "Distribution Services Section, U.S. Nuclear Regulatory Commission, Washington, DC 20555-0001;" or by fax at (301)415-2289. A copy of this guide is also available in electronic format at: <http://www.nrc.gov/reading-rm/doc-collections/reg-guides/power-reactors/active/>. A copy of the manual is also available for inspection and copying at most public libraries and "The State Library of Ohio."
- (t) "Standard Industrial Classification Manual" (SICM). Information and copies may be ordered by writing to: "U.S. Department of Commerce, Technology Administration, National Technical Information Service, Springfield, Virginia, 22161." or by calling 1-800-553-6847. A copy of the manual is

also available for inspection and copying at most public libraries and "The State Library of Ohio."

- (u) "Standard Methods for the Examination of Water and Wastewater." Information and copies may be ordered by writing to: "American Public Health Association, Publications Sales, PO Box 753, Waldorf, MD 20604-0753," or by calling 1-301-893-1894. This document is also available for ordering at [www.apha.org](http://www.apha.org). A copy of the document is also available for inspection and copying at most public libraries and "The State Library of Ohio."
- (v) "SW-846 Test Methods for Evaluating Solid Waste, Physical/Chemical Methods." Information and copies may be obtained by writing to: "Superintendent of Documents, Attn: New Orders, PO Box 371954, Pittsburgh, PA 15250-7954." These documents are also available in electronic format at <http://www.epa.gov/epaoswer/hazwaste/test/main.htm>. SW-846 methods are also available for inspection and copying at most public libraries and "The State Library of Ohio."
- (w) USEPA-approved alternative test methods. Information and copies may be obtained by writing to: "Source Measurement Technology Group Emission Measurement Center, U.S. EPA (D205-02), Research Triangle Park, NC 27711." These documents are also available in electronic format at <http://www.epa.gov/ttnemc01/approalt.html>. Alternative test methods are also available for inspection and copying at most public libraries and "The State Library of Ohio."
- (x) USEPA conditional test method. Information and copies may be obtained by writing to: "Source Measurement Technology Group Emission Measurement Center, U.S. EPA (D205-02), Research Triangle Park, NC 27711." Conditional test methods are also available for inspection and copying at most public libraries and "The State Library of Ohio."
- (y) "WATER9" is a Windows based computer wastewater treatment model. A copy of the program can be obtained by writing to: "US EPA Office of Air Quality Planning and Standards (OAQPS), Info CHIEF Help Desk, Mail Code D205-01, Research Triangle Park, NC 27711;" or calling 1-919-541-5610. This model is also available for downloading at <http://www.epa.gov/ttn/chief/software/water/>.

3745-21-02      **Ambient air quality standards and guidelines.**

This rule was rescinded as of 4/18/09.

The rule language was moved to OAC Rule 3745-25-02.

**Methods of ambient air quality measurement.**

[Comment: For dates of non-regulatory government publications, publications of recognized organizations and associations, federal rules, and federal statutory provisions referenced in this rule, see the last paragraph of rule 3745-21-01 of the Administrative Code titled "Incorporation by reference."]

- (A) For purposes of ascertaining, defining, and measuring ambient air quality, air contaminants shall be measured by the method or methods stated in paragraphs (B) to (C) of this rule or by such other methods as may be approved by the director.
- (B) Concentrations of carbon monoxide in ambient air shall be determined as follows:
  - (1) Hourly integrated concentrations of carbon monoxide shall be determined through the use of a continuous sampling and recording device as described in 40 CFR part 50, appendix C.
  - (2) Eight hour concentrations shall be determined by arithmetically averaging the hourly integrated data, obtained as described in paragraph (B)(1) of this rule, for any eight-hour period. An eight-hour average shall be considered valid if at least seventy-five per cent of the hourly averages for the eight-hour period are available. In the event that only six (or seven) hourly averages are available, the eight-hour average shall be computed on the basis of the hours available using six (or seven) as the divisor.
- (C) Concentrations of ozone shall be determined through the use of a continuous sampling and recording device as described in 40 CFR part 50, appendix D.

Effective: 08/25/2008

Rule Amplifies: 3704.03(E), 3704.03(A)

Prior Effective Dates: 9/15/1970, 12/31/1970, 10/19/1979, 10/31/1996,  
11/5/2002

[Comment: For dates and availability of non-regulatory government publications, publications of recognized organizations and associations, federal rules, and federal statutory provisions referenced in this rule, see paragraph (HH) of rule 3745-21-01 of the Administrative Code titled "Referenced materials."]

- (A) Attainment of established air quality standards for carbon monoxide and ozone, within the area, through the orderly application of pollution control techniques, shall be accomplished as expeditiously as practicable, but in no event shall such time be later than the deadline established pursuant to the Clean Air Act, as amended.
- (B) Certification and permit application requirements.

(1) Except as otherwise provided in paragraphs (B)(2), (B)(3), (B)(4), and (B)(7) of this rule, by no later than December 1, 1979 for any air contaminant source subject to paragraphs (C) to (S) of rule 3745-21-09 of the Administrative Code, by no later than April 1, 1981 for any air contaminant source subject to paragraphs (T) to (AA) of rule 3745-21-09 of the Administrative Code, by no later than June 1, 1986 for any air contaminant source subject to paragraphs (BB) to (EE) of rule 3745-21-09 of the Administrative Code, by no later than June 1, 1988 for any air contaminant source subject to paragraphs (FF) to (PP) of rule 3745-21-09 of the Administrative Code, and by no later than May 1, 1993 for any air contaminant source subject to paragraphs (QQ) to (DDD) of rule 3745-21-09 of the Administrative Code, any owner or operator of said air contaminant source(s) shall either:

- (a) Certify in writing to the director that such source is in compliance with all requirements of rule 3745-21-09 of the Administrative Code. Such certification shall include: equipment description, Ohio environmental protection agency permit application number (if assigned), and all necessary data (consistent with the appropriate permit application appendices or emission activity category forms) and calculations which confirm the compliance status. The certification shall also include an application for a permit authorizing operation of such source in accordance with rule 3745-21-09 of the Administrative Code if such source does not possess an effective permit, or, if applicable;
- (b) Submit an application for an operating permit or an application for a modification to an operating permit in accordance with Chapter 3745-77 of the Administrative Code, for sources subject to the Title V program, or in accordance with Chapter 3745-31 of the Administrative Code, for sources not subject to the Title V program. Such application shall include a compliance program which will bring the source into compliance with all the requirements of rule 3745-21-09 of the Administrative Code as

expeditiously as practicable but in no event later than the dates specified in paragraph (C) of this rule, and shall identify all reasonable interim control measures.

[Comment: Applications requiring submittal prior to June 30, 2008, for sources not subject to the Title V program, were to be submitted in accordance with Chapter 3745-35 of the Administrative Code.]

- (2) The certification and/or operating permit application required by paragraph (B)(1) of this rule shall not apply to any air contaminant sources subject exclusively to paragraph (N) or (V) of rule 3745-21-09 of the Administrative Code (pertaining to cutback asphalts and gasoline tank trucks).
- (3) For any air contaminant source subject to:
  - (a) Paragraphs (C)(3)(c), (C)(4)(b), (C)(5)(b), (C)(6)(b), (C)(8)(b), (C)(8)(c), (C)(9)(b), (C)(10)(b), (C)(19)(b) to (C)(19)(d), (C)(28)(b), (C)(28)(c), (C)(65), and (C)(66) of this rule, a certification and/or operating permit application shall be submitted in accordance with paragraphs (B)(1)(a) and (B)(1)(b) of this rule by no later than May 1, 1993.
  - (b) Paragraphs (C)(5)(d), (C)(8)(e), and (C)(10)(d) of this rule, a certification and/or operating permit application shall be submitted in accordance with paragraphs (B)(1)(a) and (B)(1)(b) of this rule by no later than one hundred twenty days after the effective date of this rule.
- (4) For any air contaminant source subject to paragraphs (C)(3)(d) and (C)(28)(d) of this rule, a certification and/or operating permit application shall be submitted in accordance with paragraphs (B)(1)(a) and (B)(1)(b) of this rule by no later than March 1, 1995.
- (5) In demonstrating compliance pursuant to paragraph (B)(1)(a) of this rule, the owner or operator of a source must utilize the test methods and procedures specified in rule 3745-21-10 of the Administrative Code. In addition, for any source that is located within one of the counties specified in paragraph (A) of rule 3745-21-09 of the Administrative Code, employs add-on controls to comply with the requirements of rule 3745-21-09 of the Administrative Code, and has not been tested since January 1, 1991, the owner or operator of such source shall conduct emission tests in accordance with the methods specified in rule 3745-21-10 of the Administrative Code to demonstrate compliance with the requirements of rule 3745-21-09 of the Administrative Code. The emission tests shall be conducted by January 17, 1996. For the purpose of complying with the emission test requirement specified in this paragraph, the Ohio environmental protection agency may accept an emission test conducted prior to January 1, 1991, if the owner or operator provides information and data to the Ohio environmental protection agency which demonstrate that the test was witnessed

by the Ohio environmental protection agency or its delegated agent, that an approved USEPA emission test method was employed, and that the operation of the source was consistent with the current source operating conditions and operating capacity. For each coating employed in any coating line that is located within one of the counties specified in paragraph (A) of rule 3745-21-09 of the Administrative Code and is subject to the requirements of rule 3745-21-09 of the Administrative Code, the owner or operator shall demonstrate compliance with any applicable VOC content limitation specified in rule 3745-21-09 of the Administrative Code using USEPA method 24 (for coatings) or USEPA method 24A (for flexographic and rotogravure printing inks and related coatings). If any such coating has not been analyzed using USEPA method 24 or USEPA 24A since January 1, 1991, the owner or operator shall either conduct a USEPA method 24 or USEPA method 24A analysis of the coating or obtain a USEPA method 24 or USEPA method 24A analysis of the coating from the coating supplier by January 17, 1996. If, pursuant to section 11.4 of USEPA method 24, as contained in 40 CFR Part 60 Appendix A, an owner or operator determines that USEPA method 24 or USEPA method 24A cannot be used for a particular coating or ink, the owner or operator shall so notify the administrator of the USEPA and shall use formulation data for that coating or ink to demonstrate compliance until the USEPA provides alternative analytical procedures or alternative precision statements for USEPA method 24 or USEPA method 24A.

- (6) The owner or operator of a source that is subject to the requirements of rule 3745-21-09 of the Administrative Code shall notify the director in writing at least thirty days before any impending change in the method of complying with said requirements.
- (7) For any air contaminant source subject to paragraph (C)(28)(e) of this rule a compliance certification or compliance program, along with an operating permit application, if appropriate, shall be submitted in accordance with paragraphs (B)(1)(a) and (B)(1)(b) of this rule by no later than two months after the effective date of this rule. For any air contaminant source subject to paragraph (C)(28)(e) of this rule and located at a facility subject to Chapter 3745-77 of the Administrative Code, the owner or operator shall only submit a compliance certification or a compliance program, but no operating permit application, in accordance with paragraphs (B)(1)(a) and (B)(1)(b) of this rule by no later than two months after the effective date of this rule.

(C) Compliance time schedules.

- (1) No owner or operator may cause, permit, or allow the operation or other use of any air contaminant source in violation of the limitations specified in rule 3745-21-07 or 3745-21-08 of the Administrative Code beyond April 15, 1977.
- (2) Except as otherwise provided in paragraphs (C)(21) to (C)(26) and (C)(35) of this rule, any owner or operator of an automobile or light-duty truck assembly plant

which is subject to the requirements of paragraph (C) of rule 3745-21-09 of the Administrative Code shall achieve compliance with said requirements by December 1, 1982.

(3) Can coating lines.

(a) Except as provided in paragraphs (C)(3)(b), (C)(3)(c), and (C)(3)(d) of this rule, any owner or operator of a can coating line which is subject to the requirements of paragraph (D) of rule 3745-21-09 of the Administrative Code shall achieve compliance with said requirements by April 1, 1982.

(b) (Reserved)

(c) Any owner or operator of a can coating line which employs a control system shall achieve compliance with either the control requirements specified in paragraph (B)(6) of rule 3745-21-09 of the Administrative Code or the VOC limitation which is contained in paragraph (D) of rule 3745-21-09 of the Administrative Code and expressed in terms of pounds of VOC per gallon of solids by April 1, 1995.

(d) Any owner or operator of an end sealing compound coating line used for food can ends shall achieve compliance with the requirements of paragraphs (D)(1)(e) and (D)(2)(e) of rule 3745-21-09 of the Administrative Code no later than January 17, 1996. Any owner or operator of a two-piece or three-piece can coating operation which has an end sealing compound coating line and which is subject to the alternative daily emission limitation of paragraph (D)(3) of rule 3745-21-09 of the Administrative Code shall achieve compliance with the requirement of paragraph (D) of rule 3745-21-09 of the Administrative Code no later than January 17, 1996.

(4) Coil coating lines.

(a) Except as otherwise provided in paragraphs (C)(4)(b) and (C)(20) of this rule, any owner or operator of a coil coating line which is subject to the requirements of paragraph (E) of rule 3745-21-09 of the Administrative Code shall achieve compliance with said requirements by April 1, 1982.

(b) Any owner or operator of a coil coating line which employs a control system shall achieve compliance with either the control requirements specified in paragraph (B)(6) of rule 3745-21-09 of the Administrative Code or the VOC limitation which is contained in paragraph (E) of rule 3745-21-09 of the Administrative Code and expressed in terms of pounds of VOC per gallon of solids by April 1, 1995.

(5) Paper coating lines.

- (a) Except as otherwise provided in paragraph (C)(5)(b) of this rule, any owner or operator of a paper coating line which is subject to the requirements of paragraph (F) of rule 3745-21-09 of the Administrative Code shall achieve compliance with said requirements by April 1, 1982.
  - (b) Any owner or operator of a paper coating line which employs a control system shall achieve compliance with either the control requirements specified in paragraph (B)(6) of rule 3745-21-09 of the Administrative Code or the VOC limitation which is contained in paragraph (F) of rule 3745-21-09 of the Administrative Code and expressed in terms of pounds of VOC per gallon of solids by April 1, 1995.
  - (c) Any owner or operator of a paper coating line which is subject to the requirements of paragraph (F)(2) of rule 3745-21-09 of the Administrative Code shall achieve compliance with said requirements by no later than one year after the effective date of this rule.
  - (d) Any owner or operator of a paper coating line which employs an add-on control system shall achieve compliance with the control requirements specified in paragraph (B)(7) of rule 3745-21-09 of the Administrative Code by no later than one year after the effective date of this rule.
- (6) Fabric coating lines.
- (a) Except as otherwise provided in paragraph (C)(6)(b) of this rule, any owner or operator of a fabric coating line which is subject to the requirements of paragraph (G) of rule 3745-21-09 of the Administrative Code shall achieve compliance with said requirements by April 1, 1982.
  - (b) Any owner or operator of a fabric coating line which employs control system shall achieve compliance with either the control requirements specified in paragraph (B)(6) of rule 3745-21-09 of the Administrative Code or the VOC limitation which is contained in paragraph (G) of rule 3745-21-09 of the Administrative Code and expressed in terms of pounds of VOC per gallon of solids by April 1, 1995.
- (7) Any owner or operator of a vinyl coating line which is subject to the requirements of paragraph (H) of rule 3745-21-09 of the Administrative Code shall achieve compliance with said requirements by April 1, 1982.
- (8) Metal furniture coating lines.
- (a) Except as otherwise provided in paragraphs (C)(8)(b) and (C)(8)(c) of this rule, any owner or operator of a metal furniture coating line which is subject to the requirements of paragraph (I) of rule 3745-21-09 of the

Administrative Code shall achieve compliance with said requirements by April 1, 1982.

- (b) Any owner or operator of a metal furniture coating line which employs a control system shall achieve compliance with either the control requirements specified in paragraph (B)(6) of rule 3745-21-09 of the Administrative Code or the VOC limitation which is contained in paragraph (I) of rule 3745-21-09 of the Administrative Code and expressed in terms of pounds of VOC per gallon of solids by April 1, 1995.
- (c) Any owner or operator of a metal furniture coating line which, prior to March 31, 1993, was exempt from the requirements of paragraph (I) of rule 3745-21-09 of the Administrative Code, but is no longer exempt due to the change in the exemption criterion specified in paragraph (I)(3)(a) of rule 3745-21-09 of the Administrative Code, shall achieve compliance with the requirements of paragraph (I) of rule 3745-21-09 of the Administrative Code by April 1, 1995.
- (d) Any owner or operator of a metal furniture coating line which is subject to the requirements of paragraph (I)(4) of rule 3745-21-09 of the Administrative Code shall achieve compliance with said requirements by no later than one year after the effective date of this rule.
- (e) Any owner or operator of a metal furniture coating line which employs an add-on control system shall achieve compliance with either the control requirements specified in paragraph (B)(7) of rule 3745-21-09 of the Administrative Code or the VOC limitation specified in the table of paragraph (I)(4) of rule 3745-21-09 of the Administrative Code and expressed in terms of pounds of VOC per gallon of deposited solids by no later than one year after the effective date of this rule.

(9) Magnet wire coating lines.

- (a) Except as otherwise provided in paragraph (C)(9)(b) of this rule, any owner or operator of a magnet wire coating line which is subject to the requirements of paragraph (J) of rule 3745-21-09 of the Administrative Code shall achieve compliance with said requirements by November 1, 1981.
- (b) Any owner or operator of a magnet wire coating line which employs a control system shall achieve compliance with either the control requirements specified in paragraph (B)(6) of rule 3745-21-09 of the Administrative Code or the VOC limitation which is contained in paragraph (J) of rule 3745-21-09 of the Administrative Code and expressed in terms of pounds of VOC per gallon of solids by April 1, 1995.

- (10) Large appliance coating lines.
- (a) Except as otherwise provided in paragraph (C)(10)(b) of this rule, any owner or operator of a large appliance coating line which is subject to the requirements of paragraph (K) of rule 3745-21-09 of the Administrative Code shall achieve compliance with said requirements by April 1, 1982.
  - (b) Any owner or operator of a large appliance coating line which employs a control system shall achieve compliance with either the control requirements specified in paragraph (B)(6) of rule 3745-21-09 of the Administrative Code or the VOC limitation which is contained in paragraph (K) of rule 3745-21-09 of the Administrative Code and expressed in terms of pounds of VOC per gallon of solids by April 1, 1995.
  - (c) Any owner or operator of a large appliance coating line which is subject to the requirements of paragraph (K)(6) of rule 3745-21-09 of the Administrative Code shall achieve compliance with said requirements by no later than one year after the effective date of this rule.
  - (d) Any owner or operator of a large appliance coating line which employs a control system shall achieve compliance with either the control requirements specified in paragraph (B)(7) of rule 3745-21-09 of the Administrative Code or the VOC limitation which is contained in paragraph (K)(6) of rule 3745-21-09 of the Administrative Code and expressed in terms of pounds of VOC per gallon of deposited solids by no later than one year after the effective date of this rule.
- (11) Any owner or operator of a fixed roof tank which is subject to the requirements of paragraph (L) of rule 3745-21-09 of the Administrative Code shall achieve compliance with said requirements by January 1, 1982.
- (12) Any owner or operator of a refinery vacuum producing system which is subject to the requirements of paragraph (M)(1) of rule 3745-21-09 of the Administrative Code shall achieve compliance with said requirements by December 31, 1982.
- (13) Any owner or operator of a refinery wastewater separator which is subject to the requirements of paragraph (M)(2) of rule 3745-21-09 of the Administrative Code shall achieve compliance with said requirements by January 1, 1981.
- (14) Any owner or operator of a refinery process unit turnaround which is subject to the requirements of paragraph (M)(3) of rule 3745-21-09 of the Administrative Code shall achieve compliance with said requirements by December 31, 1982.
- (15) The requirements of paragraph (N) of rule 3745-21-09 of the Administrative Code shall be complied with by the following deadlines:

- (a) April 15, 1981 for the use or application of cutback asphalts in road construction and maintenance; and
  - (b) April 15, 1982 for the use or application of emulsified asphalts in road construction and maintenance.
- (16) Solvent metal cleaning operations.
- (a) Except as provided in paragraphs (C)(16)(b) to (C)(16)(d) of this rule, any owner or operator of a solvent metal cleaning operation which is subject to the requirements of paragraph (O) of rule 3745-21-09 of Administrative Code shall achieve compliance with said requirements by April 1, 1981.
  - (b) Any owner or operator of a solvent metal cleaning operation shall achieve compliance with the requirements of paragraphs (O)(2)(d), (O)(3)(d), and (O)(4)(e) of rule 3745-21-09 of the Administrative Code by July 17, 1995.
  - (c) Any owner or operator of a cold cleaning operation which is located in Butler, Clark, Clermont, Greene, Hamilton, Miami, Montgomery, or Warren county shall achieve compliance with the requirements of paragraph (O)(2)(e) of rule 3745-21-09 of the Administrative Code by May 1, 2006.
  - (d) Any owner or operator of a cold cleaning operation which is located in Ashtabula, Cuyahoga, Geauga, Lake, Lorain, Medina, Portage, or Summit county shall achieve compliance with the requirements of paragraph (O)(2)(e) of the Administrative Code by no later than one year after the effective date of this rule.
- (17) Any owner or operator of a bulk gasoline plant which is subject to the requirements of paragraph (P) of rule 3745-21-09 of the Administrative Code shall achieve compliance with said requirements by July 1, 1981.
- (18) Any owner or operator of a bulk gasoline terminal which is subject to the requirements of paragraph (Q) of rule 3745-21-09 of the Administrative Code shall achieve compliance with said requirements by July 1, 1981.
- (19) Any owner or operator of a gasoline dispensing facility which is subject to the requirements of paragraph (R) of rule 3745-21-09 of the Administrative Code shall achieve compliance with said requirements no later than the deadlines in the following schedules:
- (a) Except as otherwise provided in paragraphs (C)(19)(b) to (C)(19)(d) of this rule, for any gasoline dispensing facility which has an annual throughput equal to or greater than two hundred forty thousand gallons of gasoline by July 1, 1981.

- (b) For any gasoline dispensing facility which is located in Ashtabula, Clark, Geauga, or Miami county: and for which construction commenced after November 15, 1990 and prior to March 31, 1993 by September 30, 1993.
  - (c) For any gasoline dispensing facility which is located in Ashtabula, Clark, Geauga, or Miami county and which dispenses at least one hundred thousand gallons of gasoline per month (based upon the average monthly sales of gasoline during the period from November 16, 1990 through November 15, 1992): by March 31, 1994.
  - (d) For any other gasoline dispensing facility which is located in Ashtabula, Clark, Geauga, or Miami county and which is not covered by paragraph (C)(19)(b) or (C)(19)(c) of this rule, or for any gasoline dispensing facility which is located in Delaware or Licking county and which has an annual throughput equal to or greater than one hundred twenty thousand gallons of gasoline, or for any gasoline dispensing facility which is located in Butler, Clermont, Cuyahoga, Franklin, Greene, Hamilton, Lake, Lorain, Lucas, Mahoning, Medina, Montgomery, Portage, Stark, Summit, Trumbull, Warren, or Wood county and which has an annual throughput equal to or greater than one hundred twenty thousand gallons of gasoline and less than two hundred forty thousand gallons of gasoline by March 31, 1995.
- (20) "Alside, Inc." or any subsequent owner or operator of the "Alside, Inc." facility located at 3773 Akron road, North Hampton township, Summit county, Ohio shall achieve compliance with the requirements of paragraph (E) of rule 3745-21-09 of the Administrative Code by July 1, 1979, and paragraph (S) of rule 3745-21-09 of the Administrative Code by July 1, 1981.
- (21) "General Motors Corporation" or any subsequent owner or operator of the "General Motors Corporation" automobile assembly plant located at 2200 Hallockroad, Lordstown, Ohio shall achieve compliance with the requirements of paragraph (C)(1)(a)(i) of rule 3745-21-09 of the Administrative Code by December 31, 1982; and paragraphs (C)(1)(a)(ii), (C)(1)(c) and (C)(1)(d) of rule 3745-21-09 of the Administrative Code by December 31, 1985.
- (22) "General Motors Corporation" or any subsequent owner or operator of the "General Motors Corporation" light-duty truck assembly plant located at 2200 Hallockroad, Lordstown, Ohio shall achieve compliance with the requirements of paragraph (C)(1)(a)(i) of rule 3745-21-09 of the Administrative Code by December 31, 1982; and paragraphs (C)(1)(a)(ii), (C)(1)(c) and (C)(1)(d) of rule 3745-21-09 of the Administrative Code by December 31, 1984.
- (23) "General Motors Corporation" or any subsequent owner or operator of the "General Motors Corporation" automobile assembly plant located at 4726 Smith road, Norwood, Ohio shall achieve compliance with the requirements of

paragraphs (C)(1)(a)(i) and (C)(1)(c) of rule 3745-21-09 of the Administrative Code by December 31, 1981; and paragraphs (C)(1)(a)(ii) and (C)(1)(d) of rule 3745-21-09 of the Administrative Code by December 31, 1982.

- (24) "Ford Motor Company" or any subsequent owner or operator of the "Ford Motor Company" automobile and light-duty truck assembly plant located at 5401 Baumhart road, Lorain, Ohio shall achieve compliance with the requirements of paragraph (C)(1)(a)(i) of rule 3745-21-09 of the Administrative Code by December 31, 1982; and paragraphs (C)(1)(a)(ii), (C)(1)(b), (C)(1)(c) and (C)(1)(d) of rule 3745-21-09 of the Administrative Code by December 31, 1986.
- (25) "Ford Motor Company" or any subsequent owner or operator of the "Ford Motor Company" light-duty truck assembly plant located at Miller and Walker roads, Avon Lake, Ohio shall achieve compliance with the requirements of paragraph (C)(1)(a)(i) of rule 3745-21-09 of the Administrative Code by December 31, 1982; and paragraphs (C)(1)(a)(ii), (C)(1)(c) and (C)(1)(d) of rule 3745-21-09 of the Administrative Code by December 31, 1986.
- (26) "American Motors Jeep Corporation" or any subsequent owner or operator of the "American Motors Jeep Corporation" automobile assembly plant located at 940 North Cove Boulevard, Toledo, Ohio shall achieve compliance with the requirements of paragraphs (C)(1)(a) and (C)(1)(d) of rule 3745-21-09 of the Administrative Code by December 31, 1982; and paragraph (C)(1)(c) of rule 3745-21-09 of the Administrative Code by December 31, 1986.
- (27) Any owner or operator of petroleum refinery equipment which is subject to the requirements of paragraph (T) of rule 3745-21-09 of the Administrative Code shall submit to the director a monitoring program by July 1, 1981, and the first quarterly monitoring report by October 15, 1981.
- (28) Miscellaneous metal part or product coating lines.
  - (a) Except as otherwise provided in paragraphs (C)(28)(b), (C)(28)(c), and (C)(28)(d) of this rule, any owner or operator of a miscellaneous metal part or product coating line which is subject to the requirements of paragraph (U) of rule 3745-21-09 of the Administrative Code shall achieve compliance with said requirements by December 31, 1982.
  - (b) Any owner or operator of a miscellaneous metal part or product coating line which employs a control system shall achieve compliance with either the control requirements specified in paragraph (B)(6) of rule 3745-21-09 of the Administrative Code or the applicable VOC limitation which is contained in paragraph (U) of rule 3745-21-09 of the Administrative Code and expressed in terms of pounds of VOC per gallon of solids by April 1, 1995.

- (c) Any owner or operator of a miscellaneous metal part or product coating line which is subject to the revised requirements of paragraph (U)(1)(e) of rule 3745-21-09 of the Administrative Code, pertaining to the interior coating of a steel pail or drum, shall achieve compliance with said requirements by April 1, 1995.
  - (d) Any owner or operator of a miscellaneous metal part or product coating line which is subject to the requirements of paragraph (U)(2)(e)(i) of rule 3745-21-09 of the Administrative Code or which was, prior to January 17, 1995, subject to the 4.8 pounds VOC per gallon of coating limitation for anticorrosion coatings contained in rule 3745-21-09 of the Administrative Code, shall achieve compliance by January 17, 1996.
  - (e) Any owner or operator of a miscellaneous metal part or product coating line which is located in Ashtabula, Butler, Clermont, Cuyahoga, Geauga, Hamilton, Lake, Lorain, Medina, Portage, Summit, or Warren county and which was, prior to the effective date of this rule, subject to the ten gallons per day exemption contained under paragraph (U)(2)(e) of rule 3745-21-09 of the Administrative Code shall achieve compliance with the requirements under paragraph (U)(1) or (U)(2)(e)(ii) of rule 3745-21-09 of the Administrative Code by June 15, 2000.
- (29) Any owner or operator of a gasoline tank truck which is subject to the requirements of paragraph (V) of rule 3745-21-09 of the Administrative Code shall achieve compliance with said requirements by March 31, 1983.
  - (30) Any owner or operator of a synthesized pharmaceutical manufacturing facility which is subject to the requirements of paragraph (W) of rule 3745-21-09 of the Administrative Code shall achieve compliance with said requirements by December 31, 1982.
  - (31) Any owner or operator of a pneumatic rubber tire manufacturing facility which is subject to the requirements of paragraph (X) of rule 3745-21-09 of the Administrative Code shall achieve compliance with said requirements by December 31, 1982.
  - (32) Any owner or operator of a packaging rotogravure printing line, publication rotogravure printing line, or flexographic printing line which is subject to:
    - (a) The requirements of paragraph (Y)(1) of rule 3745-21-09 of the Administrative Code shall achieve compliance with said requirements by December 31, 1982.
    - (b) The requirements of paragraph (Y)(3) of rule 3745-21-09 of the Administrative Code shall achieve compliance with said requirements by no later than one year after the effective date of this rule.

- (33) Any owner or operator of an external floating roof tank which is subject to the requirements of paragraph (Z) of rule 3745-21-09 of the Administrative Code shall achieve compliance with said requirements by December 31, 1982.
- (34) (Reserved)
- (35) "Honda of America Mfg., Inc." or any subsequent owner or operator of the "Honda of America Mfg., Inc." automobile assembly plant located at 24000 U.S. route 33, Marysville, Ohio shall achieve compliance with the requirements of paragraphs (C)(1)(c) and (C)(1)(d) of rule 3745-21-09 of the Administrative Code by December 31, 1986.
- (36) Any owner or operator of a petroleum dry cleaning facility which is subject to the requirements of paragraph (BB) of rule 3745-21-09 of the Administrative Code shall achieve compliance with said requirements by December 31, 1987.
- (37) Any owner or operator of a continuous, polystyrene resin manufacturing process which is subject to the requirements of paragraph (CC) of rule 3745-21-09 of the Administrative Code shall achieve compliance with said requirements by December 31, 1987.
- (38) Except as otherwise provided in paragraph (C)(66) of this rule, any owner or operator of a process unit which produces organic chemicals and which is subject to the requirements of paragraph (DD) of rule 3745-21-09 of the Administrative Code shall achieve compliance with paragraph (DD)(2) of rule 3745-21-09 of the Administrative Code by February 1, 1987, and paragraphs (DD)(3) to (DD)(6) of rule 3745-21-09 of the Administrative Code by July 1, 1987.
- (39) Except as otherwise provided in paragraph (C)(66) of this rule, any owner or operator of an air oxidation process which is subject to the requirements of paragraph (EE) of rule 3745-21-09 of the Administrative Code shall achieve compliance with said requirements by December 31, 1987.
- (40) "The Steelcraft Manufacturing Company" or any subsequent owner or operator of "The Steelcraft Manufacturing Company" facility located at 9017 Blue Ash road, Cincinnati, Ohio shall achieve compliance with the requirements of paragraph (FF)(1) of rule 3745-21-09 of the Administrative Code by April 1, 1989, and paragraph (FF)(2) of rule 3745-21-09 of the Administrative Code by April 1, 1989.
- (41) "Chevron U.S.A., Inc." or any subsequent owner or operator of the "Chevron U.S.A., Inc." barge loading facility located at state route 128 and U.S. route 50 in Hamilton county, Ohio shall achieve compliance with the requirements of

paragraph (GG) of rule 3745-21-09 of the Administrative Code by August 15, 1989.

- (42) Any owner or operator of an automotive/transportation plastic parts coating line or a business machine plastic parts coating line which is subject to the requirements of paragraph (HH) of rule 3745-21-09 of the Administrative Code shall achieve compliance with said requirements no later than August 25, 2009.
- (43) "International Paper Company" or any subsequent owner or operator of the "International Paper Company" facility located at 100 Progress place, Springdale, Ohio shall achieve compliance with the requirements of paragraph (II) of rule 3745-21-09 of the Administrative Code by March 31, 1993.
- (44) "The Goodyear Tire and Rubber Company" or any subsequent owner or operator of "The Goodyear Tire and Rubber Company" facility located at 1376 Tech Way drive, Akron, Ohio shall achieve compliance with the requirements of paragraph (JJ) of rule 3745-21-09 of the Administrative Code by May 25, 1988.
- (45) "Morton Thiokol, Inc." or any subsequent owner or operator of the "Morton Thiokol, Inc." facility located at 2000 West street, Cincinnati, Ohio shall achieve compliance with the requirements of paragraph (KK) of rule 3745-21-09 of the Administrative Code by May 25, 1988.
- (46) "The Lubrizol Corporation" or any subsequent owner or operator of "The Lubrizol Corporation" facility located at 155 Freedom road, Painesville, Ohio shall achieve compliance with the requirements of paragraph (LL) of rule 3745-21-09 of the Administrative Code by October 1, 1989.
- (47) "PPG Industries, Inc." or any subsequent owner or operator of the "PPG Industries, Inc." facility located at 3800 West 143rd street, Cleveland, Ohio shall achieve compliance with the requirements of paragraph (MM) of rule 3745-21-09 of the Administrative Code by May 25, 1988.
- (48) "Von Roll USA, Inc." or any subsequent owner or operator of the "Von Roll USA, Inc." facility located at 4853 West 130th street, Cleveland, Ohio shall achieve compliance with the requirements of paragraph (NN) of rule 3745-21-09 of the Administrative Code no later than the deadlines in the following schedule:
  - (a) For machine 30, by June 1, 1989.
  - (b) For any machine other than machine 30, by December 31, 1989.
- (49) "Armco Steel Company, L.P." or any subsequent owner or operator of the "Armco Steel Company, L.P." facility located at 1801 Crawford street, Middletown, Ohio shall achieve compliance with the requirements of paragraph (OO) of rule 3745-21-09 of the Administrative Code by March 31, 1993.

- (50) "Formica Corporation" or any subsequent owner or operator of the "Formica Corporation" facility located at 10155 Reading road, Cincinnati, Ohio shall achieve compliance with the requirements of paragraph (PP) of rule 3745-21-09 of the Administrative Code by May 25, 1988.
- (51) "DayColor Corp." or any subsequent owner or operator of the "DayColor Corp." facility located at 4515 St. Clair avenue, Cleveland, Ohio shall achieve compliance with the requirements of paragraph (QQ) of rule 3745-21-09 of the Administrative Code by May 1, 1994.
- (52) (Reserved)
- (53) "Ritrama Duramark" or any subsequent owner or operator of the "Ritrama Duramark" facility located at 341 Eddy Road, Cleveland, Ohio shall achieve compliance with the requirements of paragraph (SS) of rule 3745-21-09 of the Administrative Code by March 31, 1993.
- (54) "ICI Americas Incorporated" or any subsequent owner or operator of the "ICI Americas Incorporated" facility located at 3647 Shepard road, Perry, Ohio shall achieve compliance with the requirements of paragraph (TT)(1) of rule 3745-21-09 of the Administrative Code by May 1, 1994, and paragraph (TT)(2) of rule 3745-21-09 of the Administrative Code by March 31, 1993.
- (55) "British Petroleum Oil Company, Toledo Refinery" or any subsequent owner or operator of the "British Petroleum Oil Company, Toledo Refinery" facility located at 4001 Cedar Point road, Oregon, Ohio shall achieve compliance with the requirements of paragraph (UU)(1) of rule 3745-21-09 of the Administrative Code by May 1, 1995, paragraphs (UU)(2) and (UU)(3) of rule 3745-21-09 of the Administrative Code by May 1, 1993, paragraph (UU)(4) of rule 3745-21-09 of the Administrative Code by May 1, 1994, paragraph (UU)(5) of rule 3745-21-09 of the Administrative Code by October 1, 1993, and paragraph (UU)(6) of rule 3745-21-09 of the Administrative Code by January 1, 1995.
- (56) "Ashland Petroleum Company" or any subsequent owner or operator of the "Ashland Petroleum Company" facility located at 2408 Gambinus road, S.W., Canton, Ohio shall achieve compliance with the requirements of paragraph (VV) of rule 3745-21-09 of the Administrative Code by March 31, 1993.
- (57) (Reserved)
- (58) "Columbus Coated Fabrics" or any subsequent owner or operator of "Columbus Coated Fabrics" facility located at 1280 North Grant avenue, Columbus, Ohio shall achieve compliance with the requirements of paragraph (XX) of rule 3745-21-09 of the Administrative Code by December 31, 1995.

- (59) "PMC Specialties Group" or any subsequent owner or operator of the "PMC Specialties Group" facility located at 501 Murray road, Cincinnati, Ohio shall achieve compliance with the requirements of paragraph (YY)(1) of rule 3745-21-09 of the Administrative Code by March 31, 1993, and paragraph (YY)(2) of rule 3745-21-09 of the Administrative Code by May 1, 1994.
- (60) "Firestone Synthetic Rubber & Latex Company" or any subsequent owner or operator of the "Firestone Synthetic Rubber & Latex Company" facility located at 381 West Wilbeth road, Akron, Ohio shall achieve compliance with the requirements of paragraph (ZZ) of rule 3745-21-09 of the Administrative Code by May 1, 1994.
- (61) (Reserved)
- (62) "BF Goodrich Company, Akron Chemical Plant" or any subsequent owner or operator of the "BF Goodrich Company, Akron Chemical Plant" facility located at 240 West Emerling avenue, Akron, Ohio shall achieve compliance with the requirements of paragraph (BBB)(1) of rule 3745-21-09 of the Administrative Code by August 15, 1993, and paragraphs (BBB)(2) to (BBB)(4) of rule 3745-21-09 of the Administrative Code by December 15, 1994.
- (63) (Reserved)
- (64) Any owner or operator of a gasoline dispensing facility which is subject to the requirements of paragraph (DDD) of rule 3745-21-09 of the Administrative Code shall achieve compliance with said requirements no later than the deadlines in the following paragraphs:
- (a) For any gasoline dispensing facility not owned by an independent small business marketer:
    - (i) For any gasoline dispensing facility for which construction commenced after November 15, 1990 and prior to March 31, 1993, by September, 1993;
    - (ii) For any gasoline dispensing facility which dispenses at least one hundred thousand gallons of gasoline per month (based upon the average monthly sales of gasoline during the period from November 16, 1990 through November 15, 1992), by March 31, 1994; and,
    - (iii) For any other gasoline dispensing facility not covered by paragraphs (C)(64)(a)(i) and (C)(64)(a)(ii) of this rule, by March 31, 1995.
  - (b) For gasoline dispensing facilities owned by independent small business marketers:

- (i) For a minimum of thirty-three per cent of the gasoline dispensing facilities owned by each such marketer, by March 31, 1994.
  - (ii) For a minimum of sixty-six per cent of the gasoline dispensing facilities owned by such marketer, by March 31, 1995.
  - (iii) For one hundred per cent of the gasoline dispensing facilities owned by each such marketer, by March 31, 1996.
- (65) Any owner or operator of an air contaminant source which is located in Ashtabula, Clark, Delaware, Geauga, Licking, or Miami county and which, prior to March 31, 1993, was exempt from the requirements of paragraphs (C) to (M), (O) to (R), (T), (U), and (W) to (EE) of rule 3745-21-09 of the Administrative Code because the facility's potential to emit is less than one hundred tons of VOC per calendar year, shall achieve compliance with said requirements by April 1, 1995.
- (66) "Georgia Resins, Inc." or any subsequent owner or operator of the "Georgia Resins, Inc." facility located at 1975 Watkins road, Columbus, Ohio shall achieve compliance with paragraphs (DD) and (EE) of rule 3745-21-09 of the Administrative Code for the process unit which produces urea-formaldehyde by May 1, 1994.

3745-21-07      **Control of emissions of organic materials from stationary sources (i.e., emissions that are not regulated by rule 3745-21-09, 3745-21-12, 3745-21-13, 3745-21-14, 3745-21-15, 3745-21-16, or 3745-21-18 of the Administrative Code).**

[Comment: For dates of non-regulatory government publications, publications of recognized organizations and associations, federal rules, and federal statutory provisions referenced in this rule, see the last paragraph of rule 3745-21-01 of the Administrative Code entitled "Incorporation by Reference."]

(A) Applicability.

(1) RESERVED

(2) RESERVED

(3) The requirements of this rule shall apply to any source or operation, for which installation commenced prior to the effective date of this rule and that is specified in paragraphs (K) to (N) of this rule, but shall not apply to VOC emissions from any such source or operation that are regulated by rule 3745-21-09, 3745-21-12, 3745-21-13, 3745-21-14, 3745-21-15, 3745-21-16, or 3745-21-18 of the Administrative Code. Any owner or operator of any subject source or operation specified in paragraphs (K) to (N) of this rule shall comply with the facility-specific and general control requirements of this rule as of the effective date of this rule.

(4) Any emission limitation, control requirement, or operational restriction contained in a permit-to-install, permit-by-rule, permit-to-operate, or Title V permit that is based upon a citation to this rule number, except the emission limitations and control requirements specified in paragraphs (K)(2), (K)(4), (L)(2), (M)(2), (M)(3), (M)(4), and (N)(2) of this rule, shall be void upon the effective date of this rule.

[Comment: As examples of the applicability of this paragraph, if a permit-to-install, a permit-by-rule, a permit-to-operate, or a Title V permit has been issued prior to the effective date of this rule and contains both a citation to rule 3745-21-07 of the Administrative Code and one of the associated requirements referenced within this comment, the associated requirements contained in such a permit shall be void upon the effective date of this rule. The associated requirements covered by this comment shall include: (a) any requirement that prohibits the use of photochemically reactive materials, or prohibits the use of volatile photochemically reactive materials; (b) any requirement that limits organic compound emissions from an operation to eight pounds per hour and forty pounds per day, except as specified in paragraphs (M)(3)(d) and (M)(3)(g)

of this rule; (c) any requirement to determine or document materials as being photochemically reactive materials; and (d) any recordkeeping and reporting requirements related to requirements referred to in (a), (b) or (c) of this comment.

All other permit conditions, including annual emission or material usage limitations (tons per year, gallons per day or month or year, VOC per gallon, etc.) and all other recordkeeping and reporting requirements associated with those permit conditions remain in effect.]

- (5) The requirements of this rule shall not apply to any source, including any new source as defined in rule 3745-15-01 of the Administrative Code, for which installation commenced after the effective date of this rule.
- (6) For any source or operation specified in paragraphs (K) to (N) of this rule that is subject to a mass emission rate, control efficiency, overall control efficiency, or emission reduction, the owner or operator shall determine compliance by means of the following:
  - (a) For controlled and uncontrolled sources, the test methods and procedures of paragraphs (A) to (C) of rule 3745-21-10 of the Administrative Code; or
  - (b) An emission factor approved by the USEPA, such as an emission factor from the "Compilation of Air Pollutant Emission Factors, Volume 1: Stationary Point and Area Sources (AP-42);" or
  - (c) Emissions test data from similar sources or operations, provided such emissions tests comply with the test methods and procedures of paragraphs (B) and (C) of rule 3745-21-10 of the Administrative Code, and the USEPA has indicated in writing that the use of such tests is acceptable.

The use of emissions test data, if available, from a source or operation specified in paragraphs (K) to (N) of this rule shall take precedence over the use of an emission factor approved by the USEPA or the use of emission test data from similar sources or operations.

(K) Facility-specific control requirements for storage tanks (stationary tank, reservoir, or other container):

- (1) The owner or operator, or any subsequent owner or operator of each storage tank identified in this paragraph, shall comply with the control requirements specified in paragraph (K)(2) of this rule:

- (K)(1) Emissions Units -

Owner or Operator	Facility ID	Emissions Unit ID
The Glidden Company	0322000043	T009, T025 - T029, T042, T044, T045, T049, T052, T053, T063 - T067, T074, T076
Marathon Ashland Petroleum, LLC	1318082830	T004

- (2) No person shall place, store or hold in any storage tank identified in paragraph (K)(1) of this rule, any liquid organic material that has a vapor pressure of 1.5 pounds per square inch absolute or greater, under actual storage conditions, unless the storage tank is equipped with one of the following vapor loss control equipment:

(a) The storage tank shall be equipped with a floating pontoon or double-deck type cover that includes closure seals to enclose any space between the cover's edge and the compartment wall. This control requirement shall not be permitted if the liquid organic material in the tank has a vapor pressure of 12.5 pounds per square inch absolute or greater under actual storage conditions. All tank gauging or sampling devices shall be gas tight except when tank gauging or sampling is taking place.

(b) The storage tank shall be equipped with a vapor recovery system or control system that reduces the emission of organic compounds into the atmosphere by at least ninety per cent by weight. All tank gauging or sampling devices shall be gas tight except when tank gauging or sampling is taking place.

- (3) The owner or operator, or any subsequent owner or operator of each storage tank (stationary storage vessel) identified in this paragraph, shall comply with the control requirements specified in paragraph (K)(4) of this rule:

## -(K)(3) Emissions Units -

Owner or Operator	Facility ID	Emissions Unit ID
Newark Air Force Base/AGMC	0145020224	T012, T013
The Lubrizol Corporation, Wickliffe Facility	0243150025	T224, T225

Glastic Corporation, Cleveland Facility	1318544510	T009
Strongsville Expressmart	1318554294	T008

(4) No person shall place, store or hold in any storage tank identified in paragraph (K)(3) of this rule, any liquid organic material that has a vapor pressure of 1.5 pounds per square inch absolute or greater, under actual storage conditions, unless the storage tank is equipped with a permanent submerged fill pipe, or is loaded through the use of a portable loading tube which can be inserted below the liquid level line during loading operations, or is fitted with a vapor recovery system as described in paragraph (K)(2)(b) of this rule.

(L) Facility-specific control requirements for oil-water separators (effluent water separators):

(1) The owner or operator, or any subsequent owner or operator of each oil-water separator identified in this paragraph, shall comply with the control requirements specified in paragraph (L)(2) of this rule:

## -(L)(1) Emissions Units-

Owner or Operator	Facility ID	Emissions Unit ID
Marathon Ashland Petroleum, LLC	0125040071	P002

(2) No person shall use any oil-water separator identified in paragraph (L)(1) of this rule that recovers any liquid organic material which has a vapor pressure of 1.5

pounds per square inch absolute or greater unless the oil-water separator complies with one of the following:

- (a) The oil-water separator shall be equipped with a solid cover with all openings sealed and totally enclosing the liquid contents of the compartment. All gauging and sampling devices shall be gas tight except when gauging or sampling is taking place.
- (b) The oil-water separator shall be equipped with a floating pontoon or double-deck type cover that includes closure seals to enclose any space between the cover's edge and compartment wall. All gauging and sampling devices shall be gas tight except when gauging or sampling is taking place.
- (c) The oil-water separator shall be equipped with a vapor recovery system that reduces the emission of organic compounds into the atmosphere by at least ninety per cent by weight. All gauging and sampling devices shall be gas tight except when gauging or sampling is taking place.

(M) Facility-specific and general control requirements for emissions from operations using liquid organic materials:

- (1) The owner or operator, or any subsequent owner or operator of each article, machine, equipment or other contrivance identified in this paragraph, shall comply with the control requirements specified in paragraph (M)(2) of this rule.

- (2) Each article, machine, equipment or other contrivance identified in paragraph (M)(1) of this rule, or meeting the specifications of paragraph (M)(3)(a) of this rule, shall be equipped with a control system (i.e., capture and control equipment) that reduces the organic compound emissions from the article, machine, equipment or other contrivance by an overall control efficiency of at least eighty-five per cent, by weight. If the reductions are achieved by incineration, ninety per cent or more of the carbon in the organic material being incinerated shall be oxidized to carbon dioxide.
- (3) Other operations using liquid organic materials.
- (a) Any article, machine, equipment or other contrivance that meets all of the following conditions shall comply with the control requirements specified in paragraph (M)(2) of this rule:
- (i) Is an existing source located within a "Priority I" county, as identified in rule 3745-21-06 of the Administrative Code, or a new source, as defined in rule 3745-15-01 of the Administrative Code, regardless of location.
  - (ii) Commenced installation prior to the effective date of this rule.
  - (iii) Uses a liquid organic material or a substance containing a liquid organic material.
  - (iv) Is equipped with control equipment for organic compound emissions.
  - (v) The emissions are not subject to control requirements specified in rule 3745-21-09, 3745-21-12, 3745-21-13, 3745-21-14, 3745-21-15, 3745-21-16, or 3745-21-18 of the Administrative Code.
  - (vi) Is not specified in paragraph (K)(1), (K)(3), (L)(1), (M)(1) or (N)(1) of this rule.
  - (vii) Does not meet any of the conditions specified under paragraph (M)(3)(c) of this rule.
  - (viii) Is not specified in paragraph (M)(3)(d) of this rule.
  - (ix) Is not fuel burning equipment, as defined in paragraph (B)(5) of rule 3745-17-01 of the Administrative Code.
- (b) The owner or operator of any article, machine, equipment, or other contrivance meeting the specifications of paragraph (M)(3)(a) of this rule, and not specified in paragraph (M)(1) of this rule, shall notify Ohio environmental protection agency of the need to be specified in paragraph

(M)(1) of this rule. Such notification shall be submitted within ninety days after the effective date of this rule.

- (c) Any article, machine, equipment or other contrivance that meets any of the following conditions shall not be subject to the requirements of paragraphs (M)(3)(a) and (M)(3)(b) of this rule:
- (i) The article, machine, equipment, or other contrivance commenced installation after the effective date of this rule.
  - (ii) The uncontrolled potential to emit for organic compound emissions from the article, machine, equipment or other contrivance does not exceed forty pounds per day where uncontrolled potential to emit for organic compound emissions means the capability at maximum capacity of an article, machine, equipment or other contrivance to emit organic compounds under its physical and operational design. Any physical or operational limitation on the capability of an article, machine, equipment or other contrivance to emit organic compounds, including restrictions on the hours of operation or on the type or amount of material processed, but not including restrictions pertaining to air pollution control equipment, shall be treated as part of its physical and operational design if the limitation or the effect it would have on organic compound emissions is federally enforceable or legally and practicably enforceable by the state.
  - (iii) The article, machine, equipment or other contrivance is subject to and complying with a best available technology requirement, pursuant to rule 3745-31-05 of the Administrative Code, that specifies an overall control efficiency for organic compound or VOC emissions that is greater than eighty-five per cent, by weight.
  - (iv) The article, machine, equipment or other contrivance is subject to and complying with a federal regulation that specifies an overall control efficiency for organic compound or VOC emissions that is greater than eighty-five per cent, by weight.
  - (v) The article, machine, equipment or other contrivance is subject to and complying with paragraph (M)(3)(g) or (M)(4) of this rule.
  - (vi) The article, machine, equipment or other contrivance is a heatset web offset printing line that is subject to and complying with a best available technology requirement, pursuant to rule 3745-31-05 of the Administrative Code, that specifies the dryer(s) to be equipped with a control device having either a control efficiency for organic compound or VOC emissions that is equal to or greater than ninety per cent, by weight, or an outlet concentration of less than twenty parts per million,

by volume, dry basis for organic compound or VOC emissions (a heatset web offset printing line is an offset lithographic printing line in which the substrate is continuously fed from a roll and a heated oven is used to dry the printing inks).

- (vii) The article, machine, equipment or other contrivance is regulated by and complying with Chapter 3745-76 of the Administrative Code.
- (d) The following specific articles, machines, equipment or other contrivances shall not be subject to the requirements of paragraphs (M)(3)(a) and (M)(3)(b) of this rule:
- (i) Any emissions unit identified in paragraphs (M)(3)(d)(ii) to (M)(3)(d)(x) of this rule that obtains an alternative emission limitation or control requirement pursuant to paragraph (M)(5)(e) of this rule.
  - (ii) Emissions unit R001 at the "Dee Sign Company" (facility ID 1409000675), provided that the organic compound emissions from the emissions unit are controlled by means of a thermal incinerator that maintains an overall control efficiency of at least 74.1 per cent, by weight, in accordance with permit-to-install 14-2185.
  - (iii) Emissions units P001, P002, P003, P004, P005, P007, P008, P009 and P010 at "The Nylonge Corporation" (facility ID 0247040822), provided that the organic compound emissions from the emissions units are controlled by means of a packed bed scrubber and biofiltration system that maintain an overall control efficiency of at least eighty per cent, by weight, in accordance with permit-to-install 02-13356.
  - (iv) Emissions unit P001 at "Fort Amanda Specialties, LLC" (facility ID 0302020097), provided that the organic compound emissions from the emissions unit are controlled by means of a packed bed scrubber that limits emissions to 0.04 pounds per hour, in accordance with permit-to-install 03-5696.
  - (v) The following emissions units at "Franklin International" (facility ID 0125040070), provided that all the emissions units are controlled by a condenser that limits the VOC emissions to the levels specified below:
    - (a) For emissions unit P103, eight pounds per hour and forty pounds per day;
    - (b) For emissions unit P106, 6.5 pounds per hour and 32.3 pounds per day, in accordance with permit-to-install 01-05683;

- (c) For emissions unit P107, 6.5 pounds per hour and 32.3 pounds per day, in accordance with permit-to-install 01-05683;
  - (d) For emissions unit P113, eight pounds per hour and forty pounds per day;
  - (e) For emissions unit P114, eight pounds per hour and forty pounds per day;
  - (f) For emissions unit P115, 7.3 pounds per hour and 32.3 pounds per day, in accordance with permit-to-install 01-08402;
  - (g) For emissions unit P116, 6.5 pounds per hour and 32.3 pounds per day, in accordance with permit-to-install 01-05683;
  - (h) For emissions unit P124, 4.38 pounds per hour and 21.92 pounds per day, in accordance with permit-to-install 01-05232;
  - (i) For emissions unit P125, 7.8 pounds per hour and 39.0 pounds per day, in accordance with permit-to-install 01-06303; and
  - (j) For emissions unit P127, 6.92 pounds per hour and 32.3 pounds per day, in accordance with permit-to-install 01-08402.
- (vi) Emissions unit R201 at "Honda Marysville Auto Plant" (facility ID 0180000130), provided that this emissions unit is equipped with capture and control equipment that provide not less than an eighty-one per cent reduction, by weight, in the overall organic compound emissions from the application and drying of plastic part coatings within this emissions unit. For any reductions that are achieved by incineration, the incineration equipment shall provide not less than ninety per cent, by weight, destruction (control) efficiency.
- (vii) The following emissions units at "Honda Anna Engine Plant" (facility ID 0575000174), provided that VOC emissions are controlled and limited as follows:
- (a) For emissions unit P087, use of a wet scrubber only when the binder system employs triethylamine to complete the reaction, 1.82 pounds per hour of stack emissions, 0.008 pounds per hour of fugitive emissions, and 40.0 pounds per day of stack and fugitive emissions combined, in accordance with permit-to-install 05-12593; and
  - (b) For emissions unit P097, 8 pounds per hour, and 40 pounds per day, in accordance with permit-to-install 05-14422.

- (viii) Deco Booth 1 and Mask Washers associated with emissions unit K003 at "Florida Production Engineering" (facility ID 0819100218), provided that the organic compound emissions from the emissions unit are controlled by means of a capture system and thermal oxidizer that meet the following, in accordance with permit-to-install 08-04088:
- (a) The capture system has a capture efficiency of at least eighty per cent (by weight for organic compound emissions) and is vented to the thermal oxidizer; and
  - (b) The thermal oxidizer is operating with a destruction efficiency of at least ninety-five per cent (by weight for organic compound emissions), or the total organic compound concentration at the outlet is less than fifteen parts per million by volume as propane on a dry basis, whichever is less stringent.
- (ix) Emissions unit P080 at "PPG Industries, Barberton Plant" (facility ID 1677020009), provided that the organic compound emissions are limited to less than forty pounds per day and are controlled by a flare or other control device when necessary to limit emissions to less than forty pounds per day, in accordance with permit-to-install 16-1102.
- (e) "Cooper Standard Automotive, LLC" (facility ID 0387020045) or any subsequent owner or operator of the "Cooper Standard Automotive, LLC" facility located at "1175 North Main Street, Bowling Green, Ohio" shall not cause, allow or permit the discharge into the ambient air of any VOC from flock line number 1, 2, 3, or 4 (includes emissions units R008, R011, R012, P014, P018 and P021, in accordance with permit-to-install 03-11229, and R029 and P044 in accordance with permit-to-install 03-10454) unless the VOC content of the adhesive or other coating employed within said flock line does not exceed 2.6 pounds of VOC per gallon of coating, excluding water and exempt solvents (as applied).
- (f) "GMC-Truck and Bus Group-Moraine" (facility ID 0857101349) or any subsequent owner or operator of the "GMC-Truck and Bus Group-Moraine" facility located at "2601 West Stroop Road, Dayton, Ohio" shall not cause, allow or permit the discharge into the ambient air of any VOC from the windshield glass system coating operation (emissions unit K031 in accordance with permit-to-install 08-03719) unless each coating employed in said coating operation has a maximum VOC content, as applied, that does not exceed the following, in accordance with permit-to-install 08-3719:
- (i) 7.3 pounds of VOC per gallon of coating, excluding water and exempt solvents, for the clear prime;

- (ii) 5.1 pounds of VOC per gallon of coating, excluding water and exempt solvents, for the black prime; and
  - (iii) 0.08 pound of VOC per gallon of coating, excluding water and exempt solvents, for the urethane sealer.
- (g) Except as provided in paragraphs (M)(3)(h) and (M)(5) of this rule, this paragraph applies to all existing sources located within a "Priority I" county, as identified in rule 3745-21-06 of the Administrative Code, and to all new sources, as defined in rule 3745-15-01 of the Administrative Code, regardless of location, for which installation commenced prior to the effective date of this rule. The owner or operator, or any subsequent owner or operator of each sheet molding compound manufacturing operation shall not discharge from such operation more than forty pounds of organic materials into the atmosphere in any one day, nor more than eight pounds in any one hour, unless said discharge has been reduced by at least eighty-five per cent, by weight. If the reductions are achieved by incineration, ninety per cent or more of the carbon in the organic material being incinerated shall be oxidized to carbon dioxide. A sheet molding compound manufacturing operation is defined as a process which involves the production of a molding compound, that contains a resin, into sheet form. In this manufacturing operation, the molding compound is sandwiched between top and bottom films.
- (h) "Venture Holdings Corporation - Conneaut Facility" (facility ID 0204020245) or any subsequent owner or operator of the "Venture Holdings Corporation - Conneaut Facility" located at "333 Gore Road, Conneaut, Ohio" shall not cause, allow or permit the discharge into the ambient air of organic compounds or VOC from sheet mold compound machine number 2 (emissions unit P027) unless all of the following requirements are met, in accordance with permit-to-install 02-18224:
  - (i) Organic compound emissions shall not exceed 61.20 pounds per day from production operations;
  - (ii) The resin delivery system to the doctor box on each SMC manufacturing machine must be closed or covered (the doctor box itself may be open);
  - (iii) A nylon containing film must be used to enclose the sheet molding compound; and
  - (iv) The use of materials containing VOC is prohibited in cleanup and purge.

- (4) Except as provided in paragraph (M)(5) of this rule, this paragraph applies to all existing sources located within a "Priority I" county, as identified in rule 3745-21-06 of the Administrative Code, and to all new sources, as defined in rule 3745-15-01 of the Administrative Code, regardless of location, for which installation commenced prior to the effective date of this rule. The owner or operator, or any subsequent owner or operator of each article, machine, equipment or other contrivance in which any liquid organic material or substance containing liquid organic material comes into contact with flame or is baked, heat-cured, or heat-polymerized, in the presence of oxygen, and is not specified in paragraph (M)(1) of this rule, shall not discharge from such source more than fifteen pounds of organic materials into the atmosphere in any one day, nor more than three pounds in any one hour, unless said discharge has been reduced by at least eighty-five per cent, by weight. If the reductions are achieved by incineration, ninety per cent or more of the carbon in the organic material being incinerated shall be oxidized to carbon dioxide.
- (5) Exemptions.
- (a) The provisions of paragraph (M)(2) of this rule shall not apply to the use of any cleanup material in any article, machine, equipment, or other contrivance described in paragraph (M)(2) of this rule.
- (b) The provisions of paragraphs (M)(2), (M)(3)(a) and (M)(4) of this rule shall not apply to the emission from any material used in any article, machine, equipment or other contrivance described in paragraphs (M)(2), (M)(3)(a) and (M)(4) of this rule if the emission is not a VOC.
- (c) The provisions of paragraph (M)(2) of this rule shall not apply to the use, in any article, machine, equipment or other contrivance described in paragraph (M)(2) of this rule, of liquid organic materials which exhibit a boiling point higher than two hundred degrees Fahrenheit at 0.5 millimeter mercury absolute pressure, or having an equivalent vapor pressure, unless such liquid organic material is exposed to temperatures exceeding two hundred twenty degrees Fahrenheit.
- (d) The provisions of paragraph (M)(4) of this rule shall not apply if:
- (i) The volatile content of the material described in paragraph (M)(4) of this rule consists only of water and liquid organic material, and the liquid organic material comprises not more than twenty per cent, by volume, of said volatile content; or
- (ii) The volatile content of the material described in paragraph (M)(4) of this rule does not exceed twenty per cent by volume of said material.

- (e) The provisions of paragraphs (M)(2), (M)(3)(d), (M)(3)(e), (M)(3)(f), (M)(3)(g), (M)(3)(h) and (M)(4) of this rule shall not apply if all the following conditions are met:
- (i) The director has determined that best available technology for the article, machine, equipment or other contrivance, as required by rule 3745-31-05 of the Administrative Code, is a control requirement or emission limitation that is either less stringent than or inconsistent with the requirements of paragraph (M) of this rule. Best available technology shall be defined in accordance with division (F) of section 3704.01 of the Revised Code and, for purposes of this paragraph, shall provide, where an emission limitation is applicable, the lowest emission limitation that the article, machine, equipment or other contrivance is capable of meeting by the application of control technology that is reasonably available considering technological and economic feasibility. Also, for an article, machine, equipment or other contrivance located within an ozone nonattainment area, the best available technology determination must comply with section 193 of the Clean Air Act amendments of 1990, general savings clause.
  - (ii) The USEPA has informed the Ohio environmental protection agency, in writing, prior to the issuance of a final permit-to-install for the article, machine, equipment or other contrivance, that the USEPA has no objection to the issuance of the final permit and the control requirement or emission limitation specified therein.
  - (iii) A final permit-to-install has been issued for the article, machine, equipment or other contrivance pursuant to Chapter 3745-31 of the Administrative Code. The permit-to-install shall contain terms and conditions that are consistent with the approval granted by the USEPA pursuant to paragraph (M)(5)(e)(ii) of this rule, and that specify the control requirement or emission limitation that is the basis for the director's best available technology determination for the article, machine, equipment or other contrivance, as described in paragraph (M)(5)(e)(i) of this rule. The permit-to-install shall be issued by the Ohio environmental protection agency in a manner that makes the control requirement or emission limitation federally enforceable.
- (f) The provisions of paragraph (M) of this rule shall not apply to the emissions resulting from the use of any liquid organic materials in any article, machine, equipment or other contrivance if those emissions are regulated by rule 3745-21-09, 3745-21-12, 3745-21-13, 3745-21-14, 3745-21-15, 3745-21-16, or 3745-21-18 of the Administrative Code.
- (g) The provisions of paragraphs (M)(3)(a), (M)(3)(b), (M)(3)(g) and (M)(4) of this rule shall not apply to sources that are located in Darke, Fairfield,

Madison, Perry, Pickaway, Preble or Union county and that are within a facility having the potential to emit not more than one hundred tons of organic compounds per calendar year.

- (h) The provisions of paragraph (M)(3)(g) of this rule shall not apply to any sheet molding compound manufacturing operation (machine) in which all of the following requirements are met:
- (i) The resin delivery system to the doctor box on the sheet molding compound manufacturing machine must be closed or covered (the doctor box itself may be open). A doctor box is defined as the box or trough on a sheet molding compound manufacturing machine into which the liquid resin paste is delivered before it is metered onto the carrier film.
  - (ii) A nylon containing film must be used to enclose the sheet molding compound.

(N) Facility-specific control requirements for waste gas flare systems:

- (1) The owner or operator, or any subsequent owner or operator, of each waste gas flare system identified in this paragraph shall comply with the control requirements specified in paragraph (N)(2) of this rule:

-(N)(1) Emissions Units -

Owner or Operator	Facility ID	Emissions Unit ID
City of Urbana	0511010123	P001
CECOS International	1413000186	P001

- (2) The waste gas flare system identified in paragraph (N)(1) of this rule shall employ a smokeless flare or equally effective control equipment for organic compound emissions.
- (3) "Aircraft Braking Systems Corp." (facility ID 1677010999) or any subsequent owner or operator of the "Aircraft Braking Systems Corp." facility located at "1204 Massillon Road, Akron, Ohio" shall not emit a waste gas stream into the atmosphere from emissions units P036, P037, P038, P039, P040, P041, and P044 unless such waste gas stream is properly burned at 1300 degrees Fahrenheit for 0.3 seconds or greater in a direct-flame afterburner or equally effective control device for organic compound emissions.

**Control of emissions of volatile organic compounds from stationary sources and perchloroethylene from dry cleaning facilities.**

[Comment: For dates and availability of non-regulatory government publications, publications of recognized organizations and associations, federal rules, and federal statutory provisions referenced in this rule, see paragraph (HH) of rule 3745-21-01 of the Administrative Code titled "Referenced materials"]

**(A) Applicability.**

- (1) In Ashtabula, Butler, Clark, Clermont, Cuyahoga, Delaware, Franklin, Geauga, Greene, Hamilton, Lake, Licking, Lorain, Lucas, Mahoning, Medina, Miami, Montgomery, Portage, Stark, Summit, Trumbull, Warren and Wood counties, the requirements of paragraphs (C) to (M), (O)(2)(a) to (O)(2)(d), (O)(3) to (O)(6), (P), (Q), (R), (T), (U), and (W) to (EE) of this rule shall apply to all sources regardless of date of construction or modification.
- (2) The requirements of paragraphs (N) and (V) of this rule shall apply state-wide.
- (3) For sources located in counties not listed in paragraph (A)(1) of this rule:
  - (a) The requirements of paragraphs (C) to (M), (O)(2)(a) to (O)(2)(d), (O)(3) to (O)(6), (P), (Q) and (R) of this rule shall apply to all sources:
    - (i) For which the construction or modification commenced on or after October 19, 1979; or
    - (ii) Which are located at a facility having the potential to emit a total of one hundred tons or more of VOC per calendar year.
  - (b) The requirements of paragraphs (T), (U), and (W) to (AA) of this rule shall apply to all sources:
    - (i) For which the construction or modification commenced on or after March 27, 1981; or
    - (ii) Which are located at a facility having the potential to emit a total of one hundred tons or more of VOC per calendar year.
  - (c) The requirements of paragraphs (BB) to (EE) of this rule shall apply to all sources:
    - (i) For which the construction or modification commenced on or after May 9, 1986; or

- (ii) Which are located at a facility having the potential to emit a total of one hundred tons or more of VOC per calendar year.
- (4) The requirements of paragraph (DDD) of this rule shall apply to all sources, regardless of date of construction or modification, that are located in Ashtabula, Butler, Clark, Clermont, Cuyahoga, Geauga, Greene, Hamilton, Lake, Lorain, Medina, Miami, Montgomery, Portage, Summit, or Warren county.
  - (5) The requirements of paragraph (O)(2)(e) of this rule shall apply to any facility that has sources regardless of date of construction or modification that are located in Ashtabula, Butler, Clark, Clermont, Cuyahoga, Geauga, Greene, Hamilton, Lake, Lorain, Medina, Miami, Montgomery, Portage, Summit, or Warren county.
  - (6) The requirements of paragraph (HH) of this rule shall apply to all coating lines for automotive/transportation plastic parts and/or for business machine plastic parts if the facility containing said coating lines meets all of the following criteria:
    - (a) The facility is located in Ashtabula, Cuyahoga, Geauga, Lake, Lorain, Medina, Portage, or Summit county; and
    - (b) The facility has a combined total potential to emit for VOC emissions equal to or greater than one hundred tons of VOC per calendar year on or after August 25, 2008 from all of the following:
      - (i) Surface coating of automotive/transportation plastic parts and/or business machine plastic parts;
      - (ii) All non-CTG sources; and
      - (iii) Unregulated emissions from CTG sources except sources regulated under Subparts BBB, III, NNN, and RRR of 40 CFR Part 60 and sources regulated under Subpart T of 40 CFR Part 63.

For the purpose of this paragraph, a source shall be considered regulated by a paragraph or rule if it is subject to the limits of that paragraph or rule. A source is not considered regulated by a paragraph or rule if it is not subject to the limits of that paragraph or rule. For example, if the source is covered by an exemption in the paragraph or rule, or the applicability criteria of the paragraph or rule are not met, then the source is not subject to that paragraph or rule. A source is also not considered regulated if there is no rule contained in this chapter regulating the source category.

- (7) Additional requirements or requirements which are more stringent than those specified in this rule may be applicable to new sources pursuant to rule 3745-31-05 of the Administrative Code.

(B) General provisions.

- (1) Compliance with the limitations specified in paragraphs (C) to (K), (S), (U), (Y), (FF), (HH), (II), (OO), (PP) and (XX) of this rule is based upon a weighted average by volume of all coating materials employed in the coating line or printing line in any one day. The VOC contents and densities of the coating materials subject to paragraphs (C) to (K), (S), (U), (Y), (FF), (HH), (II), (OO), (PP) and (XX) of this rule shall be determined in accordance with paragraph (B) of rule 3745-21-10 of the Administrative Code. The VOC emission rate, capture efficiency and control efficiency for coating lines or printing lines subject to paragraphs (C) to (K), (S), (U), (Y), (FF), (HH), (NN), (PP), and (XX) of this rule shall be determined in accordance with paragraph (C) of rule 3745-21-10 of the Administrative Code. The averaging of VOC emissions over two or more coating lines and/or printing lines in order to demonstrate compliance with an applicable emission limitation (i.e., cross-line averaging) is prohibited except as otherwise provided in this rule.
- (2) Any approval granted by the director in accordance with paragraphs (I)(2), (K)(3), (L)(1)(a)(ii), (O)(2)(c)(iii), (O)(3)(c)(v), (O)(4)(a)(iii), (T)(4), (W)(1)(a)(ii), (W)(1)(c)(ii), (Z)(1)(a)(vii), (Z)(1)(b)(ii)(e), (Z)(1)(b)(iii)(c), (DD)(3)(e), (DD)(16), and (DD)(17)(b)(iii) of this rule must be approved by the USEPA as a revision of the state implementation plan.
- (3) Recordkeeping and reporting requirements for coating lines and printing lines.
  - (a) Except as otherwise provided by this rule, the owner or operator of a coating line or printing line subject to paragraphs (C) to (K), (S), (U), (Y), (FF), (HH), (II), (NN) to (PP), or (XX) of this rule shall demonstrate the ongoing status of compliance with the applicable emissions limitations and/or control requirements by means of one of the recordkeeping and reporting requirement alternatives specified in this paragraph.
  - (b) Any owner or operator of a coating line which is exempt from the emission limitations specified in paragraph (I) or (U) of this rule because the combined VOC emissions from all such coating lines at the facility are less than fifteen pounds of VOC per day (before add-on controls) shall collect and record the information each day and maintain the information at the facility for a period of three years:
    - (i) The name and identification number of each coating, as applied.

- (ii) The mass of VOC per volume (excluding water and exempt solvents) and the volume of each coating (excluding water and exempt solvents), as applied, used each day.
- (iii) The total VOC emissions at the facility, as calculated using the following equation:

$$T = \sum_{i=1}^n A_i B$$

where:

T = Total VOC emissions from the combined coating lines before the application of capture systems and control devices, in units of pounds per day;

n = Number of different coatings applied in the coating lines at the facility;

i = Subscript denoting an individual coating;

$A_i$  = Mass of VOC per volume of coating (i) (excluding water and exempt solvents), as applied, used at the facility, in units of pounds VOC per gallon; and

$B_i$  = Volume of coating (i) (excluding water and exempt solvents), as applied, used at the facility, in units of gallons per day. The instrument or method by which the owner or operator accurately measured or calculated the volume of each coating, as applied, shall also be described in the certification to the director.

- (c) Any owner or operator of a coating line referenced in paragraph (B)(3)(b) of this rule shall notify the director of any daily record showing that the combined VOC emissions from all such coating lines at the facility are equal to or greater than fifteen pounds of VOC per day (before add-on controls). A copy of such record shall be sent to the director within forty-five days after the exceedance occurs.
- (d) Any owner or operator of a coating line which is exempt from the emission limitations specified in paragraph (U)(1) of this rule, pursuant to paragraph (U)(2)(e) of this rule, shall collect and record the following information each day for each such coating line and maintain the information at the facility for a period of three years:

- (i) The name and identification number of each coating employed in the coating line.
  - (ii) The volume, in gallons, of each coating employed in the coating line.
  - (iii) The total volume, in gallons, of all of the coatings employed in the coating line.
- (e) Any owner or operator of a coating line referenced in paragraph (B)(3)(d) of this rule shall notify the director of any daily record showing that the coating line employs more than the applicable maximum daily coating usage limit. A copy of such record shall be sent to the director within forty-five days after the exceedance occurs.
- (f) Any owner or operator of a coating line or printing line who elects to demonstrate the ongoing status of compliance with the applicable emission limitation by means of the use of complying coatings (i.e., each coating complies with the applicable emission limitation as applied) shall collect and record the following information each month and maintain the information at the facility for a period of three years:
- (i) The name and identification number of each coating, as applied.
  - (ii) The mass of VOC per volume of each coating (excluding water and exempt solvents), as applied.

This information does not have to be kept on a line-by-line basis. Also, if an owner or operator mixes complying coatings at a coating line, it is not necessary to record the VOC content of the resulting mixture.

- (g) Any owner or operator of a coating line or printing line referenced in paragraph (B)(3)(f) of this rule shall notify the director of any monthly record showing the use of noncomplying coatings. A copy of such record shall be sent to the director within thirty days following the end of the calendar month.
- (h) Any owner or operator of a coating line or printing line who elects to demonstrate the ongoing status of compliance with the applicable emission limitation by means of a daily volume-weighted average VOC content shall collect and record the following information each day for the coating line or printing line and maintain the information at the facility for a period of three years:
- (i) The name and identification number of each coating, as applied.

- (ii) The mass of VOC per volume (excluding water and exempt solvents) and the volume of each coating (excluding water and exempt solvents), as applied.
  - (iii) The daily volume-weighted average VOC content of all coatings, as applied, calculated in accordance with the equation specified in paragraph (B)(9) of rule 3745-21-10 of the Administrative Code for  $C_{\text{voc},2}$ .
- (i) Any owner or operator of a coating line or printing line referenced in paragraph (B)(3)(h) of this rule shall notify the director of any daily record showing that the daily volume-weighted average VOC content exceeds the applicable emission limitation. A copy of such record shall be sent to the director within forty-five days after the exceedance occurs.
  - (j) Any owner or operator of a coating line who elects to demonstrate the ongoing status of compliance with the applicable pounds of VOC per gallon of solids limitation by means of control equipment shall collect and record the following information each day for the coating line and maintain the information at the facility for a period of three years:
    - (i) The name and identification number of each coating used.
    - (ii) The mass of VOC per unit volume of coating solids, as applied, the volume solids content, as applied, and the volume, as applied, of each coating.
    - (iii) The maximum VOC content (mass of VOC per unit volume of coating solids, as applied) or the daily volume-weighted average VOC content (mass of VOC per unit volume of coating solids, as applied) of all the coatings.
    - (iv) The calculated, controlled VOC emission rate, in mass of VOC per unit volume of coating solids, as applied. The controlled VOC emission rate shall be calculated using (a) either the maximum VOC content or the daily volume-weighted VOC content recorded in accordance with paragraph (B)(3)(j)(iii) of this rule and (b) the overall control efficiency for the control equipment as determined during the most recent emission test that demonstrated that the source was in compliance.
    - (v) A log or record of operating time for the capture (collection) system, control device, monitoring equipment, and the associated coating line.
    - (vi) For thermal incinerators, all three-hour periods of operation during which the average combustion temperature was more than fifty degrees Fahrenheit below the average combustion temperature during the most

recent performance test that demonstrated that the source was in compliance.

- (vii) For catalytic incinerators, all three-hour periods of operation during which the average temperature of the process vent stream immediately before the catalyst bed is more than fifty degrees Fahrenheit below the average temperature of the process vent stream during the most recent performance test that demonstrated that the source was in compliance, and all three-hour periods of operation during which the average temperature difference across the catalyst bed is less than eighty per cent of the average temperature differences during the most recent performance test that demonstrated that the source was in compliance.
- (viii) For carbon adsorbers, all three-hour periods of operation during which the average VOC concentration or reading of organics in the exhaust gases is more than twenty per cent greater than the average exhaust gas concentration or reading measured by the organics monitoring device during the most recent determination of the recovery efficiency of the carbon adsorber that demonstrated that the source was in compliance.
- (k) Any owner or operator of a coating line referenced in paragraph (B)(3)(j) of this rule shall notify the director of any daily record showing that the calculated, controlled VOC emission rate exceeds the applicable pounds of VOC per gallon of solids limitation. A copy of such record shall be sent to the director within forty-five days after the exceedance occurs.
- (l) Any owner or operator of a coating line or printing line who elects to demonstrate the ongoing status of compliance with the applicable capture and control efficiency requirements or overall control efficiency requirements contained in paragraph (B)(6), (H), (Y), (NN), (PP), or (XX) of this rule shall collect and record the following information each day for the control equipment and maintain the information at the facility for a period of three years:
  - (i) A log of operating time for the capture (collection) system, control device, monitoring equipment, and the associated coating line or printing line.
  - (ii) For thermal incinerators, all three-hour periods of operation during which the average combustion temperature was more than fifty degrees Fahrenheit below the average combustion temperature during the most recent performance test that demonstrated that the source was in compliance.
  - (iii) For catalytic incinerators, all three-hour periods of operation during which the average temperature of the process vent stream immediately

before the catalyst bed is more than fifty degrees Fahrenheit below the average temperature of the process vent stream during the most recent performance test that demonstrated that the source was in compliance, and all three-hour periods of operation during which the average temperature difference across the catalyst bed is less than eighty per cent of the average temperature difference during the most recent performance test that demonstrated that the source was in compliance.

- (iv) For carbon adsorbers, all three-hour periods of operation during which the average VOC concentration or reading of organics in the exhaust gases is more than twenty per cent greater than the average exhaust gas concentration or reading measured by the organics monitoring device during the most recent determination of the recovery efficiency of the carbon adsorber that demonstrated that the source was in compliance.
  - (m) Any owner or operator of a coating line or printing line referenced in paragraphs (B)(3)(j) and (B)(3)(l) of this rule shall submit to the director quarterly summaries of the records required by paragraphs (B)(3)(j)(v) to (B)(3)(j)(viii) and (B)(3)(l)(i) to (B)(3)(l)(iv) of this rule. These quarterly reports shall be submitted by April thirtieth, July thirty-first, October thirty-first, and January thirty-first, and shall cover the records for the previous calendar quarters.
  - (n) Any owner or operator of a coating line or printing line referenced in paragraphs (B)(3)(j) and (B)(3)(l) of this rule shall install and operate continuous monitoring and recording devices (i.e., for temperature or VOC concentration) and, if necessary, perform emission tests for the coating line or printing line to enable the recordkeeping required by paragraphs (B)(3)(j)(vi) to (B)(3)(j)(viii) and (B)(3)(l)(ii) to (B)(3)(l)(iv) of this rule. The continuous monitoring and recording devices shall be installed and placed in operation either within one hundred eighty days of the March 31, 1993 or by the date of operation of any new control equipment installed for the coating line or printing line after March 31, 1993 to achieve compliance with the VOC control requirements of this rule. The continuous monitoring and recording devices shall be capable of accurately measuring the desired parameter, and the owner or operator shall properly operate and maintain the devices in accordance with the manufacturer's recommendations.
- (4) Recordkeeping and reporting requirements for sources other than coating lines and printing lines.
- (a) Except as otherwise provided by this rule, the owner or operator of a source other than a coating line or printing line that is subject to paragraphs (O), (W), (CC), (X), (EE), (KK) to (MM), (SS) to (VV), or (YY) to (BBB) of this rule shall demonstrate the ongoing status of compliance with the applicable emissions limitations and/or control requirements by means of

one of the recordkeeping and reporting requirement alternatives specified in this paragraph.

- (b) Any owner or operator of a source referenced in paragraph (B)(4)(a) of this rule who elects to demonstrate the ongoing status of compliance with the applicable emission limitation or control requirement by means of control equipment shall collect and record the following information each day for the source and maintain the information at the facility for a period of three years:
- (i) A log or record of operating time for the capture (collection) system, control device, monitoring equipment, and the associated source.
  - (ii) For thermal incinerators, all three-hour periods of operation during which the average combustion temperature was more than fifty degrees Fahrenheit below the average combustion temperature during the most recent performance test that demonstrated that the source was in compliance.
  - (iii) For catalytic incinerators, all three-hour periods of operation during which the average temperature of the process vent stream immediately before the catalyst bed is more than fifty degrees Fahrenheit below the average temperature of the process vent stream during the most recent performance test that demonstrated that the source was in compliance, and all three-hour periods of operation during which the average temperature difference across the catalyst bed is less than eighty per cent of the average temperature difference during the most recent performance test that demonstrated that the source was in compliance.
  - (iv) Where an absorber is the final control device and an organic monitoring device is used, all three-hour periods of operation during which the average concentration level or reading of organic compounds in the exhaust gases is more than twenty per cent greater than the exhaust gas organic compound concentration level or reading measured by the most recent performance test that demonstrated that the source was in compliance.
  - (v) Where an absorber is the final control device and an organic monitoring device is not used:
    - (a) All three-hour periods of operation during which the average absorbing liquid temperature was more than twenty degrees Fahrenheit above the average absorbing liquid temperature during the most recent performance test that demonstrated that the source was in compliance; or

- (b) All three-hour periods of operation during which the average absorbing liquid specific gravity was more than 0.1 unit above, or more than 0.1 unit below the average absorbing liquid specific gravity during the most recent performance test that demonstrated that the source was in compliance (unless monitoring of an alternative parameter, which is a measure of the degree of absorbing liquid saturation, is approved by the director, in which case he or she will define appropriate parameter boundaries and periods of operation during which they are exceeded).
- (vi) Where a carbon absorber is the final control device and an organic monitoring device is used, all three-hour periods of operation during which the average concentration level or reading of organic compounds in the exhaust gases is more than twenty per cent greater than the exhaust gas organic compound concentration level or reading measured by the most recent performance test that demonstrated that the source was in compliance.
- (vii) Where a carbon adsorber is the final control device and an organic monitoring device is not used:
  - (a) All carbon bed regeneration cycles during which the total mass steam flow rate was more than ten per cent below the total mass steam flow during the most recent performance test that demonstrated that the source was in compliance; or
  - (b) All carbon bed regeneration cycles during which the temperature of the carbon bed after regeneration (and after completion of any cooling cycle(s)) was more than ten per cent greater than the carbon bed temperature (in degrees Celsius) during the most recent performance test that demonstrated that the source was in compliance.
- (viii) Where a condenser is the final control device and an organic monitoring device is used, all three-hour periods of operation during which the average concentration level or reading of organic compounds in the exhaust gases is more than twenty per cent greater than the exhaust gas organic compound concentration level or reading measured by the most recent performance test that demonstrated that the source was in compliance.
- (ix) When a condenser is the final control device and an organic monitoring device is not used, all three-hour periods of operation during which the average exit (product side) condenser operating temperature was more than eleven degrees Fahrenheit above the average exit (product side)

operating temperature during the most recent performance test that demonstrated that the source was in compliance.

- (x) For flares, all periods during which the electric arc ignition system or pilot flame is not functioning properly.
- (c) Any owner or operator of a source referenced in paragraph (B)(4)(a) of this rule shall submit to the director quarterly summaries of the records required by paragraph (B)(4)(b) of this rule. These quarterly reports shall be submitted by April thirtieth, July thirty-first, October thirty-first, and January thirty-first, and shall cover the records for the previous calendar quarters.
- (d) Any owner or operator of a source referenced in paragraph (B)(4)(a) of this rule shall install and operate continuous monitoring and recording devices (i.e., for temperature, VOC concentration, arcing of an electric arc ignition system, or presence of a pilot flame) and, if necessary, perform emission tests for the source to enable the recordkeeping required by paragraph (B)(4)(b) of this rule. The continuous monitoring and recording devices shall be installed and placed in operation either within one hundred eighty days of March 31, 1993 or by the date of operation of any new control equipment installed for the source after March 31, 1993 to achieve compliance with the VOC control requirements of this rule. The continuous monitoring and recording devices shall be capable of accurately measuring the desired parameter, and the owner or operator shall properly operate and maintain the devices in accordance with the manufacturer's recommendations.
- (5) Any owner or operator of a coating line, printing line, or other source that is subject to the recordkeeping and reporting requirements contained in paragraph (B)(3) or (B)(4) of this rule may propose to the director an alternative recordkeeping and reporting program. If the alternative recordkeeping and reporting program is approved by the director, it shall supersede the requirements of paragraph (B)(3) or (B)(4) of this rule and shall be specified in the terms and conditions of the permit, variance, or order issued by the director for the coating line, printing line, or other source. Any alternative recordkeeping and reporting program approved by the director also must be approved by the USEPA as a revision to the state implementation plan.
- (6) In lieu of complying with the pounds of VOC per gallon of solids limitations contained in paragraphs (D), (E), (F)(1), (G), (I)(1), (J), (K)(1), (U), and (HH) of this rule, any owner or operator of a coating line that employs a control system may choose to demonstrate that the capture and control equipment provide not less than an eighty one per cent reduction, by weight, in the overall VOC emissions from the coating line and that the control equipment has an efficiency of not less than ninety per cent, by weight, for the VOC emissions

vented to the control equipment. In such cases, the owner or operator shall comply with the certification and permit application requirements specified in paragraph (B)(3) of rule 3745-21-04 of the Administrative Code and shall achieve compliance with the overall VOC emission reduction and control efficiency requirements in accordance with the applicable compliance schedules contained in paragraph (C) of rule 3745-21-04 of the Administrative Code. Also, in such cases, the owner or operator of the coating line shall be subject to the recordkeeping and reporting requirements contained in paragraph (B)(3)(I) of this rule.

- (7) In lieu of complying with the pounds of VOC per gallon of solids limitations contained in paragraphs (I)(4) and (K)(6) of this rule, any owner or operator of a coating line that employs a control system may choose to demonstrate that the capture and control equipment provide not less than a ninety per cent reduction, by weight, in the overall VOC emissions from the coating line and that the control equipment has an efficiency of not less than ninety per cent, by weight, for the VOC emissions vented to the control equipment. In such cases, the owner or operator shall comply with the certification and permit application requirements specified in paragraph (B)(3)(b) of rule 3745-21-04 of the Administrative Code and shall achieve compliance with the overall VOC emission reduction and control efficiency requirements in accordance with the applicable compliance schedules contained in paragraph (C) of rule 3745-21-04 of the Administrative Code. Also, in such cases, the owner or operator of the coating line shall be subject to the recordkeeping and reporting requirements contained in paragraph (B)(3)(I) of this rule.

(C) Surface coating of automobiles and light-duty trucks.

- (1) Except as otherwise provided in paragraphs (C)(2) and (C)(3) of this rule, no owner or operator of an automobile or light-duty truck assembly plant may cause, allow or permit the discharge into the ambient air of any VOC after the dates specified in rule 3745-21-04 of the Administrative Code in excess of the following:
- (a) For a prime coat coating line employing electrodeposition,
- (i) 1.2 pounds of VOC per gallon of coating, excluding water and exempt solvents, or, if a control system is employed, 1.4 pounds of VOC per gallon of solids from the electrodeposition coating line; or
  - (ii) 1.4 pounds of VOC per gallon of solids from any electrodeposition (EDP) coating line when the solids turnover ratio ( $R_T$ ) is 0.16 or greater.  $R_T$  shall be calculated as follows:

$$R_T = \frac{T_E}{L_E}$$

where:

$T_V$  = total volume of coating solids that is added to the EDP coating line in a calendar month (gallons).

$L_E$  = volume design capacity of the EDP system, which is the total liquid volume contained in the EDP system's tanks, pumps, recirculating lines, filters, etc. at the system's designed liquid operating level (gallons); or

- (iii)  $1.4 \times 350^{(0.160-R_T)}$  pounds of VOC per gallon of solids from any EDP coating line when  $R_T$ , calculated according to the equation in paragraph (C)(1)(a)(ii) of this rule, is greater than or equal to 0.040 and less than 0.160; or
  - (iv) When  $R_T$ , calculated according to the equation in paragraph (C)(1)(a)(ii) of this rule, is less than 0.040 for any EDP coating line, there is no emission limit; and
  - (v) 2.8 pounds of VOC per gallon of coating, excluding water and exempt solvents, or 15.1 pounds VOC per gallon of deposited solids from the guidecoat or surfacer coating line. (Antichip coatings applied to automobile and light-duty truck components such as rocker panels, the bottom edges of doors and fenders, and the leading edge of the roof, are considered to be guidecoat or surfacer coatings.)
- (b) For a prime coat coating line not employing electrodeposition, 1.9 pounds of VOC per gallon of coating, excluding water and exempt solvents, or, if a control system is employed, 2.6 pounds of VOC per gallon of solids.
  - (c) For a topcoat coating line, 2.8 pounds of VOC per gallon of coating, excluding water and exempt solvents, or 15.1 pounds VOC per gallon of deposited solids.
  - (d) For a final repair coating line, 4.8 pounds of VOC per gallon of coating, excluding water and exempt solvents, or, if a control system is employed, 13.8 pounds of VOC per gallon of solids.
- (2) The emission limitations specified in paragraph (C)(1) of this rule shall apply to the application of surface coatings, except sound-proofing materials, to the frame, main body, interior panels and exterior sheet metal such as the hood,

trunk lid, fenders, cargo boxes, doors and grill openings of an automobile or light-duty truck. The emission limitation specified in paragraph (C)(1)(c) of this rule is a daily volume-weighted average of the entire topcoat operation (i.e., all spray booths, flash-off areas and bake ovens where topcoat coatings are applied, dried, and cured, except those spray booths, flash-off areas and bake ovens in the final repair coating line). The emission limitation specified in paragraph (C)(1)(a)(v) of this rule is a daily volume-weighted average of the entire guidecoat and surfacer operation (i.e., all spray booths, flash-off areas and bake ovens where guidecoat and surfacer coatings are applied, dried, and cured, except those spray booths, flash-off areas and bake ovens in the final repair topcoat coating line).

- (3) When an owner or operator of an automobile or light-duty truck assembly plant chooses to comply with the pounds VOC per gallon of deposited solids limitation specified in paragraphs (C)(1)(a)(v) and (C)(1)(c) of this rule, the test method for determining the transfer efficiency of the coating line and for determining compliance of the coating line with applicable emission limitations shall be in accordance with the publication specified in paragraph (C)(4) of this rule.
- (4) As expeditiously as practicable but not later than December 1, 1990 for any topcoat coating line and not later than July 1, 1995 for any guidecoat or surfacer coating line, any owner or operator of an automobile or light-duty truck assembly plant shall maintain daily records for the guidecoat or surfacer coating line and for the topcoat coating line and shall demonstrate compliance with paragraphs (C)(1)(a)(v) and (C)(1)(c) of this rule in accordance with the USEPA publication entitled "Protocol for Determining the Daily Volatile Organic Compound Emission Rate of Automobile and Light-Duty Truck Topcoat Operations" (EPA 450/3-88-018). A copy of records indicating an exceedance of paragraphs (C)(1)(a)(v) and (C)(1)(c) of this rule limitations shall be sent to the director within thirty days following the end of the calendar month. These recordkeeping and reporting requirements are in lieu of those contained in paragraph (B)(3) of this rule.

(D) Surface coating of cans.

- (1) Except as otherwise provided in paragraph (B)(6) of this rule, no owner or operator of a two-piece can coating operation may cause, allow, or permit the discharge into the ambient air of any volatile organic compounds after the date specified in paragraph (C)(3) of rule 3745-21-04 of the Administrative Code in excess of the following:
  - (a) 2.8 pounds of VOC per gallon of coating, excluding water and exempt solvents, or, if a control system is employed, 4.5 pounds of VOC per gallon of solids from a basecoat coating line;

- (b) 2.8 pounds of VOC per gallon of coating, excluding water and exempt solvents, or, if a control system is employed, 4.5 pounds of VOC per gallon of solids from an overvarnish coating line;
  - (c) 4.2 pounds of VOC per gallon of coating, excluding water and exempt solvents, or, if a control system is employed, 9.8 pounds of VOC per gallon of solids from an interior body coating line;
  - (d) 4.2 pounds of VOC per gallon of coating, excluding water and exempt solvents, or, if a control system is employed, 9.8 pounds of VOC per gallon of solids from an exterior bottom end coating line; and
  - (e) 3.7 pounds of VOC per gallon of coating, excluding water and exempt solvents, or, if a control system is employed, 7.4 pounds of VOC per gallon of solids from an end sealing compound coating line.
- (2) Except as otherwise provided in paragraph (B)(6) of this rule, no owner or operator of a three-piece can coating operation may cause, allow, or permit the discharge into the ambient air of any volatile organic compounds after the date specified in paragraph (C)(3) of rule 3745-21-04 of the Administrative Code in excess of the following:
- (a) 2.8 pounds of VOC per gallon of coating, excluding water and exempt solvents, or, if a control system is employed, 4.5 pounds of VOC per gallon of solids from a basecoat coating line;
  - (b) 2.8 pounds of VOC per gallon of coating, excluding water and exempt solvents, or, if a control system is employed, 4.5 pounds of VOC per gallon of solids from an overvarnish coating line;
  - (c) 4.2 pounds of VOC per gallon of coating, excluding water and exempt solvents, or, if a control system is employed, 9.8 pounds of VOC per gallon of solids from an interior body coating line;
  - (d) 5.5 pounds of VOC per gallon of coating, excluding water and exempt solvents, or, if a control system is employed, 21.7 pounds of VOC per gallon of solids from a side-seam coating line; and
  - (e) 3.7 pounds of VOC per gallon of coating, excluding water and exempt solvents, or, if a control system is employed, 7.4 pounds of VOC per gallon of solids from an end sealing compound coating line.
- (3) Alternative daily emission limitation:
- (a) Any owner or operator of a two-piece or three-piece can coating operation may obtain from the director an alternative daily emission limitation for the

emission limitations specified in paragraph (D)(1) or (D)(2) of this rule. The alternative daily emission limitation shall be determined according to paragraph (D)(3)(b) of this rule and the actual daily emission shall be determined according to paragraph (D)(3)(c) of this rule. Prior to obtaining the alternative daily emission limitation, the owner or operator shall demonstrate to the satisfaction of the director that the actual daily emission will not exceed the alternative daily emission limitation after the date specified in paragraph (C)(3) of rule 3745-21-04 of the Administrative Code and that the record-keeping requirements of paragraph (D)(3)(d) of this rule shall be met.

- (b) The alternative daily emission limitation ( $A_d$ ) shall be determined on a daily basis as follows:

$$A_d = \sum_{i=1}^n V_i L_i \frac{(D_i - C_i)}{(D_i - L_i)}$$

Where  $A_d$  = pounds of VOC emissions allowed for the day,

$C$  = VOC content of surface coating employed, in pounds of VOC per gallon of coating, excluding water and exempt solvents,

$D$  = density of VOC content of surface coating employed, in pounds of VOC per gallon of VOC (a standard density of 7.36 may be used if it is used for all surface coatings employed),

$V$  = volume of surface coating employed for the day, in gallons (excluding water and exempt solvents),

$L$  = emission limitation for the surface coating employed as specified in paragraph (D)(1) or (D)(2) of this rule, in pounds of VOC per gallon of coating (excluding water and exempt solvents),

$i$  = subscript denoting a specific surface coating employed, and

$n$  = total number of surface coatings employed in can coating operation.

- (c) The actual daily emission ( $E_d$ ) shall be determined on a daily basis as follows:

$$E_d = \sum_{i=1}^n V_i C_i (1 - F_i)$$

Where  $E_d$  = actual pounds of VOC emissions for the day,

F = fraction by weight of VOC emissions from the surface coating reduced or prevented from being emitted by control equipment, and V, C, i and n are defined as in paragraph (D)(3)(b) of this rule.

(d) Record-keeping requirements:

- (i) Daily records shall be maintained for a period of not less than two years which list the usage of surface coatings or which list other data, as authorized by the director, that approximate the usage of surface coatings. The following data shall be listed for each surface coating being recorded: VOC content (in pounds of VOC per gallon of coating, excluding water and exempt solvents), density of VOC content of coating (in pounds of VOC per gallon of VOC) unless the standard density of 7.36 is recorded, and the type of surface coating according to the classification contained within paragraphs (D)(1) and (D)(2) of this rule.
- (ii) Daily records shall be maintained for a period of not less than two years which include the following for any control equipment designed to reduce or prevent the emission of VOC: downtime, any operational problems and/or malfunctions which reduce the effective control efficiency, and the average control efficiency, if less than the normally expected control efficiency.
- (iii) Other records shall be maintained, as deemed necessary by the director, in order to provide information on VOC emissions and/or compliance with the alternative daily emission limitation.

(E) Except as otherwise provided in paragraphs (B)(6) and (D) of this rule, no owner or operator of a coil coating line may cause, allow or permit the discharge into the ambient air of any VOCs after the date specified in paragraph (C)(4) of rule 3745-21-04 of the Administrative Code in excess of 2.6 pounds of VOC per gallon of coating, excluding water and exempt solvents, or, if a control system is employed, 4.0 pounds of VOC per gallon of solids from a prime coat, topcoat, or single coat coating line.

(F) Paper coating lines.

- (1) Except as otherwise provided in paragraph (B)(6) of this rule, no owner or operator of a paper coating line which has a maximum application of coating materials greater than three gallons in any one day may cause, allow or permit the discharge into the ambient air of any volatile organic compounds after the date specified in paragraph (C)(5) of rule 3745-21-04 of the Administrative Code in excess of 2.9 pounds of VOC per gallon of coating, excluding water and

exempt solvents, or, if a control system is employed, 4.8 pounds of VOC per gallon of solids from such paper coating line.

(2) In addition to the requirements specified in paragraph (F)(1) of this rule, the following requirements are applicable to all paper coating lines located in Ashtabula, Cuyahoga, Geauga, Lake, Lorain, Medina, Portage, and Summit counties.

(a) Any owner or operator of a paper coating line with potential emissions that are equal to or greater than 25.0 tons per year of VOC before the application of capture and control devices shall comply with either of the following requirements for the coating line:

(i) Employ a control system in order to reduce VOC emissions from the paper coating line by at least ninety per cent or maintain a maximum VOC outlet concentration of twenty ppmv on a dry basis, whichever is less stringent.

(ii) Employ coatings in the paper coating line that comply with the following VOC content limitations:

-VOC content limitations-

Coating Type	Pound of VOC/Pound of Coating
pressure surface coatings (not including pressure sensitive tape and labels)	0.08
pressure sensitive tape and label surface coatings	0.067

(b) Work practice standards for cleaning materials.

Unless emissions to the atmosphere are controlled by an approved emission control system with an overall control efficiency of at least ninety per cent, any person using an organic solvent for cleanup shall:

(i) Store all VOC containing cleaning materials and used shop towels in closed containers;

(ii) Ensure that mixing and storage containers used for VOC-containing cleaning materials are kept closed at all times except when depositing or removing these materials;

(iii) Minimize spills of VOC-containing cleaning materials;

(iv) Convey VOC-containing cleaning materials from one location to another in closed containers or pipes; and

- (v) Minimize VOC emission from cleaning of storage, mixing, and conveying equipment.
- (G) Except as otherwise provided in paragraph (B)(6) of this rule, no owner or operator of a fabric coating line may cause, allow or permit the discharge into the ambient air of any VOCs after the date specified in paragraph (C)(6) of rule 3745-21-04 of the Administrative Code in excess of 2.9 pounds of VOC per gallon of coating, excluding water and exempt solvents, or, if a control system is employed, 4.8 pounds of VOC per gallon of solids from a fabric coating line.
- (H) Except as otherwise provided in paragraph (XX) of this rule, no owner or operator of a vinyl coating line may cause, allow or permit the discharge into the ambient air of any VOCs from such coating line after the date specified in paragraph (C)(7) of rule 3745-21-04 of the Administrative Code, unless the requirements of either paragraph (H)(1) or (H)(2) of this rule are satisfied.
  - (1) The VOC content of the coatings employed in the vinyl coating line, as determined under paragraph (B) of rule 3745-21-10 of the Administrative Code, does not exceed the following limitation:
    - (a) 4.8 pounds of VOC per gallon of vinyl coating, excluding water and exempt solvents; or
    - (b) Twenty-five per cent VOC by volume of the volatile matter of the vinyl coating.
  - (2) The vinyl coating line is equipped with a capture system and associated control system which are designed and operated to achieve the following efficiencies for VOCs, as determined under paragraph (C) of rule 3745-21-10 of the Administrative Code:
    - (a) A capture efficiency which is at least seventy-five per cent by weight; and
    - (b) A control efficiency which is at least ninety per cent by weight.
  - (3) The requirements specified in paragraphs (H)(1) and (H)(2) of this rule shall not apply to the application of organisol or plastisol coatings.
- (I) Surface coating of metal furniture.
  - (1) Except as otherwise provided in paragraphs (B)(6), (I)(2) and (I)(3) of this rule, no owner or operator of a prime coat, topcoat, or single coat coating line for metal furniture may cause, allow or permit the discharge into the ambient air of any VOCs after the date specified in paragraph (C)(8) of rule 3745-21-04 of the Administrative Code in excess of 3.0 pounds of VOC per gallon of coating, excluding water and exempt solvents, or, if a control system is employed, 5.1

pounds of VOC per gallon of solids from such prime coat, topcoat, or single coat coating line.

- (2) Any owner or operator of a prime coat, topcoat, or single coat coating line for metal furniture may obtain from the director an alternative emission limitation for the limitation specified in paragraph (I)(1) of this rule. The owner or operator shall demonstrate to the satisfaction of the director, prior to obtaining an alternative emission limitation, that the alternative emission limitation is, at a minimum, equivalent in terms of total daily emissions of VOCs to the applicable requirement of paragraph (I)(1) of this rule. For purposes of this demonstration, the director shall recognize that the emission limitation in paragraph (I)(1) of this rule is equivalent to 8.4 pounds VOC per gallon of deposited solids and is based upon a coating applicator transfer efficiency of sixty per cent. If the director approves an alternative emission limitation for a prime coat, topcoat, or single coat coating line for metal furniture, said limitation and the associated transfer efficiency shall be specified in the special terms and conditions of a operating permit or variance issued by the director for the coating line. If the test method for determining the transfer efficiency for a coating line has not been approved by the USEPA as part of the state implementation plan, the permit to operate or variance issued by the director for the coating line must be approved by the USEPA as a revision to the state implementation plan.
- (3) Exemptions.
- (a) Exempted from the requirements of paragraph (I)(1) of this rule are the prime coat, topcoat, or single coat coating lines for metal furniture at a facility, only if all such lines, in combination, emit less than fifteen pounds of VOC per day (before add-on controls).
- (b) Exempted from the requirements of paragraph (I)(1) of this rule is any application of a coating to a part not defined as metal furniture.
- (4) In addition to the requirements specified in paragraph (I)(1) of this rule the following requirements are applicable to all metal furniture coating lines located in Ashtabula, Cuyahoga, Geauga, Lake, Lorain, Medina, Portage, and Summit counties.
- (a) Except as otherwise provided in paragraph (I)(4)(b) of this rule, no owner or operator of a coating line for metal furniture may cause, allow or permit the discharge into the ambient air of any VOCs after the date specified in paragraph (C)(8) of rule 3745-21-04 of the Administrative Code in excess of the VOC limitations specified in the following table:

-VOC content (pound per gallon of coating, less water and exempt solvents)-

Coating	Air-Dried Coating (controls not employed)	Baked Coating (controls not employed)
---------	--	--

general one-component	2.3	2.3
general multi-component	2.8	2.3
solar-absorbent	3.5	3.0
heat-resistant	3.5	3.0
extreme high-gloss	2.8	3.0
metallic	3.5	3.5
extreme performance	3.5	3.0
pretreatment coatings	3.5	3.5

The recommended emission limits can also be expressed in terms of mass of VOC per volume of coating solids, as applied. A facility could use low-VOC coatings or a combination of coatings and add-on control equipment on a coating unit to meet the recommended mass of VOC per volume of coating solids limits. Using an assumed VOC density of 7.36 pounds per gallon, the equivalent limits in terms of mass of VOC per volume of solids, as applied, are as follows:

-VOC content (pound per gallon of coating solids, as applied)-

Coating	Air-Dried Coating (controls employed)	Baked Coating (controls employed)
general one-component	3.3	3.3
general multi-component	4.5	3.3
extreme high gloss	4.5	5.1
extreme performance	6.7	5.1
heat resistant	6.7	5.1
metallic	6.7	6.7
pretreatment coatings	6.7	6.7
solar absorbent	6.7	5.1

(b) Exemptions.

- (i) Exempted from the requirements of paragraph (I)(4) of this rule are the coating lines for metal furniture at a facility, only if all such lines, in combination, emit less than fifteen pounds of VOC per day (before add-on controls).
- (ii) Exempted from the requirements of paragraph (I)(4) of this rule is any application of coating to a part not defined as metal furniture.
- (iii) The provisions of paragraphs (I)(4)(a) and (I)(4)(d) of this rule shall not apply to:
  - (a) Stencil coatings;
  - (b) Safety-indicating coatings;

- (c) Solid-film lubricants;
- (d) Touch-up and repair coatings; and
- (e) Coating application utilizing hand-held aerosol cans.

(c) Operating equipment.

A person shall not apply VOC-containing coatings to metal furniture unless the coating is applied with equipment operated according to the equipment manufacturer specifications, and by the use of one of the following methods:

- (i) Electrostatic application;
- (ii) Flow coat;
- (iii) Dip coat;
- (iv) Roll coat;
- (v) HVLP spray;
- (vi) Hand application methods; or
- (vii) Such other coating application methods as are demonstrated to the director to be capable of achieving a transfer efficiency equivalent or better to the method listed in paragraph (I)(4)(c)(v) of this rule and for which written approval of the director has been obtained.

(d) Work practices for coating-related activities.

Unless emissions to the atmosphere are controlled by an approved emission control system with an overall control efficiency of at least ninety per cent, any person performing coating related activities shall:

- (i) Store all VOC-containing coatings, thinners, and coating-related waste materials in closed containers;
- (ii) Ensure that mixing and storage containers used for VOC-containing coatings, thinners, and coating-related waste materials are kept closed at all times except when depositing or removing these materials;
- (iii) Minimize spills of VOC-containing coatings, thinners, and coating-related waste materials; and

(iv) Convey VOC-containing coatings, thinners, and coating-related waste materials from one location to another in closed containers or pipes.

(e) Work practice standards for cleaning materials.

Unless emissions to the atmosphere are controlled by an approved emission control system with an overall control efficiency of at least ninety per cent, any person using an organic solvent for cleanup shall:

(i) Store all VOC containing cleaning materials and used shop towels in closed containers;

(ii) Ensure that mixing and storage containers used for VOC-containing cleaning materials are kept closed at all times except when depositing or removing these materials;

(iii) Minimize spills of VOC-containing cleaning materials;

(iv) Convey VOC-containing cleaning materials from one location to another in closed containers or pipes; and

(v) Minimize VOC emission from cleaning of storage, mixing, and conveying equipment.

(J) Except as otherwise provided in paragraph (B)(6) of this rule, no owner or operator of a magnet wire coating line may cause, allow or permit the discharge into the ambient air of any VOCs after the date specified in paragraph (C)(9) of rule 3745-21-04 of the Administrative Code in excess of 1.7 pounds of VOC per gallon of coating, excluding water and exempt solvents, or, if a control system is employed, 2.2 pounds of VOC per gallon of solids from a magnet wire coating line.

(K) Surface coating of large appliances.

(1) Except as otherwise provided in paragraphs (B)(6), and (K)(2) to (K)(4) of this rule, no owner or operator of a prime coat, single coat or topcoat coating line for large appliances may cause, allow or permit the discharge into the ambient air of any VOCs after the date specified in paragraph (C)(10) of rule 3745-21-04 of the Administrative Code in excess of 2.8 pounds of VOC per gallon of coating, excluding water and exempt solvents, or, if a control system is employed, 4.5 pounds of VOC per gallon of solids from such prime coat, single coat, or topcoat coating line.

(2) The emission limit under paragraph (K)(1) of this rule shall not apply to the use of quick-drying lacquers for repair of scratches and nicks that occur during

assembly, provided that the maximum usage of such lacquers does not exceed one quart in any eight-hour period.

- (3) Any owner or operator of a prime coat, single coat or topcoat coating line for large appliances may obtain from the director an alternative emission limitation for the limitation specified in paragraph (K)(1) of this rule. The owner or operator shall demonstrate to the satisfaction of the director, prior to obtaining an alternative emission limitation, that the alternative emission limitation is, at a minimum, equivalent in terms of total daily emissions of VOCs to the applicable requirement of paragraph (K)(1) of this rule. For purposes of this demonstration, the director shall recognize that the emission limitation in paragraph (K)(1) of this rule is equivalent to 7.5 pounds VOC per gallon of deposited solids and is based upon a coating applicator transfer efficiency of sixty per cent. If the director approves an alternative emission limitation for a prime coat, single coat or topcoat coating line for large appliances, said limitation and the associated transfer efficiency shall be specified in the special terms and conditions of an operating permit or variance issued by the director for the coating line. If the test method for determining the transfer efficiency for a coating line has not been approved by the USEPA as part of the state implementation plan, the permit to operate or variance issued by the director for the coating line must be approved by the USEPA as a revision to the state implementation plan.
- (4) The emission limit under paragraph (K)(1) of this rule shall not apply to any large appliance coating line for which construction commenced prior to October 19, 1979 and which is located at the following facilities, unless a modification for any such coating line has commenced on or after October 19, 1979:
  - (a) The "Whirlpool Corporation (Findlay Division)" facility located at 4901 North Main street, Findlay, Ohio; and
  - (b) The "Whirlpool Corporation (Marion Division)" facility located at 1300 Marion-Agosta road, Marion, Ohio.
- (5) The emission limit under paragraph (K)(1) of this rule shall not apply to large appliance coatings that are subject to in-use temperatures in excess of two hundred fifty degrees Fahrenheit.
- (6) In addition to the requirements specified in paragraph (K)(1) of this rule the following requirements are applicable to all surface coatings operations for large appliances located in Ashtabula, Cuyahoga, Geauga, Lake, Lorain, Medina, Portage and Summit counties.
  - (a) Except as otherwise provided in paragraph (K)(6)(b) of this rule, no owner or operator of a coating line for large appliances may cause, allow or permit the discharge into the ambient air of any VOCs after the date specified in

paragraph (C)(10) of rule 3745-21-04 of the Administrative Code in excess of the VOC limitations specified in the following table.

-VOC content emission limitations (pounds per gallon of coating, less water and exempt solvents)-

Coating Type	Air-Dried (controls not employed)	Baked Coating(controls not employed)
general one-component	2.3	2.3
general multi-component	2.8	2.3
solar-absorbent	3.5	3.0
heat-resistant	3.5	3.0
extreme high-gloss	2.8	3.0
metallic	3.5	3.5
extreme performance	3.5	3.0
pretreatment coatings	3.5	3.5

The recommended emission limits can also be expressed in terms of mass of VOC per volume of coating solids, as applied. A facility could use low-VOC coatings or a combination of coatings and add-on control equipment on a coating unit to meet the recommended mass of VOC per volume of coating solids limits. Using an assumed VOC density of 7.36 pounds per gallon, the equivalent limits in terms of mass of VOC per volume of solids, as applied, are as follows:

-VOC content (pounds per gallon of coating solids, as applied)-

Coating	Air-Dried Coating (controls employed)	Baked Coating (controls employed)
general one-component	3.3	3.3
general multi-component	4.5	3.3
extreme high gloss	4.5	5.1
extreme performance	6.7	5.1
heat resistant	6.7	5.1
metallic	6.7	6.7
pretreatment coatings	6.7	6.7
solar absorbent	6.7	5.1

(b) Exemptions.

- (i) Exempted from the requirements of paragraph (K)(6) of this rule are coating lines for large appliances at a facility, only if all such lines, in combination, emit less than fifteen pounds of VOC per day (before add-on controls).
- (ii) The provisions of paragraphs (K)(6)(a) and (K)(6)(e) of this rule shall not apply to:

- (a) Stencil coatings;
- (b) Safety-indicating coatings;
- (c) Solid-film lubricants;
- (d) Electric-insulating and thermal-conducting coatings;
- (e) Touch-up and repair coatings; and
- (f) Coating application utilizing hand-held aerosol cans.

(c) Operating equipment.

A person shall not apply VOC-containing coatings to a large appliance unless the coating is applied with equipment operated according to the equipment manufacturer specifications, and by the use of one of the following methods:

- (i) Electrostatic application;
- (ii) Flow coat;
- (iii) Dip coat;
- (iv) Roll coat;
- (v) HVLP spray;
- (vi) Hand application methods; or
- (vii) Such other coating application methods as are demonstrated to the director to be capable of achieving a transfer efficiency equivalent or better to the method listed in paragraph (K)(6)(c)(v) of this rule and for which written approval of the director has been obtained.

(d) Work practices for coating-related activities.

Unless emissions to the atmosphere are controlled by an approved emission control system with an overall control efficiency of at least ninety per cent, any person performing coating related activities shall:

- (i) Store all VOC-containing coatings, thinners, and coating-related waste materials in closed containers;

- (ii) Ensure that mixing and storage containers used for VOC-containing coatings, thinners, and coating-related waste materials are kept closed at all times except when depositing or removing these materials;
  - (iii) Minimize spills of VOC-containing coatings, thinners, and coating-related waste materials; and
  - (iv) Convey VOC-containing coatings, thinners, and coating-related waste materials from one location to another in closed containers or pipes.
- (e) Work practice standards for cleaning materials.

Unless emissions to the atmosphere are controlled by an approved emission control system with an overall control efficiency of at least ninety per cent, any person using an organic solvent for cleanup shall:

- (i) Store all VOC containing cleaning materials and used shop towels in closed containers;
- (ii) Ensure that mixing and storage containers used for VOC-containing cleaning materials are kept closed at all times except when depositing or removing these materials;
- (iii) Minimize spills of VOC-containing cleaning materials;
- (iv) Convey VOC-containing cleaning materials from one location to another in closed containers or pipes; and
- (v) Minimize VOC emission from cleaning of storage, mixing, and conveying equipment.

(L) Storage of petroleum liquids in fixed roof tanks.

- (1) No person shall place, store, or hold in a fixed roof tank any petroleum liquid with a true vapor pressure which is greater than 1.52 pounds per square inch absolute after the date specified in paragraph (C)(11) of rule 3745-21-04 of the Administrative Code unless such tank, is designed or equipped as follows, except where exempted under paragraph (L)(2) of this rule:
- (a) Vapor control equipment which is one of the following:
    - (i) Internal floating roof; or
    - (ii) Alternative equivalent control for VOC emissions as may be approved by the director.

- (b) If equipped with an internal floating roof, the automatic bleeder vents are to be closed at all times except when the roof is floated off or landed on the roof leg supports, and the rim vents, if provided, are to be set to open when the roof is being floated off the roof leg supports or is at the manufacturer's recommended setting.
  - (c) All openings, except stub drains, are to be equipped with a cover, seal or lid which is to be in a closed position at all times except when in actual use for tank gauging or sampling.
  - (d) Other means for reducing the emission of VOC into the ambient air as may be required by the director.
- (2) The following tanks are exempted from paragraph (L)(1) of this rule:
- (a) Fixed roof tank with a capacity less than forty thousand gallons; and
  - (b) Fixed roof tank with a capacity less than four hundred twenty-two thousand gallons and used to store produced crude oil and condensate prior to lease custody transfer.
- (3) Any owner or operator of a fixed roof tank that is not exempted pursuant to paragraph (L)(2) of this rule shall maintain records of the following information in a readily accessible location for at least five years and shall make copies of the records available to the director upon verbal or written request.
- (a) The types of petroleum liquids stored in the tank.
  - (b) The maximum true vapor pressure (in pounds per square inch absolute), as stored, of each liquid that has a maximum true vapor pressure greater 1.0 pound per square inch absolute.
- (4) If an owner or operator places, stores, or holds in a fixed roof tank, that is not exempted pursuant to paragraph (L)(2) of this rule, any petroleum liquid with a true vapor pressure which is greater than 1.52 pounds per square inch absolute and such tank does not comply with the requirements of paragraph (L)(1) of this rule, the owner or operator shall so notify the director within thirty days of becoming aware of the occurrence.
- (M) Refinery vacuum producing systems, wastewater separators, and process unit turnarounds.
- (1) Each owner or operator of a petroleum refinery shall control the emissions of VOC from any vacuum producing systems no later than the date specified in paragraph (C)(12) of rule 3745-21-04 of the Administrative Code by piping the

vapors to an appropriate firebox or incinerator, or by compressing the vapors and adding them to the refinery fuel gas system.

(2) Except for any wastewater separator which is used solely for once-through, noncontact cooling water or for intermittent tank farm drainage resulting from accumulated precipitation, each owner or operator of a petroleum refinery shall control the emissions of VOC from any wastewater separator no later than the date specified in paragraph (C)(13) of rule 3745-21-04 of the Administrative Code by equipping all forebay sections and other separator sections with covers and seals which minimize the amount of oily water exposed to the ambient air. In addition, all covers and forebay and separator sections shall be equipped with lids and seals which are kept in a closed position at all times except when in actual use.

(3) Process unit turnarounds.

(a) Each owner or operator of a petroleum refinery shall control the emissions of VOC from process unit turnarounds no later than the date specified in paragraph (C)(14) of rule 3745-21-04 of the Administrative Code by combusting the vapors as fuel gas or by flaring the vapors until the pressure in the process vessel is 19.7 pounds per square inch absolute or less.

(b) Each owner or operator of a petroleum refinery shall maintain records for a minimum of two years for each process unit turnaround. Such records shall include:

(i) The date the unit was shut down;

(ii) The approximate pressure of the vapors in the process vessel when the VOC emissions were first discharged to the ambient air; and

(iii) The approximate total quantity of VOC emitted to the ambient air.

(N) Use of cutback asphalts and emulsified asphalts in road construction and maintenance.

(1) Except where exempted under paragraph (N)(3) of this rule, no person may allow or permit the use or application of cutback asphalts in road construction and maintenance after the date specified in paragraph (C)(15) of rule 3745-21-04 of the Administrative Code.

(2) Except where exempted under paragraph (N)(3) of this rule, no person may allow or permit the use or application of any emulsified asphalt in road construction and maintenance after the date specified in paragraph (C)(15) of rule 3745-21-04 of the Administrative Code unless the oil distillate content of such emulsified

asphalt, as determined by ASTM D244-04, "Standard Method of Testing Emulsified Asphalt," is less than or equal to:

- (a) 8.0 per cent by volume for an open-graded mix;
  - (b) 12.0 per cent by volume for a dense-graded mix; or
  - (c) 3.0 per cent by volume for any use or application not regulated under paragraphs (N)(2)(a) and (N)(2)(b) of this rule.
- (3) The requirements of paragraphs (N)(1) and (N)(2) of this rule shall not apply:
- (a) During the period from October fifteenth through April fifteenth;
  - (b) To the use or application of a prime coat;
  - (c) To the use or application of any maintenance mix which is to be stockpiled for at least thirty days; and
  - (d) To the use or application of any cutback asphalt or emulsified asphalt on an unpaved road for the purpose of dust control.
- (4) Recordkeeping requirements
- (a) Any person using or applying a cutback asphalt or emulsified asphalt in road construction or maintenance during the period from April fifteenth through October fifteenth shall maintain the following records for each cutback asphalt or emulsified asphalt used or applied during that period:
    - (i) The type and quantity employed;
    - (ii) If an emulsified asphalt, the oil distillate content;
    - (iii) The date(s) of application;
    - (iv) An identification of the road segments where applied;
    - (v) The type of application (e.g., prime coat, tack coat, seal coat, maintenance mix, crack sealing, dust control, etc.); and
    - (vi) If the application is by hand for crack sealing, the quantity employed each day per work crew.
  - (b) The records required by paragraph (N)(4)(a) of this rule shall be maintained for a minimum of two years and shall be available for review by the director or authorized representative during normal business hours.

(O) Solvent metal cleaning.

- (1) Except where exempted under paragraph (O)(6) of this rule, the requirements in paragraphs (O)(2), (O)(3), and (O)(4) of this rule shall be satisfied no later than the dates specified in paragraph (C)(16) of rule 3745-21-04 of the Administrative Code.
- (2) Each owner or operator of a cold cleaner shall:
  - (a) Equip the cold cleaner with either:
    - (i) A cover; and if the solvent has a vapor pressure greater than 0.3 pound per square inch absolute measured at one hundred degrees Fahrenheit, or the solvent is heated or agitated, the cover shall be designed and constructed so that it can be easily operated with one hand; or
    - (ii) A remote solvent reservoir from which solvent is pumped through a nozzle suspended over a sink-like work area which drains back to the reservoir, provided the sink-like work area has an open drain area of less than sixteen square inches and provided the solvent neither is heated above one hundred twenty degrees Fahrenheit nor has a vapor pressure greater than 0.6 pound per square inch absolute, measured at one hundred degrees Fahrenheit;
  - (b) Equip the cold cleaner with a device for draining the cleaned parts; and if the solvent has a vapor pressure greater than 0.6 pound per square inch absolute, measured at one hundred degrees Fahrenheit, the drainage facility shall be constructed internally so that parts are enclosed under the cover during draining unless an internal type drainage device cannot fit into the cleaning system;
  - (c) Install one of the following devices if the solvent vapor pressure is greater than 0.6 pound per square inch absolute measured at one hundred degrees Fahrenheit, or if the solvent is heated above one hundred twenty degrees Fahrenheit:
    - (i) Freeboard that gives a freeboard ratio greater than or equal to 0.7;
    - (ii) Water cover (solvent must be insoluble in and heavier than water); or
    - (iii) Other systems of equivalent control, such as refrigerated chiller or carbon adsorption, approved by the director; and
  - (d) Operate and maintain the cold cleaner in accordance with the following practices to minimize solvent evaporation from the unit:

- (i) Provide a permanent, legible, conspicuous label, summarizing the operating requirements.
  - (ii) Store waste solvent in covered containers.
  - (iii) Close the cover whenever parts are not being handled in the cleaner.
  - (iv) Drain the cleaned parts until dripping ceases.
  - (v) If used, supply a solvent spray that is a solid fluid stream (not a fine, atomized, or shower-type spray) at a pressure that does not exceed ten pounds per square inch gauge.
  - (vi) Clean only materials that are neither porous nor absorbent.
- (e) Notwithstanding the exemption specified in paragraph (O)(6)(b) of this rule, for each cold cleaner located in Ashtabula, Butler, Clark, Clermont, Cuyahoga, Geauga, Greene, Hamilton, Lake, Lorain, Medina, Miami, Montgomery Portage, Summit, and Warren counties, comply with the following requirements:
- (i) The solvent material employed in the cold cleaner shall have a vapor pressure that does not exceed 1.0 mm Hg (0.019 psi) measured at twenty degrees Celsius (sixty-eight degrees Fahrenheit).
  - (ii) The owner or operator of each cold cleaner shall maintain records for a minimum of five years that include the following information for each solvent purchased:
    - (a) The date of the purchase;
    - (b) The name, company identification, and chemical composition of the solvent; and
    - (c) The vapor pressure of the solvent measured in mm Hg at twenty degrees Celsius (sixty-eight degrees Fahrenheit), as determined by ASTM D2879-97, "Standard Test Method for Vapor Pressure-Temperature Relationship and Initial Decomposition Temperature of Liquids by Isoteniscope."
  - (iii) The cleaning of electronic components as defined in paragraph (G)(3) of rule 3745-21-01 of the Administrative Code are exempt from the requirements of paragraph (O)(2)(e) of this rule.

- (iv) The cleaning of paint gun parts, through the use of cold cleaners as defined in paragraph (G)(1) of rule 3745-21-01 of the Administrative Code, for the removal of paint and coatings, is exempt from the requirements of paragraph (O)(2)(e) of this rule.

(3) Each owner or operator of an open top vapor degreaser shall:

- (a) Equip the open top vapor degreaser with a cover that can be opened and closed easily without disturbing the vapor zone;

(b) Install the following safety switches:

- (i) A condenser thermostat or any other device which shuts off the sump heat if the condenser coolant is either not circulating or too warm;
- (ii) A spray safety switch which shuts off the spray pump if the vapor level drops below any fixed spray nozzle;
- (iii) A vapor level control thermostat or any other device which shuts off the sump heat when the vapor level rises too high; and
- (iv) A water flow switch, water pressure switch or any other device which shuts off the sump heat if the water in a water-cooled condenser has no flow or no pressure, whichever is being monitored.

(c) Install one of the following devices:

- (i) A freeboard with a freeboard ratio greater than or equal to 0.75, and if the open top vapor degreaser opening is greater than ten square feet, the cover must be powered or equipped with mechanical features whereby it can be readily closed when the degreaser is not in use;
- (ii) Refrigerated chiller;
- (iii) Enclosed design (cover or door opens only when the dry part is actually entering or exiting the open top vapor degreaser);
- (iv) Carbon adsorption system, with ventilation greater than or equal to fifty cubic feet per minute per square foot of air/solvent interface (when cover is open), and exhausting less than twenty-five parts per million of solvent averaged over one complete adsorption cycle; or
- (v) A control system, demonstrated to have control efficiency equivalent to or greater than any of the above, and approved by the director; and

- (d) Operate and maintain the open top vapor degreaser in accordance with the following practices to minimize solvent evaporation from the unit:
  - (i) Keep the cover closed at all times except when processing work loads through the degreaser.
  - (ii) Minimize solvent carryout by:
    - (a) Racking parts so that solvent drains freely and is not trapped.
    - (b) Moving parts in and out of the degreaser at less than eleven feet per minute.
    - (c) Holding the parts in the vapor zone at least thirty seconds or until condensation ceases, whichever is longer.
    - (d) Tipping out any pools of solvent on the cleaned parts before removal from the vapor zone.
    - (e) Allowing parts to dry within the degreaser for at least fifteen seconds or until visually dry, whichever is longer.
  - (iii) Clean only materials that are neither porous nor absorbent.
  - (iv) Occupy no more than one-half of the degreaser's open-top area with a workload.
  - (v) Always spray within the vapor level.
  - (vi) Repair solvent leaks immediately, or shut down the degreaser.
  - (vii) Store waste solvent only in covered containers.
  - (viii) Operate the cleaner such that water cannot be visually detected in solvent exiting the water separator.
  - (ix) Use no ventilation fans near the degreaser opening.
  - (x) When the cover is open, do not expose the open top vapor degreaser to drafts greater than one hundred thirty-one feet per minute, as measured between three and six feet upwind and at the same elevation as the tank lip.
  - (xi) If a lip exhaust is used on the open top vapor degreaser, do not use a ventilation rate that exceeds sixty five cubic feet per minute per square

foot of degreaser open area, unless a higher rate is necessary to meet occupational safety and health administration requirements.

- (xii) Provide permanent, conspicuous label, summarizing the operating procedures.

(4) Each owner or operator of a conveyORIZED degreaser shall:

- (a) Install one of the following devices on all conveyORIZED degreasers having an air/solvent interface greater than twenty-two square feet:
  - (i) Refrigerated chiller;
  - (ii) Carbon adsorption system, with ventilation greater than or equal to fifty cubic feet per minute per square foot of air/solvent interface (when downtime covers are open), and exhausting less than twenty-five parts per million of solvent by volume averaged over a complete adsorption cycle; or
  - (iii) A system, demonstrated to have a control efficiency equivalent to or greater than paragraph (O)(4)(a)(i) or (O)(4)(a)(ii) of this rule, and approved by the director;
- (b) Equip the conveyORIZED degreaser with equipment, such as a drying tunnel or rotating (tumbling) basket, sufficient to prevent cleaned parts from carrying out solvent liquid or vapor;
- (c) Install the following safety switches, if the solvent is heated to its boiling point:
  - (i) A condenser flow switch and thermostat or any other device which shuts off the sump heat if the condenser coolant is either not circulating or too warm;
  - (ii) A spray safety switch which shuts off the spray pump if the vapor level drops below any fixed spray nozzle; and
  - (iii) A vapor level control thermostat or any other device which shuts off the sump heat when the vapor level rises too high;
- (d) Equip the conveyORIZED degreaser with covers for closing off the entrance and exit when not in use, unless the conveyORIZED degreaser is equipped with a refrigerated chiller or carbon adsorption system that is always in use except during maintenance; and

- (e) Operate and maintain the conveyORIZED degreaser in accordance with the following practice to minimize solvent evaporation from the unit:
  - (i) Use no workplace fans near the degreaser opening, and ensure that exhaust ventilation does not exceed sixty-five cubic feet per minute per square foot of degreaser opening, unless a higher rate is necessary to meet occupational safety and health administration requirements.
  - (ii) Minimize openings during operation so that entrances and exits silhouette workloads with an average clearance between the parts and the edge of the degreaser opening of less than ten per cent of the width of the opening.
  - (iii) Provide downtime covers for closing off the entrance and exit during shutdown hours.
  - (iv) Minimize carryout emission by:
    - (a) Racking parts so that solvent drains freely from parts and is not trapped.
    - (b) Maintaining the vertical conveyor speed at less than eleven feet per minute.
  - (v) Store waste solvent only in covered containers.
  - (vi) Repair solvent leaks immediately, or shut down the degreaser.
  - (vii) Operate the cleaner such that water cannot be visually detected in solvent exiting the water separator.
  - (viii) Place downtime covers over entrances and exits of the conveyORIZED degreaser at all times when the conveyors and exhausts are not being operated.
  - (ix) Clean only materials that are neither porous nor absorbent.
- (5) Any owner or operator of a solvent metal cleaning operation shall maintain records of the following information in a readily accessible location for at least five years and shall make these records available to the director upon verbal or written request:
  - (a) All control equipment maintenance such as replacement of the carbon in a carbon adsorption unit.

- (b) The results of all emission tests conducted to demonstrate compliance with the requirements of paragraph (O)(3)(c)(iv), (O)(3)(c)(v), (O)(4)(a)(ii), or (O)(4)(a)(iii) of this rule.
- (c) For cold cleaners, the types of solvents employed and the vapor pressure of each solvent (pounds per square inch absolute) measured at one hundred degrees Fahrenheit.

(6) Exemptions:

- (a) Paragraph (O)(2)(d)(v) of this rule shall not apply to cold cleaners that are research and development sources, as defined under section 3704.01 of the Revised Code, provided that the owner or operator maintains records which demonstrate that the combined VOC emissions from the exempted research and development sources are less than five tons per calendar year.
- (b) After June 15, 1999, except as provided in paragraph (O)(2)(e), paragraphs (O)(2) through (O)(5) of this rule shall not apply to any solvent metal cleaning operation which is subject to 40 CFR Part 63, Subpart T, provided the requirements of Subpart T are specified in the terms and conditions of installation and/or operating permit issued by the director.
- (c) Where VOC-containing cleaners that exceed the vapor pressure requirements of paragraph (O)(2)(e)(i) of this rule are used to clean cured resin from application equipment, the cleaning of resin application equipment at facilities subject to and complying with the requirements of 40 CFR Part 63, Subpart WWWW, is exempt from the requirements of paragraph (O)(2)(e)(i) of this rule.
- (d) The cleaning of medical parts subject to regulation by the food and drug administration and metal parts subject to federal aviation administration and department of defense cleaning solvent specifications is exempt from the requirements of paragraph (O)(2)(e)(i) of this rule provided a documented conflict between said specification and the vapor pressure requirements of paragraph (O)(2)(e)(i) of this rule occurs. Such documentation shall be provided to the appropriate Ohio EPA district office or local air agency.

(P) Bulk gasoline plant.

- (1) No owner or operator of a bulk gasoline plant may cause, allow or permit the transfer of gasoline at a bulk gasoline plant after the date specified in paragraph (C)(17) of rule 3745-21-04 of the Administrative Code unless the following requirements are met, except where exempted under paragraph (P)(5) of this rule:

- (a) Each stationary storage tank which stores gasoline at the bulk gasoline plant is loaded by means of a submerged fill pipe;
  - (b) For any transfer of gasoline from a delivery vessel to a stationary storage tank located at the bulk gasoline plant, the vapors displaced from the stationary storage tank are processed by one of the following systems:
    - (i) A vapor balance system which is equipped with a vapor tight vapor line from the stationary storage tank to the delivery vessel and a means to ensure that the vapor line is connected before gasoline can be transferred and which is designed and operated to route at least ninety per cent by weight of the VOC in the displaced vapors to the delivery vessel; or
    - (ii) A vapor control system which is designed and operated to recover at least ninety per cent by weight of the VOC in the displaced vapors;
  - (c) Any loading rack at the bulk gasoline plant which transfers gasoline to a delivery vessel is equipped for top submerged filling or bottom filling for the transfer of gasoline;
  - (d) For any transfer of gasoline from a loading rack located at the bulk gasoline plant to a delivery vessel, the vapors displaced from delivery vessel are processed by one of the following systems:
    - (i) A vapor balance system which is equipped with a vapor tight vapor line from the delivery vessel to the stationary storage tank being unloaded and a means to ensure that the vapor line is connected before gasoline can be transferred and which is designed and operated to route at least ninety per cent by weight of the VOC in the displaced vapors to the stationary storage tank; or
    - (ii) A vapor control system which is designed and operated to recover at least ninety per cent by weight of the VOC in the displaced vapors; and
  - (e) All gasoline loading lines, unloading lines and vapor lines are equipped with fittings which are vapor tight.
- (2) When a vapor balance system is employed to meet the requirements of paragraph (P)(1)(b) or (P)(1)(d) of this rule, the following operating practices shall be followed:
- (a) The vapor balance system shall be kept in good working order and shall be used at all times during the transfer of gasoline;

- (b) The delivery vessel hatches shall be closed at all times during the loading of the delivery vessel;
  - (c) There shall be no leaks in the delivery vessel pressure/vacuum relief valves and hatch covers;
  - (d) There shall be no leaks in the vapor and liquid lines during the transfer of gasoline; and
  - (e) The pressure relief valves on the stationary storage tanks and delivery vessels shall be set to release at no less than 0.7 pound per square inch gauge or the highest possible pressure (in accordance with state or local fire codes, or the "National Fire Prevention Association" guidelines).
- (3) No owner or operator of a bulk gasoline plant may permit gasoline to be spilled, discarded in sewers, stored in open containers or handled in any other manner that would result in evaporation.
- (4) Any owner or operator of a bulk gasoline plant shall repair within fifteen days any leak from the vapor balance system or vapor control system which is employed to meet the requirements of paragraph (P)(1) of this rule when such leak is equal to or greater than one hundred per cent of the lower explosive limit as propane, as determined under paragraph (K) of rule 3745-21-10 of the Administrative Code.
- (5) Exemptions.
- (a) Paragraphs (P)(1) to (P)(4) of this rule shall not apply to a bulk gasoline plant which has an average daily throughput, based upon the number of days during a calendar year when the bulk plant was actually in operation, of less than four thousand gallons of gasoline.
  - (b) Paragraph (P)(1)(b) of this rule shall not apply to any stationary storage tank which is equipped with either an internal floating roof or external floating roof.
- (6) Any owner or operator of a bulk gasoline plant shall maintain records of the following information in a readily accessible location for at least five years and shall immediately make these records available to the director upon verbal or written request:
- (a) The daily quantity of all gasoline loaded into gasoline tank trucks.
  - (b) The results of any leak checks, including, at a minimum, the following information:

- (i) Date of inspection.
- (ii) Findings (may indicate no leaks discovered or location, nature, and severity of each leak).
- (iii) Leak determination method.
- (iv) Corrective action (date each leak repaired and reasons for any repair interval in excess of fifteen calendar days).
- (v) Inspector's name and signature.

(7) Reporting requirements.

- (a) For any bulk gasoline plant that is exempted pursuant to paragraph (P)(5)(a) of this rule and has an average daily throughput equal to or greater than four thousand gallons per day, the owner or operator shall so notify the director within thirty days of becoming aware of the occurrence.
- (b) Any leaks in vapor or liquid lines that are not repaired within fifteen days after identification shall be reported to the director within thirty days after the repair is completed.

(Q) Bulk gasoline terminal.

- (1) Except where exempted under paragraph (Q)(4) of this rule, no owner or operator of a bulk gasoline terminal may cause, allow or permit the transfer of gasoline at a bulk gasoline terminal after the date specified in paragraph (C)(18) of rule 3745-21-04 of the Administrative Code unless the following requirements are met:
  - (a) The loading rack is equipped with a vapor collection system whereby during the transfer of gasoline to any delivery vessel:
    - (i) All vapors displaced from the delivery vessel during loading are vented only to the vapor collection system: and
    - (ii) The pressure in the vapor collection system is maintained between minus six and plus eighteen inches of water gauge pressure:
  - (b) The loading rack is equipped with a vapor control system whereby:
    - (i) All vapors collected by the vapor collection system are vented to the vapor control system;

- (ii) The mass emissions of VOC from the vapor control system do not exceed 0.67 pound of VOC per thousand gallons (eighty milligrams of VOC per liter) of gasoline loaded into the delivery vessel; and
    - (iii) Any liquid gasoline returned to a stationary storage tank from the vapor control system is free of entrained air to the extent possible with good engineering design;
  - (c) A means is provided to prevent drainage of gasoline from the loading device when it is not in use or to accomplish complete drainage before the loading device is disconnected; and
  - (d) All gasoline loading lines and vapor lines are equipped with fittings which are vapor tight.
- (2) No owner or operator of a bulk gasoline terminal may permit gasoline to be spilled, discarded in sewers, stored in open containers or handled in any other manner that would result in evaporation.
- (3) Any owner or operator of a bulk gasoline terminal shall repair within fifteen days any leak from the vapor collection system and vapor control system which are employed to meet the requirements of paragraph (Q)(1) of this rule when such leak is equal to or greater than one hundred per cent of the lower explosive limit as propane, as determined under paragraph (K) of rule 3745-21-10 of the Administrative Code.
- (4) Paragraph (Q)(1) of this rule shall not apply to a bulk gasoline terminal which has a maximum daily throughput equal to or less than twenty thousand gallons of gasoline, provided either:
- (a) The gasoline is supplied to the loading rack only from stationary storage tanks, each of which is equipped with an internal floating roof or external floating roof; or
  - (b) The loading rack is equipped with a vapor balance system that meets the requirements of paragraphs (P)(1)(d)(i), (P)(2) and (P)(4) of this rule.
- (R) Gasoline dispensing facilities (stage I vapor control systems).
- (1) No owner or operator of a gasoline dispensing facility may cause, allow or permit the transfer of gasoline at a gasoline dispensing facility after the date specified in paragraph (C)(19) of rule 3745-21-04 of the Administrative Code unless the following requirements are met, except where exempted under paragraph (R)(4) of this rule:

- (a) Any stationary storage tank which stores gasoline at the gasoline dispensing facility is equipped with a submerged fill pipe; and
- (b) For any transfer of gasoline from a delivery vessel to a stationary storage tank located at the gasoline dispensing facility, the vapors displaced from the stationary storage tank are processed by one of the following systems:
  - (i) A vapor balance system which is designed and operated to route at least ninety per cent by weight of the VOC in the displaced vapors to the delivery vessel and which is equipped with a means to prevent the discharge of displaced vapors from an unconnected vapor line; or
  - (ii) A vapor control system which is designed and operated to recover at least ninety per cent by weight of the VOC in the displaced vapors.
- (2) When a vapor balance system is employed to meet the requirements of paragraph (R)(1)(b) of this rule, the following operating practices shall be followed:
  - (a) The vapor balance system shall be kept in good working order and shall be used at all times during the transfer of gasoline;
  - (b) There shall be no leaks in the delivery vessel pressure/vacuum relief valves and hatch covers; and
  - (c) There shall be no leaks in the vapor and liquid lines during the transfer of gasoline.
- (3) Any owner or operator of a gasoline dispensing facility shall repair within fifteen days any leak from the vapor balance system or vapor control system which is employed to meet the requirements of paragraph (R)(1) of this rule when such leak is equal to or greater than one hundred per cent of the lower explosive limit as propane, as determined under paragraph (K) of rule 3745-21-10 of the Administrative Code.
- (4) Paragraphs (R)(1) to (R)(3) of this rule shall not apply to the following:
  - (a) Any gasoline dispensing facility which has an annual throughput of less than one hundred twenty thousand gallons of gasoline; or
  - (b) Transfers made to a stationary storage tank which is equipped with an internal floating roof or external floating roof.
- (5) Any owner or operator of a gasoline dispensing facility that is exempted from the requirements of paragraphs (R)(1) to (R)(3) of this rule pursuant to paragraph (R)(4)(a) of this rule shall maintain records of the quantity of gasoline delivered to the facility during each calendar month. The records shall be maintained at

the facility for a period of three years. The owner or operator shall notify the director if the annual gasoline throughput for any rolling twelve-month period is equal to or greater than one hundred twenty thousand gallons. The director shall be notified within forty-five days after the exceedance occurs.

(S) "Alside, Inc." or any subsequent owner or operator of the "Alside, Inc." facility located at 3773 Akron-Cleveland road, North Hampton township, Summit county, Ohio shall not cause, allow or permit the discharge into the ambient air of any VOCs after the date specified in paragraph (C)(20)(b) of rule 3745-21-04 of the Administrative Code in excess of the following:

- (1) 3.5 pounds of VOC per gallon of coating, excluding water and exempt solvents, from a siding (spray) coating line.
- (2) 3.5 pounds of VOC per gallon of coating, excluding water and exempt solvents, from a corner coating line.

(T) Leaks from petroleum refinery equipment.

(1) Except as otherwise provided in paragraphs (T)(1)(b) and (T)(1)(c) of this rule, each owner or operator of a petroleum refinery shall comply with the following monitoring, recordkeeping and reporting requirements no later than the date specified in paragraph (C)(27) of rule 3745-21-04 of the Administrative Code:

(a) Except as otherwise indicated in paragraph (T)(1)(b) of this rule, a monitoring program shall be developed and implemented which incorporates the following provisions:

- (i) Yearly monitoring of all pump seals, pipeline valves in liquid service and process drains in accordance with the method specified in paragraph (F) of rule 3745-21-10 of the Administrative Code;
- (ii) Quarterly monitoring of all compressor seals, pipeline valves in gas service and pressure relief valves in gas service in accordance with the method specified in paragraph (F) of rule 3745-21-10 of the Administrative Code;
- (iii) Monthly monitoring of all pump seals by visual methods;
- (iv) Monitoring of any pump seal in accordance with the method specified in paragraph (F) of rule 3745-21-10 of the Administrative Code within five working days after any liquids are observed dripping from the seal;
- (v) Monitoring of any relief valve in accordance with the method specified in paragraph (F) of rule 3745-21-10 of the Administrative Code within five working days after the valve has vented to the atmosphere; and

- (vi) Monitoring of any component in accordance with the method specified in paragraph (F) of rule 3745-21-10 of the Administrative Code within five working days after the repair of a leak;
- (b) Pressure relief devices which are connected to an operating flare header, vapor recovery devices, valves which are located in pipelines containing kerosene or heavier liquids, storage tank valves and valves which are not externally regulated are exempt from the monitoring requirements contained in paragraph (T)(1)(a) of this rule;
- (c) For any pipeline or pressure relief valves in gas or liquid service, an alternative monitoring schedule may be employed in lieu of the monitoring schedule specified in paragraph (T)(1)(a) of this rule as follows:
  - (i) The valve is designated as difficult to monitor and is monitored each calendar year, provided the following conditions are met:
    - (a) Construction of the process unit commenced prior to March 27, 1981;
    - (b) The owner or operator of the valve demonstrates that the valve cannot be monitored without elevating the monitoring personnel more than six feet above a support surface; and
    - (c) The owner or operator of the valve has a written plan that requires monitoring of the valve at least once per year;
  - (ii) The valve is designated as unsafe to monitor and is monitored as frequently as practical during safe to monitor times, provided the following conditions are met:
    - (a) The owner or operator of the valve demonstrates that the valve is unsafe to monitor because monitoring personnel would be exposed to an immediate danger as a consequence of monitoring on a quarterly or yearly basis as specified in paragraph (T)(1)(a) of this rule; and
    - (b) The owner or operator of the valve adheres to a written plan that requires monitoring of the valve as frequently as practical during process unit turnarounds and other safe to monitor times;
- (d) All pipeline valves in gas service and pressure relief valves in gas service shall be clearly marked and identified in such a manner that they will be obvious to both refinery personnel performing monitoring and to the director;

- (e) If a leak is identified as a result of the monitoring program required by paragraph (T)(1)(a) of this rule and the concentration of VOC exceeds ten thousand parts per million by volume, a tag shall immediately be placed on the leaking component. The tag shall be readily visible and weatherproof; it shall bear an identification number; and it shall clearly indicate the date the leak was detected. The tag shall remain in place until the leaking component is repaired;
- (f) A monitoring log shall be maintained for all leaking components which are tagged in accordance with paragraph (T)(1)(e) of this rule. The monitoring log shall contain, at a minimum, the following data:
  - (i) The name of the process unit where the leaking component is located;
  - (ii) The type of leaking component (such as valve, seal, or other component);
  - (iii) The tag number of the leaking component;
  - (iv) The date on which the leaking component was detected;
  - (v) The date on which the leaking component was repaired;
  - (vi) The date and results of the monitoring performed within five working days after the leaking component was repaired;
  - (vii) A record of the calibration of the monitoring instrument;
  - (viii) A list of those leaking components which cannot be repaired until the next process unit turnaround; and
  - (ix) The total number of components monitored and the total number of components found leaking during the calendar year;
- (g) A copy of any monitoring log shall be retained by the owner or operator for a minimum of two years after the date on which the record was made or the report was prepared;
- (h) A copy of any monitoring log shall immediately be made available to the director or an authorized representative of the director, upon verbal or written request, at any reasonable time; and
- (i) A report shall be submitted to the director by the fifteenth day of January, April, July and October that gives the total number of components monitored during the previous three calendar months, gives the total

number of components found leaking during the previous three calendar months, identifies all components which were found leaking during the previous three calendar months but which were not repaired within fifteen days and identifies all leaking components which cannot be repaired until the next process unit turnaround.

- (2) Any owner or operator of a petroleum refinery shall repair and retest any leaking component, which is tagged and identified in accordance with paragraph (T)(1)(e) of this rule, as soon as possible but no later than fifteen days after the leak is found unless the leaking component cannot be repaired until a process unit turnaround occurs.
- (3) The director may require a process unit turnaround to occur earlier than the normally scheduled date if the number and severity of leaking components awaiting a turnaround warrant such action. Any such process unit turnaround shall be required by means of an order issued by the director to the owner or operator of the petroleum refinery pursuant to division (R) of section 3704.03 of the Revised Code.
- (4) The director may accept an alternative monitoring, recordkeeping and reporting program for that required by paragraph (T)(1) of this rule if the owner or operator of a petroleum refinery can demonstrate to the satisfaction of the director that the alternative program is at least as effective in identifying, documenting and reporting leaks from petroleum refinery equipment as the program outlined in paragraph (T)(1) of this rule. For purposes of this paragraph, any proposed alternative monitoring, recordkeeping and reporting program that the director finds comparable to the requirements of paragraph (DD)(12) or (DD)(13) of this rule or for any individual equipment component, finds equivalent to the federal requirements specified in 40 CFR Part 60, Subparts VV and GG or 40 CFR Part 63, Subparts H and CC shall be acceptable to the director.
  - (a) Pursuant to this paragraph, the alternative monitoring, recordkeeping and reporting program entitled "Premcor Lima Refinery, LDAR Plan" and dated November 19, 2002 is approved by the director as an acceptable alternative program for the "Premcor Lima Refinery" (premise number 0302020012).

(U) Surface coating of miscellaneous metal parts and products.

- (1) Except where exempted under paragraph (U)(2) of this rule, or other wise provided in paragraph (B)(6) of this rule, no owner or operator of a miscellaneous metal part or product coating line may cause, allow or permit the discharge into the ambient air of any VOCs from such coating line after the date specified in paragraph (C)(28) of rule 3745-21-04 of the Administrative Code in excess of the following:

- (a) 4.3 pounds of VOC per gallon of coating, excluding water and exempt solvents, or, if a control system is employed, 10.3 pounds of VOC per gallon of solids for a clear coating;
- (b) 4.0 pounds of VOC per gallon of coating, excluding water and exempt solvents, or, if a control system is employed, 8.8 pounds of VOC per gallon of solids for a zinc rich primer coating;
- (c) 3.5 pounds of VOC per gallon of coating, excluding water and exempt solvents, or, if a control system is employed, 6.7 pounds of VOC per gallon of solids for an extreme performance coating;
- (d) 3.5 pounds of VOC per gallon of coating, excluding water and exempt solvents, or, if a control system is employed, 6.7 pounds of VOC per gallon of solids for any coating that is dried at temperatures not exceeding two hundred degrees Fahrenheit;
- (e) 4.3 pounds of VOC per gallon of coating, excluding water and exempt solvents, or, if a control system is employed, 10.3 pounds of VOC per gallon of solids for the interior coating of a steel pail or drum;
- (f) 3.5 pounds of VOC per gallon of coating, excluding water and exempt solvents, or, if a control system is employed, 6.7 pounds of VOC per gallon of solids for the exterior coating of a steel pail or drum;
- (g) 4.9 pounds of VOC per gallon of coating, excluding water and exempt solvents, for a glass adhesion body primer coating used for the installation of any glass windows during the assembly of automobiles and trucks;
- (h) 6.2 pounds of VOC per gallon of coating, excluding water and exempt solvents, or, if a control system is employed, 39.2 pounds of VOC per gallon of solids for a high performance architectural aluminum coating; or
- (i) 3.0 pounds of VOC per gallon of coating, excluding water and exempt solvents, or, if a control system is employed, 5.1 pounds of VOC per gallon of solids for any coating that is not regulated under paragraphs (U)(1)(a) to (U)(1)(h) of this rule.

If a miscellaneous metal parts of products coating is subject to two or more limits as listed in paragraphs (U)(1)(a) to (U)(1)(i) of this rule, the limit which is least restrictive shall apply.

- (2) The requirements of paragraph (U)(1) of this rule shall not apply to the following:
  - (a) The application of an exterior coating to marine vessels;

- (b) The application of an exterior coating to airplanes;
- (c) The repainting (refinishing) of used motor vehicles and trailers;
- (d) The application of a customized topcoat and any related customized single coat to motor vehicles, if the maximum number of motor vehicles is less than thirty-five per day;
- (e) Any miscellaneous metal parts or products coating line which never uses more than:
  - (i) For Clark, Greene, Miami, and Montgomery counties, eight gallons per day.
  - (ii) For Ashtabula, Butler, Clermont, Cuyahoga, Geauga, Hamilton, Lake, Lorain, Medina, Portage, Summit, and Warren counties, three gallons per day.
  - (iii) For all other counties, ten gallons per day.

Daily usage limitations included in paragraphs (U)(2)(e)(i) to (U)(2)(e)(iii) of this rule shall not apply to coatings employed by the metal parts or products coating line on parts or products which are not metal.

- (f) Any coating line that is a new source, as defined by rule 3745-31-01 of the Administrative Code and meets the following requirements:
  - (i) The construction or modification of the coating line commenced on or after March 27, 1981;
  - (ii) The director has determined that the otherwise applicable emission limitation(s) in paragraph (U)(1) of this rule is technically or economically infeasible and has established an alternative reasonably available control technology emission limitation. The alternative limitation shall be the lowest emission limitation that the coating line is capable of meeting by the application of control technology that is reasonably available considering technological and economic feasibility. The alternative limitation shall be an emissions rate (e.g., pounds VOC per gallon) or overall per cent reduction but shall not be in terms of mass per time (e.g., pounds per hour).
  - (iii) A final installation permit has been issued for the coating line pursuant to Chapter 3745-31 of the Administrative Code. The installation permit shall contain terms and conditions that specify the control requirement

or emission limitation that is the basis for the director's alternative limitation determination for the coating line, as described in paragraph (U)(2)(f)(ii) of this rule.

- (iv) USEPA has approved the alternative limitation as a revision to the Ohio state implementation plan.
  - (g) The application of a coating which is subject to paragraph (C), (D), (E), (I), (J), (K), (S), (FF) or (OO) of this rule;
  - (h) Any facility which always emits less than fifteen pounds of VOC per day (before add-on controls) from all miscellaneous metal parts or products coating lines within the facility (pounds of VOC attributed to metal parts or products coating lines in which non-metal parts or products were being coated shall not count towards this daily limit);
  - (i) The application of a coating to motorcycles at the "Honda of America Mfg., Inc." motorcycle assembly plant located at 24000 U.S. route 33, Marysville, Ohio;
  - (j) The application of a coating to bicycles in any coating line for which construction commenced prior to March 27, 1981 at the "Huffy Corporation" bicycle assembly plant located at 410 Grand Lake road, Celina, Ohio, unless a modification for any such coating line has commenced on or after March 27, 1981;
  - (k) The application of a coating subject to rule 3745-21-19 of the Administrative Code (pertaining to aerospace manufacturing and rework facilities); and
  - (l) The application of a coating subject to rule 3745-21-20 of the Administrative Code (pertaining to shipbuilding and ship repair operations).
- (3) At automobile and light-duty truck assembly plants, the requirements of paragraph (U)(1) of this rule also shall apply to the application of underbody antichip materials (e.g., underbody plastisol) and to metal surface coating operations other than prime, prime surfacer, topcoat, and final repair operations.
- (V) Gasoline tank trucks.
- (1) Except where exempted under paragraph (V)(3) of this rule, each owner or operator of a gasoline tank truck shall comply with the following requirements by the date specified in paragraph (C)(29) of rule 3745-21-04 of the Administrative Code:
    - (a) No gasoline tank truck is to be used for the transfer of gasoline, unless within the previous twelve months it was tested for leaks in accordance with the

applicable method specified in paragraph (G) of rule 3745-21-10 of the Administrative Code.

- (b) Any gasoline tank truck which, when last tested for leaks, failed to meet all requirements of the applicable method specified in paragraph (G) of rule 3745-21-10 of the Administrative Code is not to be used for the transfer of gasoline.
- (c) A record is to be maintained of all gasoline tank trucks which are tested in accordance with paragraph (G) of rule 3745-21-10 of the Administrative Code, and such record is to contain, at a minimum, the following data:
  - (i) The tank identification number (manufacturer's serial number and/or owner's identification number);
  - (ii) The calendar year during which the tank was manufactured;
  - (iii) The date and location of the test;
  - (iv) The name, title and telephone number of the person who conducted the test, and the name and address of the company where the person is employed;
  - (v) The following information from the test:
    - (a) The tank pressure for the start of the pressure test;
    - (b) The tank pressure for the end of the pressure test;
    - (c) The tank pressure for the start of the vacuum test;
    - (d) The tank pressure for the end of the vacuum test; and
    - (e) The resultant pressure changes for the pressure test and the vacuum test; and
  - (vi) A list of all repairs which were made to the gasoline tank truck to enable it to pass all applicable requirements of the test.
- (d) A copy of the test record required in paragraph (V)(1)(c) of this rule is to be retained by the owner or operator of the tank truck for a minimum of two years after the date on which the test was conducted.
- (e) A copy of the test record required in paragraph (V)(1)(c) of this rule is to immediately be made available to the director, or an authorized

representative of the director, upon verbal or written request, at any reasonable time.

- (f) No gasoline tank truck is to be used for the transfer of gasoline, unless the requirements of paragraphs (V)(1)(a) and (V)(1)(b) of this rule can be readily verified by means of the following:
  - (i) A copy of the test record required in paragraph (V)(1)(c) of this rule is kept in the gasoline tank truck; or
  - (ii) A sticker, which contains the tank identification number, the calendar year during which the tank was manufactured, the date the tank last passed the requirements of the applicable test method specified in paragraph (G) of rule 3745-21-10 of the Administrative Code and the name and location of the testing company or department, is prominently displayed on the right side of the front of the tank.
- (g) Any gasoline tank truck which has a leak which is equal to or greater than one hundred per cent of the lower explosive limit as propane, as determined under paragraph (K) of rule 3745-21-10 of the Administrative Code, is not to be used for the transfer of gasoline after fifteen days from the detection of such leak unless the leak is repaired.
- (h) Whenever any gasoline tank truck is removed from service for routine maintenance and repairs, the gasoline tank truck shall also be inspected/repaired in accordance with the following procedures:
  - (i) Inspect all dome cover gaskets to ensure they will properly seal against vapor releases. Any dome cover gasket must be replaced if its integrity is in doubt.
  - (ii) Open and close all dome covers to ensure that the latch tension is such that the cover will be held securely closed to prevent vapor releases. Any dome covers with inadequate latch tension must be repaired or replaced.
  - (iii) Inspect the fusible plugs in each dome cover assembly to ensure proper tightness. Any fusible plugs which are found to be loose or defective must be tightened and/or replaced.
  - (iv) Inspect each vapor vent hood and sealing band for defects. If any defects are found, the defective vapor vent hood and/or sealing band shall be replaced with new components.

- (v) Inspect all vapor return hoses and any associated fittings and adaptors for defects that could allow vapor releases. If defects are found, the defective equipment shall be repaired or replaced.
  - (vi) Inspect any pressure and vacuum relief vents located on the vapor recovery line to ensure that they are clean and in proper working order. If a relief vent is found to be defective, it shall be repaired or replaced.
  - (i) No gasoline tank truck is to be used for the transfer of gasoline at a bulk gasoline terminal, bulk gasoline plant or gasoline dispensing facility that employs a vapor balance system or vapor control system unless the transfer is done in a manner that ensures the proper operation of the vapor balance system or vapor control system.
- (2) The director may require any gasoline tank truck to be tested in accordance with the applicable method specified in paragraph (G) of rule 3745-21-10 of the Administrative Code within a reasonable period of time. Any such test shall be required by means of an order issued by the director to the owner or operator of the gasoline tank truck pursuant to division (R) of section 3704.03 of the Revised Code.
- (3) Exempted from the requirements of paragraphs (V)(1) and (V)(2) of this rule is any gasoline tank truck which has a capacity of less than five thousand gallons, unless it either:
- (a) Receives gasoline from any loading rack which is equipped with a vapor balance system or vapor control system; or
  - (b) Delivers gasoline to any stationary storage tank which is equipped with a vapor balance system.
- (W) Synthesized pharmaceutical manufacturing facility.
- (1) Except where exempted under paragraph (W)(2) of this rule, each owner or operator of a synthesized pharmaceutical manufacturing facility shall comply with the following requirements no later than the date specified in paragraph (C)(30) of rule 3745-21-04 of the Administrative Code:
- (a) Except for any VOC emissions which are collected by a production equipment exhaust system, the discharge of VOC emissions into the ambient air from any reactor, distillation operation, crystallizer, centrifuge or vacuum dryer is to be controlled by one of the following devices:
    - (i) A surface condenser which has an outlet gas concentration of VOC not exceeding fifty thousand parts per million by volume; or

- (ii) A device or system which is, in the judgment of the director, at least as effective in controlling VOC emissions as the above-mentioned surface condenser;
- (b) The discharge of VOC emissions into the ambient air from any air dryer or production equipment exhaust system is not to exceed thirty-three pounds in any one day, unless said discharge has been reduced by at least ninety per cent on a weight basis by control equipment;
- (c) Except as otherwise provided in paragraph (L) of this rule, any storage tank which holds a VOC that has a vapor pressure greater than 1.5 pounds per square inch absolute at sixty-eight degrees Fahrenheit is to be equipped with one of following devices:
  - (i) A conservation vent which opens at a pressure of 0.5 ounce per square inch or higher and at a vacuum of 0.5 ounce per square inch or higher; or
  - (ii) A device or system which is, in the judgment of the director, at least as effective in controlling VOC emissions as the above-mentioned conservation vent;
- (d) During any transfer of a VOC, which has a vapor pressure greater than 4.1 pounds per square inch absolute at sixty-eight degrees Fahrenheit, from a truck or railcar to a fixed roof tank which has a capacity greater than two thousand gallons, the vapors displaced from said tank are to be processed by one of the following systems:
  - (i) A vapor balance system which is designed and operated to route at least ninety per cent by weight of the VOC in the displaced vapors to the truck or railcar; or
  - (ii) A vapor control system which is designed and operated to recover at least ninety per cent by weight of the VOC in the displaced vapors;
- (e) Any centrifuge containing a VOC, any rotary vacuum filter processing a VOC and any other filter having an exposed liquid VOC surface, are to be enclosed if the VOC has a vapor pressure greater than 0.5 pound per square inch absolute at sixty-eight degrees Fahrenheit;
- (f) Any in-process tank which contains a VOC is to be equipped with a cover which remains closed, except when production, sampling, maintenance or inspection procedures require access to said tank; and
- (g) Any leak in which a VOC is observed to be running or dripping from a vessel or other equipment is to be repaired as soon as possible, but no later

than the first time said equipment is off line for a period of time long enough to complete the repair.

- (2) Exempted from the requirements of paragraph (W)(1) of this rule is any operation or equipment not associated with the production of drugs.

(X) Rubber tire manufacturing facility.

- (1) Except where exempted under paragraph (X)(2) of this rule, each owner or operator of a rubber tire manufacturing facility shall comply with the following requirements no later than the date specified in paragraph (C)(31) of rule 3745-21-04 of the Administrative Code:

- (a) Each undertread cementing, tread end cementing and bead dipping operation is to be equipped with a capture system and associated control system which are designed and operated with the following efficiencies for VOCs, as determined under paragraph (C) of rule 3745-21-10 of the Administrative Code:

- (i) A capture efficiency which is at least eighty-five per cent by weight; and  
(ii) A control efficiency which is at least ninety per cent by weight.

- (b) Except as otherwise provided in paragraph (X)(1)(c) of this rule, each green tire spraying operation is to be equipped with a capture system and associated control system which are designed and operated with the following efficiencies for VOCs, as determined under paragraph (C) of rule 3745-21-10 of the Administrative Code:

- (i) A capture efficiency which is at least ninety per cent by weight; and  
(ii) A control efficiency which is at least ninety per cent by weight.

- (c) The requirements of paragraph (X)(1)(b) of this rule do not apply to any green tire spraying operation in which the VOC content of the material sprayed, as determined in accordance with paragraph (B) of rule 3745-21-10 of the Administrative Code, is a maximum daily weighted average of six per cent or less by weight for material sprayed on the inside of a tire and eleven per cent or less by weight for material sprayed on the outside of a tire.

- (2) Exempted from the requirements of paragraph (X)(1) of this rule are the following operations:

- (a) Any operation not associated with rubber tires of the following size:

- (i) A bead diameter less than or equal to 20.0 inches; and
  - (ii) A cross-sectional dimension less than or equal to 12.8 inches.
- (b) Any operation for which construction commenced prior to March 27, 1981 at the "Cooper Tire and Rubber Company" facility located at Lima and Western avenues, Findlay, Ohio, unless a modification for any such operation has commenced on or after March 27, 1981.
  - (c) Any operation that produces specialty tires for antique or other vehicles when produced on an irregular basis or with short production runs. (This exemption applies only to tires produced on equipment separate from normal production lines for passenger-type tires.)
  - (d) Any operation subject to the federal "Standards of Performance for New Stationary Sources, 40 CFR Part 60, Subpart BBB."

(Y) Flexographic, packaging rotogravure and publication rotogravure printing lines.

- (1) Except where exempted under paragraph (Y)(2) of this rule, no owner or operator of a flexographic printing line, packaging rotogravure printing line or publication rotogravure printing line may cause, allow or permit the discharge into the ambient air of any VOCs from such printing line after the date specified in paragraph (C)(32) of rule 3745-21-04 of the Administrative Code unless the requirements of either paragraph (Y)(1)(a) or (Y)(1)(b) of this rule are satisfied.
  - (a) The VOC content of the coatings and inks employed in said printing line, as determined under paragraph (B) of rule 3745-21-10 of the Administrative Code, does not exceed the following limitation:
    - (i) Forty per cent VOC by volume of the coating and ink, excluding water and exempt solvents; or
    - (ii) Twenty-five per cent VOC by volume of the volatile matter in the coating and ink.
  - (b) Said printing line is equipped with a capture system and associated control system which are designed and operated to achieve the following efficiencies for volatile organic compounds, as determined under paragraph (C) of rule 3745-21-10 of the Administrative Code:
    - (i) A capture efficiency which is:
      - (a) At least sixty-five per cent by weight, for a flexographic printing line;

- (b) At least seventy per cent by weight, for a packaging rotogravure printing line; or
        - (c) At least eighty per cent by weight, for a publication rotogravure printing line.
      - (ii) A control efficiency which is at least ninety per cent by weight.
- (2) The requirements of paragraph (Y)(1) of this rule shall not apply to the following printing lines:
  - (a) Any printing line that is subject to and in compliance with the emission limitations in paragraph (H) of this rule, which pertains to vinyl coating;
  - (b) Any printing line which is located at a facility in which the total maximum usage of coatings and inks in all flexographic, packaging rotogravure and publication rotogravure printing lines is less than or equal to one hundred forty-eight tons per year; except as otherwise provided under paragraph (Y)(3) of this rule;
  - (c) Any printing line which is used solely to check the quality of the image formation of newly engraved or etched cylinders; and,
  - (d) Any printing line which is located at a facility in which the total maximum usage of VOC in all coatings and inks employed in all flexographic, packaging rotogravure and publication rotogravure printing lines within the facility is less than or equal to one hundred tons per year, except as otherwise provided under paragraph (Y)(3) of this rule.
- (3) Once the requirements of paragraph (Y)(1) of this rule apply to a facility or a flexographic, packaging rotogravure and publication rotogravure printing line within the facility, the facility is not eligible for an exemption under paragraphs (Y)(2)(b) and (Y)(2)(d) of this rule.
- (4) In addition to the requirements specified in paragraph (Y)(1) of this rule the following requirements are applicable to all packaging rotogravure printing lines and flexographic packaging printing lines located in Ashtabula, Cuyahoga, Geauga, Lake, Lorain, Medina, Portage and Summit counties.
  - (a) Any owner or operator of a packaging rotogravure printing line or flexographic packaging printing line with potential emissions that are equal to or greater than 25.0 tons per year of VOC before the application of capture and control devices shall comply with either of the following requirements for the printing line:

- (i) Employ a control system in order to reduce VOC emissions from the packaging rotogravure printing line that meets one of the following requirements:
  - (a) Sixty-five per cent overall control for a press that was first installed prior to March 14, 1995 and that is controlled by an add-on air pollution control device whose first installation date was prior to the effective date of this rule.
  - (b) Seventy per cent overall control for a press that was first installed prior to March 14, 1995 and that is controlled by an add-on air pollution control device whose first installation date was on or after the effective date of this rule.
  - (c) Seventy-five per cent overall control for a press that was first installed on or after March 14, 1995 and that is controlled by an add-on air pollution control device whose first installation date was prior to the effective date of this rule.
  - (d) Eighty per cent overall control for a press that was first installed on or after March 14, 1995 and that is controlled by an add-on air pollution control device whose first installation date was on or after the effective date of this rule.
- (ii) Employ coatings in the packaging rotogravure printing line or flexographic packaging printing line that comply with the following VOC content limitations:
  - (a) 0.8 pound of VOC per pound of solids applied; or
  - (b) 0.16 pound of VOC per pound of coating applied.

The VOC content limits specified above can be met by averaging the VOC content of materials used on a single press, within a single printing line.

- (b) Work practice standards for cleaning materials.

Any person or facility subject to this rule that uses VOC-containing clean-up materials shall ensure that VOC emissions are minimized by incorporating the following procedures:

- (i) Keep cleaning materials and used shop towels in closed containers; and
- (ii) Convey cleaning materials from one location to another in closed containers or pipes.

(Z) Storage of petroleum liquids in external floating roof tanks.

(1) Except where exempted under paragraph (Z)(3) of this rule, no owner or operator of an external floating roof tank shall place, store, or hold any petroleum liquid in any such tank after the date specified in paragraph (C)(33) of rule 3745-21-04 of the Administrative Code, unless the tank is designed or equipped as follows:

(a) The tank is equipped with one of the following:

- (i) A liquid-mounted primary seal and a rim-mounted secondary seal;
- (ii) A mechanical shoe primary seal and a rim-mounted secondary seal;
- (iii) A mechanical shoe primary seal and a shoe-mounted secondary seal, provided the shoe-mounted secondary seal was installed prior to January 1, 1981;
- (iv) A vapor-mounted primary seal and a rim-mounted secondary seal;
- (v) A flexible wiper primary seal and a rim-mounted secondary seal;
- (vi) A liquid-mounted primary seal or a mechanical shoe primary seal, provided the petroleum liquid is crude oil with a pour point of fifty degrees Fahrenheit or higher as determined by ASTM D97-05a; or
- (vii) A seal, closure or device which is, in the judgment of the director, equivalent to the following seals in controlling the emission of VOC into the ambient air:
  - (a) The dual seals specified in paragraph (Z)(1)(a)(i) or (Z)(1)(a)(ii) of this rule; or
  - (b) Either of the seals specified in paragraph (Z)(1)(a)(vi) of this rule, provided the petroleum liquid is crude oil with a pour point of fifty degrees Fahrenheit or higher as determined by ASTM D97-05a.

(b) Each seal meets the following requirements:

- (i) There are no visible holes, tears, or other openings in the seal or seal fabric;
- (ii) If the tank is of welded construction, the total seal gap area, as determined under paragraph (I) of rule 3745-21-10 of the Administrative Code, does not exceed:

- (a) 10.0 square inches per foot of tank diameter for a liquid-mounted primary seal or mechanical shoe primary seal;
  - (b) 10.0 square inches per foot of tank diameter for a vapor-mounted primary seal or flexible wiper primary seal, if said seal was installed prior to January 1, 1981;
  - (c) 1.0 square inch per foot of tank diameter for a vapor-mounted primary seal or flexible wiper primary seal, if said seal was installed on or after January 1, 1981;
  - (d) 1.0 square inch per foot of tank diameter for a rim-mounted secondary seal or shoe-mounted secondary seal; or
  - (e) The amount which is assigned by the director for any seal which is equivalent under paragraph (Z)(1)(a)(vii) of this rule;
- (iii) If the tank is of riveted construction, the maximum seal gap width, as determined under paragraph (I) of rule 3745-21-10 of the Administrative Code, does not exceed:
- (a) 2.5 inches for a mechanical shoe primary seal;
  - (b) 1.5 inches for a liquid-mounted primary seal, vapor-mounted primary seal, flexible wiper primary seal, shoe-mounted secondary seal or rim-mounted secondary seal; or
  - (c) The amount which is assigned by the director for any seal which is equivalent under paragraph (Z)(1)(a)(vii) of this rule;
- (c) Any opening in the external floating roof, except automatic bleeder vents, rim space vents, leg sleeves, stub drains and slotted gauging/sampling wells, is equipped with:
- (i) A cover, seal or lid which remains in the closed position at all times without any visible gaps, except when the opening is in actual use; and
  - (ii) A projection into the tank below the liquid surface;
- (d) Any automatic bleeder vent remains in the closed position, except when the external floating roof is floated off or landed on the roof leg supports;
- (e) Any rim vent is set to open only at the manufacturer's recommended setting, except when the external floating roof is being floated off the roof leg supports;

- (f) Any emergency roof drain is equipped with a slotted membrane fabric cover or other device which covers at least ninety per cent of the area of the opening;
  - (g) Any stub drain is equipped with a projection into the tank below the liquid surface; and
  - (h) Any slotted gauging/sampling well is equipped with an object which floats on the liquid surface within the well and which covers at least ninety per cent of the area of the well opening.
- (2) Except where exempted under paragraph (Z)(3) of this rule, each owner or operator of an external floating roof tank which contains a petroleum liquid shall meet the following inspection, recordkeeping and reporting requirements:
- (a) Inspect annually and seal and seal fabric for compliance with paragraph (Z)(1)(b)(i) of this rule;
  - (b) Measure annually, in accordance with the method specified in paragraph (I) of rule 3745-21-10 of the Administrative Code, the secondary seal gap or the primary seal gap, if there is no secondary seal, for compliance with the seal gap requirements of paragraph (Z)(1)(b)(ii) or (Z)(1)(b)(iii) of this rule;
  - (c) Measure at least once every five years, in accordance with the method specified in paragraph (I) of rule 3745-21-10 of the Administrative Code, the primary seal gap, if there is a secondary seal, for compliance with the seal gap requirements of paragraph (Z)(1)(b)(ii) or (Z)(1)(b)(iii) of this rule;
  - (d) Maintain for at least two years a record of the following:
    - (i) The dates and results of any inspections or measurements performed in accordance with paragraphs (Z)(2)(a) to (Z)(2)(c) of this rule; and
    - (ii) The annual throughput of any petroleum liquid stored in the tank; and
  - (e) Provide immediately to the director or an authorized representative of the director, upon written or verbal request at any reasonable time, a copy of the record required under paragraph (Z)(2)(d) of this rule.
- (3) The following external floating roof tanks shall be exempted from the requirements of paragraphs (Z)(1) and (Z)(2) of this rule:
- (a) Any tank which has a capacity of less than forty thousand gallons;

- (b) Any tank which has a capacity of less than four hundred twenty thousand gallons and which is used to store produced crude oil or condensate prior to custody transfer; and
  - (c) Any tank which contains a petroleum liquid which, as stored, has a maximum true vapor pressure less than 1.5 pounds per square inch absolute.
- (4) Any owner or operator of an external floating roof tank that is not exempted pursuant to paragraph (Z)(3)(a) or (Z)(3)(b) of this rule shall maintain records of the following information in a readily accessible location for at least five years and shall make copies of the records available to the director upon verbal or written request:
- (a) The types of petroleum liquids stored in the tank.
  - (b) The maximum true vapor pressure (pounds per square inch absolute), as stored, of each liquid that has a maximum true vapor pressure greater than 1.0 pound per square inch absolute.
- (5) If an owner or operator places, stores, or holds in an external floating roof tank, that is not exempted pursuant to paragraph (Z)(3)(a) or (Z)(3)(b) of this rule, any petroleum liquid with a true vapor pressure which is greater than 1.5 pounds per square inch absolute and such tank does not comply with the requirements of paragraph (Z)(1) of this rule, the owner or operator shall so notify the director within thirty days of becoming aware of the occurrence.

(AA) Perchloroethylene dry cleaning facility.

- (1) Except where exempted under paragraph (AA)(2) of this rule, no owner or operator of a perchloroethylene dry cleaning facility may cause, allow or permit the cleaning of articles in perchloroethylene on or after June 14, 1991 unless the following requirements are met:
- (a) Any dryer which contains articles cleaned in perchloroethylene is to be equipped and operated in accordance with one of the following:
    - (i) Any exhaust from the dryer is vented through a carbon adsorber which emits no more than one hundred parts per million by volume of perchloroethylene at any time; or
    - (ii) The dryer is equipped with or vented to a refrigerated vapor condenser whereby there is no exhaust of perchloroethylene vapors to the ambient air throughout the drying cycle, except for when the dryer's door is momentarily opened during loading or unloading.

- (b) The waste from any diatomaceous earth filter which has been used to filter perchloroethylene is to contain no more than twenty-five per cent by weight perchloroethylene, as determined under paragraph (J) of rule 3745-21-10 of the Administrative Code.
  - (c) The waste from any distillation operation (solvent still) which has been used to distill perchloroethylene is to contain no more than sixty per cent by weight perchloroethylene, as determined under paragraph (J) of rule 3745-21-10 of the Administrative Code.
  - (d) Any disposable filter cartridge which has been used to filter perchloroethylene is to be drained in the filter housing for at least twenty-four hours before being discarded.
  - (e) All equipment must be maintained so as to prevent the leaking of perchloroethylene liquid and prevent perceptible vapor leaks from gaskets, seals, ducts, and related equipment. Any equipment which is leaking perchloroethylene liquid or has a perceptible vapor leak is not to be operated until the leak is repaired.
- (2) Exemptions.
- (a) Paragraphs (AA)(1)(a) to (AA)(1)(e) of this rule shall not apply to any dry cleaning operation which is coin-operated.
  - (b) Paragraph (AA)(1)(a) of this rule shall not apply to any facility in which the owner or operator has satisfactorily demonstrated that a carbon adsorber or refrigerated condenser cannot be installed because of inadequate space.
  - (c) Paragraph (AA)(1)(a) of this rule shall not apply to any facility in which the annual amount of fabric dry cleaned with perchloroethylene is less than sixty thousand pounds.
- (3) Compliance with paragraph (AA)(1)(e) of this rule shall be determined by means of visual inspection of the following components:
- (a) Hose connections, unions, couplings, and valves;
  - (b) Machine door gaskets and seatings;
  - (c) Filter head gasket and seating;
  - (d) Pumps;
  - (e) Base tanks and storage containers;

- (f) Water separators;
  - (g) Filter sludge recovery;
  - (h) Distillation unit;
  - (i) Diverter valves;
  - (j) Saturated lint from lint basket; and
  - (k) Cartridge filters.
- (4) Each owner or operator of a perchloroethylene dry cleaning facility shall maintain the following records in a readily accessible location for at least three years and shall make these records available to the director or an authorized representative of the director at any reasonable time:
- (a) A record of control equipment maintenance, such as replacement of the carbon in a carbon adsorption unit;
  - (b) A record of the results of visual leak inspections conducted in accordance with paragraph (AA)(3) of this rule;
  - (c) The results of all tests conducted to determine compliance with the limitations contained in paragraphs (AA)(1)(a)(i), (AA)(1)(b), and (AA)(1)(c) of this rule; and
  - (d) The annual usage of perchloroethylene, in gallons, and the annual amount of fabric dry cleaned with perchloroethylene, in pounds.

(BB) Petroleum dry cleaning facility.

- (1) Except where exempted under paragraph (BB)(3) of this rule, no owner or operator of a petroleum dry cleaning facility may cause, allow or permit the cleaning of articles in petroleum solvent after the date specified in paragraph (C)(36) of rule 3745-21-04 of the Administrative Code unless the following requirements are met:
- (a) Any dryer for articles cleaned in petroleum solvent shall comply with one of the following requirements:
    - (i) The dryer is a solvent recovery dryer which is operated in a manner such that the dryer remains closed and the solvent recovery phase continues until a final recovered solvent flow rate of 1.7 ounces per minute (fifty milliliters per minute) or less is attained; or

- (ii) The emission of VOC into the ambient air from the dryer does not exceed 3.5 pounds of VOC per one hundred pounds dry weight of articles cleaned, as determined under paragraph (L) of rule 3745-21-10 of the Administrative Code.
  - (b) Any solvent filter for petroleum solvent shall comply with one of the following requirements:
    - (i) The solvent filter is a cartridge filter which is drained for at least eight hours in its sealed housing before removal of any cartridge; or
    - (ii) The filtration waste contains, before disposal and exposure to the ambient air, no more than 1.0 pound of VOC per one hundred pounds dry weight of articles cleaned, as determined under paragraph (M) of rule 3745-21-10 of the Administrative Code.
  - (c) Any bucket or barrel which contains petroleum solvent or petroleum solvent-laden waste shall be covered to minimize solvent evaporation.
  - (d) Any equipment associated with the use of petroleum solvent shall be visually inspected weekly to identify any liquid leaks of petroleum solvent.
  - (e) Any liquid or vapor leak of petroleum solvent shall be repaired within fifteen days after identifying the source of the leak, unless a necessary repair part is not on hand. If a repair part is not on hand, it shall be ordered within three working days after identifying the source of the leak. The leak shall be repaired within fifteen days following the delivery of the necessary repair part.
- (2) Any owner or operator of a solvent recovery dryer subject to the requirements of paragraph (BB)(1)(a) of this rule shall perform a test, in accordance with paragraph (N) of rule 3745-21-10 of the Administrative Code, to demonstrate the minimum length of time for operating the recovery cycle of the dryer.
- (3) Exempted from the requirements of paragraphs (BB)(1)(a), (BB)(1)(b), and (BB)(2) of this rule is any petroleum dry cleaning facility in which:
- (a) The total manufacturer's rated capacity of all petroleum solvent dryers is less than or equal to eighty-three pounds of articles, dry basis; or
  - (b) The total annual consumption of petroleum solvent is less than or equal to four thousand seven hundred gallons.
- (4) Recordkeeping requirements.

- (a) Any owner or operator of a petroleum solvent dry cleaning facility that is exempted pursuant to paragraph (BB)(3)(b) of this rule shall maintain records of annual solvent consumption in a readily accessible location for at least five years and shall make these records available to the director upon verbal or written request.
  - (b) Any owner or operator of a petroleum solvent dry cleaning facility shall maintain records of the following information in a readily accessible location for at least five years and shall make these records available to the director upon verbal or written request:
    - (i) Documentation of the results of any tests performed to determine compliance with the emission limitation specified in paragraph (BB)(1)(a)(ii) of this rule.
    - (ii) Documentation of the results of any tests performed to determine compliance with the limitation specified in paragraph (BB)(1)(b)(ii) of this rule.
    - (iii) The results of any measurements to determine compliance with the limitation specified in paragraph (BB)(1)(a)(i) of this rule.
    - (iv) The results of any leak checks, including, at a minimum, the following information.
      - (a) Date of inspection.
      - (b) Findings (may indicate no leaks discovered or location, nature, and severity of each leak).
      - (c) Leak determination method.
      - (d) Corrective action (date each leak repaired and reasons for any repair interval in excess of fifteen calendar days).
      - (e) Inspector's name and signature.
- (5) Reporting requirements.
- (a) Any test result that shows an exceedance of the limitation specified in paragraph (BB)(1)(a)(i), (BB)(1)(a)(ii), or (BB)(1)(b)(ii) of this rule shall be reported to the director within thirty days after the occurrence.
  - (b) Any leaks in vapor or liquid lines that are not repaired within fifteen days after identification shall be reported to the director within thirty days after the repair is completed.

- (c) For any petroleum dry cleaning facility that is exempted pursuant to paragraph (BB)(3)(b) of this rule and has an annual consumption of petroleum solvent greater than four thousand seven hundred gallons, the owner or operator shall so notify the director within thirty days of becoming aware of the occurrence.
- (CC) No owner or operator of a continuous, polystyrene resin manufacturing process may cause, allow, or permit the discharge into the ambient air of any VOC from the material recovery section of the process after the date specified in paragraph (C)(37) of rule 3745-21-04 of the Administrative Code in excess of 0.12 pound of VOC per one thousand pounds of polystyrene resin produced.
- (DD) Leaks from process units that produce organic chemicals.
- (1) Except where exempted under paragraph (DD)(17) of this rule, each owner or operator of a process unit that produces as an intermediate or final product one or more of the organic chemicals identified in appendix A to this rule shall comply with the requirements in paragraphs (DD)(2) to (DD)(6) of this rule no later than the date specified in paragraph (C)(38) of rule 3745-21-04 of the Administrative Code.
  - (2) Leak detection and repair program.
    - (a) A leak detection and repair program for equipment in the process unit shall be developed and implemented in accordance with the requirements specified in paragraphs (DD)(2)(b) to (DD)(2)(m) of this rule.
    - (b) Except as otherwise provided in paragraphs (DD)(2)(c) and (DD)(2)(d) of this rule, equipment shall be monitored for leaks in accordance with the method specified in paragraph (F) of rule 3745-21-10 of the Administrative Code, as follows:
      - (i) Any pump in light liquid service shall be monitored monthly.
      - (ii) Any valve in gas/vapor service or in light liquid service shall be monitored monthly, except that quarterly monitoring may be employed anytime after no leaks are detected during two consecutive months. The quarterly monitoring shall begin with the next calendar quarter following the two consecutive months of no detected leaks and shall be conducted in the first month of each calendar quarter. The quarterly monitoring may continue until a leak is detected, at which time monthly monitoring shall be employed again.

- (iii) Any of the following equipment shall be monitored within five calendar days after evidence of a leak or potential leak from the equipment by visual, audible, olfactory, or other detection method:
  - (a) Any pump in heavy liquid service;
  - (b) Any valve in heavy liquid service;
  - (c) Any pressure relief device in light liquid service or in heavy liquid service; and
  - (d) Any flange or other connector.
- (iv) Any equipment in which a leak is detected as described in paragraph (DD)(2)(g) of this rule shall be monitored within five working days after each attempt to repair, unless the owner or operator believes that the equipment was not successfully repaired.
- (c) For any valve in gas/vapor service or in light liquid service, an alternative monitoring schedule may be employed in lieu of the monitoring schedule specified in paragraph (DD)(2)(b)(ii) of this rule as follows:
  - (i) The valve is designated as difficult to monitor and is monitored each calendar year, provided the following conditions are met:
    - (a) Construction of the process unit commenced prior to May 9, 1986.
    - (b) The owner or operator of the valve demonstrates that the valve cannot be monitored without elevating the monitoring personnel more than six feet above a support surface.
    - (c) The owner or operator of the valve has a written plan that requires monitoring of the valve at least once per year.
  - (ii) The valve is designated as unsafe to monitor and is monitored as frequently as practical during safe to monitor times, provided the following conditions are met:
    - (a) The owner or operator of the valve demonstrates that the valve is unsafe to monitor because monitoring personnel would be exposed to an immediate danger as a consequence of monitoring on a monthly basis.
    - (b) The owner or operator of the valve adheres to a written plan that requires monitoring of the valve as frequently as practical during safe to monitor times.

- (iii) The valve is subject to an alternative monitoring schedule based on a skip period as specified in paragraph (DD)(12) of this rule.
- (d) Excluded from the monitoring requirements of paragraph (DD)(2)(b) of this rule are the following equipment:
  - (i) Any pump that has no externally actuated shaft penetrating the pump housing and that is designated for no detectable emissions as provided in paragraph (DD)(7) of this rule;
  - (ii) Any pump that is equipped with a dual mechanical seal which has a barrier fluid system and sensor that comply with the requirements specified in paragraph (DD)(8) of this rule;
  - (iii) Any pump that is equipped with a closed vent system capable of capturing and transporting any leakage from the pump seal to control equipment, provided the closed vent system and the control equipment comply with the requirements specified in paragraphs (DD)(9) and (DD)(10) of this rule;
  - (iv) Any valve that has no externally actuated stem penetrating the valve and that is designated for no detectable emissions as provided in paragraph (DD)(7) of this rule; and
  - (v) Any valve that is subject to the alternative monitoring standard for valves based on the percentage of valves leaking as provided in paragraph (DD)(13) of this rule.
- (e) Any pump in light liquid service shall be checked by visual inspection each calendar week for indications of liquids dripping from the pump seal, unless the pump is equipped with a closed vent system capable of transporting any leakage from the pump seal to control equipment, and the closed vent system and control equipment comply with the requirements specified in paragraphs (DD)(9) and (DD)(10) of this rule.
- (f) Any sensor employed pursuant to paragraph (DD)(2)(d)(ii) or (DD)(3)(b) of this rule shall be checked daily, unless the sensor is equipped with an audible alarm.
- (g) A leak is detected:
  - (i) When a concentration of ten thousand ppmv or greater is measured from a potential leak interface of any equipment that is monitored for leaks using the method in paragraph (F) of rule 3745-21-10 of the Administrative Code;

- (ii) When there is an indication of liquids dripping from the seal of a pump in light liquid service; or
  - (iii) When a sensor employed pursuant to paragraph (DD)(2)(d)(ii) or (DD)(3)(b) of this rule indicates failure of the seal system, the barrier fluid system, or both.
- (h) When a leak is detected as described in paragraph (DD)(2)(g) of this rule, the following procedures shall be followed:
- (i) A weatherproof and readily visible identification tag, marked with the equipment identification number, is immediately attached to the leaking equipment.
  - (ii) A record of the leak and any attempt to repair the leak is entered into the leak repair log kept pursuant to paragraph (DD)(2)(k) of this rule.
  - (iii) The identification tag attached to the leaking equipment, other than a valve that is monitored pursuant to paragraph (DD)(2)(b)(ii) of this rule, may be removed after the leaking equipment is repaired.
  - (iv) The identification tag attached to a leaking valve that is monitored pursuant to paragraph (DD)(2)(b)(ii) of this rule may be removed after the leaking valve is repaired, monitored for leaks for two consecutive months as specified in paragraph (DD)(2)(b)(ii) of this rule, and found to have no detected leaks during those two consecutive months.
- (i) When a leak is detected as described in paragraph (DD)(2)(g) of this rule, the leaking equipment shall be repaired as soon as practicable, but no later than fifteen calendar days after the leak is detected, except for a delay of repair as provided in paragraph (DD)(11) of this rule. Leaking equipment shall be deemed repaired if the maximum concentration measured pursuant to paragraph (DD)(2)(b)(iv) of this rule is less than ten thousand ppmv.
- (j) When a leak is detected as described in paragraph (DD)(2)(g) of this rule, a first attempt at repair shall be made no later than five calendar days after the leak is detected; and the first attempts at repair shall include, but are not limited to, the following best practices where practicable:
- (i) Tightening of bonnet bolts;
  - (ii) Replacement of bonnet bolts;
  - (iii) Tightening of packing gland nuts; and

(iv) Injection of lubricant into lubricated packing.

(k) When a leak is detected as described in paragraph (DD)(2)(g) of this rule, the following information shall be recorded in a leak repair log:

(i) The identification number of the leaking equipment and, for leaks based on monitoring, the identification numbers of the leak detection instrument and its operator;

(ii) The basis for the detection of the leak; for example, monitoring, visual inspection, or sensor;

(iii) The date on which the leak was detected and the date of each attempt to repair the leaking equipment;

(iv) The methods of repair applied in each attempt to repair the leaking equipment;

(v) One of the following entries within five working days after each attempt to repair the leaking equipment:

(a) "Not monitored," denoting the leaking equipment was presumed to still be leaking and it was not monitored; or

(b) If the leaking equipment was monitored with a leak detection instrument, the maximum concentration that was measured as follows:

(i) The actual reading in ppmv; or

(ii) "Below 10,000," denoting less than ten thousand ppmv; or

(iii) "Above 10,000," denoting not less than ten thousand ppmv;

(vi) If the leak is not repaired within fifteen calendar days after the date on which it was detected:

(a) "Repair delayed" and the reason for the delay;

(b) If repair is being delayed until the next process unit shutdown due to technical infeasibility of repair, the signature of the owner or operator whose decision it was that repair is technically infeasible without a process unit shutdown;

(c) The expected date of successful repair of the leak;

- (d) The number of valves in gas/vapor service or in light liquid service for which leaks were not repaired within fifteen calendar days after the date of leak detection;
  - (e) The number of compressors for which leaks were detected as described in paragraph (DD) of this rule;
  - (f) The number of compressors for which leaks were not repaired within fifteen calendar days after the date of leak detection; and
  - (g) The facts that explain each delay of repair allowed pursuant to paragraph (DD)(11) of this rule; and
- (vi) The dates of process unit shutdowns that occurred within the semiannual period.

(3) Compressors.

- (a) Except as otherwise provided in paragraphs (DD)(3)(c) to (DD)(3)(e) of this rule, any compressor in the process unit shall comply with the requirements specified in paragraph (DD)(3)(b) of this rule.
- (b) The compressor shall be equipped with a seal that has a barrier fluid system and sensor which comply with the requirements specified in paragraph (DD)(8) of this rule.
- (c) Excluded from the requirements of paragraph (DD)(3)(b) of this rule is any compressor that is designated for no detectable emissions as provided in paragraph (DD)(7) of this rule.
- (d) Excluded from the requirements of paragraph (DD)(3)(b) of this rule is any compressor that is equipped with a closed vent system capable of capturing and transporting any leakage from the compressor seal to control equipment, provided the closed vent system and the control equipment comply with the requirements specified in paragraphs (DD)(9) and (DD)(10) of this rule.
- (e) Excluded from the requirements of paragraph (DD)(3)(b) of this rule is any reciprocating compressor that meets the following conditions:
  - (i) The compressor was installed prior to May 9, 1986; and
  - (ii) The owner or operator of the compressor demonstrates to the satisfaction of the director that recasting the compressor distance piece or replacing the compressor are the only options available to bring the

compressor into compliance with the requirements of paragraph (DD)(3)(b) of this rule.

(4) Pressure relief devices in gas/vapor service.

- (a) Except as otherwise provided in paragraph (DD)(4)(e) of this rule, any pressure relief device in gas/vapor service in the process unit shall comply with the requirements specified in paragraphs (DD)(4)(b) to (DD)(4)(d) of this rule.
- (b) Except during pressure releases, the pressure relief device shall be operated with no detectable emissions, as indicated by an instrument reading of less than five hundred ppmv above background, as measured by the method specified in paragraph (F) of rule 3745-21-10 of the Administrative Code.
- (c) No later than five calendar days after a pressure release, the pressure relief device shall be tested to confirm the condition of no detectable emissions in accordance with the method specified in paragraph (F) of rule 3745-21-10 of the Administrative Code.
- (d) After each pressure release, the pressure relief device shall be returned to a condition of no detectable emissions as soon as practicable, but no later than five calendar days after the pressure release, except for a delay of repair as provided in paragraph (DD)(11) of this rule.
- (e) Excluded from the requirements of paragraphs (DD)(4)(b) to (DD)(4)(d) of this rule is any pressure relief device that is equipped with a closed vent system capable of capturing and transporting leakage through the pressure relief device to control equipment, provided the closed vent system and control equipment comply with the requirements specified in paragraphs (DD)(9) and (DD)(10) of this rule.

(5) Sampling connection system.

- (a) Except as otherwise provided in paragraph (DD)(5)(c) of this rule, any sampling connection system in the process unit shall comply with the requirements specified in paragraph (DD)(5)(b) of this rule.
- (b) The sampling connection system shall be equipped with a closed purge system or a closed vent system that meets one of the following requirements:
  - (i) The purged process fluid is returned directly to the process line with zero VOC emissions to the ambient air;

- (ii) The purged process fluid is collected and recycled with zero VOC emissions to the ambient air; or
- (iii) The closed purge system or closed vent system is designed and operated to capture and transport all the purged process fluid to control equipment that meet the requirements specified in paragraph (DD)(10) of this rule.

(c) Excluded from the requirements of paragraph (DD)(5)(b) of this rule is any sampling connection system that is an in-situ sampling system.

(6) Open-ended valves or lines.

- (a) Any open-ended valve or line in the process unit shall be equipped with a cap, blind flange, plug, or second valve and shall comply with the requirements specified in paragraphs (DD)(6)(b) to (DD)(6)(d) of this rule.
- (b) Except during operations requiring the flow of process fluid through the open-ended valve or line, the cap, blind flange, plug, or second valve shall seal the open end of the open-ended valve or line.
- (c) If equipped with a second valve, the open-ended valve or line shall be operated in a manner such that the valve on the process fluid end is closed before the second valve is closed.
- (d) If a double block and bleed system is being used, the bleed valve or line may remain open during operations that require venting the line between the block valves, but shall comply with paragraph (DD)(6)(b) of this rule at all other times.

(7) Equipment designated for no detectable emissions.

- (a) Any equipment (pump, valve, or compressor) designated for no detectable emissions pursuant to paragraph (DD)(2)(d)(i), (DD)(2)(d)(iv) or (DD)(3)(c) of this rule shall comply with the requirements specified in paragraphs (DD)(7)(b) to (DD)(7)(d) of this rule.
- (b) The equipment shall be operated with no detectable emissions as indicated by an instrument reading of less than five hundred ppmv above background as measured by paragraph (F) of rule 3745-21-10 of the Administrative Code.
- (c) The equipment shall be tested for compliance with paragraph (DD)(7)(b) of this rule initially upon designation and annually.

- (d) The designation of the equipment shall be signed by the owner or operator of the equipment in the log kept pursuant to paragraph (DD)(14)(b) of this rule.

(8) Barrier fluid systems and sensors for pumps and compressors.

- (a) When a pump or compressor is equipped with a seal that has a barrier fluid system and sensor which are employed to meet the requirements of paragraph (DD)(2)(d)(ii) or (DD)(3)(a) of this rule, the requirements of paragraphs (DD)(8)(b) to (DD)(8)(d) of this rule shall be met.

(b) The barrier fluid system shall meet one of the following conditions:

- (i) The barrier fluid system is operated with a barrier fluid at a pressure that is at all times greater than the stuffing box pressure of the pump or compressor.
  - (ii) The barrier fluid system is equipped with a barrier fluid degassing reservoir that is connected by a closed vent system to control equipment and the closed vent system and control equipment comply with the requirements specified in paragraphs (DD)(9) and (DD)(10) of this rule.
  - (iii) The barrier fluid system is equipped with a system that purges the barrier fluid into a process stream with zero VOC emissions to the ambient air.
- (c) The barrier fluid system shall be in heavy liquid service or shall not be in VOC service.
  - (d) The barrier fluid system shall be equipped with a sensor that will detect failure of the seal system, the barrier fluid system, or both based on criteria determined by the owner or operator from design considerations and operating experience.

(9) Closed vent systems.

- (a) Any closed vent system that is used to comply with the requirements of paragraph (DD)(2)(d)(iii), (DD)(3)(d), (DD)(4)(e), or (DD)(8)(b)(ii) of this rule shall comply with the requirements specified in paragraphs (DD)(9)(b) to (DD)(9)(d) of this rule.
- (b) The closed vent system shall be designed and operated with no detectable emissions, as indicated by an instrument reading of less than five hundred ppmv above background, as measured by the method specified in paragraph (F) of rule 3745-21-10 of the Administrative Code.

- (c) The closed vent system shall be tested for compliance with paragraph (DD)(9)(b) of this rule initially and annually.
- (d) The closed vent system shall be operated at all times when emissions may be vented to it.

(10) Control equipment.

- (a) Any control equipment that is used to comply with the requirements of paragraph (DD)(2)(d)(iii), (DD)(3)(d), (DD)(4)(e), (DD)(5)(b)(iii), (DD)(8)(b)(ii), or (DD)(11)(d)(ii) of this rule shall comply with the requirements specified in paragraphs (DD)(10)(b) to (DD)(10)(f) of this rule.
- (b) If the control equipment is a vapor recovery system, it shall be designed and operated to recover VOC emissions vented to it with an efficiency of at least ninety-five per cent by weight.
- (c) If the control equipment is an enclosed combustion device, it shall be designed and operated to reduce the VOC emissions vented to it with an efficiency of at least ninety-five per cent by weight, or to provide a minimum residence time of 0.75 second at a minimum temperature of fifteen hundred degrees Fahrenheit.
- (d) If the control equipment is a flare, it shall meet the following requirements:
  - (i) The flare shall be designed for and operated with no visible emissions as determined by USEPA method 22, except for periods not to exceed a total of five minutes during any one hundred twenty consecutive minutes.
  - (ii) The flare shall be operated with either an electric arc ignition system or a pilot flame. If a pilot flame is employed, the flame shall be present at all times and shall be monitored with a thermocouple or any other equivalent device to detect the presence of the pilot flame. If an electric arc ignition system is employed, the arcing shall pulse continually and shall be monitored to detect any failure.
  - (iii) The flare shall be steam-assisted, air-assisted or nonassisted.
  - (iv) The net heating value of the gas being combusted in the flare, as determined by the method specified in paragraph (P)(2) of rule 3745-21-10 of the Administrative Code, shall be three hundred Btu/scf or greater if the flare is steam-assisted or air-assisted, or shall be two hundred Btu/scf or greater if the flare is nonassisted.

(v) Except as provided in paragraph (DD)(10)(d)(vi) of this rule, the flare shall be designed and operated with an actual exit velocity, as determined by the method specified in paragraph (P)(3) of rule 3745-21-10 of the Administrative Code, less than sixty feet per second if the flare is steam-assisted or nonassisted, or less than the maximum permitted velocity, as determined in paragraph (P)(4) of rule 3745-21-10 of the Administrative Code, if the flare is air-assisted.

(vi) Excluded from the requirements of paragraph (DD)(10)(d)(v) of this rule is any steam-assisted or nonassisted flare that meets both of the following requirements:

(a) The net heating value of the gas being combusted in the flare, as determined by the method specified in paragraph (P)(2) of rule 3745-21-10 of the Administrative Code, shall be greater than one thousand Btu/scf.

(b) The flare shall be designed and operated with an actual exit velocity, as determined by the method specified in paragraph (P)(3) of rule 3745-21-10 of the Administrative Code, less than four hundred feet per second.

(e) The owner or operator of the control equipment shall monitor the control equipment to ensure that it is operated and maintained in conformance with its design.

(f) The control equipment shall be operated at all times when emissions may be vented to it.

(11) Delay of repair.

(a) A delay of repair that is employed pursuant to paragraph (DD)(2)(i) or (DD)(4)(d) of this rule shall be allowed only as provided in paragraphs (DD)(11)(b) to (DD)(11)(f) of this rule.

(b) A delay of repair shall be allowed if the repair is technically infeasible without a process unit shutdown. However, the repair shall occur before the end of the next process unit shutdown.

(c) A delay of repair shall be allowed for a piece of equipment that is isolated from the process and that does not remain in VOC service (for example, isolated from the process and properly purged).

(d) A delay of repair for a valve shall be allowed if:

- (i) The owner or operator of the valve demonstrates that the emission of purged material resulting from immediate repair is greater than the emission likely to result from delay of repair; and
    - (ii) When repair procedures are effected, the purged material is collected and destroyed or recovered in control equipment that meets the requirements specified in paragraph (DD)(10) of this rule.
  - (e) A delay of repair for a pump shall be allowed if:
    - (i) The repair requires the use of a dual mechanical seal system and associated barrier fluid system; and
    - (ii) The repair is completed as soon as practicable, but no later than six months after the leak was detected.
  - (f) A delay of repair beyond a process unit shutdown shall be allowed for a valve if a valve assembly replacement is necessary during the process unit shutdown, valve assembly supplies have been depleted, and valve assembly supplies had been sufficiently stocked before the supplies were depleted. A delay of repair beyond the next process unit shutdown shall not be allowed for that valve unless the next process unit shutdown occurs sooner than six months after the first process unit shutdown.
- (12) Alternative monitoring schedule for valves based on a skip period.
- (a) Any owner or operator of a process unit may elect to implement an alternative monitoring schedule in lieu of the monitoring requirements specified in paragraph (DD)(2)(b)(ii) of this rule, as provided in paragraph (DD)(2)(c)(iii) of this rule. The alternative monitoring schedule shall be based on skipping quarterly monitoring periods provided the percentage of valves leaking is no more than 2.0. Any owner or operator who elects to implement an alternative monitoring schedule shall comply with the requirements specified in paragraphs (DD)(12)(b) to (DD)(12)(h) of this rule.
  - (b) The owner or operator must notify the director prior to implementing this alternative monitoring schedule. Such notification must identify which valves will be subject to this alternative monitoring schedule and which work practice within paragraph (DD)(12)(e) of this rule will be implemented. Any valve in vacuum service, in heavy liquid service, or not in VOC service, shall be excluded from this alternative monitoring schedule.

- (c) Any valve subject to this alternative monitoring schedule shall comply initially with the monitoring requirements specified in paragraph (DD)(2)(b)(ii) of this rule.
  - (d) Any valve subject to this alternative monitoring schedule shall continue to be subject to the requirements specified in paragraphs (DD)(2)(g) to (DD)(2)(m) of this rule.
  - (e) One of the following two alternative work practices for skipping monitoring periods may be implemented:
    - (i) After two consecutive quarterly leak detection periods with the percentage of valves leaking equal to or less than 2.0, a monitoring program may begin in which the first quarter of every two consecutive quarterly leak detection periods is skipped.
    - (ii) After five consecutive quarterly leak detection periods with the percentage of valves leaking equal to or less than 2.0, a monitoring program may begin in which the first three quarters of every four consecutive quarterly periods is skipped.
  - (f) If the percentage of valves leaking is greater than 2.0, the owner or operator shall comply with the monitoring requirements as specified in paragraph (DD)(2)(b)(ii) of this rule, but may again elect to use this alternative monitoring schedule.
  - (g) The percentage of valves leaking shall be determined for the valves subject to this alternative monitoring schedule as the sum of the number of those valves found leaking during any portion of the current monitoring period and the number of those valves found leaking during a previous monitoring period for which repair has been delayed during the current monitoring period, divided by the total number of valves, and multiplied by one hundred.
  - (h) The following information pertaining to valves subject to this alternative monitoring schedule shall be recorded in a log that is kept in a readily accessible location:
    - (i) A schedule of monitoring; and
    - (ii) The percentage of valves leaking during each monitoring period.
- (13) Alternative monitoring standard for valves based on the allowable percentage of valves leaking.

- (a) Any owner or operator of a process unit may elect to implement an alternative monitoring standard in lieu of the monitoring requirements specified in paragraph (DD)(2)(b)(ii) of this rule, as provided in paragraph (DD)(2)(d)(v) of this rule. The alternative monitoring standard shall be based on maintaining the percentage of valves leaking at 2.0 or less. Any owner or operator who elects to implement an alternative monitoring standard shall comply with the requirements specified in paragraphs (DD)(13)(b) to (DD)(13)(g) of this rule.
- (b) The owner or operator must notify the director prior to implementing this alternative monitoring standard.
- (c) All valves in gas/vapor service or in light liquid service in the process unit shall be subject to this alternative monitoring standard, except for those valves which are designated as unsafe to monitor as provided in paragraph (DD)(2)(c)(ii) of this rule, those valves not in VOC service, and those valves in vacuum service.
- (d) The percentage of valves leaking, as determined in accordance with paragraph (DD)(13)(f) of this rule, shall not exceed 2.0. If the percentage of valves leaking is greater than 2.0, the owner or operator shall comply with the monitoring requirements as specified in paragraph (DD)(2)(b)(ii) of this rule, but may again elect to use this alternative monitoring standard.
- (e) All valves subject to this alternative monitoring standard shall be tested for compliance with paragraph (DD)(13)(d) of this rule initially upon implementation and annually.
- (f) A compliance test shall be conducted in the following manner:
  - (i) All valves subject to this alternative monitoring standard shall be monitored for leaks within a one-week period by the method specified in paragraph (F) of rule 3745-21-10 of the Administrative Code.
  - (ii) If an instrument reading of ten thousand ppmv or greater is measured, a leak is detected.
  - (iii) The percentage of valves leaking shall be determined as the number of valves for which a leak is detected, divided by the number of valves monitored, and multiplied by one hundred.
- (g) When a leak is detected as described in paragraph (DD)(13)(f)(ii) of this rule, the leaking valve shall be repaired in accordance with paragraphs (DD)(2)(h) and (DD)(2)(i) of this rule.

(14) Recordkeeping.

- (a) Each owner or operator of a process unit as described in paragraph (DD)(1) of this rule shall comply with the recordkeeping requirements of paragraphs (DD)(14)(b) to (DD)(14)(g) of this rule. An owner or operator of more than one process unit may use one recordkeeping system to comply with the recordkeeping requirements, provided the system identifies each record by each process unit.
- (b) The following information shall be recorded in a log that is kept in a readily accessible location:
  - (i) A list of identification numbers for equipment subject to the requirements of paragraphs (DD)(2) to (DD)(10) of this rule;
  - (ii) A list of identification numbers for equipment designated for no detectable emissions as provided in paragraph (DD)(7) of this rule, and a signature of the owner or operator authorizing such designation;
  - (iii) A list of identification numbers for pressure relief devices subject to paragraph (DD)(4) of this rule;
  - (iv) A list of identification numbers for closed vent systems subject to paragraph (DD)(9) of this rule; and
  - (v) For compliance tests required under paragraphs (DD)(4)(c), (DD)(7)(c), and (DD)(9)(c) of this rule:
    - (a) The date of each compliance test;
    - (b) The background level measured during each compliance test; and
    - (c) The maximum instrument reading measured at the equipment during each compliance test.
- (c) The following information pertaining to valves subject to an alternative monitoring schedule, as provided in paragraph (DD)(2)(c) of this rule, shall be recorded in a log that is kept in a readily accessible location:
  - (i) A list of identification numbers for valves designated as unsafe to monitor, an explanation for each valve stating why the valve is unsafe to monitor, and the plan for monitoring each valve;
  - (ii) A list of identification numbers for valves designated as difficult to monitor, an explanation for each valve stating why the valve is difficult to monitor, and the schedule for monitoring each valve; and

- (iii) A list of identification numbers for valves subject to the alternative monitoring schedule based on a skip period, a schedule for monitoring, and the percentage of valves leaking during each monitoring period.
- (d) The following information pertaining to closed vent systems and control equipment described in paragraphs (DD)(9) and (DD)(10) of this rule shall be recorded and kept in a readily accessible location:
- (i) Detailed schematics, design specifications, and piping and instrumentation diagrams;
  - (ii) The dates and descriptions of any changes in the design specifications;
  - (iii) A description of the parameter or parameters monitored, as required in paragraph (DD)(10)(d) of this rule, to ensure that the control equipment is operated and maintained in conformance with its design, and an explanation of the reason for selecting such parameter or parameters;
  - (iv) Periods when the closed vent systems and control equipment are not operated as designed, including periods when a flare pilot light does not have a flame; and
  - (v) Dates of startups and shutdowns of the closed vent systems and control equipment.
- (e) The following information pertaining to barrier fluid systems and sensors described in paragraph (DD)(8) of this rule shall be recorded in a log that is kept in a readily accessible location:
- (i) A list of identification numbers of pumps and compressors equipped with such barrier fluid systems and sensors;
  - (ii) The criteria that indicate failure of the seal system, the barrier fluid system, or both, as required in paragraph (DD)(8)(d) of this rule and an explanation of the criteria; and
  - (iii) Any changes to such criteria and the reasons for the changes.
- (f) The following information for use in determining an exemption for the process unit as provided in paragraph (DD)(17)(a) of this rule shall be recorded in a log that is kept in a readily accessible location:
- (i) An analysis demonstrating the design capacity of the process unit;

- (ii) A statement listing the feed and raw materials and products from the process unit and an analysis demonstrating whether these chemicals are heavy liquids or beverage alcohols; or
  - (iii) An analysis demonstrating that no equipment is in VOC service.
- (g) The following information pertaining to specific equipment that are exempt as provided in paragraph (DD)(17)(b) of this rule shall be recorded in a log that is kept in a readily accessible location:
- (i) A list of identification numbers of equipment in vacuum service;
  - (ii) A list of identification numbers of equipment not in VOC service and the information or data used to demonstrate that the equipment is not in VOC service; and
  - (iii) A list of equipment subject to an equivalent emission requirement that is approved by the director pursuant to paragraph (DD)(16) of this rule.

(15) Reporting.

- (a) Each owner or operator of a process unit as described in paragraph (DD)(1) of this rule shall comply with the reporting requirements specified in paragraphs (DD)(15)(b) to (DD)(15)(d) of this rule.
- (b) For compliance tests required under paragraphs (DD)(7)(c) and (DD)(9)(c) of this rule, the requirements of paragraphs (A)(3) and (A)(4) of rule 3745-21-10 of the Administrative Code (pertaining to notification of intent to test) shall be met. The results of such compliance tests shall be reported to the appropriate Ohio EPA district office or local air agency within thirty days after the test date.
- (c) The results of compliance tests required under paragraph (DD)(4)(c) of this rule shall be reported semiannually to the appropriate Ohio EPA district office or local air agency. The semiannual reports shall be submitted by the first day of February and August and shall include information for the preceding semiannual period.
- (d) Any semiannual reports required under paragraph (DD)(2)(m) of this rule may be sent to the appropriate Ohio EPA district office or local air agency.

(16) Equivalent requirement.

- (a) Any owner or operator of a process unit may apply to the director for determination of an equivalent requirement in lieu of the requirements specified in paragraphs (DD)(2) to (DD)(10) of this rule. The determination

of equivalence will be evaluated by the guidelines specified in paragraphs (DD)(16)(b) to (DD)(16)(d) of this rule. If the director approves an equivalent requirement for a process unit, said requirement shall be specified in the special terms and conditions of an operating permit or variance issued by the director for the process unit.

- (b) The owner or operator applying for a determination of equivalency shall be responsible for collecting and verifying test data to demonstrate the proposed equivalence.
- (c) The equivalent requirement shall achieve a reduction in emissions of VOC at least equivalent to the reduction in emissions of VOC that would be achieved by compliance with the applicable requirements of paragraph (DD) of this rule.
- (d) The director may condition the approval of equivalence as necessary to ensure the same emission reduction as the applicable requirements of paragraph (DD) of this rule.

(17) Exemptions.

- (a) Exempted from the requirements of paragraphs (DD)(2) to (DD)(6) of this rule are the following process units:
  - (i) Any process unit that has a design capacity to produce less than one thousand one hundred tons per year;
  - (ii) Any process unit that produces only heavy liquid chemicals from heavy liquid feed or raw materials;
  - (iii) Any process unit that produces beverage alcohol;
  - (iv) Any process unit that has no equipment in VOC service as determined in accordance with paragraph (O)(2) of rule 3745-21-10 of the Administrative Code; and
  - (v) Any process unit at a petroleum refinery, as defined in paragraph (E)(15) of rule 3745-21-01 of the Administrative Code.
- (b) Exempted from the requirements of paragraphs (DD)(2) to (DD)(6) of this rule are the following equipment:
  - (i) Any equipment not in VOC service, as determined in accordance with paragraph (O)(2) of rule 3745-21-10 of the Administrative Code;
  - (ii) Any equipment in vacuum service; and

(iii) Any equipment subject to an equivalent emission limitation as provided in paragraph (DD)(16) of this rule.

(EE) Air oxidation processes that produce organic chemicals.

(1) Except where exempted under paragraph (EE)(2) of this rule, no owner or operator of an air oxidation process that produces an organic chemical identified in appendix A to this rule may cause, allow or permit the discharge into the ambient air of VOC from any process vent stream after the date specified in paragraph (C)(39) of rule 3745-21-04 of the Administrative Code unless the process vent stream is vented to a combustion device that is designed and operated either:

- (a) To reduce the VOC emissions vented to it with an efficiency of at least ninety-eight per cent by weight; or
- (b) To emit VOC at a concentration less than twenty parts per million by volume, dry basis.

(2) Exemptions.

(a) Any process vent stream which is vented to a combustion device for which construction commenced prior to May 9, 1986, shall be exempt from the requirements of paragraph (EE)(1) of this rule, provided the combustion device is operated and maintained in accordance with design specifications and good engineering practices. This exemption shall terminate for such process vent stream if the combustion device is replaced with new control equipment for which construction commenced on or after May 9, 1986.

(b) Any process vent stream or combination of process vent streams which has a total resource effectiveness value greater than 1.0 shall be exempt from the requirements of paragraph (EE)(1) of this rule. If an air oxidation process has more than one process vent stream, the total resource effectiveness shall be based upon a combination of the process vent streams.

(3) Total resource effectiveness value.

(a) The total resource effectiveness value for an air oxidation process shall be calculated in accordance with the following equations:

(i) For nonchlorinated process vent streams with a net heating value less than or equal to 3.6 and for all chlorinated process vent streams:

$$\text{TRE} = \frac{[a + bW^{.88} + cW + dWH + eW^{.88}H^{.88} + fW^5]}{E}$$

where,

TRE = total resource effectiveness value;

E = maximum hourly VOC emission rate at the vent stream design flowrate (W), in kilograms of VOC per hour (kg/hr);

W = vent stream design flowrate at a standard temperature of twenty degrees Celsius, in standard cubic meters per minute (scm/min);

H = vent stream net heating value, as determined in accordance with paragraph (P)(2) of rule 3745-21-10 of the Administrative Code; in mega joules per standard cubic meter ( $10^6$ J/scm); and a, b, c, d, e, and f = applicable coefficients from appendix B to this rule.

- (ii) For nonchlorinated process vent streams with a net heating value greater than 3.6:

$$\text{TRE} = \frac{[a + bW^{.88} + cW + dWH + eW^{.88}H^{.88} + f(WH/3.6)^5]}{E}$$

where TRE, E, W, H, a, b, c, d, e and f are defined as in paragraph (EE)(3)(a)(i) of this rule.

- (b) The parameters used in the total resource effectiveness equations shall be measured at the outlet(s) of the final product recovery device(s) where VOC is reclaimed for beneficial reuse (recycle, sale or use in another part of the process).
- (4) The exhaust gases from any combustion device installed to meet the requirements of paragraph (EE)(1) of this rule for a process vent stream containing chlorinated VOC shall be controlled by a scrubber which is designed and operated to remove at least ninety-nine per cent, by weight, of the hydrogen chloride formed during combustion, unless the owner or operator of the air oxidation process demonstrates to the satisfaction of the director that a lesser control efficiency limitation is warranted based upon good engineering practices.
- (FF) "The Steelcraft Manufacturing Company" or any subsequent owner or operator of "The Steelcraft Manufacturing Company" facility located at 9017 Blue Ash road,

Cincinnati, Ohio shall comply with the following requirements by no later than the dates specified in paragraph (C)(40) of rule 3745-21-04 of the Administrative Code:

- (1) The VOC content of the adhesive coatings employed in the adhesive coating line for steel door panels and in the adhesive coating line for honeycomb paper shall not exceed 0.7 pound of VOC per gallon of adhesive coating, excluding water and exempt solvents.
  - (2) The uncontrolled VOC emissions from the steel door wipe cleaning operation shall be reduced and maintained below fourteen tons per year. The owner or operator shall keep monthly records which document the quantity and composition of the solvents used in the door wiping operation. These records shall be maintained at the facility for a period of three years. The owner or operator shall notify the director of any annual VOC emission rate that exceeds fourteen tons per year. A copy of the record showing the exceedance shall be submitted to the director within thirty days after the exceedance occurs.
- (GG) "Chevron U.S.A., Inc." or any subsequent owner or operator of the "Chevron U.S.A., Inc." barge loading facility located at state route 128 and U.S. route 50 in Hamilton county, Ohio shall not cause, allow or permit the transfer of gasoline at the barge loading facility after the date specified in paragraph (C)(41) of rule 3745-21-04 of the Administrative Code unless all of the following requirements are met:
- (1) The loading rack is equipped with a vapor collection system whereby during the transfer of gasoline to any barge, all vapors displaced from the barge during loading are vented only to a vapor collection system.
  - (2) The loading rack is equipped with a vapor control system whereby:
    - (a) All vapors collected by the vapor collection system are vented to the vapor control system;
    - (b) The mass emissions of VOC from the vapor control system do not exceed 0.29 pound of VOC per thousand gallons (thirty-five milligrams of VOC per liter) of gasoline loaded into the barge, as determined under paragraph (C) of rule 3745-21-10 of the Administrative Code; and
    - (c) Any liquid gasoline returned to a stationary storage tank from the vapor control system is free of entrained air to the extent possible with good engineering design.
  - (3) A means is provided to prevent drainage of gasoline from the loading device when it is not in use or to accomplish complete drainage before the loading device is disconnected.

- (4) All gasoline loading lines and vapor lines are equipped with fittings which are vapor tight.
- (5) Any leak from the vapor collection system and vapor control system which is equal to or greater than one hundred per cent of the lower explosive limit as propane, as determined under paragraph (K) of rule 3745-21-10 of the Administrative Code, is repaired within fifteen days of detection.
- (6) A leak inspection of the vapor collection system and vapor control system shall be performed on a quarterly basis in accordance with paragraph (K) of rule 3745-21-10 of the Administrative Code. The following information for each leak inspection shall be maintained at the facility for a period of three years:
- (a) The date of each leak inspection;
  - (b) A description of the findings, including, but not limited to a description of the location, nature, and severity of each leak;
  - (c) The leak determination method;
  - (d) A description of the corrective action taken, including the date each leak was repaired; and
  - (e) The inspector's name and signature.

(HH) Surface coating of automotive/transportation and business machine plastic parts.

- (1) Except as otherwise provided in paragraph (B)(6) of this rule, no owner or operator of a coating line for automotive/transportation plastic parts may cause, allow or permit the discharge into the ambient air of any VOCs after the date specified in paragraph (C)(42) of rule 3745-21-04 of the Administrative Code in excess of the VOC-content limitations specified in table 1. If a control system is employed for the coating line, the applicable limitation expressed in terms of pounds of VOC per gallon of solids shall be met by the owner or operator.

-Table 1: VOC limitations for coatings used for automotive/transportation plastic parts.-

Type of coating	VOC content limitation (in pounds of VOC per gallon of coating, excluding water and exempt solvents, as applied)	VOC content limitation (in pounds of VOC per gallon of solids, as applied, for a coating system that employs a control system)
(1) Auto interiors		
(a) High bake colorcoat	4.1	9.3
(b) High bake primer	3.8	7.9
(c) Low bake colorcoat	3.2	5.7
(d) Low bake primer	3.5	6.7

(2) Auto exteriors (flexible and nonflexible)		
(a) High bake		
(i) Colorcoat	4.6	12.3
(ii) Clearcoat	4.3	10.3
(iii) Primer-flexible	5.0	15.6
(iv) Primer-nonflexible	4.5	11.6
(b) Low bake		
(i) Primer	5.5	21.7
(ii) Colorcoat red and black	5.6	23.4
(iii) Colorcoat others	5.1	16.6
(iv) Clearcoat	4.5	11.6
(3) Auto specialty		
(a) Vacuum metallizing basecoats and texture basecoats	5.5	21.7
(b) Black coatings, reflective argent coatings, air bag cover coatings, and soft coatings	5.9	29.8
(c) Gloss reducers, vacuum metallizing topcoats, and texture topcoats	6.4	49.2
(d) Stencil coatings, adhesion primers, ink pad coatings, electrostatic prep coatings, and resist coatings	6.8	89.5
(e) Headlamp lens coatings	7.4	(not applicable)

(2) Except as otherwise provided in paragraph (B)(6) of this rule, no owner or operator of a coating line for business machine plastic parts may cause, allow or permit the discharge into the ambient air of any VOCs after the date specified in paragraph (C)(42) of rule 3745-21-04 of the Administrative Code in excess of the VOC content limitations specified in table 2. If a control system is employed for the coating line, the applicable limitation expressed in terms of pounds of VOC per gallon of solids shall be met by the owner or operator.

-Table 2: VOC limitations for coatings used for business machine plastic parts.-

Type of coating	VOC content limitation (in pounds of VOC per gallon of coating, excluding water and exempt solvents)	VOC content limitation (in pounds of VOC per gallon of solids, for a coating line that employs a control system)
(1) Primer	1.2	1.4
(2) Colorcoat (non-texture)	2.3	3.3

coat)		
(3) Colorcoat (texture coat)	2.3	3.3
(4) Electromagnetic interference/radio frequency interference (EMI/RFI) shielding coatings	4.0	8.8
(5) Specialty coatings		
(a) Soft coatings	4.3	10.3
(b) Plating resist	5.9	29.8
(c) Plating sensitizer	7.1	202.9

(II) "International Paper Company" or any subsequent owner or operator of the "International Paper Company" facility located at 100 Progress place, Springdale, Ohio shall comply, by March 31, 1993, with the following requirements:

- (1) The VOC contents of the coatings employed in any sheet-fed offset lithographic printing press shall not exceed the following limitations:
  - (a) 2.8 pounds of VOC per gallon of coating, excluding water and exempt solvents, for any varnish coating;
  - (b) 3.0 pounds of VOC per gallon of coating, excluding water and exempt solvents, for any aqueous coating;
  - (c) 1.2 pounds of VOC per gallon of coating, excluding water and exempt solvents, for any ink, excluding any metallic ink; and
  - (d) 2.5 pounds of VOC per gallon of coating, excluding water and exempt solvents, for any metallic ink.
- (2) The fountain solution employed in any sheet-fed offset lithographic printing press shall be refrigerated at each cooling unit to a temperature not to exceed sixty degrees Fahrenheit and shall have a VOC content not greater than 8.5 per cent VOC (alcohol) by volume at each cooling unit. The owner or operator shall measure the temperature and VOC content, in per cent by volume, of the fountain solution in each cooling unit on a daily basis, and shall maintain records of the results of the measurements at the facility for a period of three years. The VOC content of the fountain solution shall be measured using a hydrometer.
- (3) The total VOC emissions from the metallic inks employed in all sheet-fed offset lithographic printing presses shall not exceed 0.258 ton during any calendar month and 2.32 tons during any period of twelve consecutive months. The owner or operator shall calculate the calendar month and rolling twelve-month VOC emissions from the metallic inks employed in all of the sheet-fed offset

lithographic printing presses and shall maintain records of the results of the calculations at the facility for a period of three years.

- (4) The owner or operator shall notify the director of any temperature measurement of the fountain solution that exceeds sixty degrees Fahrenheit, any VOC content measurement of the fountain solution that exceeds 8.5 per cent, by volume, and any monthly and rolling twelve-month VOC emission from the use of metallic inks that exceeds 0.258 ton and 2.32 tons, respectively. A copy of the record showing the exceedance shall be submitted to the director within forty-five days after the exceedance occurs.
- (JJ) "The Goodyear Tire and Rubber Company" or any subsequent owner or operator of "The Goodyear Tire and Rubber Company" facility located at 1376 Tech Way drive, Akron, Ohio shall comply, on and after May 25, 1988, with the following requirements:
- (1) The VOC emissions from the nitrile-butadiene rubber production operation shall be controlled by employing a continuous steam stripper following the degassing vessels to maximize the removal of residual monomers (acrylonitrile and butadiene). The continuous steam stripper shall be designed and operated to achieve a residual monomer content, as determined by "Goodyear Method E-826," of not greater than nine hundred parts per million by weight (total acrylonitrile and butadiene) in the polymer (rubber) blend tanks immediately following the stripper, and all exhaust gases from the stripper shall be vented to the butadiene recovery operation or to a flare system which complies with the requirements of paragraph (DD)(10)(d) of this rule. The owner or operator shall perform daily analyses of the residual monomer content in the polymer blend tanks and shall maintain records of the results of the analyses at the facility for a period of three years. An alternative method and/or procedure to that in "Goodyear Method E-826" may be used to demonstrate compliance with the above limitation provided that such method or procedure is in accordance with good engineering practice, authorized in writing by the director, and approved by the U.S. environmental protection agency as a revision to the state implementation plan. The owner or operator shall notify the director of any residual monomer content that exceeds nine hundred parts per million by weight. A copy of the record showing the exceedance shall be submitted to the director within forty-five days after the exceedance occurs.
  - (2) The VOC emissions from the butadiene recovery operation shall be vented to a flare system which complies with the requirements of paragraph (DD)(10)(d) of this rule.
- (KK) "Morton Thiokol, Inc." or any subsequent owner or operator of the "Morton Thiokol, Inc." facility located at 2000 West street, Cincinnati, Ohio shall comply, on and after May 25, 1988, with the following requirements for VOC emissions from the production of methyltin intermediates:

- (1) Each process used for the production of methyltin intermediates shall be equipped with a VOC recovery system which is designed and operated to achieve a control efficiency of at least seventy per cent, by weight, as a weekly average for the seven-day period from Monday through Sunday, for the VOC emissions in the process vent gas, as determined under paragraph (C) of rule 3745-21-10 of the Administrative Code. The owner or operator shall on a daily basis determine the amount of VOC vented to the VOC vapor recovery system from the processes and the amount of VOC recovered. The overall recovery efficiency shall be calculated each week as the ratio of the total recovered VOC for the seven-day period from Monday through Sunday to the total VOC vented to the VOC recovery system for the same seven-day period. The ratio shall be expressed as a percentage. The ratio shall be calculated not later than the Monday following each seven-day period, and the owner or operator shall maintain records of the calculations at the facility for a period of three years. The owner or operator shall notify the director of any weekly average control efficiency that is less than seventy per cent, by weight. A copy of the record showing the noncomplying weekly average control efficiency shall be submitted to the director within thirty days of the occurrence.
  - (2) The railcar unloading operation shall be a closed-loop system that uses compressed VOC from storage, rather than nitrogen, to unload the VOC in the railcar.
- (LL) "The Lubrizol Corporation" or any subsequent owner or operator of "The Lubrizol Corporation" facility located at 155 Freedom road, Painesville, Ohio shall comply with the following requirements for VOC emissions from reactor processes no later than the date specified in paragraph (C)(46) of rule 3745-21-04 of the Administrative Code:
- (1) Except where exempted under paragraph (LL)(3) of this rule, any reactor process vent stream shall be vented to one of the following control equipment:
    - (a) The control equipment is an enclosed combustion device that is designed and operated:
      - (i) To reduce the VOC emissions vented to it with an efficiency of at least ninety-eight per cent by weight or to emit VOC at a concentration not exceeding twenty parts per million by volume (dry basis), either of which is determined under paragraph (C) of rule 3745-21-10 of the Administrative Code; or
      - (ii) To provide a minimum residence time of 0.75 second at a minimum temperature of sixteen hundred degrees Fahrenheit.

- (b) The control equipment is a flare that meets the requirements of paragraph (DD)(10)(d) of this rule.
- (2) Any process wastewater stream from a reactor process shall be discharged to a wastewater separator that has all separator sections equipped with covers and seals which minimize the amount of VOC exposed to the ambient air.
  - (3) Exempted from the requirements of paragraph (LL)(1) of this rule are the following reactor process vent streams:
    - (a) The reactor process vent stream is not vented to an enclosed combustion device or flare and has a VOC emission rate less than five tons per year. If the reactor process has more than one of these reactor process vent streams, the VOC emission rate shall be based upon a combination of such reactor process vent streams. In such cases, the owner or operator shall calculate the calendar month and rolling twelve-month VOC emissions from the reactor process vent streams and maintain records of the results of the calculations at the facility for a period of three years. The owner or operator shall notify the director of any rolling twelve-month VOC emission calculation that exceeds five tons. A copy of the record showing the exceedance shall be submitted to the director within thirty days after the exceedance occurs.
    - (b) The reactor process vent stream is vented to an enclosed combustion device or a flare for which construction commenced prior to May 25, 1988, provided the enclosed combustion device or flare is operated and maintained in accordance with design specifications. This exemption shall terminate for such reactor process vent stream if the enclosed combustion device or flare is replaced with new control equipment for which construction commenced on or after May 25, 1988.
    - (c) The reactor process vent stream is an air bearing vent stream which has a VOC concentration between the lower explosive limit and the upper explosive limit and which has a total resource effectiveness value greater than 1.0, as determined under paragraph (EE)(3) of this rule. If the reactor process has more than one of these air bearing process vent streams, the total resource effectiveness value shall be based upon a combination of such reactor process vent streams.
- (MM) "PPG Industries, Inc." or any subsequent owner or operator of the "PPG Industries, Inc." facility located at 3800 West 143rd street, Cleveland, Ohio shall comply, on and after May 25, 1988, with the following requirements for the VOC emissions from the paint manufacturing operations and associated paint laboratory operations:
- (1) The paint manufacturing operations shall include the following equipment for the processing or use of solvent based or waterbased paint materials: mixing tanks for paint liquids and pigments, grinding mills, paint thinning and tinting tanks,

paint filling equipment for shipping containers, cleaning equipment for paint processing equipment, and recovery equipment for the cleaning solvents. The paint laboratory operations shall include the following equipment for the processing or use of solvent based or waterbased paint materials: paint spray booths and associated ovens within the paint manufacturing quality control laboratory and the paint research laboratory.

- (2) Except as otherwise provided in paragraph (MM)(4) of this rule, the VOC emissions from the equipment included within the paint manufacturing operations shall be vented either directly or by means of a building or local area exhaust to a control system which shall maintain compliance with any of the following requirements:
  - (a) A minimum control efficiency of 98.0 per cent by weight for the VOC emissions;
  - (b) A maximum outlet VOC concentration of twenty parts per million by volume (dry basis); or
  - (c) A minimum incineration temperature of one thousand five hundred degrees Fahrenheit.
- (3) Except as otherwise provided in paragraph (MM)(4) of this rule, the VOC emissions from the equipment included within the paint laboratory operations shall be vented to a control system which shall maintain compliance with a minimum control efficiency of ninety per cent by weight for the VOC emissions or a maximum outlet VOC concentration of twenty parts per million by volume (dry basis).
- (4) The requirements of paragraphs (MM)(2) and (MM)(3) of this rule shall not apply to any specific piece of equipment included within the paint manufacturing operations or the paint laboratory operations during each of the following situations:
  - (a) During any period in which there is no production activity or laboratory activity at said equipment; and
  - (b) During the processing or use of a waterbased paint material in said equipment, provided the following three conditions are met:
    - (i) The equipment is dedicated solely to the production of waterbased paint materials;
    - (ii) The VOC content of the waterbased paint material is less than or equal to 12.0 per cent VOC by weight, as determined under paragraph (B) of rule 3745-21-10 of the Administrative Code; and

- (iii) Any VOC emissions from the processing or use of the waterbased paint material that are not vented to the control systems specified in paragraphs (MM)(2) and (MM)(3) of this rule are included (accounted for) in a permit-to-install issued by the director after August 22, 1990 pursuant to Chapter 3745-31 of the Administrative Code.
  - (5) The VOC control efficiency or outlet VOC concentrations shall be determined in accordance with paragraph (C) of rule 3745-21-10 of the Administrative Code.
  - (6) For a control system identified in paragraph (MM)(2) or (MM)(3) of this rule that employs incineration, the incineration temperature shall be determined by means of a continuous measurement and recording of such temperature.
  - (7) Any mixing or blending tank containing a paint material shall be equipped with a cover or lid that completely covers the opening of the tank, except for an opening no larger than necessary to allow for safe clearance for the mixer's shaft. Such tank shall be covered at all times in which the tank contains a paint material except when operator access is necessary to add ingredients or take samples.
  - (8) For any specific piece of equipment included within the paint manufacturing operations or the paint laboratory operations, for which the owner or operator claims an exemption from the requirements of paragraphs (MM)(2) and (MM)(3) of this rule, pursuant to paragraph (MM)(4) of this rule, the owner or operator shall keep daily records of the following information:
    - (a) The periods of time during which there is no production activity or laboratory activity; and
    - (b) The VOC content of the waterbased paint material (in per cent VOC, by weight), and, if applicable, the application number for the permit to install which authorizes the use of the waterbased paint materials.
  - (9) The owner or operator shall maintain the records required by paragraphs (MM)(6) and (MM)(8) of this rule at the facility for a period of three years.
- (NN) "Von Roll USA, Inc." or any subsequent owner or operator of the "Von Roll USA, Inc." facility located at 4853 West 130th street, Cleveland, Ohio shall not cause, allow or permit the discharge into the ambient air of any VOC from any mica coating or laminating line after the date specified in paragraph (C)(48) of rule 3745-21-04 of the Administrative Code unless the following requirements are met:
- (1) Except as provided in paragraph (NN)(2) of this rule, each mica coating or laminating line shall be equipped with a VOC emission control system that is designed and operated to achieve a capture efficiency of one hundred per cent

and a control destruction efficiency of at least ninety-five per cent, by weight, for all the VOC emissions from the mica coating or laminating line. To meet the one hundred per cent capture efficiency requirement, each mica coating or laminating line shall employ a permanent total enclosure that complies with the requirements of USEPA method 204 and the requirements of paragraph (NN)(3) of this rule. For the VOC control device, the VOC control (destruction) efficiency shall be determined in accordance with paragraph (C) of rule 3745-21-10 of the Administrative Code.

- (2) The requirements of paragraph (NN)(1) of this rule shall not apply to any mica coating or laminating line which employs less than five tons of VOC per year. In such case, the owner or operator shall keep monthly records that document the VOC emissions from the mica coating or laminating line. These records shall be maintained at the facility for a period of three years. The owner or operator shall notify the director of any annual VOC emission rate that equals or exceeds five tons per year. A copy of the record showing the exceedance shall be submitted to the director within thirty days after the exceedance occurs.
  - (3) Each permanent total enclosure shall be maintained under negative pressure at a minimum differential pressure of 0.007 inch of water, as a three-hour average, at all times when the mica coating or laminating line is in operation.
  - (4) Monitoring devices and a recorder shall be employed to simultaneously and continuously measure and record the pressure inside and outside each permanent total enclosure. The monitoring and recording devices shall be calibrated, operated and maintained in accordance with the manufacturer's recommendations, with any modifications deemed necessary by the permittee.
  - (5) The owner or operator shall submit quarterly, deviation (excursion) reports that identify all three-hour blocks of time during which each permanent total enclosure was not maintained at the minimum pressure differential of 0.007 inch of water, as a three-hour average.
- (OO) "Armco Steel Company, L.P." or any subsequent owner or operator of the "Armco Steel Company, L.P. facility at 1801 Crawford street, Middletown, Ohio shall comply, on and after May 25, 1988, with the following VOC content limitations for the metal coil treatment operations, as determined under paragraph (B) of rule 3745-21-10 of the Administrative Code:
- (1) The VOC content of any rolling oil employed in the temper mills shall not exceed 6.9 pounds of VOC per gallon of oil, excluding water and exempt solvents.
  - (2) The VOC content of any rust preventive oil employed in the temper mills, shears, corrective rewinds, slitters, coating lines, and the pickle lines shall not exceed 3.3 pounds of VOC per gallon of oil, excluding water and exempt solvents.

- (3) The VOC content of any anti-galling material employed in the aluminum coating operation shall not exceed 1.2 pounds of VOC per gallon of material, excluding water and exempt solvents.
  - (4) The VOC content of any prelube oil employed at the facility shall not exceed 0.8 pound of VOC per gallon of oil, excluding water and exempt solvents.
- (PP) "Formica Corporation" or any subsequent owner or operator of the "Formica Corporation" facility located at 10155 Reading road, Cincinnati, Ohio shall comply, on and after May 25, 1988, with the following requirements for the VOC emissions from each paper treater:
- (1) The VOC content of any coating employed in the paper treater shall not exceed 0.9 pound of VOC per gallon of coating, excluding water and exempt solvents, as determined under paragraph (B) of rule 3745-21-10 of the Administrative Code; or
  - (2) The paper treater shall be equipped with a capture system and control system which are designed and operated to achieve an overall control efficiency of at least eighty-five per cent by weight for the VOC emissions, as determined under paragraph (C) of rule 3745-21-10 of the Administrative Code.
- (QQ) "The Day-Glo Color Corp." or any subsequent owner or operator of "The Day-Glo Color Corp." facility located at 4515 St. Clair avenue, Cleveland, Ohio, shall comply with the following requirements by no later than the date specified in paragraph (C)(51) of rule 3745-21-04 of the Administrative Code:
- (1) The filtration process which separates the methanol from the solid dye shall be a vacuum system which consists of a vacuum pump and condenser.
  - (2) Each mixing vessel having a capacity of four hundred gallons or less shall be equipped with a lid that remains in place at all times unless the vessel is empty or being emptied. The lid shall maintain contact along the entire perimeter of the vessel's rim and shall have no openings except as follows:
    - (a) The opening for the mixer shaft shall be no larger than three inches in diameter.
    - (b) Any opening used for the addition of materials to the vessel shall be no more than one-fourth of the lid area in size and shall remain open only during the addition of materials.
- (RR) On and after the effective date of this rule, "Sherwin-Williams Diversified Brands, Incorporated" or any subsequent owner or operator of the "Sherwin-Williams Diversified Brands, Incorporated" facility located at 26300 Fargo Avenue, Bedford

Heights, Ohio shall comply with the requirements of paragraphs (RR)(1) to (RR)(8) of this rule.

- (1) For the liquid mixing tanks, can liquid filling operations, gasser (gashouse) operations (can propellant filling operations and propellant line purging operations), can brushing operations (manual can cleaning operations), and can piercing operations at this facility, the total VOC emissions in any rolling twelve-month period shall not exceed 0.75 pound of VOC per one thousand aerosol cans produced.
- (2) When a gashouse production line is in VOC operation, all VOC emissions from the gashouse production line, except during a safety diversion or emergency described under paragraph (RR)(8) of this rule, shall be vented to a thermal incinerator that is designed and operated with a destruction efficiency greater than or equal to ninety per cent by weight for VOC. A gashouse production line is in VOC operation when either the propellant being used to fill the aerosol cans contains VOC or the propellant being purged from the propellant line contains VOC. The VOC propellant being purged shall be recovered and stored in a fuel tank of the thermal incinerator."
- (3) The average combustion temperature within the thermal incinerator, for any three-hour block of time when the gashouse is vented to the thermal incinerator, shall not be more than fifty degrees Fahrenheit below the average combustion temperature during the most recent emissions test of the thermal incinerator that demonstrated compliance with the VOC destruction efficiency specified in paragraph (RR)(2) of this rule.
- (4) Monitoring and recordkeeping.
  - (a) Continuous monitoring devices.
    - (i) The owner or operator shall install, operate, and maintain a continuous temperature monitor and recorder that measures and records the combustion temperature within the thermal incinerator. The temperature monitor shall have a minimum accuracy of plus or minus one per cent of the temperature being monitored expressed in degrees Fahrenheit or plus or minus one degree Fahrenheit, whichever is greater. The temperature monitor and recorder shall be installed, calibrated, operated and maintained in accordance with the manufacturer's recommendations, with any modifications deemed necessary by the owner or operator.
    - (ii) The owner or operator shall install, operate, and maintain a lower explosive limit (LEL) monitoring system that continuously measures and records the concentration of VOC and percent LEL within each gashouse line and the inlet vent to the thermal incinerator. The LEL

detectors shall have a minimum accuracy of plus or minus two per cent. The LEL detectors shall be installed, calibrated, operated and maintained in accordance with the manufacturer's recommendations. The owner or operator shall calibrate the LEL detectors once per month following the manufacturer's protocol and shall record the date and results of each calibration.

- (iii) The owner or operator shall install, operate, and maintain mass flow meter that continuously measures and records the flow rate within each gashouse line. The mass flow meters shall have a minimum accuracy of plus or minus 1.5 per cent. The mass flow meters shall be installed, calibrated, operated and maintained in accordance with the manufacturer's recommendations. The owner or operator shall check the mass flow meters once every six months for accuracy using a pilot tube and shall record the date and results of each accuracy check.
- (b) The owner or operator shall collect and record the following information for each day of gashouse operation:
- (i) A log of operating time for each of the following: gashouse production line ventilation to the thermal incinerator, gashouse production line ventilation directly to ambient air, thermal incinerator operation, temperature monitoring equipment operation, gashouse production line in VOC operation, and gashouse production line not in VOC operation.
  - (ii) A log of all three-hour blocks of time during which the average combustion temperature within the thermal incinerator, when the gashouse was vented to the thermal incinerator, was more than fifty degrees Fahrenheit below the average combustion temperature during the most recent emissions test of the thermal incinerator that demonstrated compliance with the VOC destruction efficiency requirement specified in paragraph (RR)(2) of this rule.
  - (iii) A log of the dates and times of the bypass venting of gashouse emissions to ambient air and any downtime for the thermal incinerator and temperature monitoring equipment, when any gashouse production line is in VOC operation. Additional records on bypass venting due to safety diversions are specified under paragraph (RR)(4)(h) of this rule.
- (c) The owner or operator shall collect and record for each aerosol can production line at this facility the following production information each month:
- (i) Number of aerosol cans produced.

- (ii) Name and amount (pounds) of each VOC liquid charged to the mixing tanks and filled into aerosol cans.
  - (iii) Number of aerosol cans filled with a VOC propellant by name of propellant, type of propellant filler (under-the-cup fill, needle fill, or Sepro fill), and type of emissions venting (vented to thermal incinerator or not vented to thermal incinerator).
  - (iv) Number of VOC propellant line purges by name of propellant, type of recovery (recovered for fuel tank of thermal incinerator or not recovered), and type of emissions venting (vented to thermal incinerator or not vented to thermal incinerator).
  - (v) Name and amount (pounds) of each VOC liquid (solvent) used in the manual aerosol can cleaning operation (can brushing operation).
  - (vi) Number of safety diversion events and number of emergency events, as described in paragraph (RR)(8)(a) of this rule.
- (d) The owner or operator shall collect and record the following chemical and physical properties for the VOC liquids and VOC propellants used in the aerosol can production lines of this facility:
- (i) For any VOC liquid used in liquid mixing and liquid filling of aerosol cans, the liquid name, the liquid density (pounds per gallon), and the vapor pressure (mm Hg) at seventy degrees Fahrenheit and eighty degrees Fahrenheit.
  - (ii) For any VOC liquid used in manual aerosol can cleaning, the liquid name and the liquid density (pounds per gallon).
  - (iii) For any VOC propellant, the liquid density (pounds per gallon) under usual propellant storage temperature and pressure, the vapor density (pounds per cubic centimeter) at propellant filler temperature, the fraction VOC by weight, the molecular weight, and the lower explosive limit (LEL) concentration (ppmv).
- (e) The owner or operator shall calculate and record for each aerosol can production line at this facility the following information each month:
- (i) Monthly amount of VOC emissions (pounds) from the liquid mixing operations, as determined in accordance with paragraph (RR)(6)(a) of this rule.

- (ii) Monthly amount of VOC emissions (pounds) from the can liquid filling operations, as determined in accordance with paragraph (RR)(6)(b) of this rule.
  - (iii) Monthly amount of VOC emissions (pounds) from the gashouse operations (propellant filling, propellant line purging, and safety diversions), as determined in accordance with paragraph (RR)(6)(c) of this rule.
  - (iv) Monthly amount of VOC emissions (pounds) from the manual aerosol can cleaning operations (can brushing operations), as determined in accordance with paragraph (RR)(6)(d) of this rule.
  - (v) Monthly amount of VOC emissions (pounds) from the aerosol can production line, which is the sum of data recorded under paragraphs (RR)(4)(e)(i) to (RR)(4)(e)(iv) of this rule.
- (f) The owner or operator shall collect and record for each can piercing operation at this facility the following information each month:
- (i) The monthly operation of aerosol cans pierced, categorized by type of product/propellant and size.
  - (ii) For each category of aerosol can identified under paragraph (RR)(4)(f)(i) of this rule, the name and amount (pounds per can) of VOC liquid (solvent) and VOC propellant contained within the aerosol can.
  - (iii) For each VOC liquid, the vapor pressure (mm Hg) at eighty degrees Fahrenheit and the molecular weight (pounds per pound mole).
  - (iv) The monthly amount of VOC emissions (pounds) from can piercing operations, as determined in accordance with paragraph (RR)(6)(e) of this rule.
- (g) The owner or operator shall record for all aerosol can production lines and can piercing operations combined at this facility the following information each month:
- (i) The monthly amount of VOC emissions (pounds), which is a sum of the monthly VOC emissions recorded under paragraphs (RR)(4)(e)(v) and (RR)(4)(f)(iv) of this rule for each aerosol can production line and each can piercing operation, respectively.

- (ii) The monthly number of aerosol cans produced, which is a sum of the monthly aerosol can production recorded under paragraph (RR)(4)(c)(i) of this rule for each aerosol can production line.
  - (iii) The amount of VOC emissions (pounds) during the rolling twelve-month period, which is the sum of the values recorded under paragraph (RR)(4)(g)(i) of this rule for this month and the previous eleven consecutive months.
  - (iv) The number of aerosol cans produced during the rolling twelve-month period, which is the sum of the values recorded under paragraph (RR)(4)(g)(ii) of this rule for this month and the previous eleven consecutive months.
  - (v) The VOC emissions rate during the rolling twelve-month period in pounds per one thousand cans, which is one thousand times the value from paragraph (RR)(4)(g)(iii) of this rule divided by the value from paragraph (RR)(4)(g)(iv) of this rule, and rounded to two decimal places.
- (h) The owner or operator shall collect and record for each aerosol can production line at this facility, the following information for each safety diversion event, as described in paragraph (RR)(8) of this rule:
- (i) Twenty per cent LEL stamp, which indicates that a concentration between twenty per cent and forty per cent of the LEL occurred;
  - (ii) Date and time of the twenty per cent LEL stamp;
  - (iii) Event length (seconds);
  - (iv) Type of VOC propellant being employed in the gashouse;
  - (v) Average concentration of LEL detectors in gashouse line (ppmv);
  - (vi) Average flow rate (cfm); and
  - (vii) Amount of VOC emissions (pounds).
- (i) The records required by paragraphs (RR)(4)(a) to (RR)(4)(h) of this rule shall be maintained for a minimum of five years and shall be available for review by the director or any authorized representative of the director during normal business hours.

(5) Reporting.

- (a) The owner or operator shall submit quarterly compliance status reports:
- (i) That identify any emission rate violation in which the emission rate recorded under paragraph (RR)(4)(g)(v) of this rule exceeds the VOC emission limitation specified in paragraph (RR)(1) of this rule;
  - (ii) That identify any deviations of the requirements specified in paragraphs (RR)(2) and (RR)(3) of this rule, as recorded under paragraphs (RR)(4)(b)(iii) and (RR)(4)(b)(ii) of this rule, respectively; and
  - (iii) That provide summaries of the records specified under paragraphs (RR)(4)(a) to (RR)(4)(h) of this rule.
- (b) The owner or operator shall submit to the appropriate Ohio EPA district office or local air agency the quarterly compliance status reports specified in paragraph (RR)(5)(a) of this rule. These quarterly compliance status reports shall be submitted by April thirtieth, July thirty-first, October thirty-first, and January thirty-first and shall cover the records for the previous calendar quarters.

(6) Determination of VOC emissions.

(a) VOC emissions from liquid mixing operations.

- (i) For liquid mixing operations, the monthly VOC emissions (pounds),  $E(\text{mixing})$ , shall be calculated as follows:

$$E(\text{mixing}) = E(\text{loading}) + (E)\text{venting}$$

where:

$E(\text{loading})$  = monthly VOC emissions from loading VOC liquids into mixing tanks

$E(\text{venting})$  = monthly VOC emissions from venting VOC liquids during mixing

- (ii) For loading VOC liquid into a mixing tank, the monthly VOC emissions shall be calculated, based on the ideal gas law and displacement of saturated vapors at seventy degrees Fahrenheit (twenty-one degrees Celsius), as follows:

$E(\text{loading})$  = monthly sum of  $E_i(\text{loading})$  for all VOC liquid "i" loaded into mixing tanks

$$E_i(\text{loading}) = (P_i * X_i * V_i * MW_i) / (R * T)$$

where:

$E_i(\text{loading})$  = pounds of VOC emissions during the month from loading VOC liquid "i" into mixing tanks

$P_i$  = vapor pressure of VOC liquid "i" at seventy degrees Fahrenheit, in mmHg

$X_i$  = mole fraction of VOC liquid "i" in liquid mix (value of one is used for this emissions estimate)

$V_i$  = volume of VOC liquid "i" charged to mixing tanks during the month in cubic feet (equals monthly gallons of liquid "i" divided by 7.48 gallons per cubic foot)

$R$  = nine hundred ninety-nine mmHg-cubic feet per pound mole-degrees Kelvin

$T$  = temperature in degrees Kelvin (equals two hundred seventy-three plus twenty-one degrees Celsius)

$MW_i$  = molecular weight of VOC liquid "i", in pounds per pound mole

- (iii) For venting of VOC liquids during mixing, the monthly VOC emissions shall be calculated, based on the ideal gas law and venting of saturated vapors at eighty degrees Fahrenheit (twenty-seven degrees Celsius), as follows:

$E(\text{venting})$  = monthly sum of  $E_i(\text{venting})$  for all VOC liquid "i" loaded into mixing tanks

$$E_i(\text{venting}) = (P_i * X_i * V_{i,v} * MW_i) / (R * T)$$

where:

$E_i(\text{venting})$  = pounds of VOC emissions during the month for venting a VOC liquid "i" during mixing

$P_i$  = vapor pressure of VOC liquid "i" at eighty degrees Fahrenheit, in mmHg

$X_i$  = mole fraction of VOC liquid "i" in liquid mix (a value of one is used for this emissions estimate)

$V_{i,v}$  = volume ( cubic feet) of saturated vapors removed by the ventilation system during mixing of VOC liquid "i" (equals monthly gallons of VOC liquid "i" times five times thirty divided by three hundred fifty based on five per cent of the total ventilation flow rate or five cubic feet per minute, an average mixing time of thirty minutes per batch, and a typical batch size of three hundred and fifty gallons)

R = nine hundred ninety-nine mmHg-cubic feet per pound mole-degrees Kelvin

T = temperature in degrees Kelvin (equals two hundred seventy-three plus twenty-seven degrees Celsius)

MW<sub>i</sub> = molecular weight of VOC liquid "i", in pounds per pound mole

(iv) Alternative method.

An alternative method for calculating the monthly emissions rate for liquid mixing operations shall be as follows:

$$E(\text{mixing}) = \text{EFM} * V(\text{mixing})$$

where:

EFM = emission factor of 0.00131 pound VOC per pound VOC liquid throughput (this emission factor is based on the highest annual average emission factor for mixing operations during 1997 to 2000)

V(mixing) = monthly throughput of VOC liquid employed for mixing, in pounds

- (v) If for any month in which the use of the alternative method described in paragraph (RR)(6)(a)(iv) of this rule shows noncompliance with the VOC emission limit, the method described in paragraphs (RR)(6)(a)(i) to (RR)(6)(a)(iii) of this rule shall be used to calculate monthly emissions for liquid mixing operations. The compliance determination will then be based on these more detailed calculations.

(b) VOC emissions from liquid filling of aerosol cans.

- (i) For the liquid filling of aerosol cans, the monthly VOC emissions (pounds) shall be calculated, based on the ideal gas law and displacement of saturated vapors at seventy degrees Fahrenheit (twenty-one degrees Celsius) as follows:

$E(\text{filling})$  = monthly sum of  $E_i(\text{filling})$  for all VOC liquid "i" filling of aerosol cans

$$E_i(\text{filling}) = (P_i * X_i * V_i * MW_i) / (R * T)$$

where:

$E_i(\text{filling})$  = pounds of VOC emissions during the month for VOC liquid "i" filling of aerosol cans

$P_i$  = vapor pressure of VOC liquid "i" at seventy degrees Fahrenheit, in mmHg

$X_i$  = mole fraction of VOC liquid "i" in liquid fill (a value of one is used for this emissions estimate)

$V_i$  = volume of VOC liquid "i" filled into aerosol cans during the month in cubic feet (equals monthly gallons of VOC liquid "i" divided by 7.48 gallons per cubic foot)

$R$  = nine hundred ninety-nine mmHg-cubic feet per pound mole-degrees Kelvin

$T$  = temperature in degrees Kelvin (equals two hundred seventy-three plus twenty-one degrees Celsius)

$MW_i$  = molecular weight of VOC liquid "i", in pounds per pound mole

(ii) Alternative method.

An alternative method for calculating the monthly emissions for liquid can filling operations shall be as follows:

$$E(\text{filling}) = EFF * V(\text{filling})$$

where:

$EFF$  = emission factor of 0.00026 pound VOC per pound VOC liquid throughput ( this emission factor is based on the highest annual average emission factor for liquid can filling operations during 1997 to 2000)

$V(\text{filling})$  = monthly throughput of VOC liquid employed for can filling, in pounds

(iii) If for any month in which the use of the alternative method described in paragraph (RR)(6)(b)(ii) of this rule shows noncompliance with the

VOC emission limit, the method described in paragraph (RR)(6)(b)(ii) of this rule shall be used to calculate monthly emissions for liquid filling of aerosol cans. The compliance determination will then be based on these more detailed calculations.

(c) VOC emissions from gasser (gashouse) operations.

(i) For the gasser operations, the monthly VOC emissions in pounds, EG(total), shall be calculated as follows:

$$EG(\text{total}) = EG(\text{filling}) + EG(\text{purging}) + EG(\text{safety diversions})$$

where:

EG(fillings) = monthly VOC emissions from filling aerosol cans with VOC propellant

EP(purging) = monthly VOC emissions from purging of lines containing VOC propellant

EG(safety diversions) = monthly VOC emissions from safety diversions of VOC control equipment

(ii) For the filling of aerosol cans with VOC propellant and the purging of lines containing VOC propellant, the monthly VOC emissions for filling and line purging shall be calculated as follows:

$$EG(\text{filling}) = \text{monthly sum of } (NC_{p,f,v}) \times (EF_{p,f}) \times (K_p) \times (1 - CE_{p,v}/100) \times (VOC_p)$$

$$EP(\text{purging}) = \text{monthly sum of } (NP_{p,v}) \times (V_p) \times (LD_p) \times (1 - R_p) \times (1 - CE_{p,v}/100) \times (VOC_p)$$

where:

CE<sub>p,v</sub> = control efficiency for propellant "p" VOC emissions and type of venting "v" for those emissions, based on venting of VOC propellant emissions to thermal incinerator or not and the overall control efficiency of the thermal incinerator for VOC

CE<sub>p,v</sub> = zero per cent if propellant "p" VOC emissions are not vented to the thermal incinerator

CE<sub>p,v</sub> = overall VOC control efficiency from most recent compliance test of the thermal incinerator, if propellant "p" VOC emissions are vented to the thermal incinerator

EF<sub>p,f</sub> = emission factor for VOC propellant gas loss when filling cans with VOC propellant "p", based on propellant filler type "f" (under-the-cup fill, needle fill, or Sepro fill)

EF<sub>p,f</sub> = 0.2 cubic centimeters per can for needle filling of VOC propellant "p"

EF<sub>p,f</sub> = 1.00 cubic centimeters per can for Sepro filling of VOC propellant "p"

EF<sub>p,f</sub> = 1.75 cubic centimeters per can for under-the-cup filling of VOC propellant "p"

K<sub>p</sub> = conversion factor for gaseous VOC propellant "p" expressed in pounds per cubic centimeter at standard conditions

LD<sub>p</sub> = liquid density of VOC propellant "p" at storage temperature and pressure, in pounds per gallon

NC<sub>p,f,v</sub> = number of cans produced with VOC propellant "p" and filling type "f" during the month by type of venting "v" (vented to thermal incinerator or not vented to thermal incinerator)

NP<sub>p,v</sub> = number of propellant line purges during the month for VOC propellant "p" by type of venting "v" (vented to thermal incinerator or not vented to thermal incinerator)

R<sub>p</sub> = fraction by weight of purged VOC propellant "p" which is recovered and stored in a pressure tank

V<sub>p</sub> = volume of propellant line purged for VOC propellant "p", in gallons

VOC<sub>p</sub> = fraction VOC by weight for VOC propellant "p" (usually one for a VOC containing propellant)

(iii) Alternative method for filling and line purging.

For gasser operations equipped with a thermal incinerator in which the VOC emissions from the filling of aerosol cans with VOC propellant are vented to the thermal incinerator and the line purging of VOC propellant is recovered for use as a fuel in the thermal incinerator, the monthly VOC emissions for filling and line purging shall be calculated as follows:

$$EG(\text{filling}) + EG(\text{purging}) = EF * (NC/1000)$$

where:

EF = VOC emissions factor from most recent compliance test of the thermal incinerator, expressed in pounds VOC per thousand aerosol cans produced (based on the September 24, 2002 compliance test, EF equals 0.16 pound VOC per thousand aerosol cans)

NC = number of aerosol cans produced with VOC propellant during the month

- (iv) EG(safety diversions) is the sum of the VOC emissions for each safety diversion event during the month, as determined in accordance with paragraph (RR)(8) of this rule. The amount of VOC emissions in pounds for a safety diversion event EG(event) shall be calculated as follows:

$$EG(\text{event}) = C_{\text{avg}} * MW * \text{Flow} * \text{Time} * (4.256 \times 10^{-11})$$

where:

$C_{\text{avg}}$  = average concentration of VOC propellant in gas stream being vented to ambient air during safety diversion event, in parts per million by volume

MW = molecular weight of VOC propellant being employed in gashouse at time of safety diversion event, in pounds per pound-mole

Flow = average flow rate of gas stream being vented to ambient air during safety diversion event, in cubic feet per minute

Time = length of safety diversion event, in seconds

$4.256 \times 10^{-11}$  = constant value based on various unit conversions and division by the Universal Gas Constant at standard conditions

- (d) VOC emissions from manual aerosol can cleaning operations.

For the manual aerosol can cleaning operations (can brushing operations), VOC emissions shall be equal to the mass of VOC solvent consumed in the operation. The monthly VOC emissions from can brushing shall be calculated as the sum of VOC emissions for all solvents consumed during that month. The VOC emissions from each VOC solvent consumed is calculated as the number of VOC solvent gallons consumed during the month times the VOC solvent density (pounds per gallon).

## (e) VOC emissions from can piercing operations.

- (i) For the can piecing operations, monthly VOC emissions shall be the total VOC emissions from propellants plus the total VOC emissions from liquid recovery.
- (ii) The total VOC emissions (pounds) from propellants is the sum of the amount of VOC propellant within all cans pierced during that month. For a grouping of pierced cans by type and size, the monthly amount of VOC propellant is calculated as the amount of propellant VOC per can (pounds VOC per can), which is based on the type and size category, times the number of cans pierced during the month for that type and size category.
- (iii) The total VOC emissions (pounds) from liquid recovery for all cans pierced during a month is the sum of VOC emissions from the liquids (solvents) within all cans pierced during that month. The VOC emissions from the liquids shall be calculated, based on the ideal gas law and displacement of saturated vapors at eighty degrees Fahrenheit (twenty-seven degrees Celsius) for liquid flowing into a recovery drum or vessel, using the following formulas:

$E(\text{piercing}) = \text{sum of } E_i(\text{piercing}) \text{ for all VOC liquid "i" within the cans pierced in the month}$

$E_i(\text{piercing}) = (P_i * X_i * V_i * MW_i) / (R * T)$

$V_i = W_i / (7.48 * D_i)$

$W_i = \text{sum of } (W_{i,c} * N_c) \text{ for VOC liquid "i" for all cans pierced (by can type and size category "c") during the month}$

where:

$D_i = \text{density of VOC liquid "i", in pounds per gallon}$

$E(\text{piercing}) = \text{total VOC emissions from liquid recovery for all cans pierced in the month, in pounds}$

$E_i(\text{piercing}) = \text{pounds of VOC emissions from VOC liquid "i" recovered from cans pierced in the month}$

$MW_i = \text{molecular weight of VOC liquid "i", in pounds per pound mole}$

$N_c$  = number of cans pierced during the month for can type and size category "c"

$P_i$  = vapor pressure of VOC liquid "i" at eighty degrees Fahrenheit, in mmHg

$R$  = nine hundred ninety-nine mmHg-cubic feet per pound mole-degrees Kelvin

$T$  = temperature in degrees Kelvin (equals two hundred seventy-three plus twenty-seven degrees Celsius)

$X_i$  = mole fraction of VOC liquid "i" in liquid of pierced cans (value of one is used for this emissions estimate)

$V_i$  = volume of VOC liquid "i" within pierced cans for the month, in cubic feet

$W_i$  = amount of VOC liquid "i" within the pierced cans for the month, in pounds

$W_{i,c}$  = amount of VOC liquid "i" for can type and size category "c", in pounds per can

7.48 = conversion factor in gallons per cubic foot

(7) VOC emissions testing.

The owner or operator shall conduct, or have conducted, emissions testing for the thermal incinerator to demonstrate the thermal incinerator's mass emission rate, destruction efficiency, and overall control efficiency for VOC emissions from this facility's gashouse operations in accordance with the following requirements:

- (a) The emissions testing shall be conducted within six months after the effective date of this rule, unless emissions testing had been conducted within three years prior to the effective date of this rule and the emissions testing demonstrated compliance with paragraph (RR)(2) of this rule.
- (b) For the emissions testing, the owner or operator shall meet the general provisions of paragraph (A) of rule 3745-21-10 of the Administrative Code.
- (c) The emissions testing shall be conducted in accordance with the test methods in paragraph (C) of rule 3745-21-10 of the Administrative Code with the concentration of VOC in the thermal incinerator's inlet and outlet gas

streams determined by means of USEPA Method 25 or USEPA Method 25A.

- (d) The emission testing to determine the VOC capture efficiency of the vapor collection system used to transport VOC emissions from the facility's gashouse operations (propellant filling of aerosol cans and propellant line purging) to the thermal incinerator shall be conducted by means of the test methods specified in paragraph (C)(3)(c) of rule 3745-21-10 of the Administrative Code.
  - (e) The emission testing shall be conducted while the facility's gashouse is operating at or near its maximum capacity, unless otherwise specified or approved by the appropriate Ohio EPA district office or local air agency.
  - (f) The overall control efficiency of the thermal incinerator for VOC shall be the destruction efficiency times the capture efficiency divided by one hundred.
  - (g) The mass emission rate of the thermal incinerator, expressed in pounds VOC per thousand aerosol cans produced, shall be the hourly mass emission rate (pounds VOC per hour) divided by the hourly production rate (one thousand cans per hour).
  - (h) Additional testing of the gashouse and the thermal incinerator may be required by the director to ensure continued compliance with the applicable requirements.
- (8) Safety diversion events and emergency events for gasser operations being vented to a thermal incinerator.
- (a) A safety diversion is the venting of gasser operations directly to ambient air, instead of being vented to the thermal incinerator, in order to meet requirements of NFPA 30B: "Code for the Manufacturing and Storage of Aerosol Products". A safety diversion occurs when any of the lower explosive limit (LEL) detectors in the gashouse detects a concentration between twenty per cent and forty per cent of the LEL. Under a safety diversion, as described in NFPA 30B, Section 5.4.2(E), the ventilation rate of the affected gashouse line is quickly increased, the gashouse line is vented immediately to ambient air (i.e. thermal incinerator is bypassed), and production activities usually continue. Safety diversion events are less than five minutes and shall be included in the determination of compliance with the monthly VOC emission limitation of 0.75 pound VOC per thousand aerosol cans produced. A safety diversion event is not be a malfunction under paragraph (B) of rule 3745-15-06 of the Administrative Code.
  - (b) An emergency event is a condition that shuts down the line, releases propellant in the gasser to atmosphere and vents the gashouse directly to

ambient air, instead of being vented to the thermal incinerator as required by NFPA 30B, Section 5.12. Emergency events include safety diversions greater than five minutes, detected LEL concentrations greater than forty per cent, low flow alarms, power loss, fire alarms, explosion suppression systems discharge, gashouse and thermal oxidizer safety system monitoring device fault and emergency stops (E-Stops). An E-Stop occurs when a gashouse operator shuts down the line due to an observed safety issue caused by the gashouse operation such as employee injury, damage to equipment, or operation problems such as shredding of cans. The owner or operator shall maintain a record of the emergency events.

- (c) The VOC emissions for a safety diversion event shall be calculated based on the average concentration of the LEL detectors associated with the gashouse line, the flow rate of the gashouse line (measured with a mass flow meter), the propellant being filled, and the length of the event (seconds).
  - (d) The owner or operator shall calibrate the LEL detectors once per month following the manufacturer's protocol and shall check the flow meters once every six months for accuracy using a pilot tube.
- (SS) On and after March 31, 1993, "Ritrama Duramark" or any subsequent owner or operator of the "Ritrama Duramark" facility located at 341 Eddy Road, Cleveland, Ohio shall not cause, allow or permit the discharge into the ambient air of any VOC from the vinyl film casting line unless all of the VOC emissions are vented to an incinerator that is designed and operated to achieve a control efficiency of at least ninety-eight per cent, by weight, as determined under paragraph (C) of rule 3745-21-10 of the Administrative Code.
- (TT) "ICI Americas Incorporated" or any subsequent owner or operator of the "ICI Americas Incorporated" facility located at 3647 Shepard Road, Perry, Ohio, shall comply with the following requirements by no later than the date specified in paragraph (C)(54) of rule 3745-21-04 of the Administrative Code:
- (1) For the tetra-hydro-phthalimide production process, the stage 1 and stage 2 reactor vent streams shall be vented to a flare that meets the requirements of paragraph (DD)(10)(d) of this rule.
  - (2) VOC emissions from the diked area of the carbon disulfide tanks shall be reduced by employing styrofoam sheets which completely cover the diked area.
- (UU) "British Petroleum Company, Toledo Refinery" or any subsequent owner or operator of the "British Petroleum Company, Toledo Refinery" facility located at 4001 Cedar Point Road, Oregon, Ohio shall comply with the following requirements for VOC emissions:

- (1) On and after the date specified in paragraph (C)(55)(a) of rule 3745-21-04 of the Administrative Code, all VOC emissions from the SPOP waterwash tower spentwash flash drum and the POLY waterwash tower spentwash flash drum shall be vented to a flare that complies with the requirements of paragraph (DD)(10)(d) of this rule.
  - (2) On and after the date specified in paragraph (C)(55)(b) of rule 3745-21-04 of the Administrative Code, all VOC emissions from the alkyl 1 blowdown drum and the alkyl 2 blowdown drum shall be vented to a flare that complies with the requirements of paragraph (DD)(10)(d) of this rule.
  - (3) On and after the date specified in paragraph (C)(55)(b) of rule 3745-21-04 of the Administrative Code, all VOC emissions from the cokers 1 and 2 blowdown drum shall be vented to a flare that complies with the requirements of paragraph (DD)(10)(d) of this rule.
  - (4) On and after the date specified in paragraph (C)(55)(c) of rule 3745-21-04 of the Administrative Code, all process wastewater from the crude desalter shall be discharged to a steam stripper for the recovery of condensable hydrocarbons, and all VOC emissions from the steam stripper shall be vented to a flare that complies with the requirements of paragraph (DD)(10)(d) of this rule.
  - (5) On and after the date specified in paragraph (C)(55)(d) of rule 3745-21-04 of the Administrative Code, the barometric condensers and hot wells serving crude vacuum unit 1 and associated with cooling tower cell 6 shall be replaced with surface condensers (shell and tube heat exchangers).
  - (6) On and after the date specified in paragraph (C)(55)(e) of rule 3745-21-04 of the Administrative Code, the barometric condensers and hot wells serving crude vacuum unit 2 and associated with cooling tower cell 7 shall be replaced with surface condensers (shell and tube heat exchangers).
- (VV) "Marathon Petroleum Company LLC" or any subsequent owner or operator of the "Marathon Petroleum Company LLC" facility located at 2408 Gambrinus Road, S.W., Canton, Ohio shall comply with the following requirements for VOC emissions:
- (1) Reserved.
  - (2) On and after March 31, 1993, all VOC emissions from the asphalt oxidizer shall be vented to an enclosed combustion device that is operated to reduce the VOC emissions by at least ninety-five per cent, by weight, as determined under paragraph (C) of rule 3745-21-10 of the Administrative Code.
- (WW) (Reserved)

(XX) "Columbus Coated Fabrics" or any subsequent owner or operator of "Columbus Coated Fabrics" facility located at 1280 North Grant Avenue, Columbus, Ohio shall comply with the requirements of either paragraph (XX)(1) or (XX)(2) of this rule for each of the seven U-frame vinyl coating lines and the HL-40 in-line vinyl coating line, by no later than the dates specified in paragraph (C)(58) of rule 3745-21-04 of the Administrative Code.

- (1) A capture system and control system shall be employed which are designed and operated to achieve an overall control efficiency for the VOC emissions of at least eighty-one per cent, by weight, as determined under paragraph (C) of rule 3745-21-10 of Administrative Code.
- (2) The VOC content of the coatings employed in the coating line, as determined under paragraph (B) of rule 3745-21-10 of Administrative Code, does not exceed 3.2 pounds per gallon of coating, excluding water and exempt solvents.

(YY) "PMC Specialties Group" or any subsequent owner or operator of the "PMC Specialties Group" facility located at 501 Murray road, Cincinnati, Ohio shall comply with the following requirements by no later than the dates specified in paragraph (C)(59) of rule 3745-21-04 of the Administrative Code:

- (1) Any VOC emissions from the reactor process vent streams from the methyl anthranilate and anthranilic acid manufacturing operations shall be vented to an enclosed combustion device that is designed and operated to reduce the VOC emissions by at least ninety-five per cent, by weight, as determined under paragraph (C) of rule 3745-21-10 of the Administrative Code.
- (2) For the OCBS fine chemicals system II process, the VOC emissions from the centrifuge vent shall not exceed twelve pounds of VOC per six thousand pounds of product, as determined under paragraph (C) of rule 3745-21-10 of the Administrative Code.

(ZZ) "Firestone Synthetic Rubber & Latex Company" or any subsequent owner or operator of the "Firestone Synthetic Rubber & Latex Company" facility located at 381 West Wilbeth Road, Akron, Ohio shall comply with the following requirements for the VOC emissions from the reactor processes no later than the date specified in paragraph (C)(60) of rule 3745-21-04 of the Administrative Code:

- (1) Except where exempted under paragraph (ZZ)(2) of this rule, each reactor process vent stream shall be vented to one of the following control equipment:
  - (a) An enclosed combustion device that is designed and operated to reduce the VOC emissions by at least ninety-eight per cent, by weight, as determined under paragraph (C) of rule 3745-21-10 of the Administrative Code; or
  - (b) A flare that meets the requirements of paragraph (DD)(10)(d) of this rule.

- (2) Exempted from the requirements of paragraph (ZZ)(1) of this rule are the following reactor process vent streams:
- (a) Any reactor process vent stream which is vented to an enclosed combustion device or a flare for which construction commenced prior to March 31, 1993, provided the enclosed combustion device or flare is operated and maintained in accordance with design specifications. This exemption shall terminate if the enclosed combustion device or flare is replaced with new control equipment for which construction commenced on or after March 31, 1993.
  - (b) Any reactor process vent stream which is an air-bearing vent stream, which has a VOC concentration between the lower explosive limit and the upper explosive limit, and which has a total resource effectiveness value greater than 1.0, as determined under paragraph (EE)(3) of this rule. If the reactor process has more than one of these air-bearing process vent streams, the total resource effectiveness value shall be based upon a combination of those air-bearing reactor process vent streams.

(AAA) Reserved.

(BBB) "BFGoodrich Company Akron Chemical Plant" or any subsequent owner or operator of the "BFGoodrich Company Akron Chemical Plant" facility located at 240 West Emerling Avenue, Akron, Ohio shall comply with the following requirements by no later than the date specified in paragraph (C)(62) of rule 3745-21-04 of the Administrative Code:

- (1) For the agerite resin D process, the VOC emissions from the recovery system vents and product neutralization and distillation system vents, except wash kettles (or still feed) condenser vents, stills vacuum jet tailpipe vents, and process emergency safety relief devices, shall not exceed 1.0 ton per year.
- (2) For the superlite (trademark) process, the VOC emissions from the reactor process vent streams, except the process emergency safety relief devices, shall be vented to a control device that is designed and operated to achieve a control efficiency of at least ninety-five per cent, by weight, as determined under paragraph (C) of rule 3745-21-10 of the Administrative Code.
- (3) For the diphenylamine-based antioxidants process, the VOC emissions from the reactor process vent streams, except the emulsion recovery system tank vent, recovered MND tank vent, and process emergency safety relief devices, shall be vented to a control device that is designed and operated to achieve a control efficiency of at least ninety-five per cent, by weight, as determined under paragraph (C) of rule 3745-21-10 of the Administrative Code.

- (4) For the DPPD/PHDA process, the VOC emissions from the reactor process vent streams, except the north and south still jet vents and process emergency safety relief devices, shall be vented to a control device that is designed and operated to achieve a control efficiency of at least ninety-four per cent, by weight, as determined under paragraph (C) of rule 3745-21-10 of the Administrative Code.

(CCC) (Reserved)

(DDD) Gasoline dispensing facilities (stage II vapor control systems).

- (1) Except where exempted under paragraph (DDD)(4) of this rule, no owner or operator of a gasoline dispensing facility may cause, allow, or permit the transfer of gasoline from a stationary storage tank at a gasoline dispensing facility into a motor vehicle after the dates specified in paragraph (C)(64) of rule 3745-21-04 of the Administrative Code unless the following requirements are met:
- (a) All vapors displaced from the motor vehicle are vented to a vapor control system which is designed and operated to maintain an overall control efficiency of not less than ninety-five per cent, by weight, for the VOC in the displaced vapors and which is CARB certified. The vapor control system shall employ only coaxial hoses, and the use of remote check valves shall be prohibited.
  - (b) The vapor control system is installed, operated and maintained in accordance with the manufacturer's specifications and the applicable CARB certification, and is free of the following defects:
    - (i) Any component, that is required to be employed at all times pursuant to the system CARB certification, is absent or disconnected.
    - (ii) A vapor hose is crimped or flattened such that the vapor passage is blocked, or the pressure drop through the vapor hose exceeds by a factor of two or more the requirements in the CARB certification.
    - (iii) A nozzle boot is torn in one or more of the following manners:
      - (a) A triangular-shaped or similar tear one half inch or more to a side, or a hole one half inch or more in length; and
      - (b) A slit one inch or more in length.
    - (iv) A faceplate or flexible cone is damaged in the following manner:
      - (a) For balance nozzles and for nozzles for aspirator and educator assist type systems, the capability to achieve a seal with a fill pipe

interface is affected for one fourth of the circumference of the faceplate (accumulated); and

- (b) For nozzles for vacuum assist-type systems, more than one fourth of the flexible cone is missing.
  - (v) Nozzle shutoff mechanisms are malfunctioning in any manner.
  - (vi) Vapor return lines, including such components as swivels, antirecirculation valves and underground piping are malfunctioning or are blocked, or restricted such that the pressure drop through the lines exceeds by a factor of two or more the requirements specified in the system CARB certification.
  - (vii) A vapor processing unit is inoperative or malfunctioning.
  - (viii) A vacuum producing device is inoperative or malfunctioning.
  - (ix) Pressure/vacuum relief valves, vapor check valves, or dry breaks are inoperative.
  - (x) Any vapor recovery equipment is leaking liquid gasoline or gasoline vapors.
  - (xi) Any other equipment defect identified in the CARB certification as one which substantially impairs the effectiveness of the vapor control system.
- (c) The vapor control system has successfully passed the testing requirements contained in paragraph (DDD)(2) of this rule.
- (d) Operating instructions for the vapor control system are conspicuously posted in each gasoline dispensing area. The operating instructions shall clearly describe how to properly fuel motor vehicles and shall specifically prohibit the topping off of the motor vehicle fuel tank.

(2) Testing requirements:

- (a) Except as otherwise provided in paragraph (DDD)(2)(h) of this rule, within sixty days after the installation or modification of a vapor control system required pursuant to paragraph (DDD)(1) of this rule, the owner or operator of the gasoline dispensing facility shall perform and comply with the requirements of the following tests:
  - (i) A leak test shall be performed in accordance with the test procedures contained in paragraph (Q) of rule 3745-21-10 of the Administrative

Code to quantify the vapor tightness of the vapor control system. The vapor control system must comply with the leak rate criteria specified in the test procedures.

- (ii) A dynamic pressure performance test shall be performed in accordance with the test procedures contained in paragraph (R) of rule 3745-21-10 of the Administrative Code to determine the pressure drop through the vapor control system at prescribed flow rates. The vapor recovery system must comply with the dynamic back pressures shown in the following table:

--

Nitrogen flowrate (standard cubic feet per hour)	Maximum dynamic back pressure (inches of water)
40	0.16
60	0.35
80	0.62

- (b) For purposes of paragraph (DDD)(2)(a) of this rule, the modification of a vapor control system shall include the following:
- (i) Any change, such as the removal of certified components and the addition or removal of piping or fittings, which may cause the vapor control system to be incapable of maintaining an overall control efficiency of not less than ninety-five per cent, by weight, for the VOC emissions.
- (ii) Any change which requires an installation permit pursuant to rule 3745-31-02 of the Administrative Code.
- (c) Not later than thirty days prior to any tests required pursuant to paragraphs (DDD)(2)(a) and (DDD)(2)(d) of this rule, the owner or operator of the gasoline dispensing facility shall submit a test notification to the appropriate Ohio EPA district office or local air agency. The test notification shall describe the proposed test methods and procedures, the time and date of the tests, and the person who will be conducting the tests. Failure to submit such notification prior to the tests may result in the Ohio EPA's refusal to accept the results of the tests. Personnel from the appropriate Ohio EPA district office or local air agency shall be permitted to witness the tests, examine the testing equipment, and acquire data and information during the tests. After completion of any tests, the owner or operator shall complete the post test inspection form contained in appendix C to rule 3745-21-10 of the Administrative Code, and a comprehensive written report on the results

of the tests shall be submitted to the appropriate Ohio EPA district office or local air agency within thirty days following the completion of the tests.

- (d) At intervals not to exceed five years, the owner or operator of the gasoline dispensing facility shall repeat and demonstrate compliance with the requirements of the tests specified in paragraph (DDD)(2) of this rule.
  - (e) The director may require the owner or operator of a gasoline dispensing facility to perform other tests that have been authorized by the USEPA if such tests are necessary to demonstrate the adequacy of a vapor control system.
  - (f) The owner or operator of the gasoline dispensing facility shall perform and comply with any vapor control system tests specified in the applicable CARB certification. The tests shall be performed at the frequency specified in such certification.
  - (g) Any vapor control system test conducted in accordance with the previous test procedures and specifications that were effective on March 31, 1993 and subsequently amended or deleted may be used, where appropriate, in lieu of the test procedures and specifications currently contained in this rule, provided such vapor control system test was not conducted after January 17, 1995.
  - (h) Any vapor control system required by paragraph (DDD)(1) of this rule at an automobile or light-duty truck assembly plant that has not been tested in accordance with paragraph (DDD)(2)(a) of this rule as of January 17, 1995, shall be tested in accordance with paragraph (DDD)(2)(a) of this rule by July 17, 1995.
- (3) Recordkeeping requirements:
- (a) Any owner or operator of a gasoline dispensing facility which is subject to the requirements of paragraph (DDD)(1) of this rule shall maintain the following records:
    - (i) The quantity of gasoline delivered to the facility during each calendar month.
    - (ii) The results of any tests performed pursuant to paragraph (DDD)(2) of this rule.
    - (iii) A log of the date and description of all repair and maintenance work performed (including, but not limited to, work performed to meet manufacturer's specifications or CARB certification requirements), or any other modifications made to the vapor control system.

(iv) A copy of the most recent operating permit application (including emissions activity category form or appendix form) submitted to the Ohio EPA.

(v) A copy of the most recent operating permit issued by the Ohio EPA.

(vi) Proof of attendance and completion of the training required by the Ohio EPA for the operator or local manager of the gasoline dispensing facility.

(vii) Copies of all completed post test inspection forms.

(b) All records shall be retained by the owner or operator for a period of not less than three years and shall be made available to the director or any authorized representative of the director for review during normal business hours.

(4) Exemptions:

(a) Paragraph (DDD)(1) of this rule shall not apply to any gasoline dispensing facility which has a monthly gasoline throughput of less than ten thousand gallons per month or to any gasoline dispensing facility which is owned by an independent small business marketer and which has a monthly gasoline throughput of less than fifty thousand gallons per month. The monthly gasoline throughput shall be based upon the average monthly sales of gasoline during the period from November 16, 1990 through November 15, 1992; however, if a gasoline dispensing facility was inactive for any portion of this two year calculation period, the calculation period may be extended to include a total of twenty-four months of activity. This exemption shall cease to apply to a facility if during any calendar month after November 15, 1992, the gasoline throughput equals or exceeds ten thousand gallons or fifty thousand gallons, whichever is applicable. Furthermore, this exemption shall not apply to any facility which installed a vapor control system pursuant to the requirements of paragraph (DDD)(1) of this rule and the monthly gasoline throughput subsequently falls below ten thousand gallons per month or, if owned by an independent small business marketer, fifty thousand gallons per month.

(b) Paragraph (DDD)(1) of this rule shall not apply to marinas and aircraft refueling stands.

(c) The requirement in paragraphs (DDD)(1)(a) and (DDD)(1)(b) of this rule that refer to a CARB certification shall not apply to any vapor control system at an automobile or light-duty truck assembly plant. In cases where it has been determined that the test procedures specified in paragraph

(DDD)(2)(a)(i) and/or (DDD)(2)(a)(ii) of this rule are not appropriate for a vapor control system at an automobile or light-duty truck assembly plant, alternative test procedures may be employed and alternative testing deadlines may be established provided that written, prior approval has been obtained from the Ohio EPA.

- (d) Paragraph (DDD)(1) of this rule shall not apply to any motor vehicle fueling or refueling operation which is located at an automobile or light-duty truck assembly plant and which, considered alone, has a monthly gasoline throughput of less than ten thousand gallons per month. Any gasoline dispensers located within two hundred feet from each other shall be considered as one operation for the purpose of this exemption.
- (e) Paragraph (DDD)(1) of this rule shall not apply to any gasoline dispensing pump that is used solely for the dispensing of E85, a gasoline with an ethanol content of eighty-five per cent.
- (f) Paragraph (DDD)(1) of this rule shall not apply to any gasoline dispensing facility where gasoline is dispensed to a fleet of motor vehicles in which ninety-five per cent or more of the fleet of motor vehicles being fueled with gasoline is equipped with onboard refueling vapor recovery. If the gasoline dispensing facility is located at a motor vehicle assembly plant, the fleet of produced motor vehicles being initially fueled with gasoline shall be considered separate from any fleet of motor vehicles being refueled with gasoline. The owner or operator of a gasoline dispensing facility claiming this exemption shall maintain records documenting that at least ninety-five per cent of the fleet of motor vehicle being fueled with gasoline are equipped with onboard refueling vapor recovery. These records shall be retained by the owner or operator for a period of not less than five years and shall be made available to the director or any authorized representative of the director for review.

[Comment: This exemption is appropriate for gasoline dispensing facilities located at a facility or site serving a known fleet of motor vehicle rental agency, governmental agency, or motor vehicle assembly plant.]

(5) Suspension of control requirements:

- (a) If, as a result of the development of a redesignation request prepared in accordance with requirements of the USEPA and Section 107(d)(3)(D) of the Clean Air Act contained in 42 USC 7407 (d)(3)(D), the director determines that the stage II vapor control program is not necessary in an area to ensure the maintenance of the ambient air quality standard for ozone and subsequently submits an official redesignation request to the USEPA for approval, the director may suspend the requirements of this paragraph in that area. This suspension shall remain in effect until a violation of the

ambient air quality standard for ozone is measured in the area or the USEPA disapproves the redesignation request.

- (b) The director also may suspend the requirements of this paragraph in the event that the USEPA promulgates or a federal court of last resort requires the USEPA to promulgate onboard (on-the-vehicle) refueling control standards pursuant to Section 202(a)(6) of the Clean Air Act contained in 42 USC 7521(a)(6), unless the director determines that the stage II vapor control program is necessary for the attainment and/or maintenance of the ambient air quality standard for ozone and this determination is issued by the director as final findings and orders subject to public hearing requirements. If the director determines that the stage II vapor control program is not required for the maintenance of the ambient air quality standard for ozone after the promulgation of onboard control requirements, the director may suspend the requirements of this paragraph.

3745-21-09 Appendix A

List of Organic Chemicals for which  
Paragraphs (DD) and (EE) of  
Rule 3745-21-09 of the Administrative Code are Applicable

Organic Chemical

Acetal  
Acetaldehyde  
Acetaldol  
Acetamide  
Acetanilide  
Acetic acid  
Acetic Anhydride  
Acetone  
Acetone cyanohydrin  
Acetonitrile  
Acetophenone  
Acetyl chloride  
Acetylene  
Acrolein  
Acrylamide  
Acrylic acid  
Acrylonitrile  
Adipic acid  
Adiponitrile  
Alkyl naphthalenes  
Allyl alcohol  
Allyl chloride  
Aminobenzoic acid  
Aminoethylethanolamine  
p-aminophenol  
Amyl acetates  
Amyl alcohols  
Amyl amine  
Amyl chloride  
Amyl mercaptans  
Amyl phenol  
Aniline  
Aniline hydrochloride  
Anisidine  
Anisole  
Anthranilic acid  
Anthraquinone  
Benzaldehyde

Organic Chemical

Benzamide  
Benzene  
Benzenedisulfonic acid  
Benzenesulfonic acid  
Benzil  
Benzilic acid  
Benzoic acid  
Benzoin  
Benzonitrile  
Benzophenone  
Benzotrichloride  
Benzoyl chloride  
Benzyl alcohol  
Benzylamine  
Benzyl benzoate  
Benzyl chloride  
Benzyl dichloride  
Biphenyl  
Bisphenol A  
Bromobenzene  
Bromonaphthalene  
Butadiene  
1-butene  
n-butyl acetate  
n-butyl acrylate  
n-butyl alcohol  
s-butyl alcohol  
t-butyl alcohol  
n-butylamine  
s-butylamine  
t-butylamine  
p-tertbutyl benzoic acid  
1,3-butylene glycol  
n-butyraldehyde  
Butyric acid  
Butyric anhydride  
Butyronitrile  
Caprolactam

Carbon disulfide  
Carbon tetrabromide  
Carbon tetrachloride  
Cellulose acetate  
Chloroacetic acid  
m-chloroaniline  
o-chloroaniline  
p-chloroaniline  
Chlorobenzaldehyde  
Chlorobenzene  
Chlorobenzoic acid  
Chlorobenzotrichloride  
Chlorbenzoyl chloride  
Chlorodifluoromethane  
Chlorodifluoroethane  
Chloroform  
Chloronaphthalene  
o-chloronitrobenzene  
p-chloronitrobenzene  
Chlorophenols  
Chloroprene  
Chlorosulfonic acid  
m-chlorotoluene  
o-chlorotoluene  
p-chlorotoluene  
Chlorotrifluoromethane  
m-cresol  
o-cresol  
p-cresol  
Cresols (mixture)  
Cresylic acid  
Crotonaldehyde  
Crotonic acid  
Cumene  
Cumene hydroperoxide  
Cyanoacetic acid  
Cyanogen chloride  
Cyanuric acid  
Cyanuric chloride  
Cyclohexane  
Cyclohexanol  
Cyclohexanone  
Cyclohexene  
Cyclohexylamine  
Cyclooctadiene  
Decanol  
Diacetone alcohol  
Diaminobenzoic acid  
Dichloroaniline  
m-dichlorobenzene  
o-dichlorobenzene  
p-dichlorobenzene  
Dichlorodifluoromethane  
Dichloroethyl ether  
1,2-dichloroethane (EDC)  
Dichlorohydrin  
Dichloropropene  
Dicyclohexylamine  
Diethylamine  
Diethylene glycol  
Diethylene glycol diethyl ether  
Diethylene glycol dimethyl ether  
Diethylene glycol monobutyl ether  
Diethylene glycol monobutyl ether acetate  
Diethylene glycol monoethyl ether  
Diethylene glycol monoethyl ether acetate  
Diethylene glycol monomethyl ether  
Diethyl sulfate  
Difluoroethane  
Diisobutylene  
Diisodecyl phthalate  
Diisooctyl phthalate  
Diketene  
Dimethylamine  
N,N-dimethylaniline  
N,N-dimethyl ether  
N,N-dimethylformamide  
Dimethylhydrazine  
Dimethyl sulfate  
Dimethyl sulfide  
Dimethyl sulfoxide  
Dimethyl terephthalate  
3,5-dinitrobenzoic acid  
Dinitrophenol  
Dinitrotoluene  
Dioxane  
Dioxilane  
Diphenylamine  
Diphenyl oxide  
Diphenyl thiourea

Dipropylene glycol  
Dodecene  
Dodecylaniline  
Dodecylphenol  
Epichlorohydrin  
Ethanol  
Ethanolamines  
Ethyl acetate  
Ethyl acetoacetate  
Ethyl acrylate  
Ethylamine  
Ethylbenzene  
Ethyl bromide  
Ethylcellulose  
Ethyl chloride  
Ethyl chloroacetate  
Ethylcyanoacetate

Ethylene carbonate  
Ethylene chlorohydrin  
Ethylenediamine  
Ethylene dibromide  
Ethylene glycol  
Ethylene glycol diacetate  
Ethylene glycol dimethyl ether  
Ethylene glycol monobutyl ether  
Ethylene glycol monobutyl ether acetate  
Ethylene glycol monoethyl ether  
Ethylene glycol monoethyl ether acetate  
Ethylene glycol monomethyl ether  
Ethylene glycol monomethyl ether  
acetate  
Ethylene glycol monophenyl ether  
Ethylene glycol monopropyl ether  
Ethylene oxide  
Ethyl ether  
2-ethylhexanol  
Ethyl orthoformate  
Ethyl oxalate  
Ethyl sodium oxalacetate  
Formaldehyde  
Formamide  
Formic acid  
Fumaric acid  
Furfural  
Glycerol  
Glycerol dichlorohydrin  
Glycerol triether  
Glycine  
Glyoxal  
Hexachlorobenzene  
Hexachloroethane  
Hexadecyl alcohol  
Hexamethylenediamine  
Hexamethylene glycol  
Hexamethylenetetramine  
Hydrogen cyanide  
Hydroquinone  
p-hydroxybenzoic acid  
Isoamylene  
Isobutanol  
Isobutyl acetate  
Isobutylene  
Isobutyraldehyde  
Isobutyric acid  
Isodecanol  
Isoctyl alcohol  
Isopentane  
Isophorone  
Isophthalic acid  
Isoprene  
Isopropanol  
Isopropyl acetate  
Isopropylamine  
Isopropyl chloride  
Isopropylphenol  
Ketene  
Linear alkyl sulfonate  
Linear alkylbenzene (linear  
dodecylbenzene)  
Maleic acid  
Maleic anhydride  
Malic acid  
Mesityl oxide  
Metanilic acid  
Methacrylic acid  
Methallyl chloride  
Methanol  
Methyl acetate  
Methyl acetoacetate  
Methylamine  
n-methylaniline

Methyl bromide  
Methyl butynol  
Methyl chloride  
Methylcyclohexane  
Methylcyclohexanone  
Methylene chloride  
Methylene dianiline  
Methylene diphenyl diisocyanate  
Methyl ethyl ketone  
Methyl formate  
Methyl isobutyl carbinol  
Methyl isobutyl ketone  
Methyl methacrylate  
Methylpentynol  
a-methylstyrene  
Methyl tert-butyl ether  
Morpholine

3745-21-10      **Compliance test methods and procedures.**

[Comment: For dates of non-regulatory government publications, publications of recognized organizations and associations, federal rules, and federal statutory provisions referenced in this rule, see the last paragraph of rule 3745-21-01 of the Administrative Code titled "Incorporation by reference."]

(A) General provisions.

- (1) The methods and procedures of this rule apply to sources governed by rule 3745-21-09 of the Administrative Code.
- (2) Use of an alternative test method, in lieu of one of the USEPA's approved test methods or in lieu of other methods specified in this rule, must be approved by the USEPA as a revision of the state implementation plan.
- (3) The results of any compliance testing required by the director for tests conducted pursuant to paragraphs (C) to (F) and (L) of this rule shall not be accepted unless the Ohio EPA district office or local air agency has been notified of the intent to test in accordance with paragraph (A)(4) of this rule not less than thirty days before the proposed initiation of the testing.
- (4) Any person notifying the Ohio EPA district office or local air agency of a proposed emissions compliance test shall include as part of the notification the following information:
  - (a) A statement indicating the purpose of the proposed test and the applicable paragraph of rule 3745-21-09 of the Administrative Code;
  - (b) A detailed description of the facility to be tested;
  - (c) A detailed description of the test procedures, equipment and sampling sites;  
and
  - (d) A timetable, setting forth the dates on which:
    - (i) The testing will be conducted; and
    - (ii) The final test report will be submitted (not later than thirty days after completion of on-site sampling).
- (5) For any source compliance determination, the owner or operator of the source shall be responsible for providing:

- (a) Sampling ports, pipes, lines, or appurtenances for the collection of samples and data required by the test procedures;
  - (b) Safe access to the sample and data collection locations; and
  - (c) Light, electricity, and other utilities required for sample and data collection.
- (B) Method for the determination of volatile organic compound content, solids content, and density of surface coatings and inks.
- (1) This method applies to coatings, inks or other coating materials employed in a coating line, printing line or other operation. For purposes of this method "coating" shall also mean "ink" or other coating material.
  - (2) Any determination of VOC content, solids content, or density of a coating shall be based on the coating as employed (as applied), including the addition of any thinner or viscosity reducer to the coating.
  - (3) When a sample of a coating is obtained for analysis by any of the procedures described in this method, the amount of the sample shall be at least one quart. The sample shall be placed in an air-tight container. When multiple package coatings are sampled, separate samples of each component shall be obtained.
  - (4) Using either the procedures set forth in USEPA method 24 (for coatings) and USEPA method 24A (for flexographic and rotogravure printing inks and related coatings), or the coating formulation data from the coating manufacturer and coating user, the following shall be determined, where appropriate:

$D_C$  = density of coating, in pounds of coating per gallon of coating.

$D_{VM}$  = density of volatile matter in coating, in pounds of volatile matter per gallon of volatile matter.

$V_S$  = volume fraction of solids (nonvolatile matter) in coating, in gallon of solids per gallon of coating.

$V_{VM}$  = volume fraction of volatile matter in coating, in gallon of volatile matter per gallon of coating.

$V_W$  = volume fraction of water in coating, in gallon of water per gallon of coating.

$W_S$  = weight fraction of solids (nonvolatile matter) in coating, in pound of solids per pound of coating.

$W_{VM}$  = weight fraction of volatile matter in coating, in pound of volatile matter per pound of coating. If this weight fraction is determined by ASTM D2369-04, "Standard Test Method for Volatile Content of Coatings," the drying conditions shall be one hundred ten degrees Celsius for one hour, except where otherwise authorized by the director based on an alternate analytical procedure that is satisfactorily demonstrated to the director by the coating manufacturer to be more representative of the actual cure mechanism of the coating.

$W_W$  = weight fraction of water in coating, in pound of water per pound of coating.

- (5) If the coating contains a volatile matter other than VOC or water, the identity and content of such volatile matter may be determined using either standard gas chromatographic techniques or coating formulation data from the coating manufacturer and coating user. The density of such volatile matter may be determined using either the procedures set forth in ASTM D1475-98 or data from reference texts. For purposes of this method, such volatile matter shall be referred to as exempt solvent. The following may be determined, where appropriate:

$D_{ES}$  = density of exempt solvent, in pounds of exempt solvent per gallon of exempt solvent.

$V_{ES}$  = volume fraction of exempt solvent in coating, in gallon of exempt solvent per gallon of coating.

$W_{ES}$  = weight fraction of exempt solvent in coating, in pound of exempt solvent per pound of coating.

- (6) The weight fraction  $W_{VOC}$  of VOC in a coating and the volume fraction  $V_{VOC}$  of VOC in a coating shall be calculated as follows, where appropriate:

$$W_{VOC} = W_{VM} - W_W - W_{ES}$$

$$V_{VOC} = V_{VM} - V_W - V_{ES}$$

- (7) The VOC content of a coating can be expressed as follows:

$C_{VOC,1}$  = VOC content in pounds of VOC per gallon of coating.

$C_{VOC,2}$  = VOC content in pounds of VOC per gallon of coating, excluding water and exempt solvents.

$C_{VOC,3}$  = VOC content in pounds of VOC per gallon of solids.

$C_{VOC,4}$  = VOC content in pounds of VOC per pound of solids.

$C_{VOC,5}$  = VOC content in percentage VOC by volume of the coating, excluding water and exempt solvents.

$C_{VOC,6}$  = VOC content in percentage VOC by volume of the volatile matter.

$C_{VOC,7}$  = VOC content in percentage VOC by weight of the coating.

- (8) The VOC content of a coating shall be calculated as follows, where appropriate:
- (9) The weighted average VOC content of the coatings employed during a specified time period  $t$  shall be calculated as follows, where appropriate:

where:

$A$  = subscript denoting that the indicated VOC content is a weighted average of the coatings employed during time period  $t$ .

$L_C$  = liquid volume of coating employed during time period  $t$ , in gallons of coating.

$M_C$  = mass (weight) of coating employed during time period  $t$ , in pounds of coating.

$i$  = subscript denoting a specific coating employed during time period  $t$ .

$n$  = total number of coatings employed during time period  $t$ .

$t$  = time period specified for the weighted average VOC content.

- (10) The density of the VOC content of a coating may be determined using either the procedures set forth in ASTM D1475-98 or data from reference texts. If ASTM D1475-98 is employed, the density shall be the arithmetic average of three determinations.
- (11) In the event of a dispute between coating formulation data and data obtained by analytical procedures, the data obtained by analytical procedures shall be employed, except as otherwise provided in paragraph (B)(12) of this rule.
- (12) If a VOC content value obtained by analytical procedures is higher than a VOC content value obtained by formulation data due to any VOC that is formed during baking or curing (i.e., cure volatiles), then the VOC content of the portion of the coating not subject to curing or baking shall be based on

formulation data and the VOC content of the portion of the coating subject to curing or baking shall be based on analytical procedures. The portion of the coating subject to curing or baking shall be equal to the measured transfer efficiency for the coating applicator and object being coated. The approach described in this paragraph for determining the VOC content of a coating may be used only when the applicable VOC limitation is expressed in terms of pounds of VOC per gallon of deposited solids and the transfer efficiency test method is specified in this rule or rule 3745-21-09 of the Administrative Code. Also, in cases where analytical results and formulation data are combined for a waterborne coating, the interlaboratory precision adjustments specified in the analytical procedures shall not be applied to the analytical results.

(C) Method for the determination of VOC concentration, VOC mass emission rate and VOC control equipment efficiency.

- (1) The provisions of this paragraph are generally applicable to the test methods employed to determine the VOC concentration and VOC mass emission rate for a gas stream or exhaust vent and the collection or control efficiency for any control equipment designed, installed, and operated for the purpose of reducing the emission of VOC. For purposes of this paragraph, "vapor collection system" also means capture system and "vapor control system" also means control system or control device.
- (2) The concentration of VOC in a gas stream or exhaust vent shall be determined by utilizing the following methods:
  - (a) USEPA method 25 or USEPA method 25A, as appropriate, for sources specified in paragraphs (C) to (L), (P), (R), (S), (U), (W) to (Y), (FF), (GG), (LL) to (NN) [if the control efficiency compliance option in (LL), (MM) or (NN) is chosen] and, (PP), (SS), (VV)(2), (XX)(1), (YY), (ZZ)(1)(a), (AAA)(1), and (BBB) of rule 3745-21-09 of the Administrative Code; or
  - (b) USEPA method 18) or USEPA method 25A, as appropriate, for sources specified in paragraphs (O)(3)(c)(iv), (O)(4)(a)(ii), (CC) to (EE), and (LL) to (NN) [if the ppmv compliance option in (LL), (MM) or (NN) is chosen] of rule 3745-21-09 of the Administrative Code.
- (3) The following procedures shall be included in any source testing or determination where applicable:
  - (a) The source shall be operated at or near maximum operating capacity during any testing and the measurement of the operating rate shall be made in a manner acceptable to the Ohio environmental protection agency.
  - (b) The VOC content of any coatings employed shall be sampled and analyzed in accordance with paragraph (B) of this rule.

- (c) The capture efficiency of any vapor collection system used to transport the VOC emissions from their point of origin to the vapor control system shall be determined in accordance with USEPA methods 204 to 204F or the alternative capture efficiency testing protocols specified in the USEPA, Office of Air Quality Planning and Standards document entitled "Guidelines for Determining Capture Efficiency."
- (d) The control efficiency of any vapor control system used to reduce the emission of VOC shall be based upon an emissions test or a recovery test. For a vapor control system that destroys VOC (e.g., an incineration system), either the streams entering and leaving the vapor control system shall be tested or, if acceptable to the director, the amount of VOC employed shall be measured and the gas stream leaving the vapor control system shall be tested. For a vapor control system that recovers VOC (e.g., a carbon adsorption system), either the gas streams entering and leaving the vapor control system shall be tested or, if acceptable to the director, the amounts of VOC employed and recovered or, employed and emitted, shall be measured or tested.
- (e) For the testing of a gas stream vented to a vapor control system, samples shall be taken simultaneously at the inlet and the outlet of the vapor control system.
- (f) For the testing of a gas stream, the sampling location(s), volumetric flow rate, molecular weight, carbon dioxide and oxygen contents, excess air, and water vapor content shall be determined in accordance with USEPA methods 1, 1A, 2, 2A, 2C, 2D, 3 and 4.
- (g) For gas streams tested by USEPA method 25 or 25A, the VOC emission rate shall be based upon the average of three test runs. Each run shall have a minimum duration of one hour and a minimum sample volume of .003 dry standard cubic meter, except that shorter sampling times or smaller volumes, when necessitated by process variables, may be found acceptable.
- (h) The control efficiency of the vapor control system shall be the per cent reduction in mass emissions of VOC between the inlet and the outlet of the vapor control system. If this efficiency is based upon an emissions test utilizing USEPA method 25 or 25A, the mass emissions of VOC as carbon shall be employed in the efficiency determination.
- (i) The capture efficiency of the vapor collection system shall be the per cent of total mass emissions of VOC emitted from the source which are vented to the vapor control system. If this efficiency is based upon an emissions test utilizing USEPA method 25 or 25A, the mass emissions of VOC as carbon shall be employed in the efficiency determination.

- (j) The overall control efficiency (in per cent) of any control equipment for VOC emissions shall be the vapor capture efficiency multiplied by the vapor control efficiency and divided by one hundred.
- (k) The total mass emission rate of VOC from a source equipped with control equipment shall be the sum of VOC emissions from the vapor control system, VOC emissions not collected by the vapor collection system and VOC emissions from any losses associated with the vapor collection system and vapor control system.
- (4) The VOC mass emissions rate for a gas stream tested by USEPA method 18 shall be calculated as follows:

where:

$E_s$  = VOC mass emission rate for the gas stream, in kilograms of VOC per hour (kg VOC/hr).

$K = 2.494 \times 10^{-6}$  (gram mole-kilogram-minute per standard cubic meter-gram-ppmv-hour);

where the standard temperature for gram-mole per standard cubic meter is twenty degrees Celsius.

$Q_s$  = volumetric flow rate of gas stream, in dry standard cubic meters per minute, at a standard temperature of twenty degrees Celsius.

$C_i$  = concentration of sample component i, in ppmv, dry basis.

$M_i$  = molecular weight of sample component i, in grams per gram-mole.

i = subscript denoting a specific sample component, which is a VOC, in the gas stream.

n = total number of sample components, which are VOC, in the gas stream.

- (5) The mass emission rate of VOC as carbon for a gas stream tested by USEPA method 25 shall be calculated as follows:

$$E_s = K C_s Q_s$$

where:

$E_s$  = mass emission rate of VOC as carbon for the gas stream, in kilograms of carbon per hour (kg C/hr).

$K = 1 \times 10^{-6}$  kilograms per milligram.

$C_s$  = concentration of VOC as carbon in the gas stream, in milligrams of carbon per dry standard cubic meter.

$Q_s$  = volumetric flow rate of the gas stream, in dry standard cubic meters per hour.

- (6) To convert a mass emission rate from kilograms per hour to pounds per hour, multiply the mass emission rate in kilograms per hour by 2.2046.
- (7) To convert a mass emission value from VOC as carbon to VOC, divide the mass emission value of VOC as carbon by the weight fraction of carbon in the average molecular weight of the VOC emission. The determination of this weight fraction of carbon may be based on standard analytical techniques or material formulation data.

(D) Method for the determination of VOC emissions from solvent metal cleaning:

- (1) This method is applicable to determining VOC emissions from solvent metal cleaning equipment.
- (2) The purpose of this method is to quantify, by material balance, the amount of solvent input into a degreaser over a sufficiently long period of time so that an average emission rate can be computed.
- (3) The following procedure shall be followed to perform a material balance test:
  - (a) Clean the degreaser sump before testing.
  - (b) Record the amount of initial and make-up solvent added to the tank with a flow meter or other means.
  - (c) Record the type and amount or weight of work load degreased each day.
  - (d) At the end of the test run, pump out the used solvent and measure the amount with a flow meter or other means. Also, estimate the volume of metal chips and other material remaining in emptied sump, if significant.
  - (e) Bottle a sample of the used solvent and analyze it to find the per cent that is oil and other contaminants. The oil and solvent proportions can be estimated by weighing samples of used solvent before and after boiling off the solvent. Compute the volume of oils in the used solvent. The volume of

solvent displaced by this oil along with the volume of make-up solvent added during operations is equal to the amount of VOC emissions.

- (4) The following procedure can be followed to perform a material balance test in lieu of the procedure in paragraph (D)(3) of this rule:
  - (a) Clean the degreaser sump before testing.
  - (b) Record the amount of initial and make-up solvent added to the tank as measured with a flow meter or other means.
  - (c) Record the type and amount or weight of work load degreased over the period of the test.
  - (d) Record the amount of used solvent pumped out of the tank for disposal as measured with a flow meter or other means.
  - (e) Bottle a sample of the used solvent and analyze it to find the per cent that is oil and other contaminants.
  - (f) The VOC emissions from solvent metal cleaning equals the total solvent added to the tank minus the solvent contained in the used solvent being disposed.

(E) Method for the determination of VOC emissions from bulk gasoline terminals.

- (1) This method is applicable to determining the VOC emission rates at a bulk gasoline terminal employing a vapor collection system and either a continuous or intermittent vapor control system at a loading rack.
- (2) The VOC emission rates shall be determined in accordance with the methods and procedures contained in 40 CFR 60.503(b), (c), (e) and (f) of "Subpart XX - Standards of Performance for Bulk Gasoline Terminals," except that the gasoline throughput during any test shall be not less than ninety per cent of the maximum throughput of the loading rack(s) and not less than eighty thousand gallons.
- (3) During any test, all loading racks shall be open for each product line which is controlled by the system under test. Simultaneous use of more than one loading rack shall occur to the extent that such use would normally occur.
- (4) Simultaneous use of more than one dispenser on each loading rack shall occur to the extent that such use would normally occur.

- (5) Dispensing rates shall be set at the maximum rate at which the equipment is typically operated. Automatic product dispensers are to be used according to normal operating practices.
  - (6) Applicable operating parameters of the vapor control system shall be monitored to demonstrate that the control unit is operating at design levels. Delivery devices shall be leak free.
  - (7) For each gasoline tank truck loaded during the test period, all potential sources of leaks shall be checked in accordance with the method specified in paragraph (K) of this rule. The tank identification number, the latest leak check certification date, and the location and highest detector reading for each incident of leakage shall be recorded.
  - (8) During each test, all potential sources of leaks in the vapor collection and control systems shall be monitored in accordance with the method specified in paragraph (K) of this rule. The location and highest detector reading for each incident of leakage shall be recorded.
- (F) Method for the detection of leaks of VOC from petroleum refinery equipment and organic chemical manufacturing equipment.
- (1) This method is applicable to the detection of leaks of VOC into the ambient air from petroleum refinery equipment and any chemical manufacturing equipment subject to paragraph (T) or (DD) of rule 3745-21-09 of the Administrative Code.
  - (2) The detection of leaks shall be determined in accordance with the test procedure set forth in USEPA method 21.
  - (3) The calibration gases shall be:
    - (a) Zero air, which consists of less than ten ppmv of hydrocarbon in air; and
    - (b) A mixture of air and methane or n-hexane at a concentration of approximately, but less than, ten thousand ppmv of methane or n-hexane.
  - (4) The leak detection instrument shall be calibrated before use on each day of its use.
- (G) Standard method for the determination of the leak tightness of gasoline tank trucks (method G).
- (1) This method is applicable to determining the leak tightness of gasoline tank trucks which are equipped with piping, hoses and other devices for the collection or return of gasoline vapors during the transfer of gasoline at a gasoline dispensing facility, bulk gasoline plant or bulk gasoline terminal.

- (2) The leak tightness of a gasoline tank truck shall be determined in accordance with the test procedure set forth in USEPA method 27. For the pressure test, the initial pressure shall be 18.0 inches of water. For the vacuum test, the initial vacuum shall be 6.0 inches of water.
- (3) If any gasoline tank truck or compartment of a gasoline tank truck sustains either a pressure decrease greater than 3.0 inches of water over five consecutive minutes for the pressure test or a pressure increase greater than 3.0 inches of water over five consecutive minutes for the vacuum test, the tank truck is not leak tight. If not leak tight, repair the tank truck as necessary and repeat the entire test procedure specified in paragraph (G)(2) of this rule until the gasoline tank truck or compartment passes the test.

(H) (Reserved)

(I) Method for the determination of seal gaps in an external floating roof tank.

- (1) This method is applicable to determining the width and area of any gaps between the wall of an external floating roof tank and a seal which is around the circumference of the external floating roof.
- (2) The width of any seal gap is the distance between the seal and the tank wall. It is determined by using probes of various widths to accurately measure the actual distance from the seal to the tank wall.
- (3) The area of any seal gap is determined by multiplying the width of the seal gap, as determined in paragraph (I)(2) of this rule, by the circumferential length of the gap.
- (4) The total seal gap area is the accumulated area of all gaps which are greater than 0.125 inch in width.

(J) Method for the determination of the perchloroethylene content of wastes at a dry cleaning facility which uses perchloroethylene.

- (1) The method is applicable to determining the perchloroethylene content in per cent by weight for waste at a dry cleaning facility from any distillation operation which distills perchloroethylene and from any diatomaceous earth filter which filters perchloroethylene.
- (2) The perchloroethylene content of the waste in per cent by volume is determined in accordance with the procedure in ASTM D322-97(2002)e1, and is calculated as the diluent content in that procedure.

- (3) The density of the waste is determined by weighing a known volume of the waste and is calculated as the net weight of the waste in pounds divided by the volume of the waste in gallons.
  - (4) The perchloroethylene content of the waste in per cent by weight is calculated as the product of its diluent content and 13.55, divided by its density.
- (K) Method for the detection of leaks of gasoline vapors from vapor control systems, vapor collection systems, vapor balance systems, gasoline barges and gasoline tank trucks.
- (1) This method is applicable to the detection of leaks of gasoline vapors into the ambient air from:
    - (a) Vapor control systems, vapor collection systems, and vapor balance systems at barge loading facilities (for gasoline), bulk gasoline terminals, bulk gasoline plants, and gasoline dispensing facilities; and
    - (b) Gasoline barges and gasoline tank trucks during loading, providing the vapor control system, vapor collection system, or vapor balance system which is connected to the gasoline barge or gasoline tank truck does not create a back pressure greater than eighteen inches of water gauge pressure.
  - (2) This method describes the procedures to be followed for detecting leaks of gasoline vapors by means of a portable hydrocarbon gas analyzer, which is calibrated to read in per cent of the lower explosive limit as propane.
  - (3) The following equipment are used:
    - (a) A liquid manometer, or equivalent device, capable of measuring up to twenty-five inches of water gauge pressure with a precision of plus or minus 0.1 inch of water; and
    - (b) A portable hydrocarbon gas analyzer which:
      - (i) Is equipped with a sampling line of sufficient length for easy maneuverability during testing and a sampling probe having an internal diameter of 0.25 inch;
      - (ii) Is certified as safe for operation in explosive atmospheres;
      - (iii) Has a minimum range of zero to one hundred per cent of the lower explosive limit as propane; and
      - (iv) Has a response time for full-scale deflection of less than eight seconds with sampling line and probe attached.

- (4) The portable hydrocarbon gas analyzer is calibrated with 2.2 per cent propane by volume in air (or equivalent calibration gas) for one hundred per cent of the lower explosive limit according to the procedures and frequency specified by the manufacturer.
  - (5) The test procedures for detecting leaks are the following:
    - (a) Connect the liquid manometer to a pressure tap in the vapor control system, vapor collection system, or vapor balance system as close as possible to the connection with the gasoline barge or gasoline tank truck;
    - (b) Record the pressure periodically during loading of the gasoline barge or gasoline tank truck;
    - (c) Check with the portable hydrocarbon gas analyzer all potential leak sources on the gasoline barge or gasoline tank truck during loading and on the vapor control system, vapor collection system, or vapor balance system by:
      - (i) Maintaining the probe's inlet about one inch from the potential leak source in the path of (parallel to) the vapor flow from a leak;
      - (ii) Moving the probe slowly around the periphery of the potential leak source to locate the point of highest meter response;
      - (iii) Blocking as much as possible the wind from the area being monitored; and
    - (d) Record the location of leakage and the highest detector reading for each incidence of leakage.
- (L) Method for the determination of the emission of volatile organic compounds from a dryer at a petroleum dry cleaning facility.
- (1) This method is applicable to determining the volatile organic compound emission rate of a dryer containing articles cleaned in petroleum solvent at a dry cleaning facility.
  - (2) The dryer shall be tested under normal operating conditions for at least thirty dryer loads that total not less than four thousand pounds dry weight of articles cleaned. The dryer loads shall represent a normal range of variations in fabrics, solvents, load weights, temperatures, flow rates, and process deviations. Each dryer load shall be tested in accordance with paragraph (L)(3) or (L)(4) of this rule.
  - (3) For each dryer load the following shall be conducted and recorded:

- (a) Determine the average stack gas dry volumetric flow rate  $V$  (in dry standard cubic feet per hour) in accordance with USEPA methods 1 and 2.
- (b) Determine the average organic concentration  $C$  in the stack (in ppmv as propane) in accordance with USEPA method 25A in which the flame ionization analyzer is calibrated with propane standards.
- (c) Determine the ratio  $R$  of the flame ionization analyzer's response to a given parts per million by volume concentration of propane to its response to the same parts per million by volume concentration of the volatile organic compounds present in the stack gas.
- (d) Determine the molecular weight  $M$  (in pounds per pound-mole) of the volatile organic compounds present in the stack gas. Such determination shall be based on data from the manufacturer of the cleaning solvent or on standard analytical techniques.
- (e) Measure and record the weight  $W_a$  (in pounds dry weight) of the articles to be cleaned.
- (f) Calculate the weight  $W_{voc}$  (in pounds) of the volatile organic compounds emitted into the ambient air using the following equation:

$$W_{voc} = V \times C \times R \times M$$

- (4) For each dryer load the following shall be conducted and recorded:
- (a) All weights shall be measured to the nearest 0.5 pound or less on a scale that is accurate to 0.5 pound at weights of up to two hundred pounds.
  - (b) Measure and record the weight  $W_a$  (in pounds) of the articles to be cleaned.
  - (c) Measure and record the initial weight  $W_i$  (in pounds) of the articles to be dried after the washing cycle.
  - (d) Measure and record the final weight  $W_f$  (in pounds) of the articles removed from the dryer after the drying cycle.
  - (e) Measure and record the weight  $W_r$  (in pounds) of any recovered liquid materials.
  - (f) Calculate the weight  $W_{VOC}$  (in pounds) of the volatile organic compounds emitted into the ambient air using the following equation:

$$W_{VOC} = W_i - W_f - W_r$$

- (5) The dryer's volatile organic compound emission rate (in pounds per one hundred pounds dry weight of articles cleaned) shall be calculated for the combined dryer loads tested under this method as equal to one hundred multiplied by the sum total of  $W_{VOC}$  and divided by the sum total of  $W_a$ .
- (M) Method for the determination of the amount of volatile organic compounds contained in filtration waste at a petroleum dry cleaning facility.
- (1) This method is applicable to determining the amount of volatile organic compounds contained in the waste from a solvent filter used to filter petroleum solvent at a dry cleaning facility.
  - (2) The solvent filter shall be tested under normal operating conditions for at least three time periods according to the procedures specified in paragraph (M)(3) of this rule.
  - (3) The test procedures for each time period are as follows:
    - (a) A time period consists of the time immediately after the removal of waste from the solvent filter up to the next removal of waste.
    - (b) Record the date and time of the start of the time period.
    - (c) Record during the time period the weight of articles being cleaned in any washer connected to the solvent filter.
    - (d) Record the weight of the waste from the solvent filter at the end of the time period, in pounds.
    - (e) Collect in a sealed container, which is impervious to petroleum solvent, about two pounds of the waste from the solvent filter at the end of the time period.
    - (f) Record the date and time of the end of the time period.
    - (g) Conduct a laboratory analysis of the waste collected in the sealed container according to the procedures specified in paragraph (M)(4) of this rule.
  - (4) The procedures for the laboratory analysis of the collected filtration waste are as follows:
    - (a) Determine the weight  $W_s$  (in grams of a sample of approximately fifty milliliters of the filtration waste).

- (b) Determine the volume  $V_s$  (in milliliters) of the diluent content of that sample in accordance with ASTM D322-97(2002)e1.
- (c) Calculate the sample's diluent content  $D_s$  (fraction diluent by weight) using the following equation:

where 0.78 is the typical density of petroleum solvent in grams per milliliter.

- (5) For the test conducted under paragraphs (M)(2), (M)(3) and (M)(4) of this rule, the amount of VOCs contained in the filtration waste is calculated using the following equation:

where:

$X$  = amount of VOCs in the filtration waste, in pounds of VOC per one hundred pounds dry weight of articles cleaned.

$A$  = total weight of articles cleaned during the time period indicated, in pounds dry weight.

$D$  = diluent content of the sample of filtration waste for the time period indicated, in fraction diluent by weight (pounds of diluent per pound of filtration waste).

$W$  = total weight of filtration waste for the time period indicated.

Subscripts 1, 2, and 3 identify the time period of the test.

- (N) Method for the determination of the length of time to operate the recovery cycle of a solvent recovery dryer at a petroleum dry cleaning facility.
  - (1) This method is applicable to determining the length of time for operating the solvent recovery cycle of a solvent recovery dryer at a petroleum dry cleaning facility in order to assure that the flow rate of recovered petroleum solvent at the termination of solvent recovery cycle is no greater than fifty milliliters per minute.
  - (2) The dryer shall be tested under normal operating conditions for a duration of no less than two weeks during which no less than one-half of the dryer loads shall be monitored for their final recovered solvent flow rate.
  - (3) The suggested point for measuring the flow rate of recovered solvent is from the outlet of the solvent-water separator. Near the end of the recovery cycle, the

entire flow of recovered solvent is diverted to a graduated cylinder. As the recovered solvent collects in the graduated cylinder, the elapsed time is monitored and recorded in periods greater than or equal to one minute. At the same time, the volume of solvent in the graduated cylinder is monitored and recorded to determine the volume of recovered solvent that is collected during each time period. The recovered solvent flow rate is calculated by dividing the volume of solvent collected per period by the length of time elapsed during the period and converting the result with appropriate factors into units of milliliters per minute. The recovery cycle and the monitoring procedure is continued until the flow rate of solvent is less than or equal to fifty milliliters per minute. The date, the type of articles cleaned, and the total length of the recovery cycle shall be recorded for each dryer load being monitored.

- (O) Method for the determination of equipment in VOC service and in light liquid service.
- (1) This method is applicable to equipment at a petroleum refinery or a process unit subject to paragraph (T) or (DD) of rule 3745-21-09 of the Administrative Code.
  - (2) Any piece of equipment is presumed to be in VOC service, unless the owner or operator demonstrates that the piece of equipment is not in VOC service according to the following provisions:
    - (a) The piece of equipment is considered not in VOC service if it can be determined that the VOC content of the process fluid, which is contained in or contacts the piece of equipment, can be reasonably expected never to exceed ten per cent by weight.
    - (b) For purposes of determining the VOC content of a process fluid, procedures that conform to the general methods described in ASTM E168-99(2004), ASTM E169-04, and ASTM E260-73 shall be used.
    - (c) The owner or operator may use engineering judgment rather than the procedures contained in paragraph (O)(2)(b) of this rule to demonstrate that the VOC content of a process fluid does not exceed ten per cent by weight, provided the VOC content clearly does not exceed ten per cent by weight. In the event the Ohio environmental protection agency or the USEPA has a disagreement with an engineering judgment, paragraph (O)(2)(b) of this rule shall be used to resolve the disagreement.
  - (3) A piece of equipment is in light liquid service if it contains or is in contact with a process fluid that meets all of the following conditions:
    - (a) The process fluid is a liquid at operating conditions.

- (b) The vapor pressure of one or more of the pure components within the process fluid is greater than 0.04 pound per square inch at sixty-eight degrees Fahrenheit. Vapor pressures may be obtained from standard reference texts or may be determined by the method in ASTM D2879-70.
  - (c) The total concentration of the pure components having a vapor pressure greater than 0.04 pound per square inch at sixty-eight degrees Fahrenheit is equal to or greater than twenty per cent by weight.
- (P) Method for the determination of the net heating value of a gas, the actual exit velocity for a flare, and the maximum permitted velocity for an air-assisted flare.

(1) This method is applicable to:

- (a) Any flare subject to paragraph (DD) of rule 3745-21-09 of the Administrative Code; and
- (b) Any process vent stream subject to paragraph (EE) of rule 3745-21-09 of the Administrative Code.

(2) The net heating value of gas being combusted in a flare or being vented from a process vent stream shall be calculated using the following equation:

where:

$H_T$  = net heating value of the sample, in mega joules per standard cubic meter (MJ/scm), where the net enthalpy per mole of offgas is based on combustion at twenty-five degrees Celsius and seven hundred sixty millimeters of mercury, but the standard temperature for determining the volume corresponding to one mole is twenty degrees Celsius.

where the standard temperature for gram-mole per standard cubic meter (g mole/scm) is twenty degrees Celsius.

$C_i$  = concentration of sample component  $i$  in ppmv, as measured by the procedures in USEPA method 18, and ASTM D1946-77 reported on a wet basis.

$H_i$  = net heat of combustion of sample component  $i$ , in kilocalories per gram-mole. The heat of combustion may be determined using the procedures in ASTM D2382-76 if published values are not available or cannot be calculated.

$i$  = subscript denoting a specific component in the sample.

$n$  = total number of components within the sample.

- (3) The actual exit velocity of a flare shall be calculated by dividing the volumetric flow rate (in units of standard temperature and pressure) of the flare header or headers that feed the flare, as determined by USEPA methods 2, 2A, 2C, or 2D as appropriate, by the unobstructed (free) cross-sectional area of the flare tip, as determined by design and engineering principles.
- (4) The maximum permitted velocity of an air-assisted flare shall be determined by the following equation:

$$V_{\max} = 8.706 + 0.7084 (H_T)$$

where:

$V_{\max}$  = maximum permitted velocity of an air-assisted flare, in meters per second (m/sec).

$H_T$  = the net heating value as determined in paragraph (P)(2) of this rule.

- (5) To express the net heating value of a gas in Btu per standard cubic foot, multiply  $H_T$  by 26.84.
- (6) To express a velocity in feet per second, multiply the velocity in meters per second by 3.281.
- (Q) Method for the detection of leaks of gasoline vapors from a vapor control system installed at a gasoline dispensing facility (static leak test).
- (1) This method is applicable to quantifying the vapor tightness of a vapor balance system or a vacuum assist control system installed at a gasoline facility.
- (2) This method describes the procedures to be followed for detecting leaks of gasoline vapors by pressurizing the entire vapor recovery control system to two inches of water column and then allowing the system pressure to decay for five minutes. The acceptability of the final pressure is based upon the vapor system volume or ullage space. The allowable five minute final pressure is based upon the gasoline tank ullage, pressure decay equations, and the number of affected nozzles.
- (3) The equipment, procedures, and pressure decay leak criteria are specified in appendix A of this rule.
- (R) Method for the determination of the dynamic pressure performance for a vapor control system installed at a gasoline dispensing facility (dynamic pressure performance test).

- (1) This method is applicable to determining the dynamic pressure at known dispensing flow rates for a vapor control system installed at a gasoline dispensing facility. This method is used to quantify the back pressure and detect liquid obstructions in the vapor path leading from the dispensing nozzle to the gasoline storage tank.
- (2) This method describes the procedures to be followed in simulating the dynamic back pressures associated with known gasoline dispensing rates and liquid blockages by passing nitrogen through the vapor control system at three flow rates after liquid gasoline has been introduced into the vapor return piping.
- (3) The equipment, procedures, and dynamic pressure performance criteria are identified in appendix B to this rule.

**3745-21-10 APPENDIX A****STATIC LEAK TEST**  
(taken from BAAQMD test procedure ST-30)**1. Applicability**

- 1.1** This test procedure is used to quantify the vapor tightness of vapor control systems installed at any gasoline dispensing facility (GDF) equipped with pressure/vacuum (P/V) valves, provided that the designed pressure setting of the P/V valves is a minimum of 2.5 inches of water column (inches H<sub>2</sub>O). Excessive leaks in the vapor control system will increase the quantity of fugitive hydrocarbon emissions and lower the overall efficiencies of both the Stage I and Stage II vapor control systems.
- 1.2** For those systems equipped with a P/V valve(s) allowed to have a designed cracking pressure less than 2.5 inches H<sub>2</sub>O, the valve(s) shall be bagged to eliminate, from the test results, any flow contribution through the valve assembly. The valve/vent pipe connection, however, shall remain unobstructed during this test.
- 1.3** For those facilities not required to be equipped with a P/V valve(s), the vent pipe(s) shall be capped. For these installations, the test may be conducted at the vent pipe(s).

**2. Principle**

- 2.1** The entire vapor control system is pressurized with nitrogen to two (2.0) inches H<sub>2</sub>O. The system pressure is then allowed to decay and the pressure after five (5) minutes is compared with an allowable value. The minimum allowable five-minute final pressure is based on the system ullage and pressure decay equations. For the purpose of compliance determination, this test shall be conducted after all back-filling, paving, and installation of all Stage I and Stage II components, including P/V valves, has been completed.
- 2.2** For a GDF equipped with a coaxial Stage I system this test shall be conducted at a Stage II vapor riser. For a GDF which utilizes a two-point Stage I system this test shall be conducted at the Stage I vapor coupler, provided that the criteria set forth in Section 6.7 have been met. If the integrity criteria for two-point systems specified in Section 6.7 are met, this test shall be conducted at the Stage I vapor coupler unless the vapor control system possesses a design which is incompatible with testing at this location.

**3. Range**

- 3.1** If mechanical pressure gauges are employed, the full-scale range of the pressure gauges shall be 0-2.0, 0-1.0, and 0-0.50 inches H<sub>2</sub>O column. Maximum incremental graduations of the pressure gauge shall be 0.05 inches H<sub>2</sub>O and the minimum accuracy of the gauge shall be three percent of full scale. The minimum diameter of the pressure gauge face shall be 4 inches.
- 3.2** If an electronic pressure measuring device is used, the full-scale range of the device shall not exceed 0-10 inches H<sub>2</sub>O with a minimum accuracy of 0.5 percent of full-scale. A 0-20 inches H<sub>2</sub>O device may be used, provided the equivalent accuracy is not less than 0.25 percent of full scale.

- 3.3 The minimum ullage during the test shall be 25 percent of the tank capacity (total of **all** tanks if manifolded) or 500 gallons, whichever is greater. The maximum total ullage shall be 25,000 gallons. These values are exclusive of all vapor piping volumes.
- 3.4 The minimum and maximum nitrogen feed-rates, into the system, shall be one (1) and five (5) CFM, respectively.

#### 4. Interferences

- 4.1 Nitrogen shall not be introduced into the system at flowrates exceeding five (5) CFM as this may bias the results of the test toward non-compliance.
- 4.2 For vacuum-assist Stage II systems which utilize an incinerator, power to the collection unit shall be turned off during testing.
- 4.3 For vacuum-assist systems which locate the vacuum producing device in-line, between the Stage II vapor riser and the storage tank, the following shall apply:
  - 4.3.1 A valve shall be installed at the vacuum producing device. When closed, this valve shall isolate the vapor passage downstream of the vacuum producing device.
  - 4.3.2 The storage tank side of the vacuum producing device shall be tested in accordance with the procedures outlined in Section 7 of this method. Compliance shall be determined by comparing the final five-minute pressure with the allowable minimum five-minute final pressure from the first column (1-6 affected nozzles) in Table IB or use the corresponding equation in Section 9.2.
  - 4.3.3 The upstream vapor passage (nozzle to vacuum producing device) shall also be tested. Methodology for this test shall be submitted to the Ohio EPA, Division of Air Pollution Control for approval prior to submission of test results or shall be conducted in accordance with the procedures set forth in the applicable CARB Executive Order.

#### 5. Apparatus

- 5.1 Nitrogen. Use commercial grade nitrogen in a high pressure cylinder, equipped with a two-stage pressure regulator and a one psig pressure relief valve. A one psig (maximum) pressure relief valve is required and **must** be present. In addition, the cylinder of nitrogen **must** be grounded.
- 5.2 Pressure Measuring Device. Use 0-2.0, 0-1.0, and 0-0.50 inches H<sub>2</sub>O pressure gauges connected in parallel, a 0-2 inches H<sub>2</sub>O manometer, or an electronic pressure measuring device to monitor the pressure decay in the vapor control system. The pressure measuring device shall, at a minimum, be readable to the 0.05 inches H<sub>2</sub>O.
- 5.3 "T" Connector Assembly. See Figure 1 below for example.

Figure 1

**"T" Connector Assembly**

- 5.4 Vapor Coupler Integrity Assembly. Assemble OPW 633-A, 633-B, AND 634-A adapters, or equivalent, as shown in Figure 2 below. If the test is to be conducted at the storage tank Stage I vapor coupler, this assembly shall be used prior to conducting the static leak test in order to verify the pressure integrity of the vapor poppet. The internal volume of this assembly shall not exceed 0.1 cubic feet.

Figure 2

**Vapor Coupler Integrity Assembly**

- 5.5** Vapor Coupler Test Assembly. Use a compatible OPW 634-B cap, or equivalent, equipped with a center probe to open the poppet, the appropriate pressure measuring device to monitor the pressure decay, and a connection for the introduction of nitrogen into the system. See Figure 3 below for example.

**Figure 3**

**Vapor Coupler Test Assembly**

- 5.6** Stopwatch. Use a stopwatch accurate to within 0.2 seconds.
- 5.7** Flowmeter. Use a Dwyer flowmeter, Model RMC-104, or equivalent, to determine the required pressure setting of the delivery pressure gauge on the nitrogen supply pressure regulator. This pressure shall be set such that the nitrogen flowrate is between 1.0 and 5.0 CFM.
- 5.8** Combustible Gas Detector. A Bacharach Instrument Company, Model 0023-7356, or equivalent, may be used to verify the pressure integrity of system components during this test.
- 5.9** Leak Detection Solution. Any liquid solution designed to detect vapor leaks may be used to verify the pressure integrity of system components during this test.

**6. Pre-Test Procedures**

- 6.1** The following safety precautions shall be followed:
- 6.1.1** Only grounded nitrogen shall be used to pressurize the system.
  - 6.1.2** A one psig relief valve shall be installed to prevent the possible over-pressurizing of the storage tank.
- 6.2** Product dispensing shall not occur during the test. There shall have been no Stage I deliveries into or out of the storage tanks within the three hours prior to the test. For vacuum-assist Stage II systems, product dispensing shall not occur during the thirty minutes immediately prior to the test.

- 6.3** Measure the gallons of gasoline present in each underground storage tank and determine the actual capacity of each storage tank from facility records. Calculate the ullage space for each tank by subtracting the gasoline gallonage present from the actual tank capacity. The minimum ullage during the test shall be 25 percent of the tank capacity (total of **all** tanks if manifolded) or 500 gallons, whichever is greater. The total ullage shall not exceed 25,000 gallons.
- 6.4** For two-point Stage I systems, this test shall be conducted with the dust cap removed from the vapor coupler. This is necessary to determine the vapor tightness of the Stage I vapor poppet. See Section 6.7 if this test is to be conducted at the Stage I vapor coupler.
- 6.4.1** For coaxial Stage I systems this test shall be conducted with the dust cap removed from the Stage I coupler. This is necessary to insure the vapor tightness of the Stage I vapor poppet.
- 6.4.2** Verify that the liquid level in the storage tank is at least four (4) inches above the highest opening at the bottom of the submerged drop tube.
- 6.5** If the Stage I containment box is equipped with a drain valve, the valve assembly may be cleaned and lubricated prior to the test. This test shall, however, be conducted with the drain valve installed and the manhole cover removed. See subsection 7.4.1 for further details regarding containment box drain valves.
- 6.6** If the test is to be conducted at a Stage II vapor riser, disconnect the dispenser end of one vapor control hose and install the "T" connector assembly (see Figure 1). Connect the nitrogen gas supply (do not use air) and the pressure measuring device to the "T" connector.
- 6.6.1** For those Stage II systems utilizing a dispenser mounted remote vapor check valve, the "T" connector assembly shall be installed on the vapor riser side of the check valve.
- 6.7** If this test is to be conducted at the Stage I vapor coupler on a two-point Stage I system, the procedures set forth in subsections 6.7.1 and 6.7.2 shall be successfully completed prior to testing. The static leak test shall not be conducted at the Stage I coupler at facilities equipped with coaxial Stage I systems.
- 6.7.1** Connect the Vapor Coupler Integrity Assembly to the Stage I vapor coupler. Connect the Vapor Coupler Test Assembly. Connect the nitrogen supply to the assembly and carefully pressurize the internal volume of the assembly to two (2.0) inches H<sub>2</sub>O. Start the stopwatch. Record the final pressure after one minute.
- 6.7.2** If the pressure after one minute is less than 0.25 inches H<sub>2</sub>O, the leak rate through the Stage I vapor poppet precludes conducting the static leak test at this location. Repair or replace the faulty component(s) as necessary and restart the test pursuant to Section 6.7.1. If the pressure after one minute is greater than or equal to 0.25 inches H<sub>2</sub>O, the static leak test may be conducted at this location. This criteria assures a maximum leak rate through the Stage I vapor poppet of less than 0.0004 cubic feet per minute.

- 6.7.3** Disconnect the Vapor Coupler Integrity Assembly from the Stage I vapor coupler. If the requirements of subsection 6.7.2 were met, install the Vapor Coupler Test Assembly to the Stage I vapor coupler.
- 6.8** All pressure measuring device(s) shall be bench calibrated using either a reference gauge or incline manometer. Calibration shall be performed at 20, 50, and 80 percent of full scale. Accuracy shall be within two percent at each of these calibration points. Calibrations shall be conducted on a frequency not to exceed 90 days. The individual conducting the test shall supply to the Ohio EPA or its designated local air agency with proof of equipment calibration meeting the requirements of this Section.
- 6.9** Use the flowmeter to determine the nitrogen regulator delivery pressures which correspond to nitrogen flowrates of 1.0 and 5.0 CFM. These pressures define the allowable range of delivery pressures acceptable for this test procedure. Also record which regulator delivery pressure setting, and the corresponding nitrogen flowrate, will be used during the test.
- 6.10** Use Equation 9.3 to calculate the approximate time required to pressurize the system ullage to the initial starting pressure of two (2.0) inches H<sub>2</sub>O. This will allow the tester to minimize the quantity of nitrogen introduced into those systems which cannot comply with the static leak standards.
- 6.11** Attach the Vapor Coupler Test assembly to the Stage I poppet or the "T" connector assembly to the Stage II vapor riser. Read the initial pressure of the storage tank and underground piping. If the initial pressure is greater than 0.5 inches H<sub>2</sub>O, carefully bleed off the pressure, in accordance with all applicable safety procedures, in the storage tank and underground piping to less than 0.5 inches H<sub>2</sub>O column.

## 7. Testing

- 7.1** Open the nitrogen gas supply valve and set the regulator delivery pressure within the allowable range determined in Section 6.9, and start the stopwatch. Pressurize the vapor system (or subsystem for individual vapor return line systems) to **at least** 2.2 inches H<sub>2</sub>O initial pressure. It is critical to maintain the nitrogen flow until the pressure stabilizes, indicating temperature and vapor pressure stabilization in the tanks. Check the test equipment using leak detecting solution or a combustible gas detector to verify that all test equipment is leak tight.
- 7.1.1** If the time required to achieve the initial pressure of two (2.0) inches H<sub>2</sub>O exceeds twice the time derived from Equation 9.3, stop the test and use liquid leak detector, or a combustible gas detector, to find the leak(s) in the system. Repair or replace the faulty component(s) and restart the test pursuant to Section 7.1.
- 7.2** Close and disconnect the nitrogen supply. Start the stopwatch when the pressure has decreased to the initial starting pressure of two (2.0) inches H<sub>2</sub>O.
- 7.3** At one-minute intervals during the test, record the system pressure. After five minutes, record the final system pressure. See the applicable of Table IA (or Equation 9.1) or IB (or Equation 9.2) to determine the acceptability of the final system static pressure results. For intermediate values of ullage in Table IA and IB, linear interpolation may be employed.

- 7.4** If the system failed to meet the criteria set forth in Table I (or the appropriate equation in Section 9), repressurize the system and check all accessible vapor connections using leak detector solution or a combustible gas detector. If vapor leaks in the system are encountered, repair or replace the defective component and repeat the test. Potential sources of leaks include nozzle check valves, pressure/vacuum relief valves, containment box drain valve assemblies, and plumbing connections at the risers.
- 7.4.1** If the facility fails to comply with the static leak test standards and the Stage I system utilizes a non-CARB-certified drain valve equipped containment box, which was installed prior to July 1, 1992, for which a CARB-certified replacement drain valve assembly is not marketed, the following two subsections shall apply:
- 7.4.1.1** The drain valve may be removed and the port plugged. Retest the system. If the facility complies with the static leak test standards under these conditions, the facility shall be considered complying with the requirements, provided that the manufacturer and model number of the containment box and the date of installation are submitted with the test results.
- 7.4.1.2** The criteria set forth in subsection 7.4.1.1 shall not apply after July 1, 1996.
- 7.5** After the remaining system pressure has been relieved, remove the Vapor Coupler Test Assembly or "T" connector assembly and reconnect the vapor control hose, if applicable.
- 7.6** If the vapor control system utilizes individual vapor return lines, repeat the leak test for each gasoline grade. Avoid leaving any vapor return line open longer than is necessary to install or remove the "T" connector assembly.

## **8. Post-Test Procedures**

- 8.1** Use the applicable of Table IA or IB, or the applicable of Equations 9.1 or 9.2, to determine the compliance status of the facility by comparing the final five-minute pressure with the minimum allowable final pressure.
- 8.1.1** For balance Stage II systems use Table IA or the applicable of Equation 9.1 to determine compliance.
- 8.1.2** For vacuum-assist Stage II systems use Table IB or the applicable of Equation 9.2 to determine compliance.

## **9. Calculations**

- 9.1** For Stage II Balance Systems, the minimum allowable five-minute final pressure, with an initial pressure of two (2.0) inches H<sub>2</sub>O, shall be calculated as follows:

[Equation 9-1]

$$P_f = 2e^{\frac{-760.490}{V}} \quad \text{if } N = 1-6$$

$$P_f = 2e^{\frac{-792.196}{V}} \quad \text{if } N = 7-12$$

$$P_f = 2e^{\frac{-824.023}{V}} \quad \text{if } N = 13-18$$

$$P_f = 2e^{\frac{-855.974}{V}} \quad \text{if } N = 19-24$$

$$P_f = 2e^{\frac{-888.047}{V}} \quad \text{if } N > 24$$

Where:

- N = The number of affected nozzles. For manifolded systems, N equals the total number of nozzles. For dedicated plumbing configurations, N equals the number of nozzles serviced by the tank being tested.
- $P_f$  = The minimum allowable five-minute final pressure, inches H<sub>2</sub>O
- e = A dimensionless constant approximately equal to 2.718
- 2 = The initial starting pressure, inches H<sub>2</sub>O
- V = The total ullage affected by the test, gallons

- 9.2** For Stage II Vacuum Assist Systems, the minimum allowable five-minute final pressure, with an initial pressure of two (2.0) inches H<sub>2</sub>O, shall be calculated as follows:

[Equation 9-2]

$$P_f = 2e^{\frac{-500.887}{V}} \quad \text{if } N = 1-6$$

$$P_f = 2e^{\frac{-531.614}{V}} \quad \text{if } N = 7-12$$

$$P_f = 2e^{\frac{-562.455}{V}} \quad \text{if } N = 13-18$$

$$P_f = 2e^{\frac{-593.412}{V}} \quad \text{if } N = 19-24$$

$$P_f = 2e^{\frac{-624.483}{V}} \quad \text{if } N > 24$$

Where:

- N = The number of affected nozzles. For manifolded systems, N equals the total number of nozzles. For dedicated plumbing configurations, N equals the number of nozzles serviced by the tank being tested.
- $P_f$  = The minimum allowable five-minute final pressure, inches H<sub>2</sub>O
- e = A dimensionless constant approximately equal to 2.718
- 2 = The initial starting pressure, inches H<sub>2</sub>O
- V = The total ullage affected by the test, gallons

- 9.3** The minimum time required to pressure the system ullage to two (2.0) inches H<sub>2</sub>O shall be calculated as follows:

[Equation 9-3]

$$t_2 = \frac{V}{[1522] F}$$

Where:

- $t_2$  = The minimum time to pressurize the ullage to two inches H<sub>2</sub>O, minutes  
 $V$  = The total ullage affected by the test, gallons  
 $F$  = The nitrogen flowrate into the system, CFM  
 1522 = The conversion factor for pressure and gallons

- 9.4** If the policy of the local district requires an allowable tolerance for testing error, the minimum allowable five-minute final pressure, including testing error, shall be calculated as follows:

[Equation 9-4]

$$P_{f-E} = 2 \left[ 1 + \left( \frac{E}{100} \right) \right] \left[ 408.9 - (P_f + 406.9) \right]$$

Where:

- $P_{f-E}$  = The minimum allowable five-minute final pressure including allowable testing error, inches H<sub>2</sub>O  
 $E$  = The allowable testing error, percent  
 $P_f$  = The minimum allowable five-minute final pressure calculated in Equations 9-1 or 9-2, inches H<sub>2</sub>O  
 2 = The initial starting pressure, inches H<sub>2</sub>O  
 408.9 = Atmospheric pressure plus the initial starting pressure, inches H<sub>2</sub>O  
 406.9 = Atmospheric pressure, inches H<sub>2</sub>O

## 10. Reporting

- 10.1** The calculated ullage and system pressures for each five-minute vapor control system test shall be reported as shown in Form 1. Be sure to include the Stage I system type (two-point or coaxial), the Stage II system type, whether the system is manifolded, and the one-minute pressures during the test. The tester may either provide all information listed in Form 1 in the comprehensive test report or include a copy of this form along with the comprehensive written report.

**Note:**For manifolded Stage II Assist Systems, the "Number of Affected Nozzles" shall be the total of all gasoline nozzles. For dedicated return configurations, the "Number of Affected Nozzles" shall be the total of those nozzles served by the tank being tested.

**DYNAMIC PRESSURE PERFORMANCE TEST**

(taken from BAAQMD test procedure ST-27)

**1. APPLICABILITY**

**1.1** This procedure is used to verify compliance with the applicable dynamic back pressure limits imposed on any Stage II vapor control system. The applicability of the following Alternate Methods is dependent upon the regulatory requirements imposed by the California Air Resources Board (CARB) Executive Order.

**1.1.1 Alternate Method 1.** This procedure is applicable if the dynamic back pressure standards are imposed from the nozzle to the gasoline storage tank, provided remote vapor check valves are not part of the Stage II system.

**1.1.2 Alternate Method 2.** This procedure is applicable if the dynamic back pressure standards are imposed from the Stage II riser to the gasoline storage tank, provided there is no vacuum-producing device located between the riser and tank.

**1.1.3 Alternate Method 3.** This procedure is applicable if the dynamic back pressure standards are imposed at the nozzle/vehicle interface during vehicle fueling.

**1.1.4 Alternate Method 4.** This procedure shall be conducted, in conjunction with the applicable of Alternate Methods 1, 2, or 3 if the Stage II system utilizes an incinerator.

**1.2** Alternate Methods 1 and 2 shall be conducted with the Stage I vapor poppet **open**. Alternate Methods 3 and 4 shall be conducted with the poppet **closed**.

**1.3** Other Alternate Methods may be used provided that written approval has been granted by the Ohio EPA, Division of Air Pollution Control. Such approval shall be based upon demonstrated equivalency of any proposed methodology.

**2. PRINCIPLE**

**2.1** Using Alternate Methods 1, 2, or 4, the dynamic back pressure during vehicle fueling is simulated by passing nitrogen through the Stage II vapor control system at specified rates. The resultant dynamic back pressure is measured using a pressure gauge, or equivalent device. Alternate Method 3 is a direct measurement of the pressure at the nozzle/fillpipe interface during gasoline dispensing. Liquid blockages in the vapor return lines are also detected using these Methods.

**3. RANGE**

**3.1** The minimum and maximum dynamic back pressures that can be measured are dependent upon the range of the pressure gauges used. Required gauge ranges are as follows:

<b>3.1.1</b>	<b>Alternate Method 1.</b>	0-0.5 and 0-2 inches H <sub>2</sub> O.
<b>3.1.2</b>	<b>Alternate Method 2.</b>	0-0.25, 0-1, and 0-2 inches H <sub>2</sub> O.
<b>3.1.3</b>	<b>Alternate Method 3.</b>	-1.0-+1.0 inches H <sub>2</sub> O.
<b>3.1.4</b>	<b>Alternate Method 4.</b>	0-0.5 and 0-1 inches H <sub>2</sub> O.

- 3.2** If mechanical pressure gauges are employed, the minimum diameter of the gauge face shall be four inches, and the minimum accuracy of the gauge shall be three percent of full scale.
- 3.3** If an electronic pressure measuring device is used, the full-scale range of the device shall not exceed 0-10 inches H<sub>2</sub>O with a minimum accuracy of 0.5 percent of full scale. A 0-20 inches H<sub>2</sub>O device may be used provided that the equivalent accuracy is not less than 0.25 percent of full-scale.

#### **4. INTERFERENCES**

- 4.1** Any leaks in the nozzle vapor path, vapor hose, or underground vapor return piping may result in erroneously low dynamic back pressure measurements.
- 4.2** For those Stage II systems possessing a design incompatible with this test procedure, testing shall be conducted in accordance with the procedures specified in the applicable CARB Executive Order.

#### **5. APPARATUS**

- 5.1** Nitrogen High Pressure Cylinder with Pressure Regulator. Use a high pressure nitrogen cylinder capable of maintaining a pressure of 2000 psig and equipped with a compatible two-stage pressure regulator and a one psig relief valve. The nitrogen cylinder **must** be grounded and the one psig (maximum) relief valve **must** be present during the test.
- 5.2** Rotameter. Use a calibrated rotameter capable of accurately measuring nitrogen flowrate(s) applicable for the imposed dynamic back pressure limits.
- 5.3** Pressure Gauges. Use differential pressure gauges, or equivalent, as specified in the applicable subsection of Section 3.1.
- 5.4** Automobile fillpipe. Use an automobile fillpipe, if applicable, known to be compatible with all bellows-equipped vapor control nozzles, and equipped with a pressure tap. See Figure 1.
- 5.5** Nitrogen. Use commercial grade nitrogen.
- 5.6** Hand Pump. Use a gasoline compatible hand pump, if applicable, to drain any gasoline from condensate pots.

- 5.7** Stopwatch. For Alternate Method 3, use a stopwatch, or equivalent, accurate to within 0.5 seconds.

## **6. PRE-TEST PROCEDURES**

**6.1 Alternate Method 1.** The following subsections are applicable for those Stage II systems where a limitation is imposed on the dynamic back pressure between the nozzle and the gasoline storage tank, provided that remote vapor check valves are not employed. For those Stage II systems which **do not** utilize a remote vapor check valve, assemble the apparatus as shown in Figure 1, ensuring that the riser shut-off valve on the test equipment is closed. If a Hirt Stage II system is used, the vacuum producing device shall be turned off during this test.

**6.1.1** Assemble the Dynamic Pressure Performance Test Assembly as shown in Figure 1.

**6.1.2** The test equipment **must** be leak-checked prior to use. Plug the nozzle end of the auto fillpipe and open the nitrogen cylinder. Adjust the flow meter control valve until a pressure of 50 percent of full scale is indicated on the high range pressure gauge. Close the nitrogen cylinder valve and any toggle valves. A pressure decay of less than 0.2 inches H<sub>2</sub>O, in five minutes, is considered acceptable.

**6.1.3** Perform an initial visual examination for vapor leaks at the nozzles and hoses of the Stage II system to be tested. All leak sources shall be repaired or the component(s) removed and replaced prior to testing.

**6.1.4** The Stage I vapor poppet shall be propped open in such a manner that the valve is not damaged. This may be accomplished using a Dynamic Pressure Release Assembly as shown in Figure 2.

**6.1.5** Pour a minimum of two (2) gallons of gasoline into each and every Stage II vapor return riser. This gasoline may be introduced into the Stage II riser in any appropriate manner. Alternatively, a minimum of twenty gallons of gasoline may be introduced into the Stage II riser furthest from the gasoline storage tank, provided that the riser is common to all products available at that dispenser. If product-specific risers are employed, a minimum of seven gallons, per product grade, may be introduced into the riser of each product which is furthest from the gasoline storage tank.

**6.1.6** Allow fifteen (15) minutes for liquid in the vapor return piping to drain.

**6.1.7** Completely drain any gasoline from the spout and bellows of each nozzle.

**6.1.8** For those vapor piping configurations which utilize a condensate pot, drain the pot prior to testing.

### **6.2 Alternate Method 2.**

**6.2.1** Assemble the Capped "T" Assembly as shown in Figure 3.

**6.2.2** Open the Stage I vapor poppet for the affected tank(s).

**6.2.3** Pour a minimum of two (2) gallons of gasoline into each and every Stage II vapor return riser. This gasoline may be introduced into the Stage II riser(s) in any appropriate manner.

**6.2.4** Allow fifteen (15) minutes for liquid in the vapor return piping to drain.

**6.2.5** For those vapor piping configurations which utilize a condensate pot, drain the pot prior to testing.

### **6.3 Alternate Method 3.**

**6.3.1** Assemble the Torus Pressure Test Assembly as shown in Figure 4.

**6.3.2** The Stage I vapor poppet shall remain closed during this test.

### **6.4 Alternate Method 4.**

**6.4.1** Assemble the Vent Pipe Pressure Assembly as shown in Figure 5.

**6.4.2** Carefully remove the vent pipe pressure/vacuum (P/V) valve.

**6.4.3** Open the Stage I vapor poppet for the affected tank(s).

**6.4.4** Insure that the collection unit of the Stage II system is turned off.

## **7. TESTING**

**7.1 Alternate Method 1.** Insert the nozzle into the fillpipe of the Dynamic Pressure Performance Test Unit as shown in Figure 1 below, ensuring that a tight seal at the fillpipe/nozzle interface is achieved.

**7.1.1** Connect the nitrogen supply to the test assembly.

**7.1.2** Open the nitrogen supply, set the delivery pressure to 5 psig, and use the flowmeter control valve to adjust the flowrate to lowest of the required nitrogen flowrates.

**7.1.3** A pulsating gauge needle indicates nitrogen passing through a liquid obstruction in the vapor return system. Close the flow meter control valve, redrain the nozzle and hose assembly, and repeat the test. If this condition re-occurs, the cause of the liquid trap in the system must be corrected.

**Figure 1****Dynamic Pressure Performance Test Assembly**

**7.1.4** The following information shall be recorded on the field data sheet, as shown in Form 1:

- (a) Nozzle Number
- (b) Gauge needle action
- (c) Dynamic back pressure, inches H<sub>2</sub>O

Specified nitrogen flowrates and associated maximum allowable Dynamic Backpressures are included in Form 1.

**7.1.5** Repeat subsections 7.1.2 through 7.1.4 at all required nitrogen flowrates for each and every nozzle.

**7.1.6** Close and replace the dust cover on the Stage I poppet.

**Figure 2****Dynamic Pressure Release Assembly**

**7.2 Alternate Method 2.** Those Stage II systems subject to regulatory limitations on the dynamic back pressure between the Stage II riser and gasoline storage tank shall be tested using this methodology.

**7.2.1** Disconnect the Stage II riser and install the "T" assembly as shown in Figure 3 below.

**Figure 3****Capped "T" Assembly**

**7.2.2** Connect the nitrogen supply to the "T" assembly.

**7.2.3** Open the nitrogen supply, set the delivery pressure to 5 psig, and use the flowmeter control valve to adjust the flowrate to lowest of the required nitrogen flowrates.

**7.2.4** A pulsating gauge needle indicates nitrogen passing through a liquid obstruction in the vapor return plumbing. If this occurs, the cause of the liquid trap must be corrected.

**7.2.5** The following information shall be recorded on the field data sheet, as shown in Form 2:

- (a) Riser Number
- (b) Gauge needle action
- (c) Dynamic back pressure, inches H<sub>2</sub>O

Specified nitrogen flowrates and associated maximum allowable Dynamic Backpressures are included in Form 2.

**7.2.6** Repeat subsections 7.2.3 through 7.2.5 at all required nitrogen flowrates for each and every riser.

**7.3 Alternate Method 3.** Those bellows-equipped Stage II systems subject to regulatory limitations on the dynamic back pressure at the nozzle/fillpipe interface during gasoline dispensing shall use the following methodology.

**7.3.1** Assemble the Torus Pressure Test Assembly (Donut) as shown in Figure 4 below

**7.3.2** Insert the nozzle spout through the inner hole of the donut.

**7.3.3** Insert and latch the nozzle in the vehicle fillpipe. Visually insure that a tight connection is made between the donut and fillpipe.

**Figure 4**

**Torus Pressure Test Assembly**

**7.3.4** Activate the dispenser, set the nozzle hold-open latch on low, and after at least one gallon has been dispensed start the stopwatch. Dispense a minimum of four gallons of gasoline.

Use the stopwatch to accurately time the dispensing rate. Record the total gallons dispensed and calculate the flow rate in gallons per minute. The following data shall be recorded on the field data sheet as shown in Form 3:

- Nozzle number and gasoline grade
- Gallons dispensed during test
- Maximum dynamic back pressure, inches H<sub>2</sub>O
- Minimum dynamic back pressure, inches H<sub>2</sub>O
- The average dispensing rate, gallons per minute
- Allowable backpressure range specified in the Executive Order

**7.3.5** This Alternate Method shall only be conducted with the Stage I vapor poppet closed,

since gasoline is being dispensed during the test.

**7.4 Alternate Method 4.** Those Stage II systems which utilize an incinerator shall conduct this test in conjunction with the applicable of Alternate Method 1, 2, or 3. This procedure verifies proper drainage of gasoline from the base of the vent pipe to the gasoline storage tank.

**7.4.1** After verifying compliance with the dynamic back pressure standards, pursuant to the applicable of Alternate Methods 1, 2, or 3, close the Stage I vapor poppet.

**7.4.2** Remove the pressure/vacuum (P/V) valve(s) from each vent pipe.

**7.4.3** Carefully pour a minimum of five gallons of gasoline down each vent pipe.

**7.4.4** Install the Vent Pipe Pressure Assembly as shown in Figure 5 below. Open the Stage I poppet(s) on all affected tanks.

**Figure 5**

**Vent Pipe Pressure Assembly**

**7.4.5** Connect the nitrogen supply to the Vent Pipe Pressure Assembly.

**7.4.6** Open the nitrogen supply and adjust the flowrate to 60 CFH.

**7.4.7** After a minimum of thirty seconds, record the dynamic back pressure.

**7.4.8** A dynamic back pressure, from the top of the vent pipe to the storage tank, of less than 0.5 inches H<sub>2</sub>O shall be considered acceptable.

**7.4.9** Remove the Vent Pipe Pressure Assembly, carefully reinstall the P/V valve, and close the Stage I poppets.

## **8. REPORTING**

**8.1** Results of the dynamic back pressure test shall be reported as shown below:

- |              |                    |   |
|--------------|--------------------|---|
| <b>8.1.1</b> | Alternate Method 1 | Use Form 1                                |
| <b>8.1.2</b> | Alternate Method 2 | Use Form 2                                |
| <b>8.1.3</b> | Alternate Method 3 | Use Form 3                                |
| <b>8.1.4</b> | Alternate Method 4 | Include on applicable of Forms 1, 2, or 3 |

### Form 3

## Summary of Test Results Dynamic Pressure Performance

Date: \_\_\_\_\_ Time: \_\_\_\_\_ Application No. \_\_\_\_\_

GDF Name and address: \_\_\_\_\_

Stage II system type: (Manufacturer and Executive Order Number) \_\_\_\_\_

Nozzle No.	Gas Grade	Gallons Disp.	Max. B.P.	Min. B.P.	Disp Rate	Allow-able B.P.	PASS OR FAIL

Indicate location of storage tank(s), condensate pot(s), pump(s), and location where gasoline was introduced into the vapor return system on reverse side of this page:

Tests Conducted By: \_\_\_\_\_

Test Company: \_\_\_\_\_ Date of Tests: \_\_\_\_\_

Tests Witnessed By: \_\_\_\_\_

**STAGE II POST TEST INSPECTION FORM**

Facility Name:	Application #
Address:	County:
City, State, Zip	

**DISPENSER AREA INSPECTION**

- All Vapor pipes under the dispenser are capped, plugged, or re-attached.
- No leaks are present under dispenser, nor from hoses or nozzles.
- All impact valves are open on all product lines.
- All dispenser panels are correctly re-installed.
- All lock-outs or "Out of Service" bags are removed from dispenser nozzles.
- All tools, testing equipment, cones, and caution tape removed from dispenser area.

**TANK AREA INSPECTION**

- Isolation plugs are removed from vapor risers (if applicable).
- All tank top components (plugs, caps, etc...) are reinstalled and secure.
- "Drop out tank" free of product and functioning properly (with all caps replaced).
- Submersible pit(s) free from leaks.
- All tools, testing equipment, cones, and caution tape removed from tank area.
- All lids and covers are properly replaced.

3745-21-11      **Reasonably available control technology studies for ozone non-attainment areas.**

This rule was rescinded as of 4/2/09.

**Control of volatile organic compound emissions from commercial bakery oven facilities.**

[Comment: For dates and availability of non-regulatory government publications, publications of recognized organizations and associations, federal rules, and federal statutory provisions referenced in this rule, see the "Incorporation by Reference" paragraph at the end of rule 3745-21-01 of the Administrative Code.]

**(A) Applicability.****(1) Applicability for the Cincinnati area.**

- (a) Except as otherwise provided in paragraph (A)(1)(b) of this rule, the requirements of paragraphs (D) to (I) of this rule shall apply to each commercial bakery oven facility that meets both of the following criteria:
  - (i) The facility is located in any of the following counties: Butler, Clermont, Hamilton, or Warren; and
  - (ii) The facility has a total uncontrolled potential to emit for volatile organic compound (VOC) emissions equal to or greater than one hundred tons per year on or after May 27, 2005 as determined in accordance with paragraph (C) of this rule.
- (b) Once a commercial bakery oven facility meets the applicability requirements of paragraph (A)(1)(a) of this rule on or after May 27, 2005, it is always subject to the requirements of paragraphs (D) to (I) of this rule, except as otherwise provided in paragraph (A)(1)(c) of this rule.
- (c) In the event a commercial bakery oven facility meets the applicability requirements under paragraph (A)(1)(a) of this rule, but reduces its total uncontrolled potential to emit for volatile organic compounds to less than one hundred tons per year by no later than May 27, 2006, the facility is not subject to the requirements of paragraphs (D) to (I) of this rule. If such commercial bakery oven facility subsequently meets the applicability requirements of paragraph (A)(1)(a) of this rule, then it becomes subject to the requirements of paragraphs (D) to (I) of this rule.

**(2) Applicability for the Cleveland-Akron-Lorain area.**

- (a) Except as otherwise provided in paragraph (A)(2)(b) of this rule, the requirements of paragraphs (D) to (I) of this rule shall apply to each commercial bakery oven facility that meets both of the following criteria:

- (i) The facility is located in any of the following counties: Ashtabula, Cuyahoga, Geauga, lake, Lorain, Medina, Portage, or Summit; and
  - (ii) The facility has a total uncontrolled potential to emit for VOC emissions equal to or greater than one hundred tons per year on or after the effective date of this rule, as determined in accordance with paragraph (C) of this rule.
- (b) Once a commercial bakery oven facility meets the applicability requirements of paragraph (A)(2)(a) of this rule on or after the effective date of this rule, it is always subject to the requirements of paragraphs (D) to (I) of this rule, except as otherwise provided in paragraph (A)(2)(c) of this rule.
- (c) In the event a commercial bakery oven facility meets the applicability requirements under paragraph (A)(2)(a) of this rule, but reduces its total uncontrolled potential to emit for VOCs to less than one hundred tons per year by no later than twelve months after the effective date of this rule, the facility is not subject to the requirements of paragraphs (D) to (I) of this rule. If such commercial bakery oven facility subsequently meets the applicability requirements of paragraph (A)(2)(a) of this rule, then it becomes subject to the requirements of paragraphs (D) to (I) of this rule.

(B) Definitions.

The definitions applicable to this rule are contained in paragraphs (B) and (U) of rule 3745-21-01 of the Administrative Code.

(C) Determination of total uncontrolled potential to emit.

- (1) The owner or operator of each commercial bakery oven facility shall calculate the facility's total uncontrolled potential to emit, UPTE(facility), for VOC emissions in tons per year, using either the equations in paragraphs (C)(1)(a) to (C)(1)(c) of this rule and the provisions in paragraphs (C)(2) to (C)(4) of this rule, or a USEPA administrator-approved alternative method if the use of that alternative method is approved in writing by the USEPA administrator for this purpose:
- (a) UPTE(facility) equals the sum of the UPTE(oven) for all bakery ovens at the facility (in tons VOC per year)

- (b) UPTE(oven) is calculated for each bakery oven as follows:

$$\text{UPTE(oven)} = P_A * \text{EF}_{\text{VOC}} * (1 \text{ ton}/2000 \text{ pounds})$$

where:

$P_A$  = the bakery oven's maximum annual production rate for yeast-leavened finished bakery product (in tons of baked product per year).

$EF_{VOC}$  = VOC emission factor for the bakery oven's yeast-leavened finished bakery product having the highest emission potential (in pounds of VOC per ton of baked product) for the bakery oven.

- (c) The value of  $EF_{VOC}$ , expressed in pounds of VOC per ton of baked product (rounded off to two decimal places), is determined as follows:

$$EF_{VOC} = 0.95Y_i + 0.195t_i - 0.51S - 0.86t_s + 1.90$$

where:

$Y_i$  = initial baker's per cent of yeast to the nearest tenth of a per cent.

$t_i$  = total yeast action time in hours to the nearest tenth of an hour.

$S$  = final (spike) baker's per cent of yeast to the nearest tenth of a per cent.

$t_s$  = spiking time in hours to the nearest tenth of an hour.

- (2) The owner or operator shall presume for purposes of calculating the uncontrolled potential to emit that both of the following conditions apply:
- (a) Each facility production line and associated bakery oven are operating eight thousand seven hundred sixty hours per year at maximum capacity.
  - (b) Each facility production line is producing the product with the highest level of VOC emissions of those products that it may produce.
- (3) A VOC emission factor based on emission testing can be used to calculate the facility's total uncontrolled potential to emit for VOC in tons per year. In the event emission testing is conducted, the emission testing results would be used instead of the VOC emission factor equation in paragraph (C)(1)(c) of this rule. Such emission testing shall be based on the test methods and procedures specified under paragraph (F) of this rule.
- (4) The presumptions of paragraph (C)(2) of this rule would not apply where restrictions on operating hours and/or annual production rate are specified for the commercial bakery oven facility within a federally enforceable state operating permit, a federally enforceable permit-to-install, or a Title V permit that is issued pursuant to rule 3745-35-07, Chapter 3745-31, or Chapter 3745-77, respectively, of the Administrative Code as follows:

- (a) For bakery ovens that are located within a county specified in paragraph (A)(1)(a)(i) of this rule and for which installation commenced before May 27, 2005, such restrictions must be in effect no later than May 27, 2006.
- (b) For bakery ovens that are located within a county specified in paragraph (A)(1)(a)(i) of this rule and for which installation commenced on or after May 27, 2005, such restrictions must be in effect upon initial startup of the bakery oven.
- (c) For bakery ovens that are located within a county specified in paragraph (A)(2)(a)(i) of this rule and for which installation commenced before the effective date of this rule, such restrictions must be in effect no later than twelve months after the effective date of this rule.
- (d) For bakery ovens that are located within a county specified in paragraph (A)(2)(a)(i) of this rule and for which installation commenced on or after the effective date of this rule, such restrictions must be in effect upon initial startup of the bakery oven.

(D) VOC emission control requirements.

- (1) Except where exempted under paragraph (D)(2) of this rule, any owner or operator of a commercial bakery oven facility that is subject to this rule shall install and operate a VOC emission control system that reduces the VOC emissions from each bakery oven by at least ninety-five per cent by weight (i.e., an overall control efficiency of at least ninety-five per cent by weight).
- (2) Exempted from the requirement of paragraph (D)(1) of this rule is any uncontrolled bakery oven with annual VOC emissions of less than 25.0 tons and average daily VOC emissions of less than one hundred ninety-two pounds. Average daily VOC emissions means the VOC emissions from a bakery oven in a calendar year (annual VOC emissions) divided by the number of days the bakery oven was employed for production during the calendar year.

(E) Compliance dates.

- (1) Except where otherwise specified within this rule, any owner or operator of a commercial bakery oven facility that is subject to this rule shall comply with the requirements of this rule by no later than the following dates:
  - (a) For any bakery oven which is located within a county specified in paragraph (A)(1)(a)(i) of this rule and for which installation commenced before May 27, 2005, the compliance date of the bakery oven is the initial startup of the bakery oven or May 27, 2006, whichever is later.

- (b) For any bakery oven which is located within a county specified in paragraph (A)(1)(a)(i) of this rule and for which installation commenced on or after May 27, 2005, the compliance date of the bakery oven is the date of initial startup of the bakery oven.
  - (c) For any bakery oven which is located within a county specified in paragraph (A)(2)(a)(i) of this rule and for which installation commenced before the effective date of this rule, the compliance date of the bakery oven is the initial startup of the bakery oven or twelve months from the effective date of this rule, whichever is later.
  - (d) For any bakery oven which is located within a county specified in paragraph (A)(2)(a)(i) of this rule and for which installation commenced on or after the effective date of this rule, the compliance date of the bakery oven is the date of initial startup of the bakery oven.
- (2) In the event a commercial bakery oven facility reduces its total uncontrolled potential to emit pursuant to paragraph (A)(1)(c) or paragraph (A)(2)(c) of this rule, the date on which the facility subsequently meets the applicability criteria of paragraph (A)(1)(a) or paragraph (A)(2)(a) of this rule is the date the facility becomes subject to this rule.
  - (3) In the event an uncontrolled bakery oven is exempted under paragraph (D)(2) of this rule and is later equipped with a VOC emission control system, the compliance date of the bakery oven pertaining to paragraph (D)(1) of this rule is the date of first startup of the installed VOC emission control system for the bakery oven. Until the date of first startup of the installed VOC emission control system for the bakery oven, the bakery oven shall continue to comply with the requirements of paragraph (D)(2) of this rule.
  - (4) The owner or operator of any commercial bakery oven facility subject to this rule shall demonstrate compliance with paragraph (D)(1) of this rule by testing the bakery oven and its VOC emission control system in accordance with paragraph (F) of this rule within ninety days after the bakery oven's compliance date.
  - (5) Additional testing of a bakery oven and its VOC emission control system in accordance with paragraph (F) of this rule may be required by the director to ensure continued compliance.
- (F) Compliance testing requirements.

For any bakery oven subject to paragraph (D)(1) of this rule, the owner or operator shall demonstrate compliance by conducting compliance testing in accordance with the following requirements:

- (1) The general provisions specified under paragraphs (A)(2) to (A)(5) of rule 3745-21-10 of the Administrative Code shall apply to the compliance testing.
  - (2) The test methods and procedures of paragraph (C) of rule 3745-21-10 of the Administrative Code shall be followed, except as specified below:
    - (a) The concentration of VOC in a gas stream or exhaust vent shall be determined by utilizing any of the methods specified under paragraph (C)(2) of rule 3745-21-10 of the Administrative Code.
    - (b) USEPA alternative test method ALT-020 titled "Negative Pressure Enclosure Qualitative Test Method for Bakery Ovens" may be used to demonstrate capture efficiency of a bakery oven. A bakery oven that passes this alternative test method and vents all of its oven exhaust gas streams, other than the purge stack, to a VOC control device has a VOC capture efficiency of one hundred per cent by weight.
    - (c) USEPA conditional test method CTM-042 titled "Use of Flame Ionization Detector-Methane Cutter Analysis Systems for VOC Compliance Testing of Bakeries" may be used to demonstrate the control efficiency of a VOC control device (thermal oxidizer or catalytic oxidizer) for a bakery oven.
- (G) Monitoring and inspection requirements for controlled bakery ovens.
- (1) For any bakery oven subject to paragraph (D)(1) of this rule, the owner or operator shall install and operate continuous monitoring and recording devices for the following operational parameters:
    - (a) The combustion temperature of any thermal incinerator;
    - (b) The inlet temperature and the temperature rise across the catalyst bed of any catalytic incinerator; and
    - (c) Any other parameter that the director may require the owner or operator to monitor.
  - (2) While operating the bakery oven, the owner or operator of the facility shall maintain the parameters listed in paragraphs (C)(1)(a) to (C)(1)(c) of this rule within the baseline operational data established during the most recent compliance test(s) that demonstrated compliance.
  - (3) The owner or operator shall inspect the VOC emission control system and monitoring equipment to assure that the control system is operating properly, and that no leaks or malfunctions have occurred or are occurring. The inspections shall be made at the frequency defined by the equipment

manufacturer, or as otherwise appropriate for each unit, component, or operation, but not less than monthly.

- (4) The owner or operator shall record the results of each inspection in a permanent log to be retained on-site for a period of not less than five years and shall make the log available to the director or any authorized representative of the director for review during normal business hours.

(H) Recordkeeping and associated reporting requirements.

- (1) The owner or operator of each commercial bakery oven facility subject to this rule shall keep the records required under paragraphs (H)(2) to (H)(5) of this rule on site for at least five years following the date of the record and shall make such records available to the director or any authorized representative of the director for review during normal business hours.
- (2) The owner or operator shall keep monthly production period records of the following operational data for each yeast-leavened product for each bakery oven:
  - (a) The amount of raw product processed;
  - (b) The baker's per cent of yeast used (initial yeast and any spike yeast);
  - (c) The fermentation time (total time and any spiking time);
  - (d) The type of product baked;
  - (e) The amount of product baked; and
  - (f) Any other information that the director may determine to be necessary for determining that the facility is operated in continuous compliance with this rule.
- (3) The owner or operator shall calculate monthly VOC emissions for each bakery oven and shall record the emission factor used for each product, including a citation of the source of the emission factor, and the results of the VOC emission calculations.
- (4) For any uncontrolled bakery oven exempted under paragraph (D)(2) of this rule, the owner or operator shall record the VOC emissions from that bakery oven for the recent month and rolling twelve-month period within fifteen days after the end of each month. The owner or operator shall notify the appropriate Ohio environmental protection agency district office or local air agency of any record showing the bakery oven exceeded the applicable VOC emissions limit. A copy of such record shall be sent to the appropriate Ohio environmental protection

agency district office or local air agency within forty-five days after the exceedance occurs.

- (5) For any bakery oven equipped with a VOC emission control system and subject to the paragraph (D)(1) of this rule, the owner or operator shall collect and record the following information each day of operation of the bakery oven:
    - (a) A log of operating time for the capture (collection) system, control device, monitoring equipment, and the associated bakery oven.
    - (b) For any thermal incinerator, all three-hour periods of operation during which the average combustion temperature was more than fifty degrees Fahrenheit below the average combustion temperature during the most recent performance test that demonstrated that the bakery oven was in compliance.
    - (c) For any catalytic incinerator, all three-hour periods of operation during which the average temperature of the process vent stream immediately before the catalyst bed is more than fifty degrees Fahrenheit below the average temperature of the process vent stream during the most recent performance test that demonstrated that the source was in compliance, and all three-hour periods of operation during which the average temperature difference across the catalyst bed is less than eighty per cent of the average temperature difference during the most recent performance test that demonstrated that the bakery oven was in compliance.
    - (d) For any VOC emission control equipment, any other information that the director may determine to be necessary for determining that the bakery oven is operating in continuous compliance with this rule.
  - (6) The owner or operator shall submit to the appropriate Ohio environmental protection agency district office or local air agency quarterly summaries of the records required by paragraph (H)(5) of this rule. These quarterly reports shall be submitted by April thirtieth, July thirty-first, October thirty-first, and January thirty-first, and shall cover the records for the previous calendar quarters.
- (I) Requirements on applicability notification, compliance certification, and permit application.
- (1) The owner or operator of a commercial bakery oven facility that is subject to this rule pursuant to paragraph (A)(1) of this rule and that has a bakery oven with an initial startup date before May 27, 2005 shall notify the appropriate Ohio environmental protection agency district office or local air agency in writing that the bakery oven is subject to this rule. The notification, which shall be submitted not later than sixty days after May 27, 2005 (or within sixty days after the

bakery oven becomes subject to this rule), shall provide the following information:

- (a) Name and address of the owner or operator;
  - (b) Address (i.e., physical location) of the commercial bakery oven facility;
  - (c) Equipment description and Ohio EPA application number (if assigned) of the bakery oven;
  - (d) Identification of the VOC emissions requirement, the means of compliance, and the compliance date for the bakery oven; and
  - (e) Regarding an air pollution permit for the bakery oven, whichever of the following is applicable;
    - (i) Submission of an application for a permit-to-operate, modification, or renewal of a permit-to-operate in accordance with paragraph (B) of rule 3745-35-02 of the Administrative Code; or
    - (ii) Statement of intent to submit an application for a Title V permit or modification of a Title V permit in accordance with rule 3745-77-02 or rule 3745-77-08 of the Administrative Code, respectively.
- (2) The owner or operator of a commercial bakery oven facility that is subject to this rule pursuant to paragraph (A)(1) of this rule and that has a bakery oven with an initial startup date on or after May 27, 2005 shall notify the appropriate Ohio environmental protection agency district office or local air agency in writing that the bakery oven is subject to this rule. The notification, which shall be submitted not later than either the date of initial startup of the bakery oven or sixty days after the May 27, 2005 (whichever is later), shall provide the information listed under paragraph (I)(1) of this rule. The application for a permit-to-install under rule 3745-31-02 of the Administrative Code may be used to fulfill the notification requirements of this paragraph.
- (3) The owner or operator of a commercial bakery oven facility that is subject to this rule pursuant to paragraph (A)(2) of this rule and that has a bakery oven with an initial startup date before the effective date of this rule shall notify the appropriate Ohio environmental protection agency district office or local air agency in writing that the bakery oven is subject to this rule. The notification, which shall be submitted not later than sixty days after the effective date of this rule (or within sixty days after the bakery oven becomes subject to this rule), shall provide the information listed under paragraph (I)(1) of this rule.
- (4) The owner or operator of a commercial bakery oven facility that is subject to this rule pursuant to paragraph (A)(2) of this rule and that has a bakery oven with an

initial startup date on or after the effective date of this rule shall notify the appropriate Ohio environmental protection agency district office or local air agency in writing that the bakery oven is subject to this rule. The notification, which shall be submitted not later than either the date of initial startup of the bakery oven or sixty days after the effective date of this rule (whichever is later), shall provide the information listed under paragraph (I)(1) of this rule. The application for a permit-to-install under rule 3745-31-02 of the Administrative Code may be used to fulfill the notification requirements of this paragraph.

(5) Compliance certification.

- (a) The owner or operator of a commercial bakery oven facility that is subject to this rule shall notify the appropriate Ohio environmental protection agency district office or local air agency in writing within thirty days following the completion of any of the following requirements:
  - (i) For an uncontrolled bakery oven subject to the VOC emission requirement in paragraph (D)(2) of this rule, the first documented achievement of compliance with the requirements;
  - (ii) For a bakery oven subject to the VOC emission control requirement in paragraph (D)(1) of this rule:
    - (a) The completion of installation and initial use of a VOC emission control system for the bakery oven;
    - (b) The completion of installation and initial use of any monitoring devices required under paragraph (G) of this rule for the bakery oven; and
    - (c) The completion of any compliance testing conducted in accordance with paragraph (F) of this rule to demonstrate compliance with the applicable control requirement.
- (b) The compliance certification under paragraph (I)(3)(a) of this rule shall provide the following, where applicable:
  - (i) A description of the requirements;
  - (ii) A description of the VOC emission control system;
  - (iii) A description of the monitoring devices;
  - (iv) A description of the records that document continuing compliance;

- (v) The results of any compliance tests, including documentation of test data;
- (vi) The results of any records that document continuing compliance, including calculations; and
- (vii) A statement by the owner or operator of the commercial bakery oven facility as to whether the bakery oven has complied with the requirement(s).

Effective: 08/25/2008

Date

Promulgated Under: 119.03  
Statutory Authority: 3704.03(E)  
Rule Amplifies: 3704.03(E), 3704.03(A)  
Prior Effective Dates: 5/27/2005, 2/10/2006

**Control of volatile organic compound emissions from reactors and distillation units employed in SOCFI chemical production.**

[Comment: For dates and availability of non-regulatory government publications, publications of recognized organizations and associations, federal rules, and federal statutory provisions referenced in this rule, see the "Incorporation by Reference" paragraph at the end of rule 3745-21-01 of the Administrative Code.]

**(A) Rule applicability.**

- (1) Except as otherwise provided in paragraph (A)(2) of this rule, this rule shall apply to any reactor or distillation unit in a process unit that meets both of the following criteria:
  - (a) The process unit is located in Ashtabula, Butler, Clermont, Cuyahoga, Geauga, Hamilton, Lake, Lorain, Medina, Portage, Summit, or Warren county; and
  - (b) The process unit produces a SOCFI chemical.
- (2) Excluded from the requirements of this rule are the following:
  - (a) Any reactor or distillation unit that is a batch operation.
  - (b) Any reactor or distillation unit that is regulated by paragraph (CC) or (EE) of rule 3745-21-09 of the Administrative Code.
  - (c) Any reactor or distillation unit included within an "early reduction program," as specified in 40 CFR part 63, and published in 57 Federal Register 61970 (December 29, 1992), evidenced by a timely enforceable commitment approved by USEPA.
  - (d) Any reactor regulated by subpart III or subpart RRR of 40 CFR part 60.
  - (e) Any distillation unit regulated by subpart NNN of 40 CFR part 60.
- (3) For the purposes of paragraph (A)(2) of this rule, a reactor or distillation unit shall be considered regulated by a paragraph, rule or subpart if it is subject to the limits of that paragraph, rule, or subpart. A reactor or distillation unit is not considered regulated by a paragraph, rule, or subpart if it is not subject to the limits of that paragraph, rule, or subpart. For example, if the reactor or distillation unit is covered by an exemption in the paragraph, rule, or subpart, or the applicability criteria of the paragraph or subpart are not met, then the source is not subject to that paragraph, rule, or subpart.

(B) Definitions.

The definitions applicable to this rule are contained in paragraphs (B) and (V) of rule 3745-21-01 of the Administrative Code.

(C) Overall requirements for reactors and distillation units.

- (1) Except where exempted under paragraph (C)(2) of this rule, the owner or operator of a reactor or distillation unit subject to this rule shall comply with the requirements of paragraphs (D) to (L) of this rule.
- (2) Exempted from the requirements of paragraph (C)(1) of this rule is any reactor or distillation unit in a process unit with a total design capacity for all chemicals produced within that unit of less than one thousand one hundred tons per year. However, such reactor or distillation unit remains subject to the recordkeeping and reporting requirements contained in paragraphs (J)(1)(f) and (L)(1) of this rule.

(D) Determination of group status and halogen status for process vents of reactors and distillation units.

- (1) (Group status) The owner or operator of a reactor or distillation unit shall determine the group status (i.e., group 1, group 2A, or group 2B) for each process vent based on flow rate, VOC concentration, and TRE index value in accordance with paragraphs (D)(3) to (D)(5) of this rule and the procedures contained in paragraph (E) of this rule. Group 1 process vents require control for VOC, and group 2A and group 2B process vents do not. Group 1 process vents require monitoring of control devices, except for boilers or process heaters specified under paragraphs (F)(1)(b) and (F)(1)(c) of this rule, and require monitoring of bypass lines. Group 2A process vents require monitoring of the associated recovery systems, and group 2B process vents do not require any monitoring.
- (2) (Halogen status) The owner or operator of a group 1 process vent which is controlled (or to be controlled) by a combustion device shall determine the halogen status in accordance with the procedures specified in paragraph (E)(7) of this rule. Group 1 process vents that are halogenated process vents being discharged to a combustion device require halogen reduction control (either a pre-combustion or post-combustion).
- (3) (Group 1) A process vent shall be group 1 if it meets at least one of the following specifications:
  - (a) The owner or operator designates the process vent as group 1.

- (b) At representative operating conditions expected to yield the lowest TRE index value for the process vent, the TRE index value is less than or equal to 1.0, the flow rate is equal to or greater than 0.30 scfm, and the VOC concentration is equal to or greater than five hundred ppmv.
- (4) (Group 2A) A process vent shall be group 2A if it is from a recovery system and if, at representative operating conditions expected to yield the lowest TRE index value for the process vent, the TRE index value is greater than 1.0 and less than or equal to 4.0, the flow rate is equal to or greater than 0.30 scfm, and the VOC concentration is equal to or greater than five hundred ppmv.
- (5) (Group 2B) A process vent shall be group 2B if it meets any one of the following specifications.
  - (a) The process vent has a flow rate less than 0.30 scfm.
  - (b) The process vent has a VOC concentration less than five hundred ppmv.
  - (c) The process vent is not from a recovery system and, at representative operating conditions expected to yield the lowest TRE index value for the process vent, the TRE index value is greater than 1.0.
  - (d) The process vent is from a recovery system and, at representative operating conditions expected to yield the lowest TRE index value for the process vent, the TRE index value is greater than 4.0.
- (6) Process changes for group 2A and group 2B process vents.

Whenever process changes are made that could reasonably be expected to change a group 2A or group 2B process vent to a group 1 process vent, the owner or operator shall redetermine the flow rate, VOC concentration, or TRE index value, according to paragraph (D)(6)(a), (D)(6)(b), or (D)(6)(c) of this rule as specified for each process vent as necessary to determine whether the process vent is group 1, group 2A, or group 2B. The owner or operator shall perform the group status determination as soon as practical after the process change and within sixty days after the process change. Examples of process changes include, but are not limited to, changes in production capacity, production rate, feedstock type, or catalyst type, or whenever there is replacement, removal, or addition of recovery equipment. For purposes of paragraph (D)(6) of this rule, process changes do not include process upsets, unintentional, temporary process changes, and changes that are within the range on which the original TRE index value calculation was based.

- (a) (Group 2B process vent based on flow rate) The flow rate shall be redetermined by using the measurement procedure in paragraph (E)(9) of this rule or by using an engineering assessment of the effects of the change.

- (b) (Group 2B process based on VOC concentration) The VOC concentration shall be redetermined by using the measurement procedure in paragraph (E)(10) of this rule or by using an engineering assessment of the effects of the change.
- (c) (Group 2B process vent based on TRE index value or group 2A process vent) The TRE index value shall be redetermined (recalculated) based on measurements of flow rate, net heating value, VOC emission rate, and halogen status as specified in paragraphs (E)(9), (E)(11), (E)(12), and (E)(13) of this rule, or based on an engineering assessment of the effects of the change.

(E) Procedures for process vent determinations.

- (1) (General) The provisions under paragraph (E) of this rule provide procedures for the determination of process vent parameters that are used to determine the group status and halogen status for a process vent.
- (2) Location within a process vent for determination of group status and halogen status and for sampling.
  - (a) For the purpose of determining group status of a process vent based on VOC concentration, flow rate, or TRE index value, the location shall be representative of the process vent stream after the last recovery device (if any recovery devices are present) but prior to the inlet of any control device that is present, and prior to release to the atmosphere. The process vent parameters for TRE index value are flow rate, net heating value, VOC emission rate, and halogen status.
  - (b) The location of the sampling site for measurement of process vent parameters (flow rate, VOC concentration, VOC emission rate, net heating value, and mass emission rate for halogen atoms) shall be selected in accordance with paragraph (E)(2)(a) of this rule and paragraph (C)(3)(f) of rule 3745-21-10 of the Administrative Code. No traverse site selection method is needed for process vents smaller than four inches (0.10 meter) in nominal inside diameter.
- (3) The flow rate of a process vent shall be determined by engineering assessment or by the measurement procedure of paragraph (E)(9) of this rule.
- (4) The VOC concentration of a process vent shall be determined by engineering assessment or by the measurement procedure of paragraph (E)(10) of this rule.
- (5) The net heating value of a process vent shall be determined by engineering assessment or by the measurement procedure of paragraph (E)(11) of this rule.

- (6) The VOC and TOC emission rate of a process vent shall be determined by engineering assessment or by the measurement procedure of paragraph (E)(12) of this rule.
- (7) The halogen status of a process vent shall be determined by process knowledge that no halogen or hydrogen halides are present in the process vent, by engineering assessment, or by the measurement procedure of paragraph (E)(13) of this rule. If the mass emission rate of halogen atoms for a process vent is equal to or greater than 0.99 pound per hour, the process vent shall be classified as halogenated.
- (8) Procedure for TRE index value.

The TRE index value of the process vent shall be determined as specified in paragraphs (E)(8)(a) to (E)(8)(c) of this rule.

- (a) TRE index value for a process vent shall be calculated by the following equation:

$$\text{TRE} = [a + b(Q) + c(H) + d(E_{\text{TOC}})] / E_{\text{VOC}}$$

where:

TRE = TRE index value.

Q = Process vent flow rate, standard cubic meters per minute, at a standard temperature of 20 degrees Celsius, as determined under paragraph (E)(3) of this rule by engineering assessment or measurement procedure.

H = Process vent net heating value, megajoules per standard cubic meter, as determined under paragraph (E)(5) of this rule by engineering assessment or measurement procedure.

$E_{\text{VOC}}$  = Process vent emission rate of VOC, kilograms per hour, as determined under paragraph (E)(6) of this rule by engineering assessment or measurement procedure.

$E_{\text{TOC}}$  = Process vent emission rate of TOC, kilograms per hour, as determined under paragraph (E)(6) of this rule by engineering assessment or measurement procedure.

a, b, c, and d = coefficients presented in table A of this rule.

**Table A: Coefficients for Total Resource Effectiveness for Nonhalogenated and Halogenated Process Vent Streams**

Type of Process Vent Stream	Control Device Basis	Values of Coefficients			
		a	b	c	d
Nonhalogenated	Flare	2.129	0.183	-0.005	0.359
	Thermal incinerator with zero percent heat recovery	3.075	0.021	-0.037	0.018
	Thermal incinerator with 70 percent heat Recovery	3.803	0.032	-0.042	0.007
Halogenated	Thermal incinerator and scrubber	5.470	0.181	-0.040	0.004

- (b) For a nonhalogenated process vent stream, the owner or operator shall use the applicable coefficients in table A to calculate the TRE index values based on a flare, a thermal incinerator with zero heat recovery, and a thermal incinerator with seventy per cent heat recovery, and shall select the lowest TRE index value. For a halogenated process vent stream, the owner or operator shall use the applicable coefficients in table A to calculate the TRE index value based on a thermal incinerator and scrubber.
- (c) If the TRE index value, as determined in accordance with paragraphs (E)(8)(a) and (E)(8)(b) of this rule, is less than or equal to 4.0, and such TRE index value is calculated using engineering assessment for process vent flow rate, process vent net heating value, process vent VOC emission rate, or process vent halogen status, then the owner or operator shall either perform the measurement procedures specified in paragraphs (E)(9), (E)(11), (E)(12), and (E)(13) of this rule for the determination of the process vent's group status or designate the process vent as a group 1 process vent.
- (9) (Measurement procedure for flow rate) The process vent volumetric flow rate in standard cubic meters per minute shall be measured at a sampling site selected as specified in paragraph (E)(2)(b) of this rule and by the appropriate method specified in paragraph (C)(3)(f) of rule 3745-21-10 of the Administrative Code. If the process vent stream passes through a final steam jet ejector and is not condensed, the volumetric flow rate shall be corrected to 2.3 per cent moisture.
- (10) Measurement procedure for VOC concentration.

- (a) The sampling site shall be selected as specified in paragraph (E)(2)(b) of this rule.
- (b) The methods and procedures under paragraph (C) of rule 3745-21-10 of the Administrative Code shall to be employed wherein USEPA method 18 or USEPA method 25A shall be employed for VOC concentration.
- (c) If USEPA method 18 is employed, the following procedures shall be used:
- (i) The minimum sampling time for each run shall be one hour in which either an integrated sample or four grab samples shall be taken. If grab sampling is used, then the samples shall be taken at approximately equal intervals in time, such as fifteen-minute intervals during the run.
  - (ii) The VOC concentration (C) is the sum of the concentrations of the individual components and shall be computed for each run by the following equation:

$$C = \sum_{i=1}^x \frac{\left( \sum_{j=1}^n C_{ji} \right)}{x}$$

where:

C = Concentration of VOC, dry basis, ppmv.

x = Number of samples in the sample run.

n = Number of components in the sample.

C<sub>ji</sub> = Concentration of sample component j of the sample i, dry basis, ppmv.

- (d) If USEPA method 25A is employed, the following procedures shall be used:
- (i) USEPA method 25A shall be used only if a single organic compound of VOC is greater than fifty per cent of the total VOC, by volume, in the process vent.
  - (ii) The process vent composition may be determined by either process knowledge or test data collected using an appropriate USEPA method. Examples of information that could constitute process knowledge include calculations based on material balances, process stoichiometry, or previous test results provided the results are still relevant to the current process vent conditions.

- (iii) The organic compound used as the calibration gas for USEPA method 25A shall be the single organic compound of VOC present at greater than fifty per cent of the total VOC by volume.
  - (iv) The span value for USEPA method 25A shall be equal to five hundred ppmv.
  - (v) Use of USEPA method 25A is acceptable if the response from the high-level calibration gas is at least twenty times the standard deviation of the response from the zero calibration gas when the instrument is zeroed on the most sensitive scale.
  - (vi) The owner or operator shall demonstrate that the total organic concentration measured by USEPA method 25A is below two hundred fifty ppmv in order for the VOC concentration to be considered below five hundred ppmv.
- (11) (Measurement procedure for net heating value) The net heating value of a vent stream shall be measured and calculated in accordance with 40 CFR 63.115(d)(2)(ii) and 40 CFR 63.115(d)(2)(iii).
- (12) (Measurement procedure for TOC and VOC emission rates) The TOC and VOC emission rates of a process vent shall be determined in accordance with paragraph (C) of rule 3745-21-10 of the Administrative Code and the following:
- (a) The sampling site shall be selected as specified in paragraph (E)(2)(b) of this rule.
  - (b) The minimum sampling time for each run shall be one hour in which either an integrated sample or a minimum of four grab samples shall be taken. If grab sampling is used, then the samples shall be taken at approximately equal intervals in time such as fifteen-minute intervals during the run.
  - (c) The mass rates of TOC and VOC for each sample shall be calculated in accordance with paragraph (C)(4) of rule 3745-21-10 of the Administrative Code wherein all organic compounds measured by USEPA method 18 are used in the calculation of the mass rate of TOC and only those organic compounds that are VOC are used in the calculation of mass rate of VOC. The mass rates of TOC and VOC for each run shall be the average of the mass rates of TOC and VOC of each sample within that run.
- (13) (Measurement procedure for mass emission rate of halogen atoms) The mass emission rate of halogen atoms for a process vent shall be measured based upon a sampling site selected as specified in paragraph (E)(2)(b) of this rule, flow rate measured by the appropriate method specified in paragraph (C)(3)(f) of rule 3745-21-10 of the Administrative Code, and the halogen-related measurements

and calculations specified in 40 CFR 63.115(d)(2)(v)(A)(3) and 40 CFR 63.115(d)(2)(v)(B).

(F) Control and operational requirements for process vents.

(1) For any group 1 process vent, the owner or operator shall comply with the requirements of paragraph (F)(1)(a), (F)(1)(b), (F)(1)(c), (F)(1)(d), (F)(1)(e), (F)(1)(f), or (F)(1)(h) of this rule. If the group 1 process vent is a halogenated process vent that is discharged to a combustion device, the owner or operator shall also comply with the requirements of paragraph (F)(1)(g) of this rule.

(a) Discharge the group 1 process vent to a flare that is designed and operated to meet the requirements specified under paragraph (DD)(10)(d) of rule 3745-21-09 of the Administrative Code.

(b) Discharge the group 1 process vent into the flame zone of a boiler or process heater with a heat input capacity equal to or greater than one hundred fifty million Btu per hour.

(c) Discharge the group 1 process vent to a boiler or process heater as the primary fuel or with the primary fuel.

(d) Discharge the group 1 process vent to a control device (boiler, process heater, incinerator or recapture device) or combination of control devices that is designed and operated to reduce VOC emissions from the group 1 process vent by at least ninety-eight per cent or emit VOC at a concentration less than twenty ppmv, dry basis, whichever is less stringent. For a combustion device, the concentration of VOC shall be corrected to three per cent oxygen.

(e) For the group 1 process vent, achieve and maintain a TRE index value greater than 1.0 at the outlet of the final recovery device, or prior to release from the process vent to atmosphere if no recovery device is present. If the TRE index value is greater than 1.0, the process vent shall meet the requirements for a group 2A or group 2B process vent specified in paragraph (F)(2) or (F)(3) of this rule, whichever is applicable.

(f) (Existing combustion device) Discharge the group 1 process vent to a previously installed combustion device, provided all of the following conditions are met:

(i) The combustion device was installed:

(a) Prior to May 27, 2005 if the facility is located in Butler, Clermont, Hamilton, or Warren county; or

- (h) (Off-site control or onsite control not owned or operated by the owner or operator of the source) Transfer the gas stream from group 1 process vent for disposal to an onsite control device (or other compliance equipment) not owned or operated by the owner or operator of the source (reactor or distillation unit) generating the gas stream, or to an off-site control device or other compliance equipment, provided the following conditions are met:
    - (i) The owner or operator transferring the gas stream shall:
      - (a) Comply with the provisions specified in paragraph (H)(6) of this rule for each gas stream prior to transfer.
      - (b) Notify the transferee that the gas stream contains VOC that are to be treated in accordance with the provisions of this rule. The notice shall be submitted to the transferee initially and whenever there is a change in the required control.
    - (ii) The owner or operator may not transfer the gas stream unless the transferee has submitted to the director a written certification that the transferee will manage and treat any gas stream transferred under paragraph (F)(1)(h) of this rule and received from a source (reactor or distillation unit) subject to this rule in accordance with the requirements of this rule. The certifying entity may revoke the written certification by sending a written statement to the director and the owner or operator giving at least ninety days notice that the certifying entity is rescinding acceptance of responsibility for compliance with the regulatory provisions of this rule. Upon expiration of the notice period, the owner or operator may not transfer the gas stream to the transferee. Records retained by the transferee shall be retained in accordance with paragraph (J)(1) of this rule.
    - (iii) By providing this written certification to the director, the certifying entity accepts responsibility for compliance with the regulatory provisions listed in paragraph (F)(1)(h)(ii) of this rule with respect to any transfer covered by the written certification. Failure to abide by any of those provisions with respect to such transfers may result in enforcement action by the director against the certifying entity.
    - (iv) Written certifications and revocation statements to the director from the transferees of such gas streams shall be signed by a responsible official of the certifying entity and provide the name and address of the certifying entity. Such written certifications are not transferable by the transferee.
- (2) For any group 2A process vent, the owner or operator shall maintain a TRE index value greater than 1.0

- (3) For any group 2B process vent, the owner or operator shall maintain a flow rate less than 0.30 scfm, or a VOC concentration less than five hundred ppmv, or a TRE index value greater than 1.0 if the gas stream is not from a recovery system, or a TRE index value greater than 4.0 if the gas stream is from a recovery system, whichever is the basis for the group 2B status for that process vent.

(G) Compliance dates.

- (1) Except where otherwise specified within this rule, any owner or operator of a reactor or distillation unit that is subject to this rule shall comply with the requirements of this rule by no later than the following dates:
  - (a) For any reactor or distillation unit located in Butler, Clermont, Hamilton, or Warren county for which installation commenced before May 27, 2005, the compliance date of the reactor or distillation unit is May 27, 2006.
  - (b) For any reactor or distillation unit located in Butler, Clermont, Hamilton, or Warren county for which installation commenced on or after May 27, 2005, the compliance date of the reactor or distillation unit is the date of initial startup of the reactor or distillation unit.
  - (c) For any reactor or distillation unit located in Ashtabula, Cuyahoga, Geauga, Lake, Lorain, Medina, Portage, or Summit county for which installation commenced before the effective date of this rule, the compliance date of the reactor or distillation unit is twelve months from the effective date of this rule.
  - (d) For any reactor or distillation unit located in Ashtabula, Cuyahoga, Geauga, Lake, Lorain, Medina, Portage, or Summit county for which installation commenced on or after the effective date of this rule, the compliance date of the reactor or distillation unit is the date of initial startup of the reactor or distillation unit.
- (2) In the event a reactor or distillation unit has a group 1 process vent which is subject to paragraph (F)(1)(f) of this rule and the group 1 process vent is later discharged to a new control device, the compliance date of the process vent pertaining to an applicable requirement under paragraph (F)(1) of this rule is the date of first startup of the discharge of the process vent to the new control device. Until that date of first startup, the group 1 process vent shall continue to comply with paragraph (F)(1)(f) of this rule.
- (3) If there is a change in group status due to a process change, the owner or operator shall meet the requirements of paragraphs (G)(3)(a), (G)(3)(b), and (G)(3)(c) of this rule, whichever is applicable.

- (a) (Group status change to group 1) Where the process change causes the group status to change to group 1, the owner or operator shall comply with the group 1 process vent requirements in paragraph (F)(1) of this rule upon initial startup after the change and thereafter unless the owner or operator demonstrates to the director that achieving compliance will take longer than making the process change. If this demonstration is made to the director's satisfaction, the owner or operator shall comply as expeditiously as practical, but in no event later than one year after the process vent becomes a group 1 process vent, and shall comply with the following procedures to establish a compliance date:
    - (i) The owner or operator shall submit to the director for approval a compliance schedule, along with a justification for the schedule.
    - (ii) The compliance schedule shall be submitted with an application for a permit, or an application for a modification of a permit, or by other means provided by the appropriate Ohio environmental protection agency district office or local air agency.
    - (iii) The director shall approve the compliance schedule or request changes within ninety calendar days of receipt of the compliance schedule and justification for the schedule.
  - (b) (Group status change to group 2A) Where the process change causes the process vent group status to change to group 2A, the owner or operator shall comply with the requirements of paragraph (F)(2) of this rule upon completion of the group status determination of the process vent.
  - (c) (Group status change to group 2B) Where the process change causes the process vent group status to change to group 2B or causes the basis of a group 2B status to change, the owner or operator shall comply with the requirements of paragraph (F)(3) of this rule as soon as practical after the process change.
- (4) The owner or operator of any reactor or distillation unit that has a group 1 process vent discharged to a flare that is designed and operated to meet paragraph (F)(1)(a) of this rule, or discharged to a control device or combination of control devices that is designed and operated to meet paragraph (F)(1)(d) of this rule shall demonstrate compliance by conducting a compliance test of the control and/or recovery devices in accordance with paragraph (I) of this rule within ninety days after the compliance date.
- (5) The owner or operator of any reactor or distillation unit that has a group 1 process vent operated to meet paragraph (F)(1)(e) of this rule or a group 2A process vent operated to meet paragraph (F)(2) of this rule shall demonstrate

compliance by conducting a TRE determination test in accordance with paragraph (I) of this rule by the compliance date.

- (6) Additional testing of the process vent, control device, or recovery device of a reactor or distillation unit in accordance with paragraph (I) of this rule may be required by the director to ensure continued compliance.

(H) Monitoring requirements for group 1 and group 2A process vents.

- (1) For any flare used by a group 1 process vent to comply with paragraph (F)(1)(a) of this rule, the owner or operator shall install, calibrate, maintain, and operate according to manufacturer's specifications, a monitoring device (including but not limited to a thermocouple, ultra-violet beam sensor, or infrared sensor) capable of continuously detecting the presence of a flame.
- (2) For any combustion device (boiler, process heater, incinerator) used by a group 1 process vent to comply with paragraph (F)(1)(d) or (F)(1)(g) of this rule, the owner or operator shall install, calibrate, maintain, and operate according to manufacturer's specifications, a temperature monitoring device equipped with a continuous recorder. The temperature monitoring device shall be located as follows:
  - (a) Where a thermal incinerator is used, the temperature monitoring device shall be located in the firebox or in the ductwork immediately downstream of the firebox in a position before any substantial heat exchange occurs.
  - (b) Where a catalytic incinerator is used, temperature monitoring devices shall be located in the gas stream immediately before and after the catalyst bed.
  - (c) Where a boiler or process heater is used, the temperature monitoring device shall be located in the firebox. This requirement does not apply to process vent streams that are introduced with the primary fuel or are used as the primary fuel.
- (3) For any recapture device used by a group 1 process vent to comply with paragraph (F)(1)(d) of this rule and for any final recovery device within a recovery system used by a group 2A process vent to comply with paragraph (F)(2) of this rule the owner or operator shall install, calibrate, maintain and operate according to manufacturer's specifications, the following monitoring devices:
  - (a) Where an absorber is used,
    - (i) A temperature monitoring device equipped with a continuous recorder shall be employed to monitor the exit temperature of the absorbing liquid; and

- (ii) A specific gravity monitoring device equipped with a continuous recorder shall be employed to monitor the exit specific gravity of the absorbing liquid.
  - (b) Where a condenser is used, a temperature monitoring device equipped with a continuous recorder shall be employed to monitor the exit (product side) temperature.
  - (c) Where a carbon adsorber is used,
    - (i) An integrating regeneration stream flow monitoring device, having an accuracy of plus or minus ten per cent or better, shall be employed for recording the total regeneration stream mass or volumetric flow for each regeneration cycle; and
    - (ii) A carbon bed temperature monitoring device shall be employed for recording the carbon bed temperature after each regeneration and within fifteen minutes of completing any cooling cycle.
  - (d) Where a recapture or final recovery device other than an absorber, condenser, or carbon adsorber is used, or as an alternative to the monitoring device specified in paragraphs (H)(2)(a) to (H)(2)(c) of this rule, an organic monitoring device equipped with a continuous recorder shall be employed for monitoring the concentration level or reading at the outlet of the recapture or final recovery device.
- (4) For any halogen reduction device used by a halogenated group 1 process vent to comply with paragraph (F)(1)(g) of this rule, the owner or operator shall install, calibrate, maintain and operate according to manufacturer's specifications, monitoring devices as specified in paragraph (H)(4)(a) or (H)(4)(b) of this rule.
- (a) Where a scrubber is used, the following monitoring devices shall be employed:
    - (i) A pH monitoring device equipped with a continuous recorder shall be employed to monitor the pH of the scrubber effluent.
    - (ii) A flow meter equipped with a continuous recorder shall be employed to monitor the scrubber influent for liquid flow.
    - (iii) A flow meter equipped with a continuous recorder shall be employed to monitor the gas stream flow, unless an alternative method for gas stream flow as specified in paragraphs (H)(4)(a)(iii)(a) to (H)(4)(a)(iii)(c) is submitted to the director.

- (a) The owner or operator may determine gas stream flow using the design blower capacity, with appropriate adjustments for pressure drop.
  - (b) If the scrubber is subject to an Ohio environmental protection agency or USEPA regulation prior to May 27, 2005 if the facility is located in Butler, Clermont, Hamilton, or Warren county, or the effective date of this rule if the facility is located in Ashtabula, Cuyahoga, Geauga, Lake, Lorain, Medina, Portage, or Summit county, the owner or operator may determine gas stream flow by the method that had been utilized to comply with such regulation. A determination that was conducted prior to the compliance date of such regulation may be utilized to comply with this rule if it is still representative.
  - (c) The owner or operator may prepare and implement a gas stream flow determination plan that documents an appropriate method that will be used to determine the gas stream flow. The plan shall require determination of gas stream flow by a method that will at least provide a value for either a representative or the highest gas stream flow anticipated in the scrubber during representative operating conditions other than startups, shutdowns, or malfunctions. The plan shall include a description of the methodology to be followed and an explanation of how the selected methodology will reliably determine the gas stream flow and a description of the records that will be maintained to document the determination of gas stream flow.
- (b) Where a halogen reduction device other than a scrubber is used, the procedures in paragraph (H)(8) of this rule shall be followed to establish monitoring devices and parameters.
- (5) (Alternative parameter monitoring) An owner or operator of a process vent may request approval to employ monitoring devices and monitoring parameters other than those listed in paragraphs (H)(1) to (H)(4) of this rule. The request shall be submitted according to the procedures specified in paragraph (H)(8) of this rule. Approval shall be requested if the owner or operator uses a combustion, recovery, or recapture device other than those listed in paragraphs (H)(1) to (H)(4) of this rule or uses one of the combustion or recovery or recapture devices listed in paragraphs (H)(1) to (H)(4) of this rule, but seeks to monitor a parameter other than those specified in paragraphs (H)(1) to (H)(4) of this rule.
  - (6) For any bypass line that could divert a group 1 process vent directly to the atmosphere, the owner or operator shall comply with paragraph (H)(6)(a) or (H)(6)(b) of this rule. Equipment such as low leg drains, high point bleeds,

analyzer vents, open-ended valves or lines, and pressure relief valves needed for safety purposes are not subject to this paragraph.

- (a) The owner or operator shall install, calibrate, maintain, and operate, according to manufacturer's specifications, a flow indicator that takes a reading at least once every fifteen minutes. The flow indicator shall be installed at the entrance to any bypass line that could divert the gas stream to the atmosphere.
  - (b) The owner or operator shall secure the bypass line valve in the non-diverting position with a car-seal or a lock-and-key type configuration. The owner or operator shall perform a visual inspection of the seal or closure mechanism at least once every month to ensure that the valve is maintained in the non-diverting position and the gas stream is not diverted through the bypass line.
- (7) For each parameter monitored under paragraphs (H)(2) to (H)(5) of this rule, the owner or operator shall determine a range that indicates proper operation of the control or recovery device. The ranges shall be determined in accordance with paragraphs (H)(7)(a) to (H)(7)(c) of this rule. In order to establish the range, the information specified under paragraph (K)(2)(c) of this rule shall be submitted as part of the initial compliance status report required under paragraph (K)(2) of this rule.
- (a) If a compliance test is conducted pursuant to paragraph (I) of this rule, the range shall be based on the parameter values measured during the compliance test that demonstrated compliance and may be supplemented by engineering assessments and/or manufacturer's recommendations. Compliance testing is not required to be conducted over the entire range of permitted parameter values.
  - (b) If a TRE determination test is conducted pursuant to paragraph (I) of this rule, the range shall be based on the parameter values measured during the TRE determination test and may be supplemented by engineering assessments and/or manufacturer's recommendations. TRE determination testing or vent stream measurements are not required to be conducted over the entire range of permitted parameter values.
  - (c) If a compliance test or a TRE determination test has not been conducted, the range may be based solely on engineering assessments and/or manufacturer's recommendations.
- (8) Approval of other monitoring devices and parameters.
- (a) The owner or operator who has been directed by any paragraph of this rule to establish monitoring devices and parameters or request approval to employ monitoring devices and parameters other than required by this rule shall

submit within an application for a permit or modification of a permit, or by other means provided by the appropriate Ohio environmental protection agency or local air agency, the following information:

- (i) A description of the parameter(s) to be monitored to ensure the process, control technology, or pollution prevention measure is operated in conformance with its design and achieves the specified emission limit, percent reduction, or nominal efficiency, and an explanation of the criteria used to select the parameter(s).
  - (ii) A description of the methods and procedures that will be used to demonstrate that the parameter indicates proper operation of the control device or recovery device being monitored, the schedule for this demonstration, and a statement that the owner or operator will establish a range for the monitored parameter as part of the initial compliance status report required in paragraph (K)(2) of this rule.
  - (iii) The frequency and content of monitoring, recording, and reporting if monitoring and recording is not continuous, or if reports of daily average values when the monitored parameter value is outside the range established in the operating permit or initial compliance report will not be included in semiannual reports as specified in paragraph (K)(2) of this rule. The rationale for the proposed monitoring, recording, and reporting system shall be included.
- (b) If the monitoring device and parameter are approved by the director, the monitoring device and parameter, including associated records and semiannual reporting, shall be specified in the terms and conditions of a permit or order issued by the director.
- (I) Compliance tests and TRE determination tests for group 1 and group 2A process vents.
- (1) Where a flare is used to comply with paragraph (F)(1)(a) of this rule, the owner or operator shall conduct compliance tests as follows:
    - (a) Determine visible emissions from the flare in accordance with paragraph (DD)(10)(d)(i) of rule 3745-21-09 of the Administrative Code.
    - (b) Determine the net heating value of the gas being combusted in accordance with paragraph (P)(2) of rule 3745-21-10 of the Administrative Code.
    - (c) Determine the actual exit velocity of the flare in accordance with paragraph (P)(3) of rule 3745-21-10 of the Administrative Code

- (2) No initial compliance test is required for a boiler or process heater used to comply with paragraph (F)(1)(b) or (F)(1)(c) of this rule.
- (3) Except as provided in paragraph (I)(8) of this rule, any owner or operator using a control device (or combination of control devices) to comply with the VOC reduction or VOC concentration requirement in paragraph (F)(1)(d) of this rule or the VOC reduction requirement in paragraph (F)(1)(f) of this rule, shall conduct an initial compliance test as follows:
  - (a) For determination of compliance with the ninety or ninety-eight per cent reduction of VOC requirement, sampling sites shall be located at the outlet to atmosphere of any control device and at the inlet of the control device (or combination of control devices) as follows:
    - (i) The control device inlet sampling site shall be located after the final recovery device (if any).
    - (ii) If a vent stream is introduced with the combustion air or as a secondary fuel into a boiler or process heater with a design capacity less than one hundred fifty million Btu per hour, selection of the location of the inlet sampling sites shall ensure the measurement of VOC concentrations in all vent streams and primary and secondary fuels introduced into the boiler or process heater.
  - (b) For determination of compliance with the twenty ppmv VOC limit, the sampling site shall be located at the outlet of any control device.
  - (c) The VOC concentration and mass rate of VOC for each sampling site shall be determined in accordance with the test methods in paragraph (C) of rule 3745-21-09 of the Administrative Code as follows:
    - (i) VOC concentration shall be based on USEPA method 18.
    - (ii) The minimum sampling time for each run shall be one hour in which either an integrated sample or a minimum of four grab samples shall be taken. If grab sampling is used, then the samples shall be taken at approximately equal intervals in time such as fifteen minute intervals during the run.
    - (iii) The mass rate of VOC for each sample shall be calculated in accordance with paragraph (C)(4) of rule 3745-21-10 of the Administrative Code. The mass rate of VOC for each run shall be the average of the mass rate of VOC of each sample within that run.

- (d) The per cent reduction of VOC shall be the per cent reduction in the mass rate of VOC between the outlet of the last recovery device and the outlet to atmosphere from all control devices combined.
- (e) If a combustion device is the control device used to comply with the twenty ppmv VOC limit, the concentration of VOC shall be corrected to three per cent oxygen for each run as follows:
  - (i) The emission rate correction factor or excess air, integrated sampling and analysis procedures of USEPA method 3B shall be used to determine the oxygen concentration (%O<sub>2d</sub>). The samples shall be taken during the same time that the VOC samples are taken.
  - (ii) The concentration corrected to three per cent oxygen (C<sub>c</sub>) shall be computed using the following equation:

$$C_c = C_m (17.9)/(20.9 - \%O_{2d})$$

where:

C<sub>c</sub> = Concentration of VOC corrected to three per cent oxygen, dry basis, ppmv.

C<sub>m</sub> = Concentration of VOC measured, dry basis, ppmv.

%O<sub>2d</sub> = Concentration of oxygen, dry basis, per cent by volume.

- (4) Any owner or operator using a combustion device followed by a scrubber or other halogen reduction device to comply with paragraph (F)(1)(g)(i) of this rule shall conduct an initial compliance test to determine compliance with the per cent reduction (control efficiency) requirement or outlet mass limit for total hydrogen halides and halogens as follows:
  - (a) For determining compliance with the percent reduction requirement, sampling sites shall be located at the inlet and outlet of the scrubber or other halogen reduction device used to reduce halogen emissions.
  - (b) For determining compliance with outlet mass emission limit, the sampling site shall be located at the outlet of the scrubber or other halogen reduction device and prior to any releases to the atmosphere.
  - (c) Except as provided in paragraph (I)(4)(f) of this rule, USEPA method 26 or USEPA method 26A shall be used to determine the concentration, in milligrams per dry standard cubic meter, of total hydrogen halides and halogens that may be present in the gas stream at each sampling site. The

mass emissions of each hydrogen halide and halogen compound shall be calculated from the measured concentrations and the gas stream flow rate.

- (d) To demonstrate compliance with the per cent reduction requirement:
- (i) The mass emissions for any hydrogen halides and halogens present at the inlet of the scrubber or other halogen reduction device shall be summed together
  - (ii) The mass emissions for any hydrogen halides and halogens present at the outlet of the scrubber or other halogen reduction device shall be summed together.
  - (iii) The per cent reduction shall be determined by comparison of the summed inlet and outlet measurements.
- (e) To demonstrate compliance with the outlet mass emission limit:
- (i) The mass emissions for any hydrogen halides and halogens at the outlet of the scrubber or other halogen reduction device shall be summed together and expressed as a mass emission rate in pounds per hour.
  - (ii) The resultant mass emission rate of total hydrogen halides and halogens must be less than 0.99 pound per hour.
- (f) The owner or operator may use any other method to demonstrate compliance if the method or data has been validated according to the applicable procedures of USEPA method 301.
- (5) An owner or operator using a scrubber or other halogen reduction device to reduce the vent stream halogen atom mass emission rate to less than 0.99 pound per hour prior to a combustion device to comply with paragraph (F)(1)(g)(ii) of this rule shall determine the halogen atom mass emission rate prior to the combustion device according to the measurement procedure in paragraph (E)(13) of this rule.
- (6) Except as provided in paragraph (I)(9) of this rule, any owner or operator using a recovery system, process change, or other means to achieve and maintain a TRE index value greater than 1.0 for a process vent and to comply with paragraph (F)(1)(e) of this rule, shall conduct TRE determination tests to determine the TRE index value of the process vent based on measurements for flow rate, net heating value, VOC emission rate, and mass emission rate of halogen atoms (if needed for halogen status) as specified in the measurement procedures of paragraphs (E)(9), (E)(11), (E)(12), and (E)(13) of this rule.

- (7) Except as provided in paragraph (I)(9) of this rule, any owner or operator using a recovery system to maintain a TRE index value greater than 1.0 for a process vent and comply with paragraph (F)(2) of this rule, shall conduct TRE determination tests to determine the TRE index value of the process vent based on measurements conducted for flow rate, net heating value, VOC emission rate, and mass emission rate of halogen atoms (if needed for halogen status) as specified in the measurement procedures of paragraphs (E)(9), (E)(11), (E)(12), and (E)(13) of this rule.
- (8) An initial compliance test is not required for the following:
- (a) A control device for which a test was conducted for determining compliance with a regulation promulgated by the Ohio EPA or USEPA and the test was conducted using the same methods specified in this rule and either no process changes have been made since the test, or the owner or operator can demonstrate to the satisfaction of the director that the results of the test, with or without adjustments, reliably demonstrate compliance despite process changes.
  - (b) A boiler or process heater burning hazardous waste for which the owner or operator:
    - (i) Has been issued a final permit under 40 CFR part 270 and complies with the requirements of 40 CFR part 266, subpart H;
    - (ii) Has certified compliance with the interim status requirements of 40 CFR Part 266, subpart H; or
  - (c) A hazardous waste incinerator for which the owner or operator has been issued a final permit under 40 CFR part 270 and complies with the requirements of 40 CFR part 264, subpart O, or has certified compliance with the interim status requirements of 40 CFR part 265, subpart O.
- (9) An initial TRE determination test is not required for a recovery device for which a test was conducted for determining compliance with a regulation promulgated by the Ohio EPA or USEPA and the test was conducted using the same methods specified in this rule and either no process changes have been made since the test, or the owner or operator can demonstrate to the satisfaction of the director that the results of the test, with or without adjustments, reliably demonstrate compliance despite process changes.

(J) Recordkeeping.

- (1) (General) All records specified under this paragraph shall be retained by the owner or operator for a period of not less than five years and shall be made available to the director or any authorized representative of the director for

review during normal business hours. The following types of records are to be maintained by the owner or operator:

- (a) Group status determination records for process vents.
  - (b) Monitoring records for group 1 and group 2A process vents.
  - (c) Compliance demonstration records for group 1 process vents.
  - (d) Compliance demonstration records for group 2A process vents.
  - (e) Compliance demonstration records for group 2B process vents.
  - (f) Records pertaining to the one thousand one hundred tons per year exemption.
- (2) Group status determination records for process vents.

The owner or operator of a reactor or distillation unit subject to this rule shall maintain records used to determine the group status of each process vent. The following types of records are to be maintained:

- (a) (TRE index value records) The owner or operator shall maintain records of measurements, engineering assessments, and calculations performed to determine the TRE index value of the process vent according to the procedures of paragraph (E)(8) of this rule, including those records associated with halogen vent stream determination. Documentation of engineering assessments shall include all data, assumptions, and procedures used for the engineering assessments. For any process vent not classified as group 2B based on flow rate or VOC concentration records specified in paragraphs (J)(2)(b) and (J)(2)(c) of this rule, TRE index value records are needed to document the basis for classifying a process vent as group 1, group 2A, or group 2B.
- (b) (Flow rate records) Each owner or operator who elects to demonstrate that a process vent is group 2B based on a flow rate less than 0.30 scfm shall record the flow rate as measured using the measurement procedure specified in paragraph (E)(9) of this rule or as determined through engineering assessment.
- (c) (VOC concentration records) Each owner or operator who elects to demonstrate that a process vent is group 2B based on a VOC concentration less than the five hundred ppmv shall record the VOC concentration as measured using the measurement procedure specified in paragraphs (E)(10) of this rule or as determined through engineering assessment.

- (d) (Process change records) The owner or operator shall keep up-to-date, readily accessible records on process changes, as defined in paragraph (D)(6) of this rule, for process vents as follows:
- (i) If the process vent is a group 2B process vent on the basis of the flow rate being less than 0.30 scfm, then the owner or operator shall keep records of any process changes that increase the process vent flow rate and any redetermination of the flow rate pursuant to paragraph (D)(6)(a) of this rule.
  - (ii) If the process vent is a group 2B process vent on the basis of the VOC concentration being less than five hundred ppmv, then the owner or operator shall keep records of any process changes that increase the VOC concentration of the process vent and any redetermination of the concentration pursuant to paragraph (D)(6)(b) of this rule.
  - (iii) If the process vent is a group 2B process vent on the basis of the TRE index value being greater than 4.0 for a vent stream from a recovery system, then the owner or operator shall keep records of any process changes and any redetermination (recalculation) of the TRE index value pursuant to paragraph (D)(6)(c) of this rule.
  - (iv) If the process vent is a group 2B process vent on the basis of the TRE index value being greater than 1.0 for a vent stream not from a recovery system, then the owner or operator shall keep records of any process changes and any redetermination (recalculation) of the TRE index value pursuant to paragraph (D)(6)(c) of this rule.
  - (v) If the process vent is a group 2A process vent (i.e., the TRE index value is greater than 1.0 and less than or equal to 4.0 for a vent stream not from a recovery system), then the owner or operator shall keep records of any process changes and any redetermination (recalculation) of the TRE index value pursuant to paragraph (D)(6)(c) of this rule.

(3) Monitoring records for group 1 and group 2A process vents.

For any group 1 or group 2A process vent subject to paragraph (H) of this rule, the owner or operator shall maintain monitoring records as follows:

- (a) For any flare used by a group 1 process vent to comply with paragraph (F)(1)(a) of this rule, the owner or operator shall maintain the following records for the monitoring device used to continuously detect the presence of a pilot flame.
  - (i) Hourly records of whether the monitor was continuously operating and whether a pilot flame was continuously present during each hour.

- (ii) A record on the presence of a pilot flame over the full period of the compliance test.
  - (iii) A record of the times and duration of all periods when the pilot flame is absent or the monitoring device is not operating.
- (b) For any combustion device (boiler, process heater, or incinerator) used by a group 1 process vent to comply with paragraph (F)(1)(d) or (F)(1)(f) of this rule, the owner or operator shall maintain the following records for the temperature monitoring device:
- (i) Where the combustion device is a thermal incinerator, boiler, or process heater:
    - (a) Continuous records of firebox temperature.
    - (b) A record of the firebox temperature averaged over the full period of the compliance test.
    - (c) A record of daily average firebox temperature for each operating day.
    - (d) Records of the times and durations of all periods excluded from the daily average as specified in paragraph (J)(3)(f) of this rule and any other periods during process or control operation when the monitoring device is not working.
  - (ii) Where the combustion device is a catalytic incinerator:
    - (a) Continuous records of temperature upstream and downstream of catalyst bed.
    - (b) A record of the upstream temperature, downstream temperature, and temperature difference across the catalyst bed averaged over the full period of the compliance test.
    - (c) A record of the daily average of the upstream temperature and the temperature difference across the catalyst bed for each operating day.
    - (d) Records of the times and durations of all periods excluded from the daily average as specified in paragraph (J)(3)(f) of this rule and any other periods during process or control operation when the monitoring device is not working.

- (c) For any halogen reduction device used by a halogenated group 1 process vent to comply with paragraph (F)(1)(g)(i) of this rule, the owner or operator shall maintain the following monitoring records:
  - (i) Where a scrubber is employed for a halogenated vent stream following combustion:
    - (a) Continuous records of pH of scrubber effluent.
    - (b) A record of pH of the scrubber effluent averaged over the full period of the compliance test.
    - (c) A record of the daily average pH of the scrubber effluent for each operating day.
    - (d) Continuous records of scrubber liquid flow rate.
    - (e) A record of the scrubber liquid/gas ratio averaged over the full period of the compliance test.
    - (f) A record of the daily average scrubber liquid/gas ratio for each operating day.
    - (g) Records of the times and durations of all periods excluded from the daily average as specified in paragraph (J)(3)(f) of this rule and any other periods during process or control operation when either monitoring device is not working.
  - (ii) Where a halogen reduction device other than a scrubber is employed for a halogenated vent stream following combustion, the owner or operator shall maintain the monitoring records identified pursuant to paragraph (H)(8) of this rule.
- (d) For any recapture device used by a group 1 process vent to comply with paragraph (F)(1)(d) of this rule and any final recovery device within a recovery system used by a group 2A process vent to comply with paragraph (F)(2) of this rule, the owner or operator shall maintain the following monitoring records, as applicable:
  - (i) Where an absorber is the recapture or final recovery device:
    - (a) Continuous records of the exit temperature of the absorbing liquid.
    - (b) A record of the exit temperature of the absorbing liquid averaged over the full period of the compliance test (if group 1) or averaged

- over the full period of the TRE index value determination (if group 2A).
- (c) A record of the daily average exit temperature of the absorbing liquid for each operating day.
  - (d) Continuous records of the exit specific gravity.
  - (e) A record of the exit specific gravity averaged over the full period of the compliance test (if group 1) or averaged over the full period of the TRE index value determination (if group 2A).
  - (f) A record of the daily average exit specific gravity for each operating day.
  - (g) Records of the times and durations of all periods excluded from the daily average as specified in paragraph (J)(3)(f) of this rule and any other periods during process or control operation when either monitoring device is not working.
- (ii) Where a condenser is the recapture device or final recovery device:
- (a) Continuous records of the exit (product side) temperature.
  - (b) A record of the exit temperature averaged over the full period of the compliance test (if group 1) or averaged over the full period of the TRE index value determination (if group 2A).
  - (c) A record of the daily average exit temperature for each operating day.
  - (d) Records of the times and durations of all periods excluded from the daily average as specified in paragraph (J)(3)(f) of this rule and any other periods during process or control operation when the monitoring device is not working.
- (iii) Where a carbon adsorber is the recapture device or final recovery device:
- (a) A record of the total regenerative stream mass or volumetric flow for each carbon bed regeneration cycle.
  - (b) A record of the total regenerative stream mass or volumetric flow for each carbon bed regeneration cycle during the full period of the compliance test (if group 1) or during the full period of the TRE index value determination (if group 2A).

- (a) Hourly records of whether the flow indicator was operating and whether a diversion of the vent stream to the atmosphere was detected at any time during the hour.
  - (b) Records of the times and durations of all periods when the flow indicator is not operating or the vent stream is diverted to the atmosphere.
- (ii) Where a car-seal or a lock-and-key type configuration is employed to secure the bypass line valve in the non-diverting position:
  - (a) A record indicating that a monthly visual inspection of the seal or closure mechanism has been done.
  - (b) Records of the times and durations of all periods when the seal mechanism is broken, the bypass line valve position has changed, the serial number of the broken car-seal has changed, or when the key to unlock the bypass line valve has been checked out.
- (f) The daily average value of a monitored parameter shall be calculated as the average of all values recorded during the operating day by the continuous recorder, except for monitoring data recorded during the following periods:
  - (i) Monitoring system breakdowns, repairs, calibration checks, and zero (low-level) and high-level adjustments.
  - (ii) Start-ups.
  - (iii) Shutdowns.
  - (iv) Malfunctions.
  - (v) Periods of non-operation of the reactor or distillation unit, resulting in cessation of the emissions to which the monitoring applies.

(4) Compliance demonstration records for group 1 process vents.

Any owner or operator of a group 1 process vent shall keep an up-to-date, readily accessible record of the data specified in paragraphs (J)(4)(a) to (J)(4)(e) of this rule, as applicable, to demonstrate compliance with paragraph (F) of this rule.

- (a) When using a flare to comply with paragraph (F)(1)(a) of this rule, the owner or operator shall maintain records on the following:
  - (i) Flare design (i.e., steam-assisted, air-assisted, or non-assisted);

- (ii) The results of all visible emission readings, heat content determinations (and associated concentration measurements), and exit velocity determinations (and associated flow rate measurements) for a compliance test conducted pursuant to paragraph (I)(1) of this rule; and
  - (iii) All periods during the compliance test when the pilot flame is absent.
- (b) When using a boiler or process heater to comply with paragraph (F)(1)(b) of this rule, the owner or operator shall maintain records on the heat input capacity of the boiler or process heater and a description of the location at which the vent stream is introduced into the boiler or process heater.
- (c) When using a boiler or process heater to comply with paragraph (F)(1)(c) of this rule, the owner or operator shall maintain records on the location at which the vent stream is introduced into the boiler or process heater.
- (d) When using a control device (boiler, process heater, incinerator, or recapture device) to comply with paragraph (F)(1)(d) of this rule, the owner or operator shall maintain records of the following:
  - (i) The results of compliance tests conducted pursuant to paragraph (I)(3) of this rule.
  - (ii) The results of parameter monitoring during the compliance test, including results of continuous parameter monitoring averaged over the full period of the compliance test.
  - (iii) For a boiler or process heater, a description of the location at which the vent stream is introduced into the boiler or process heater for the compliance test. For a boiler or process heater, a description of the location at which the vent stream is introduced into the boiler or process heater for the compliance test.
- (e) When using a recovery system, process change, or other means to achieve and maintain a TRE index value greater than 1.0 and to comply with paragraph (F)(1)(e) of this rule, the owner or operator shall maintain records of the TRE determination tests conducted pursuant to paragraph (I)(7) of this rule.
- (f) When using a combustion device to comply with paragraph (F)(1)(f) of this rule, the owner or operator shall maintain records of the following:
  - (i) The date of installation of the combustion device.

- (ii) Documentation on why the combustion device is not capable of reliably reducing VOC emissions from the process vent in order to meet the requirement of paragraph (F)(1)(d) of this rule, including the results of any VOC emissions testing.
- (iii) Information on the combustion device pertaining to design specifications, good engineering practices, and any requirements under applicable laws, as defined under paragraph (I) of rule 3745-31-01 of the Administrative Code.
- (iv) The results of compliance tests conducted pursuant to paragraph (I)(3) of this rule.
- (v) The results of parameter monitoring averaged over the full period of the compliance test.
- (g) When using a scrubber or other halogen reduction device following a combustion device to control a halogenated vent stream to comply with paragraph (F)(1)(g)(i) of this rule, the owner or operator shall maintain records of the following:
  - (i) The results of compliance tests conducted pursuant to paragraph (I)(4) of this rule.
  - (ii) The results of parameter monitoring averaged over the full period of the compliance test.
- (h) When transferring a group 1 process vent for disposal to comply with paragraph (F)(1)(h) of this rule, the owner or operator shall maintain records on the name and location of the transferee and the identification of the group 1 process vent.

(5) Compliance demonstration records for group 2A process vents.

Any owner or operator of a group 2A process vent shall keep an up-to-date, readily accessible record of the data specified in paragraphs (J)(5)(a) to (J)(5)(b) of this rule to demonstrate compliance with paragraph (F)(2) of this rule.

- (a) The results of the TRE determination test (i.e., measurements of vent stream flow rate and vent stream concentrations used in the TRE index value determination, all measured while the vent stream is normally routed and constituted).
- (b) The calculations to determine the TRE index value.

- (c) The results of parameter monitoring for the final recovery device (absorber, condensers, carbon adsorber, or other recovery device) during the TRE determination test, including results of continuous parameter monitoring averaged over the full period of the TRE determination test.

(6) Compliance demonstration records for group 2B process vents.

Any owner or operator of a group 2B process vent shall keep an up-to-date, readily accessible record of the data specified in paragraph (J)(6)(a), (J)(6)(b), or (J)(6)(c) of this rule, whichever is applicable, to demonstrate compliance with paragraph (F)(3) of this rule.

- (a) Any owner or operator who elects to demonstrate that a process vent is a group 2B process vent based on a flow rate being less than 0.30 scfm shall maintain a record of the vent stream flow rate as determined in accordance with paragraph (E)(3) of this rule, including documentation of any engineering assessments, measurements, and calculations.
- (b) Any owner or operator who elects to demonstrate that a process vent is a group 2B process vent based on a VOC concentration being less than five hundred ppmv shall maintain a record of the vent stream VOC concentration as determined in accordance with paragraph (E)(4) of this rule, including documentation of any engineering assessments, measurements, and calculations.
- (c) Any owner or operator who elects to demonstrate that a process vent not from a recovery system is a group 2B process vent based on the TRE index value being greater than 1.0 shall maintain records of the following:
  - (i) A description and identification of the process operation or device preceding the process vent.
  - (ii) The TRE index value as determined in accordance with paragraph (E)(8) of this rule, including documentation of any engineering assessments, measurements, and calculations.
- (d) Any owner or operator who elects to demonstrate that a process vent from a recovery system is a group 2B process vent based on the TRE index value being greater than 4.0 shall maintain records of the following:
  - (i) A description and identification of the final recovery device preceding the process vent.
  - (ii) The TRE index value as determined in accordance with paragraph (E)(8) of this rule, including documentation of any engineering assessments, measurements, and calculations.

(7) Records pertaining to the one thousand one hundred tons per year exemption.

The owner or operator of a reactor or distillation unit subject to this rule and qualifying for the exemption under paragraph (C)(2) of this rule regarding a process unit with a total design capacity for all chemicals produced within that unit of less than one thousand one hundred tons per year, shall keep up-to-date records detailing the design production capacity of the process unit, including any change in equipment or process operation that affects the total design production capacity.

(K) Reporting requirements.

(1) (General) The provisions under paragraph (K) of this rule describe the contents of reports and identify the reporting dates for the following reports:

- (a) Initial compliance status report.
- (b) Semiannual compliance status reports.
- (c) Process change reports for group 2A and group 2B process vents.

(2) Initial compliance status report.

Each owner or operator of a reactor or distillation unit subject to this rule shall submit an initial compliance status report within sixty calendar days after the compliance dates specified in paragraph (G) of this rule as follows:

- (a) The initial compliance status report shall include the results of any process vent group determinations, compliance tests, TRE determination tests, inspections, values of monitored parameters established during compliance tests and TRE determination tests, and any other information used to demonstrate compliance and recorded pursuant to paragraphs (J)(4) to (J)(6) of this rule.
- (b) For compliance tests, TRE determination tests, and any group determinations based on measurements, the initial compliance status report shall include one complete test report for each test method used for a particular kind of process vent. For additional tests and measurements performed for the same kind of process vent using the same test method, the test results or measurement results shall be submitted, but a complete test report is not required.
- (c) A complete test report shall include a brief process description, sampling site description, description of sampling and analysis procedures and any modifications to standard procedures, quality assurance procedures, record

of operating conditions during the test, record of preparation of standards, record of calibrations, raw data sheets for field sampling, raw data sheets for field and laboratory analyses, documentation of calculations, and any other information required by the test method.

- (d) For each monitored parameter for which a range is required to be established under paragraph (H)(7) of this rule (pertains to group 1 and group 2A process vents), the compliance status report shall include the following information:
  - (i) The specific range of the monitored parameter(s) for each control device and final recovery device.
  - (ii) The rationale for the specific range for each parameter for each control device and final recovery device, including any data and calculations used to develop the range and a description of why the range indicates proper operation of the control device or final recovery device.

(3) Semiannual compliance status reports.

The owner or operator of a reactor or distillation unit subject to this rule shall submit semiannual compliance status reports containing the information in paragraphs (K)(3)(a), (K)(3)(b), and (K)(3)(c) of this rule. The semiannual compliance status reports shall be submitted no later than sixty calendar days after the end of each six-month period to the appropriate Ohio environmental protection agency district office or local air agency. The first report shall be submitted no later than eight months after the date the initial compliance status report is due and shall cover the six-month period beginning on the date the initial compliance status report is due.

(a) Semiannual reports on parameter monitoring for group 1 process vents.

For a group 1 process vent, the semiannual compliance status reports shall include the following recorded information:

- (i) Reports of daily average values of monitored parameters for all operating days when the daily average values recorded under paragraph (J)(3) of this rule were outside the ranges established in the initial compliance status report or permit issued by the director.
- (ii) Reports of the times and durations of all periods recorded under paragraph (J)(3) of this rule when the monitoring device is not working or monitoring data is not collected during process operation generating the process vent stream or during operation of the control or recovery device.

- (iii) Reports of the times and durations of all periods recorded under paragraph (J)(3)(e)(i)(b) of this rule when the vent stream is diverted to the atmosphere through a bypass line.
  - (iv) Reports of the duration of all periods recorded under paragraph (J)(3)(e)(ii)(b) of this rule when the seal mechanism is broken, the bypass line valve position has changed, the serial number of the broken car-seal has changed, or the key to unlock the bypass line valve has been checked out.
  - (v) Reports of the times and durations of all periods recorded under paragraph (J)(3)(a)(iii) of this rule in which all pilot flames of a flare were absent.
  - (vi) Reports of all carbon bed regeneration cycles during which the parameters recorded under paragraphs (J)(3)(d)(iii)(a) and (J)(3)(d)(iii)(c) of this rule were outside the ranges established in the initial compliance status report or permit issued by the director.
  - (vii) Reports on monitoring devices and parameters approved by the director pursuant to paragraph (H)(8) of this rule.
- (b) Semiannual reports on parameter monitoring for group 2A process vents.

For a group 2A process vent, the semiannual compliance status reports shall include the following recorded information:

- (i) Reports of daily average values of monitored parameters for all operating days when the daily average values recorded under paragraph (J)(3) of this rule were outside the ranges established in the initial compliance status report or permit issued by the director.
  - (ii) Reports of all carbon bed regeneration cycles during which the parameters recorded under paragraphs (J)(3)(d)(iii)(a) and (J)(3)(d)(iii)(c) of this rule were outside the ranges established in the initial compliance status report or permit issued by the director.
  - (iii) Reports on monitoring devices and parameters approved by the director pursuant to paragraph (H)(8) of this rule.
- (c) Semiannual reports on subsequent compliance tests for group 1 process vents or subsequent TRE determination tests for group 2A process vents.

If any subsequent compliance tests or subsequent TRE determination tests are conducted during the semiannual reporting period after the initial compliance status report has been submitted, the semiannual compliance

status report shall include the data recorded pursuant to paragraphs (J)(4) and (J)(5) of this rule.

(4) Process change reports for group 2A and group 2B process vents.

Whenever a process change, as defined in paragraph (D)(6) of this rule, is made that causes the process vent group status to change, the owner or operator shall submit a report to the appropriate Ohio environmental protection agency district office or local air agency within sixty calendar days after the process change. The report shall include the following, whichever is applicable:

- (a) For a group 2A or group 2B process vent that becomes a group 1 process vent, the report shall include all of the following:
  - (i) A description of the process change.
  - (ii) The results of the redetermination of the flow rate, VOC concentration, and TRE index value required under paragraph (D)(6) of this rule and recorded under paragraph (J)(2)(d) of this rule.
  - (iii) A statement that the owner or operator will comply with the requirements of paragraph (F)(1) of this rule for group 1 process vents by the date specified in paragraph (G)(3)(a) of this rule.
- (b) For a group 2B process vent that becomes a group 2A process vent, the report shall include all of the following:
  - (i) A description of the process change.
  - (ii) The results of the determination or redetermination of the TRE index value required under paragraph (D)(6) of this rule and recorded under paragraph (J)(2)(d) of this rule.
  - (iii) A statement that the owner or operator will comply with the requirements of paragraph (F)(2) of this rule for group 2A process vents by the date specified in paragraph (G)(3)(b) of this rule.
- (c) For a group 2A process vent that becomes a group 2B process, the report shall include all of the following:
  - (i) A description of the process change.
  - (ii) The results of the determination or redetermination of the TRE index value required under paragraph (D)(6) of this rule and recorded under paragraph (J)(2)(d) of this rule.

- (iii) A statement that the owner or operator will comply with the requirements of paragraph (F)(3) of this rule for group 2B process vents by the date specified in paragraph (G)(3)(c) of this rule.
- (d) For a group 2B process vent under a specific basis that becomes a group 2A process vent under a different basis, the report shall include all of the following:
  - (i) A description of the process change.
  - (ii) The results of the redetermination of the basis for the group 2 process vent under paragraph (D)(6) of this rule and recorded under paragraph (J)(2)(d) of this rule.
  - (iii) A statement that the owner or operator will comply with the requirements of paragraph (F)(3) of this rule for group 2B process vents by the date specified in paragraph (G)(3)(c) of this rule.
- (e) The owner or operator is not required to submit a report of a process change if one of the conditions listed in paragraphs (K)(3)(d)(i) to (K)(3)(d)(v) of this rule is met.
  - (i) The process change does not meet the definition of a process change in paragraph (D)(6) of this rule; or
  - (ii) The vent stream flow rate is redetermined for a group 2B process vent that is based on flow rate according to paragraph (D)(6)(a) of this rule and the redetermined value is less than 0.30 scfm; or
  - (iii) The VOC concentration is redetermined for a group 2B process vent that is based on flow rate according to paragraph (D)(6)(b) of this rule and the redetermined value is less than five hundred ppmv; or
  - (iv) The TRE index value is redetermined for a group 2B process vent that is based on the TRE index value according to paragraph (D)(6)(c) of this rule and the redetermined value is greater than 1.0 for a process vent not from a recovery system or greater than 4.0 for a process vent from a recovery system; or
  - (v) The TRE index value is redetermined for a group 2A process vent according to paragraph (D)(6)(c) of this rule and the redetermined TRE index value for a process vent from a recovery system is greater than 1.0 and less than or equal to 4.0.

(L) Requirements on applicability notification and permit application.

- (1) The owner or operator of a reactor or distillation unit that is subject to this rule, is located in Butler, Clermont, Hamilton, or Warren county, and has an initial startup date before May 27, 2005 shall notify the appropriate Ohio environmental protection agency district office or local air agency in writing that the reactor or distillation operation is subject to this rule. The notification, which shall be submitted not later than July 26, 2005, shall provide the information specified in paragraph (L)(5) of this rule:
- (2) The owner or operator of a reactor or distillation unit that is subject to this rule, is located in Butler, Clermont, Hamilton, or Warren county, and has an initial startup date on or after May 27, 2005 shall notify the appropriate Ohio environmental protection agency district office or local air agency in writing that the reactor or distillation unit is subject to this rule. The notification, which shall be submitted not later than either the date of initial startup of the reactor or distillation unit or July 26, 2005 (whichever is later), shall provide the information specified in paragraph (L)(5) of this rule. The application for a permit-to-install under rule 3745-31-02 of the Administrative Code may be used to fulfill the notification requirements of this paragraph.
- (3) The owner or operator of a reactor or distillation unit that is subject to this rule, is located in Ashtabula, Cuyahoga, Geauga, Lake, Lorain, Medina, Portage, or Summit county, and has an initial startup date before the effective date of this rule shall notify the appropriate Ohio environmental protection agency district office or local air agency in writing that the reactor or distillation operation is subject to this rule. The notification, which shall be submitted not later than sixty days after the effective date of this rule, shall provide the information specified in paragraph (L)(5) of this rule.
- (4) The owner or operator of a reactor or distillation unit that is subject to this rule, is located in Ashtabula, Cuyahoga, Geauga, Lake, Lorain, Medina, Portage, or Summit county, and has an initial startup date on or after the effective date of this rule shall notify the appropriate Ohio environmental protection agency district office or local air agency in writing that the reactor or distillation unit is subject to this rule. The notification, which shall be submitted not later than either the date of initial startup of the reactor or distillation unit or sixty days after the effective date of this rule (whichever is later), shall provide the information specified in paragraph (L)(5) of this rule. The application for a permit-to-install under rule 3745-31-02 of the Administrative Code may be used to fulfill the notification requirements of this paragraph.
- (5) The notification required in paragraphs (L)(1) to (L)(4) of this rule shall include the following information:
  - (a) Name and address of the owner or operator;
  - (b) Address (i.e., physical location) of the facility;

- (c) Equipment description and Ohio EPA application number (if assigned) of the reactor or distillation unit;
- (d) Identification of the applicable requirements, the means of compliance, and the compliance date for the reactor or distillation unit under this rule; and
- (e) Regarding a permit for the reactor or distillation unit, whichever of the following is applicable:
  - (i) Submission of an application for a permit-to-operate, modification, or renewal of a permit-to-operate in accordance with paragraph (B) of rule 3745-35-02 of the Administrative Code; or
  - (ii) Statement of intent to submit an application for a Title V permit or modification of a Title V permit in accordance with rule 3745-77-02 or rule 3745-77-08 of the Administrative Code, respectively.

**Control of volatile organic compound emissions from process vents in batch operations.**

[Comment: For dates and availability of non-regulatory government publications, publications of recognized organizations and associations, federal rules, and federal statutory provisions referenced in this rule, see paragraph (HH) at the end of rule 3745-21-01 of the Administrative Code entitled "Referenced materials."]

**(A) Applicability.**

- (1) Except as otherwise provided in paragraphs (A)(4) and (A)(5) of this rule, the requirements of paragraph (C) of this rule shall apply to any facility that has a batch process train associated with any of the following SIC codes: 2821, 2833, 2834, 2861, 2865, 2869, or 2879, and meets either the following criteria in paragraphs (A)(1)(a) and (A)(1)(b) of this rule or paragraphs (A)(1)(c) and (A)(1)(d) of this rule:
  - (a) The facility is located in Butler, Clermont, Hamilton, or Warren county; and
  - (b) The facility has a combined total potential to emit for VOC emissions equal to or greater than one hundred tons of VOC per calendar year on or after May 27, 2005 from all of the following:
    - (i) Process vents in batch operations;
    - (ii) All non-CTG sources; and
    - (iii) Unregulated emissions from CTG sources except sources regulated under Subparts BBB, III, NNN, and RRR of 40 CFR Part 60 and sources regulated under Subpart T of 40 CFR Part 63.
  - (c) The facility is located in Ashtabula, Cuyahoga, Geauga, Lake, Lorain, Medina, Portage, or Summit county; and
  - (d) The facility has a combined total potential to emit for VOC emissions equal to or greater than one hundred tons of VOC per calendar year on or after August 25, 2008 from all of the following:
    - (i) Process vents in batch operations;
    - (ii) All non-CTG sources; and
    - (iii) Unregulated emissions from CTG sources except sources regulated under Subparts BBB, III, NNN, and RRR of 40 CFR Part 60 and sources regulated under Subpart T of 40 CFR Part 63.

- (2) For the purposes of paragraphs (A)(1)(a) to (A)(1)(d) of this rule, a source shall be considered regulated by a paragraph, rule or subpart if it is subject to the limits of that paragraph, rule, or subpart. A source is not considered regulated by a paragraph, rule, or subpart if it is not subject to the limits of that paragraph, rule, or subpart. For example, if the source is covered by an exemption in the paragraph, rule, or subpart, or the applicability criteria of the paragraph or subpart are not met, then the source is not subject to that paragraph, rule, or subpart. A source is also not considered regulated if there is no rule contained in this chapter regulating the source category.
- (3) Once a facility has met the applicability requirements of paragraphs (A)(1)(a) and (A)(1)(b) of this rule on or after May 27, 2005, or the applicability requirements of paragraphs (A)(1)(c) and (A)(1)(d) of this rule on or after the effective date of this rule, it is always subject to the requirements of paragraph (C) of this rule, except as otherwise provided in paragraphs (A)(4) and (A)(5) of this rule.
- (4) In the event a facility meets the applicability requirements under paragraphs (A)(1)(a) and (A)(1)(b) of this rule, but reduces its potential to emit for volatile organic compounds by means of federally enforceable operational restrictions (e.g., production, hours of operation, or capacity utilization) to less than one hundred tons per year by no later than May 27, 2006, and documents that the actual VOC emissions from the above combined sources have never exceeded one hundred tons per year after the baseline year (1990) of the state implementation plan for ozone, the facility is not subject to the requirements of paragraph (C) of this rule.
- (5) In the event a facility meets the applicability requirements under paragraphs (A)(1)(c) and (A)(1)(d) of this rule, but reduces its potential to emit for VOCs by means of federally enforceable operational restriction(s) (e.g., production, hours of operation, or capacity utilization) to less than one hundred tons per year by no later than twelve months after the effective date of this rule, and documents that the actual VOC emissions from the above combined sources have never exceeded one hundred tons per year after the baseline year (2002) of the state implementation plan for ozone, the facility is not subject to the requirements of paragraph (C) of this rule.

(B) Definitions.

The definitions applicable to this rule are contained in paragraph (W) of rule 3745-21-01 of the Administrative Code.

(C) Applicability for batch process trains and unit operations (batch operations).

- (1) Except as otherwise provided in paragraphs (C)(2) and (C)(3) of this rule, the owner or operator of a batch process train at a facility that meets the

applicability criteria of paragraph (A)(1) of this rule is subject to the requirements of paragraphs (D) to (K) of this rule.

- (2) The requirements of paragraphs (D) to (J) of this rule shall not apply to:
  - (a) Any emissions unit included within any early reduction program, as specified in 40 CFR part 63, and published in 57 Federal Register 61970 (December 29, 1992), evidenced by a timely enforceable commitment approved by USEPA.
  - (b) Any unit operation at a synthesized pharmaceutical manufacturing facility that is subject to a requirement under paragraph (W)(1) of rule 3745-21-09 of the Administrative Code.
- (3) The following unit operations within a batch process train and batch process trains are exempt from the control requirements of paragraph (D) of this rule, but are still subject to the requirements in paragraphs (H), (I) and (K) of this rule pertaining to recordkeeping, reporting, applicability notification, and permit application.
  - (a) Any unit operation with uncontrolled total annual mass emissions of less than or equal to five hundred pounds per year of VOC.

Such unit operations are also excluded from the calculation of the total annual mass emissions for a batch process train. If the uncontrolled total annual mass emissions from such exempt unit operation exceed five hundred pounds per year of VOC in any subsequent year, the owner or operator shall calculate applicability in accordance with paragraph (C)(4) of this rule for both the individual unit operation and the batch process train containing the unit operation.
  - (b) Any batch process train containing process vents that have, in the aggregate, uncontrolled total annual mass emissions, as determined in accordance with paragraph (E)(1) of this rule, of less than thirty thousand pounds per year of VOC for all products manufactured in such batch process train.
- (4) The applicability equations in paragraph (C)(5) of this rule, which require the calculation of uncontrolled total annual mass emissions and flow rate value, shall be used to determine whether a unit operation or a batch process train is subject to the control requirements set forth in paragraph (D) of this rule. The applicability equation shall be applied to the following:
  - (a) Any unit operation with uncontrolled total annual mass emissions that exceed five hundred pounds per year and with a VOC concentration greater than five hundred ppmv. In this individual determination, no applicability

analysis shall be performed for any unit operation with a VOC concentration of less than or equal to five hundred ppmv.

- (b) Any batch process train containing process vents which, in the aggregate, have uncontrolled total annual mass emissions of thirty thousand pounds per year or more of VOC from all products manufactured in the batch process train. Any unit operation with uncontrolled total annual mass emissions exceeding five hundred pounds per year, regardless of VOC concentration, shall be included in the aggregate applicability analysis.

(5) Applicability equations.

- (a) The applicability equations under paragraph (C)(5) of this rule are specific to volatility.

- (b) For purposes of paragraph (C)(5) of this rule, the following abbreviations are employed:

(i) FR = calculated applicability flow rate, scfm.

(ii) UTAME = uncontrolled total annual mass emissions of VOC, expressed as pounds per year.

(iii) WAV = weighted average volatility.

(iv) MVOC<sub>i</sub> = mass of VOC component i.

(v) MWVOC<sub>i</sub> = molecular weight of VOC component i.

(vi) VP<sub>i</sub> = vapor pressure of VOC component i.

(vii) i = subscript denoting a specific VOC component.

(viii) n = total number of VOC components.

- (c) Weighted average volatility shall be calculated as follows:

$$WAV = \frac{\sum_{i=1}^n \frac{(VP_i)(MVOC_i)}{(MWVOC_i)}}{\sum_{i=1}^n \frac{(MVOC_i)}{(MWVOC_i)}}$$

- (d) For purposes of determining applicability, calculated applicability flow rate values shall be determined as follows:

- (i) Process vents with a WAV that is less than or equal to seventy-five mmHg at twenty degrees Celsius (sixty-eight degrees Fahrenheit), shall use the following equation:

$$FR = [0.07 (UTAME)] - 1,821$$

- (ii) Process vents with a WAV that is greater than seventy-five mmHg, but less than or equal to one hundred fifty mmHg at twenty degrees Celsius (sixty-eight degrees Fahrenheit), shall use the following equation:

$$FR = [0.031 (UTAME)] - 494$$

- (iii) Process vents a WAV that is greater than one hundred fifty mmHg at twenty degrees Celsius (sixty-eight degrees Fahrenheit), shall use the following equation:

$$FR = [0.013 (UTAME)] - 301$$

(D) Control requirements for VOC emissions from process vents.

The control requirements set forth in paragraph (D) of this rule shall apply to process vents of batch process trains and unit operations within batch process trains (batch operations).

- (1) The owner or operator of a unit operation with an average flow rate, as determined in accordance with paragraph (E)(2) of this rule, below the flow rate value calculated by the applicability equations contained in paragraph (C)(5) of this rule, shall reduce uncontrolled VOC emissions from such unit operation by an overall efficiency, on average, of at least ninety per cent, or to twenty ppmv, per batch cycle.
- (2) The owner or operator of a batch process train with an average flow rate, as determined in accordance with paragraph (E)(2)(b) of this rule, below the flow rate value calculated by the applicability equations contained in paragraph (C)(5) of this rule, shall reduce uncontrolled VOC emissions from such batch process train by an overall efficiency, on average, of at least ninety per cent, or to twenty ppmv, per batch cycle.
- (3) If a boiler or process heater is used to comply with paragraph (D)(1) or (D)(2) of this rule, the vent stream shall be introduced into the flame zone of the boiler or process heater.
- (4) If a flare is used to comply with paragraph (D)(1) or (D)(2) of this rule, the flare shall comply with the requirements of paragraph (DD)(10)(d) of rule 3745-21-09 of the Administrative Code. If a process, not subject to this rule, vents an emergency relief discharge into a common flare header of this flare, the

requirements of paragraph (DD)(10)(d) of rule 3745-21-09 of the Administrative Code shall not apply during such emergency relief discharge.

(E) Determination of uncontrolled total annual mass emissions and actual weighted average flow rate values for a batch process train or unit operation.

(1) Uncontrolled total annual mass emissions shall be determined by the following methods:

(a) Direct process vent emissions measurements taken prior to any release to the atmosphere, following any recovery device, prior to mixing with vents from other process trains or unrelated operations, and prior to any control device, provided such measurements conform with the requirements of measuring the mass flow rate of VOC incoming to the control device as set forth in paragraphs (F)(6)(b), (F)(6)(c)(i)(a) and (F)(6)(c)(i)(b) of this rule.

(b) Engineering estimates of the uncontrolled VOC emissions from a process vent or process vents, in the aggregate, within a batch process train, using either the potential or permitted number of batch cycles per year or total production as represented in the permit for the batch process train as follows:

(i) Engineering estimates of the uncontrolled VOC emissions shall be based upon accepted chemical engineering principles, measurable process parameters, or physical or chemical laws and their properties. Examples of methods include, but are not limited to, the following:

(a) Use of material balances based on process stoichiometry to estimate maximum VOC concentrations.

(b) Estimation of maximum flow rate based on physical equipment design such as pump or blower capacities.

(c) Estimation of VOC concentrations based on saturation conditions.

(ii) All data, assumptions and procedures used in any engineering estimate shall be documented.

(2) Average flow rate shall be determined by any of the following methods:

(a) Direct process vent flow rate measurements taken prior to any release to the atmosphere, following any recovery device, prior to mixing with vents from other process trains or unrelated operations, and prior to any control device, provided such measurements conform with the requirements of measuring incoming volumetric flow rate set forth in paragraph (F)(6)(b) of this rule.

- (b) Average flow rate for a unit operation having multiple emission events or batch process trains shall be the weighted average flow rate, calculated as follows:

$$WAF = \frac{\sum_{i=1}^n (AFR_i)(ADE_i)}{\sum_{i=1}^n (ADE_i)}$$

where:

WAF = actual weighted average flow rate for a unit operation or batch process train.

$AFR_i$  = average flow rate of emission event i.

$ADE_i$  = annual duration of emission event i.

i = subscript denoting a specific emission event.

n = number of emission events.

- (c) Engineering estimates calculated in accordance with the requirements in paragraph (E)(1)(b) of this rule.

- (3) For purposes of determining the average flow rate for steam vacuuming systems, the steam flow shall be included in the average flow rate calculation.

(F) Compliance testing requirements for a batch process train or unit operation.

- (1) Upon the director's request, the owner or operator of a batch process train or unit operation within a batch process train shall conduct testing to demonstrate compliance with paragraph (D) this rule. The owner or operator shall, at its own expense, conduct such tests in accordance with the applicable test methods and procedures specified in paragraphs (F)(4), (F)(5), and (F)(6) of this rule.
- (2) Notwithstanding paragraph (F)(1) of this rule, flares and process boilers used to comply with the control requirements of paragraph (D) of this rule shall be exempt from compliance testing requirements.
- (3) When a flare is used to comply with the control requirements of paragraph (D) of this rule, the flare shall comply with the requirements of paragraph (DD)(10)(d) of rule 3745-21-09 of the Administrative Code.
- (4) The owner or operator of a batch process train or unit operation within a batch process train that is exempt from the control requirements of paragraph (D) of

this rule due to an average flow rate that is equal to or above the calculated applicability flow rate or due to a VOC concentration of less than or equal to five hundred ppmv (unit operation) shall demonstrate, upon the director's request, the absence of oversized gas moving equipment in any manifold. Gas moving equipment shall be considered oversized if it exceeds the maximum requirements of the exhaust flow rate by more than thirty per cent.

- (5) For the purpose of demonstrating compliance with the control requirements in paragraph (D) of this rule, the batch process train or unit operation shall be run at representative operating conditions and flow rates during any compliance test.
- (6) The following methods in 40 CFR part 60, appendix A shall be used to demonstrate compliance with the reduction efficiency requirement set forth in paragraph (D) of this rule:
  - (a) USEPA method 1 or 1A, as appropriate, for selection of the sampling sites if the flow measuring device is not a rotameter. The control device inlet sampling site for determination of vent stream VOC composition reduction efficiency shall be prior to the control device and after the control device.
  - (b) USEPA method 2, 2A, 2B, 2C, or 2D, as appropriate, for determination of gas stream volumetric flow rate flow measurements, which shall be taken continuously. No traverse is necessary when the flow measuring device is an ultrasonic probe.
  - (c) USEPA method 25A or USEPA method 18, if applicable, to determine the concentration of VOC in the control device inlet and outlet.
    - (i) The sampling time for each run shall be as follows:
      - (a) For batch cycles less than eight hours in length, readings shall be taken continuously over the entire length of the batch cycle with a maximum of fifteen-minute intervals between measurements if using USEPA method 25A. If using USEPA method 18, readings shall be taken continuously with a maximum of fifteen-minute intervals between measurements throughout the batch cycle unless it becomes necessary to change the impinger train, in which case a thirty-minute interval shall not be exceeded.
      - (b) For batch cycles of eight hours and greater in length, the owner of operator may either test in accordance with the test procedures defined in paragraph (F)(6)(c)(i)(a) of this rule or the owner or operator may elect to perform tests, pursuant to either USEPA method 25A or USEPA method 18, only during those portions of each emission event which define the emission profile of each emission event occurring within the batch cycle. For each emission

event of less than four hours in duration, the owner or operator shall test continuously over the entire emission event as set forth in paragraph (F)(6)(c)(i)(a) of this rule. For each emission event of greater than four hours in duration, the owner or operator shall elect either to perform a minimum of three one hour test runs during the emission event or shall test continuously over the entire emission event within each unit operation in the batch process train. To demonstrate that the portion of the emission event to be tested defines the emission profile for the emission event, the owner or operator electing to rely on this option shall develop an emission profile for the entire emission event. Such emission profile shall be based upon either process knowledge or test data collected. Examples of information that could constitute process knowledge include, but are not limited to, calculations based on material balances and process stoichiometry. Previous test results may be used provided such results are still relevant to the current process vent stream conditions.

- (ii) The mass emission rate from the process vent or inlet to the control device shall be determined by combining concentration and flow rate measurements taken simultaneously at sampling sites selected in accordance with paragraph (F)(6)(a) of this rule throughout the batch cycle.
  - (iii) The mass emission rate from the control device outlet shall be obtained by combining concentration and flow rate measurements taken simultaneously at sampling sites selected in accordance with paragraph (F)(6)(a) of this rule throughout the batch cycle.
  - (iv) The efficiency of the control device shall be determined by integrating the mass emission rates obtained in paragraphs (F)(6)(c)(ii) and (F)(6)(c)(iii) of this rule, over the time of the batch cycle and dividing the difference in inlet and outlet mass flow totals by the inlet mass flow total.
- (7) The owner or operator of a batch process train or unit operation may propose an alternative test method or procedures to demonstrate compliance with the control requirements set forth in paragraph (D) of this rule. Such method or procedures shall be approved by the director and USEPA in writing and shall be included as federally enforceable permit conditions.
- (8) In the absence of a request by the director to conduct compliance testing in accordance with provisions of this rule, the owner or operator may demonstrate compliance by the use of engineering estimates or process stoichiometry.

- (9) During the compliance test conducted to demonstrate compliance with the control requirements of paragraph (D) of this rule, the owner or operator shall establish the operating limits (operating parameter values) for the monitoring devices required under paragraph (G) of this rule.

(G) Monitoring requirements for control devices.

- (1) Every owner or operator using an incinerator to comply with paragraph (D) of this rule shall install, calibrate, maintain and operate, according to manufacturer's specifications, temperature monitoring devices with an accuracy of plus or minus one per cent of the temperature being measured expressed in degrees Celsius or plus or minus 1.8 per cent of the temperature being measured expressed in degrees Fahrenheit, each equipped with a continuous recorder as follows:
  - (a) Where a catalytic incinerator is used, temperature monitoring devices shall be installed in the gas stream immediately before and after the catalyst bed.
  - (b) Where an incinerator other than a catalytic incinerator is used, a temperature monitoring device shall be installed in the combustion chamber.
- (2) The owner or operator using a flare to comply with paragraph (D) of this rule shall install, calibrate, maintain and operate, according to manufacturer's specifications, a heat sensing device, such as an ultra-violet beam sensor or thermocouple, at the pilot light to indicate continuous presence of a flame.
- (3) Every owner or operator using a scrubber to comply with paragraph (D) of this rule shall install, calibrate, maintain, and operate, according to manufacturer's specifications, the following:
  - (a) A temperature monitoring device for scrubbant liquid having an accuracy of plus or minus one per cent of the temperature being monitored expressed in degrees Celsius or plus or minus 1.8 per cent of the temperature being measured expressed in degrees Fahrenheit and a specific gravity device for scrubbant liquid, each equipped with a continuous recorder; or
  - (b) A VOC monitoring device used to indicate the concentration of VOC exiting the control device based on a detection principle such as infra-red photoionization, or thermal conductivity, equipped with a continuous recorder.
- (4) Every owner or operator using a condenser to comply with paragraph (D) of this rule shall install, calibrate, maintain, and operate, according to manufacturer's specifications, the following:

- (a) A condenser exit temperature monitoring device equipped with a continuous recorder and having an accuracy of plus or minus one per cent of the temperature being monitored expressed in degrees Celsius or plus or minus 1.8 per cent of the temperature being measured expressed in degrees Fahrenheit, equipped with a continuous recorder; or
    - (b) A VOC monitoring device used to indicate the concentration of VOC such as infra-red, photoionization, or thermal conductivity, each equipped with a continuous recorder.
  - (5) Every owner or operator using a carbon adsorber to comply with paragraph (D) of this rule shall install, calibrate, maintain, and operate, according to the manufacturer's specifications, the following equipment:
    - (a) An integrating regeneration steam flow monitoring device having an accuracy of plus or minus ten per cent, and a carbon bed temperature monitoring device having an accuracy of plus or minus one per cent of the temperature being monitored expressed in degrees Celsius or plus or minus 1.8 per cent of the temperature being measured expressed in degrees Fahrenheit, both equipped with a continuous recorder; or
    - (b) A VOC monitoring device used to indicate the concentration level of VOC exiting such device based on a detection principle such as infra-red, photoionization, or thermal conductivity, equipped with a continuous recorder.
  - (6) Every owner or operator using a boiler or process heater with a design heat input capacity less than one hundred fifty million Btu per hour that is to comply with paragraph (D) of this rule shall install, calibrate, maintain, and operate, according to the manufacturer's specifications, a temperature monitoring device in the firebox with an accuracy of plus or minus one per cent of the temperature being measured expressed in degrees Celsius or plus or minus 1.8 per cent of the temperature being measured expressed in degrees Fahrenheit, equipped with a continuous recorder. Any boiler or process heater in which all process vent streams are introduced with primary fuel is exempt from this requirement.
  - (7) Every owner or operator of a process vent shall be permitted to monitor by an alternative method or may monitor parameters other than those listed in paragraphs (G)(1) to (G)(6) of this rule, if approved by the director and USEPA in writing. Such alternative method or parameters shall be contained in a permit pertaining to the process vent as federally enforceable permit conditions.
- (H) Recordkeeping for a batch process train or unit operation.
- (1) Every owner or operator of a unit operation or batch process train that is exempt from the control requirements per paragraph (C)(3)(a) or (C)(3)(b) of this rule

shall keep records of the uncontrolled total annual mass emissions for such unit operation or batch process train, as applicable, and documentation verifying these values or measurements. The documentation shall include the engineering calculations, any measurements made in accordance with paragraph (F) of this rule, and the potential or permitted number of batch cycles per year, or, in the alternative, total production as represented in the permit pertaining to the unit operation or batch process train.

(2) Every owner or operator of a unit operation or batch process train that is exempt from control requirements per paragraph (C)(4) of this rule shall keep the following records:

(a) The uncontrolled total annual mass emissions and documentation verifying these values or measurements.

The documentation shall include any engineering calculations, any measurements made in accordance with paragraph (F) of this rule, and the potential or permitted number of batch cycles per year, or, in the alternative, total production as represented in the permit pertaining to the unit operation or batch process train.

(b) The average flow rate in scfm and documentation verifying this value.

(c) The calculated weighted average volatility and documentation verifying this value.

(d) The calculated applicability flow rate value from paragraph (C)(5)(d) of this rule.

(3) Every owner or operator of a batch process train or unit operation subject to the control requirements of paragraph (D) of this rule shall keep records of the following parameters required to be monitored under paragraph (G) of this rule:

(a) If using a thermal or catalytic incinerator to comply with paragraph (D) of this rule, records indicating the average combustion chamber temperature of the incinerator (or the average temperature upstream and downstream of the catalyst bed for a catalytic incinerator), measured continuously and averaged over the same time period as the compliance test that demonstrated compliance.

(b) If using a flare (i.e., steam-assisted, air-assisted or nonassisted) to comply with paragraph (D) of this rule, continuous records of the flare pilot flame monitoring and records of all periods of operations during which the pilot flame is absent.

(c) If using any of the following as a control device, the following records:

- (i) Where a scrubber is used, the exit specific gravity (or alternative parameter which is a measure of the degree of absorbing liquid saturation, if approved by the director) and the average exit temperature of the absorbing liquid, measured continuously and averaged over the same time period as the compliance test that demonstrated compliance (both measured while the vent stream is routed normally).
  - (ii) Where a condenser is used, the average exit (product side) temperature measured continuously and averaged over the same time period as the compliance test that demonstrated compliance while the vent stream is routed normally.
  - (iii) Where a carbon adsorber is used, the total steam mass flow measured continuously and averaged over the same time period as the compliance test that demonstrated compliance (full carbon bed cycle), temperature of the carbon bed after regeneration (and within fifteen minutes after completion of any cooling cycle(s)), and duration of the carbon bed steaming cycle (all measured while the vent stream is routed normally).
  - (iv) As an alternative to paragraph (H)(3)(c)(i), (H)(3)(c)(ii), or (H)(3)(c)(iii) of this rule, at a minimum, records indicating the concentration level or reading indicated by the VOC monitoring device at the outlet of the scrubber, condenser, or carbon adsorber, measured continuously and averaged over the same time period as the compliance test that demonstrated compliance (while the vent stream is routed normally).
- (4) Every owner or operator of a unit operation claiming a vent stream concentration exemption level, as set forth in paragraph (C)(4)(a) of this rule, shall maintain records to indicate the vent stream concentration is less than or equal to five hundred ppmv, and shall notify the director in writing if the vent stream concentration at any time equals or exceeds five hundred ppmv, within sixty days after such event. Such notification shall include a copy of all records of such event.
- (5) An owner or operator of a batch process train or unit operation subject to the control requirements of paragraph (D) of this rule may maintain alternative records other than those listed in paragraph (C) of this rule. Any alternative recordkeeping shall be approved by the director and USEPA in writing and shall be contained in the permit pertaining to the batch process train or unit operation as federally enforceable permit conditions.
- (6) The owner or operator of a unit operation or batch process train that is exempt from the control requirements of paragraph (D) of this rule shall notify the director in writing if the uncontrolled total annual mass emissions from such unit

operation or batch process train exceed the threshold in paragraph (C)(3)(a) or (C)(3)(b) of this rule, respectively, within sixty days after the event occurs. Such notification shall include a copy of all records of such event.

- (7) Every owner or operator of a batch process train or unit operation required to keep records under this rule shall maintain such records at the facility for a minimum period of five years and shall make all such records available to the director upon request.

(I) Reporting requirements.

- (1) (General) The provisions under paragraph (I) of this rule describe the contents of reports and identify the reporting dates for the following reports:

- (a) Initial compliance status report.
- (b) Semiannual compliance status reports.

- (2) Initial compliance status report.

Each owner or operator of a batch process train or unit operation subject to this rule shall submit an initial compliance status report within sixty calendar days after the compliance dates specified in paragraph (I) of this rule as follows:

- (a) The initial compliance status report shall include the results of exemption, process vent determinations, compliance tests, values of monitored parameters established during compliance tests, and any other information used to demonstrate compliance and recorded pursuant to paragraph (H) of this rule.
- (b) For compliance tests and process vent determinations based on measurements, the initial compliance status report shall include one complete test report for each test method used for a particular kind of process vent. For additional tests and measurements performed for the same kind of process vent using the same test method, the test results or measurement results shall be submitted, but a complete test report is not required.
- (c) A complete test report shall include a brief process description, sampling site description, description of sampling and analysis procedures and any modifications to standard procedures, quality assurance procedures, record of operating conditions during the test, record of preparation of standards, record of calibrations, raw data sheets for field sampling, raw data sheets for field and laboratory analyses, documentation of calculations, and any other information required by the test method.

(d) For each monitored parameter for which a range is required to be established under paragraph (F)(9) of this rule, the compliance status report shall include the following information:

- (i) The specific range of the monitored parameter(s) for each control device.
- (ii) The rationale for the specific range for each parameter for each control device, including any data and calculations used to develop the range and a description of why the range indicates proper operation of the control device or final recovery device.

(3) Semiannual compliance status reports.

The owner or operator of a batch process train or unit operation subject to this rule shall submit semiannual compliance status reports containing the information in paragraphs (I)(3)(a) and (I)(3)(b) of this rule. The semiannual compliance status report shall be submitted no later than sixty calendar days after the end of each six-month period to the Ohio EPA or its delegated local air agency. The first report shall be submitted no later than eight months after the date the initial compliance status report is due and shall cover the six-month period beginning on the date the initial compliance status report is due.

(a) Semiannual reports on parameter monitoring for controlled process vents.

For a process vent equipped with a control device to meet the requirement of paragraph (D) of this rule, the semiannual compliance status reports shall include the following recorded information:

- (i) Reports of monitored parameters for all operating days when the average values recorded under paragraph (H)(3) of this rule were outside the ranges established in the initial compliance status report or permit issued by the director.
- (ii) Reports of the times and durations of all periods recorded under paragraph (J)(3) of this rule when the monitoring device is not working or monitoring data is not collected during process operation generating the process vent stream or during operation of the control or recovery device.
- (iii) Reports of the times and durations of all periods recorded under paragraph (H)(3)(b) of this rule in which the pilot flame is absent.
- (iv) Reports on monitoring devices and parameters approved by the director pursuant to paragraph (H)(5) of this rule.

- (b) Semiannual reports on subsequent compliance tests for controlled process vents and subsequent process vent determination tests.

If any subsequent compliance tests or subsequent process vent determination tests are conducted during the semiannual reporting period after the initial compliance status report has been submitted, the semiannual compliance status report shall include the data recorded pursuant to paragraphs (H) of this rule.

(J) Compliance dates.

- (1) Except where otherwise specified within this rule, any batch process train that is subject to this rule shall comply with the requirements of this rule by no later than the following dates:
  - (a) For any batch process train located in Butler, Clermont, Hamilton, or Warren county for which installation commenced before May 27, 2005, the compliance date of the batch process train is May 27, 2006 or the date the facility becomes subject to this rule, whichever is later.
  - (b) For any batch process train located in Butler, Clermont, Hamilton, or Warren county for which installation commenced on or after May 27, 2005, the compliance date of the batch process train is the date of initial startup of the batch process train.
  - (c) For any batch process train located in Ashtabula, Cuyahoga, Geauga, Lake, Lorain, Medina, Portage, or Summit county for which installation commenced before the effective date of this rule, the compliance date of the batch process train is twelve months from the effective date of this rule or the date the facility becomes subject to this rule, whichever is later.
  - (d) For any batch process train located in Ashtabula, Cuyahoga, Geauga, Lake, Lorain, Medina, Portage, or Summit county for which installation commenced on or after the effective date on this rule, the compliance date of the batch process train is the date of initial startup of the batch process train.
- (2) In the event a facility reduces its potential to emit pursuant to paragraph (A)(4) or (A)(5) of this rule, the date on which the facility subsequently meets the applicability criteria of paragraph (A)(1) of this rule is the date the facility becomes subject to this rule.
- (3) In the event a batch process train or unit operation is exempted under paragraph (C)(3) of this rule or is not required to reduce uncontrolled VOC emissions pursuant to paragraph (D)(1) or (D)(2) and is subsequently equipped with a control device to meet the VOC reduction requirements of paragraph (D)(1) or

(D)(2) of this rule, the compliance date of the batch process train or unit operation is the date of first startup of the installed control device. Until the date of first startup of the installed control device, the batch process train or unit operation shall continue to meet either the exemption level or the criteria pertaining to applicability equations.

- (4) For any control device that is used to comply with paragraph (D) of this rule, the owner or operator shall demonstrate compliance by testing the control device in accordance with paragraph (F) of this rule within ninety days after the compliance date.
- (5) Additional testing of the control device or testing of the process vents of a batch process train or unit operation in accordance with paragraph (F) of this rule may be required by the director to ensure continued compliance with paragraph (D) of this rule.

(K) Requirements on applicability notification and permit application.

- (1) The owner or operator of a facility that is subject to this rule, is located in Butler, Clermont, Hamilton, or Warren county, and that has an initial startup of a batch process train before May 27, 2005 shall notify the appropriate Ohio environmental protection agency district office or local air agency in writing that the batch process train is subject to this rule. The notification, which shall be submitted not later than July 26, 2005, shall provide the information specified in paragraph (K)(5) of this rule.
- (2) The owner or operator of a facility that is subject to this rule, is located in Butler, Clermont, Hamilton, or Warren county, and has an initial startup of a batch process train on or after May 27, 2005, shall notify the appropriate Ohio environmental protection agency district office or local air agency in writing that the batch process train is subject to this rule. The notification, which shall be submitted not later than either the date of initial startup of the facility or July 26, 2006 (whichever is later), shall provide the information specified in paragraph (K)(5) of this rule. The application for an installation permit under rule 3745-31-02 of the Administrative Code may be used to fulfill the notification requirements of this paragraph.
- (3) The owner or operator of a facility that is subject to this rule, is located in Ashtabula, Cuyahoga, Geauga, Lake, Lorain, Medina, Portage, or Summit county, and has an initial startup of a batch process train before the effective date of this rule shall notify the appropriate Ohio environmental protection agency district office or local air agency in writing that the batch process train is subject to this rule. The notification, which shall be submitted not later than sixty days after the effective date of this rule, shall provide the information specified in paragraph (K)(5) of this rule.

- (4) The owner or operator of a facility that is subject to this rule, is located in Ashtabula, Cuyahoga, Geauga, Lake, Lorain, Medina, Portage, or Summit county, and has an initial startup of a batch process train on or after the effective date of this rule, shall notify the appropriate Ohio environmental protection agency district office or local air agency in writing that the batch process train is subject to this rule. The notification, which shall be submitted not later than either the date of initial startup of the facility or sixty days after the effective date of this rule (whichever is later), shall provide the information specified in paragraph (K)(5) of this rule. The application for an installation permit under rule 3745-31-02 of the Administrative Code may be used to fulfill the notification requirements of this paragraph.
- (5) The notification required in paragraphs (K)(1) to (K)(4) of this rule shall include the following information:
- (a) Name and address of the owner or operator;
  - (b) Address (i.e., physical location) of the facility;
  - (c) Equipment description and Ohio EPA application number (if assigned) of any batch process train or unit operation;
  - (d) Identification of the applicable requirements, the means of compliance, and the compliance date for any batch process train; and
  - (e) Regarding a permit for any batch process train or unit operation, whichever of the following is applicable:
    - (i) Submission of an application for an operating permit, modification, or renewal of an operating permit in accordance with paragraph (B) of rule 3745-31-02 of the Administrative Code; or  

[Comment: Applications requiring submittal prior to June 30, 2008, were submitted in accordance with Chapter 3745- 35 of the Administrative Code.]
    - (ii) Statement of intent to submit an application for a Title V permit or modification of a Title V permit in accordance with rule 3745-77-02 or rule 3745-77-08 of the Administrative Code, respectively.

**Control of volatile organic compound emissions from wood furniture manufacturing operations.**

[Comment: For dates and availability of non-regulatory government publications, publications of recognized organizations and associations, federal rules, and federal statutory provisions referenced in this rule, see the "Incorporation by Reference" paragraph at the end of rule 3745-21-01 of the Administrative Code.]

**(A) Rule applicability.**

(1) Except as otherwise provided in paragraph (A)(2) of this rule, this rule shall apply to any facility that meets both of the following criteria:

- (a) The facility is located in Ashtabula, Butler, Clermont, Cuyahoga, Geauga, Hamilton, Lake, Lorain, Medina, Portage, Summit, or Warren county; and
- (b) The facility has wood furniture manufacturing operations.

(2) Excluded from the requirements of this rule are the following:

- (a) Any facility that has a potential to emit for VOC of less than 25.0 tons per year for all wood furniture manufacturing operations combined.
- (b) Any facility that meets all the requirements of paragraphs (A)(2)(b)(i) and (A)(2)(b)(ii) of this rule:
  - (i) The facility uses no more than six hundred twenty-five gallons per month, for every month, or no more than seven thousand five hundred gallons per rolling twelve-month period, for every twelve-month period, of coating, adhesive, cleaning, and washoff materials, including thinners for such materials, for all wood furniture manufacturing operations combined. A rolling twelve-month period includes the previous twelve months of operation. The owner or operator of the facility shall maintain records of the total gallons of coating, adhesive, cleaning, and washoff materials, including thinners, used each month.
  - (ii) All records specified under paragraph (A)(2)(b)(i) of this rule shall be retained by the owner or operator for a period of not less than five years and shall be made available to the director or any authorized representative of the director for review during normal business hours.

**(B) Definitions.**

The definitions applicable to this rule are contained in paragraph (X) of rule 3745-21-01 of the Administrative Code.

(C) Overall requirements for wood furniture manufacturing operations.

The owner or operator of a wood furniture manufacturing operation at a facility that is subject to this rule shall comply with the requirements of paragraphs (D) to (N) of this rule.

(D) VOC emission limitations for finishing operations.

For any finishing operation, the owner or operator shall meet the requirements of any one paragraph of paragraphs (D)(1) to (D)(5) of this rule. If the owner or operator elects to use paragraph (D)(4) or (D)(5) of this rule, the owner or operator shall also meet the requirements of paragraph (M) of this rule.

(1) VOC content limit for topcoats only.

(a) The VOC content of any topcoat shall not exceed 0.8 pound of VOC per pound of solids, as applied.

(b) There is no VOC content limit for sealers, stains, basecoats, and washcoats.

(2) VOC content limits for topcoats and sealers only.

(a) The VOC content of any topcoat shall not exceed 1.8 pounds of VOC per pound of solids, as applied, except for acid-cured alkyd amino conversion varnish topcoats.

(b) The VOC content of any acid-cured alkyd amino conversion varnish topcoat shall not exceed 2.0 pound of VOC per pound of solids, as applied.

(c) The VOC content of any sealer shall not exceed 1.9 pounds of VOC per pound of solids, as applied, except for acid-cured alkyd amino sealers.

(d) The VOC content of any acid-cured alkyd amino sealer shall not exceed 2.3 pound of VOC per pound of solids, as applied.

(e) There is no VOC content limit for stains, basecoats, and washcoats.

(3) VOC emission control system for topcoats and/or sealers.

In lieu of a VOC content limit for any topcoat subject to paragraph (D)(1) or (D)(2) of this rule or any sealer subject to paragraph (D)(2) of this rule, a VOC emission control system shall be used that achieves for each topcoat or sealer employed and designated for control, an overall reduction of VOC emissions that is equal to or greater than the required overall control efficiency determined in accordance with paragraph (I)(6) of this rule. Also, if the VOC emission

control system includes a thermal or catalytic oxidizer, the control efficiency of the thermal or catalytic oxidizer for VOC emissions shall be at least ninety per cent by weight.

(4) Daily VOC emissions limit for topcoats only.

Each topcoat employed in any day shall be subject to either a daily VOC emissions limit or a VOC content limit, as specified in paragraphs (D)(4)(a) and (D)(4)(b) of this rule. There is no VOC limit for sealers, stains, basecoats, and washcoats.

- (a) The daily actual VOC emissions ( $E_{\text{day}}$ ) shall not exceed the daily VOC emissions limit ( $L_{\text{day}}$ ) in which " $E_{\text{day}}$ " and " $L_{\text{day}}$ " are calculated for topcoats as follows:

$$E_{\text{day}} = \sum_{i=1}^n (AT_i)(CT_i)(1 - F_i)$$

$$L_{\text{day}} = (0.90) \sum_{i=1}^n (AT_i)(LT_i)$$

where:

$AT_i$  = amount of solids of topcoat "i" used for the day, in pounds of solids.

$CT_i$  = VOC content of topcoat "i" in pounds of VOC per pound of solids, as applied.

$F_i$  = fraction by weight of VOC emissions from topcoat "i" reduced or prevented from being emitted by a VOC emission control system.

$LT_i$  = emission limit for topcoat "i" expressed as 0.8 pound of VOC per pound of solids, as applied. However, for a facility located in Butler, Clermont, Hamilton, or Warren county, if topcoat "i" is employed at the facility as of May 27, 2005 and if the VOC content of topcoat "i" is less than the previously stated emissions limit, then the facility must use the actual VOC content of topcoat "i" as of the May 27, 2005 as the emissions limit for topcoat "i". Likewise, for a facility located in Ashtabula, Cuyahoga, Geauga, Lake, Lorain, Medina, Portage, or Summit county, if topcoat "i" is employed at the facility as of the effective date of this rule and if the VOC content of topcoat "i" is less than the previously stated emissions limit, then the facility must use the actual VOC content of topcoat "i" as of the effective date of this rule as the emissions limit for topcoat "i".

i = subscript denoting a specific topcoat selected by the owner or operator for inclusion in the daily VOC emissions limit.

n = total number of topcoats selected by the owner or operator for inclusion in the daily VOC emissions limit

- (b) For any topcoat not selected by the owner or operator for inclusion in the daily VOC emissions limit, the VOC content of the topcoat shall not exceed 0.8 pound of VOC per pound of solids.

(5) Daily VOC emissions limit for topcoats, sealers, and other finishing materials.

Each topcoat and sealer employed in any day shall be subject to either a daily VOC emissions limit or a VOC content limit, as specified in paragraphs (D)(5)(a) and (D)(5)(b) of this rule. Stains, basecoats, and washcoats can be included in the daily VOC emissions limit. There is no VOC limit for stains, basecoats, and washcoats that are not included in the alternative daily VOC emissions limit.

- (a) The daily actual VOC emissions ( $E_{\text{day}}$ ) shall not exceed the daily VOC emissions limit ( $L_{\text{day}}$ ) in which " $E_{\text{day}}$ " and " $L_{\text{day}}$ " are calculated for finishing materials as follows:

$$E_{\text{day}} = \sum_{i=1}^n (A_i)(C_i)(1 - F_i)$$

$$L_{\text{day}} = (0.90) \sum_{i=1}^n (A_i)(L_i)$$

where:

$A_i$  = amount of finishing material "i" employed for the day, expressed in pounds of solids if a topcoat, sealer, washcoat, or basecoat; or in gallons if a stain.

$C_i$  = VOC content of finishing material "i" employed for the day, expressed in pounds of VOC per gallon of solids, as applied, if a topcoat, sealer, washcoat, or basecoat; or in pounds of VOC per gallon, as applied, if a stain.

$F_i$  = fraction by weight of VOC emissions from finishing material "i" reduced or prevented from being emitted by a VOC emission control system.

$L_i$  = emissions limit for finishing material "i" based of the type of finishing material as follows: 1.8 pounds of VOC per gallon of solids for a topcoat; 1.9 pounds of VOC per gallon of solids for a sealer; 9.0 pounds of VOC per gallon of solids for a washcoat; 1.2 pound of VOC per gallon of solids for a

basecoat; and 0.791 pounds of VOC per gallon of coating for a stain. However, for a facility located in Butler, Clermont, Hamilton, or Warren county, if finishing material "i" is employed at the facility as of May 27, 2005 and if the VOC content of finishing material "i" is less than the previously stated emissions limit, then the facility must use the actual VOC content of finishing material "i" as of May 27, 2005 as the emissions limit for finishing material "i". Likewise, for a facility located in Ashtabula, Cuyahoga, Geauga, Lake, Lorain, Medina, Portage, or Summit county, if finishing material "i" is employed at the facility as of the effective date of this rule and if the VOC content of finishing material "i" is less than the previously stated emissions limit, then the facility must use the actual VOC content of finishing material "i" as of the effective date of this rule as the emissions limit for finishing material "i".

i = subscript denoting a specific finishing material selected by the owner or operator for inclusion in the alternative daily VOC emissions limit.

n = total number of finishing material selected by the owner or operator for inclusion in the alternative daily VOC emissions limit.

- (b) For any topcoat or sealer not selected by the owner or operator for inclusion in the daily VOC emissions limit, the VOC content limit shall be the following:
- (i) The VOC content of any topcoat shall not exceed 1.8 pounds of VOC per pound of solids, except for acid-cured alkyd amino conversion varnish topcoats.
  - (ii) The VOC content of any acid-cured alkyd amino conversion varnish topcoat shall not exceed 2.0 pound of VOC per pound of solids.
  - (iii) The VOC content of any sealer shall not exceed 1.9 pounds of VOC per pound of solids, except for acid-cured alkyd amino sealers.
  - (iv) The VOC content of any acid-cured alkyd amino sealer shall not exceed 2.3 pounds of VOC per pound of solids.

(E) VOC content limit for strippable spray booth materials.

The VOC content of any strippable spray booth material employed for wood furniture manufacturing operations shall not exceed 0.8 pound of VOC per pound of solids, as applied.

(F) Work practice requirements.

The owner or operator of a facility subject to this rule shall prepare and maintain a written work practice implementation plan that defines environmentally desirable work practices for each wood furniture manufacturing operation and addresses each of the work practices contained in paragraphs (b) to (d) and (f) to (k) of 40 CFR 63.803 and the following:

- (1) For any terms pertaining to the work practices that are not defined under paragraph (B) of this rule, the definitions under 40 CFR 63.801 shall be the used;
- (2) The wording "Administrator (or delegated State, local, or Tribal authority)" is replaced by the wording "Ohio environmental protection agency district office or local air agency;"
- (3) The wording "organic HAP solvent" is replaced by the wording "VOC solvent;" and
- (4) The plan shall be developed no more than sixty days after the compliance date.

(G) Compliance dates.

- (1) Except where otherwise specified within this rule, any owner or operator of a facility that is subject to this rule shall comply with the requirements of this rule by no later than the following dates:
  - (a) For a facility located in Butler, Clermont, Hamilton, or Warren county for which installation commenced before May 27, 2005, the compliance date of any wood furniture manufacturing operation within the facility is either May 27, 2006 or the date of initial startup of the wood furniture manufacturing operation, whichever is later.
  - (b) For a facility located in Butler, Clermont, Hamilton, or Warren county for which installation commenced on or after May 27, 2005, the compliance date of any wood furniture manufacturing operation within the facility is the date of initial startup of the wood furniture manufacturing operation.
  - (c) For a facility located in Ashtabula, Cuyahoga, Geauga, Lake, Lorain, Medina, Portage, or Summit county, for which installation commenced before the effective date of this rule, the compliance date of any wood furniture manufacturing operation within the facility is either twelve months from the effective date of this rule or the date of initial startup of the wood furniture manufacturing operation, whichever is later.
  - (d) For a facility located in Ashtabula, Cuyahoga, Geauga, Lake, Lorain, Medina, Portage, or Summit county for which installation commenced on or after the effective date of this rule, the compliance date of any wood

furniture manufacturing operation within the facility is the date of initial startup of the wood furniture manufacturing operation.

- (2) For a VOC emission control system that is used for a finishing operation to comply with paragraph (D)(3), (D)(4), or (D)(5) of this rule, the owner or operator shall demonstrate the overall control efficiency of the VOC emission control system by testing the finishing operation and the VOC emission control system in accordance with paragraph (J) of this rule within ninety days after the finishing operation's compliance date.
- (3) Additional testing of the finishing operation and the VOC emission control system in accordance with paragraph (J) of this rule may be required by the director to ensure continued compliance.

(H) Monitoring requirements for a VOC emission control system.

- (1) For any incinerator used to comply with paragraph (D) of this rule, the owner or operator shall install, calibrate, maintain, and operate according to manufacturer's specifications, a temperature monitoring device equipped with a continuous recorder. The temperature monitoring device shall be located as follows:
  - (a) Where a thermal incinerator is used, the temperature monitoring device shall be located in the firebox or in the duct immediately downstream of the firebox in a position before any substantial heat exchange occurs.
  - (b) Where a catalytic incinerator is used, temperature monitoring devices shall be located in the gas stream immediately before and after the catalyst bed.
- (2) For any regenerative carbon adsorber used to comply with paragraph (D) of this rule, the owner or operator shall install, calibrate, maintain and operate according to manufacturer's specifications the following monitoring devices:
  - (a) An integrating regeneration steam flow monitoring device, having an accuracy of plus or minus ten per cent or better, shall be employed for recording the total regeneration steam mass or volumetric flow for each regeneration cycle.
  - (b) A carbon bed temperature monitoring device shall be employed for recording the carbon bed temperature after each regeneration and within fifteen minutes of completing any cooling cycle.
- (3) For any concentrator, such as a zeolite wheel or rotary carbon bed concentrator, used to comply with paragraph (D) of this rule, the owner or operator shall install, calibrate, maintain, and operate according to manufacturer's

specifications the following monitoring devices equipped with continuous recorders:

- (a) A temperature monitoring device for the desorption gas stream.
  - (b) A pressure monitoring device to measure pressure drop across the zeolite wheel or rotary carbon bed with an accuracy of at least 0.5 inches of water column or five percent of the measured value, whichever is larger.
- (4) Where a control device other than an incinerator, regenerative carbon adsorber, or concentrator is used to comply with paragraph (D) of this rule, or as an alternative to the monitoring device specified in paragraphs (H)(1) to (H)(3) of this rule, the owner or operator shall install, calibrate, maintain, and operate, according to manufacturer's specifications, an organic monitoring device equipped with a continuous recorder for measuring the concentration level at the outlet of the control device.
- (5) For any capture system that is part of a VOC emissions control used to comply with paragraph (D) of this rule and that is a permanent total enclosure, the owner or operator shall install, calibrate, maintain, and operate, according to manufacturer's specifications, either one of the following:
- (a) A pressure monitoring device equipped with a continuous recorder to measure pressure drop across the enclosure with an accuracy of at least 0.5 inch of water column or five per cent of the measured value, whichever is larger.
  - (b) A monitoring device equipped with a continuous recorder to measure the facial velocity of air through any natural draft opening into the enclosure.
- (6) For any capture system that is part of a VOC emissions control used to comply with paragraph (D) of this rule and that is not a permanent total enclosure, the owner or operator shall install, calibrate, maintain, and operate, according to manufacturer's specifications, either one of the following:
- (a) A pressure monitoring device equipped with a continuous recorder to measure the static pressure for each capture device with an accuracy of at least 0.5 inch of water column or five per cent of the measured value, whichever is larger.
  - (b) A flow rate monitoring device equipped with a continuous recorder to measure the flow in the duct from each capture device in the capture system to the control device with an accuracy of at least ten per cent of the flow.
- (7) Capture system bypass line.

For any capture system that is part of a VOC emissions control used to comply with paragraph (D) of this rule and that contains bypass lines which could divert flow (i.e., VOC emissions) away from the control device to the atmosphere, the owner or operator shall for each bypass line meet the requirements of any one paragraph of paragraphs (H)(7)(a) to (H)(7)(e) of this rule.

- (a) (Flow control position indicator) The owner or operator shall install, calibrate, maintain, and operate, according to manufacturer's specifications, a flow control position indicator that takes a reading at least once every fifteen minutes and provides a record indicating whether the emissions are directed to the control device or diverted from the control device. The flow control position indicator shall be installed at the entrance to any bypass line that could divert the emissions away from the control device to the atmosphere.
- (b) (Car-seal or lock-n-key) The owner or operator shall secure the bypass line valve in the nondiverting position with a car-seal or a lock-and-key type configuration. The owner or operator shall perform a visual inspection of the seal or closure mechanism at least once every month to ensure that the valve is maintained in the non-diverting position and the emissions are not diverted away from the add-on control device to the atmosphere.
- (c) (Valve closure monitoring) The owner or operator shall employ a valve closure monitoring system that ensures any bypass line valve is in the closed (nondiverting) position through monitoring of valve position at least once every fifteen minutes. The owner or operator shall inspect the monitoring system at least once every month to verify that the monitor will indicate valve position.
- (d) (Automatic shutdown system) The owner or operator shall employ an automatic shutdown system in which the finishing operation is stopped when flow is diverted by the bypass line away from the control device to the atmosphere when the finishing operation is running. The owner or operator shall inspect the automatic shutdown system at least once every month to verify that it will detect diversions of flow and shut down the finishing operation.
- (e) (Flow direction indicator) The owner or operator shall install, calibrate, maintain, and operate, according to the manufacturer's specifications, a flow direction indicator that takes a reading at least once every fifteen minutes and provides a record indicating whether the emissions are directed to the control device or diverted from the control device. Each time the flow direction changes, the next reading of the time of occurrence and flow direction must be recorded. The flow direction indicator shall be installed in each bypass line or air makeup supply line that could divert the VOC emissions away from the control device to the atmosphere.

- (8) (Alternative control device monitoring) An owner or operator of a control device that is part of a VOC emission control system used to comply with paragraph (D) of this rule may request approval to employ monitoring devices and monitoring parameters other than those listed in paragraphs (H)(1) to (H)(4) of this rule. The request shall be submitted according to the procedures specified in paragraph (H)(10) of this rule.
- (9) (Alternative capture system monitoring or bypass line monitoring) An owner or operator of a capture system that is part of a VOC emission control system used to comply with paragraph (D) of this rule may request approval to employ monitoring devices and monitoring parameters other than those listed in paragraphs (H)(5) to (H)(7) of this rule. The request shall be submitted according to the procedures specified in paragraph (H)(10) of this rule.
- (10) Approval of alternative monitoring devices and parameters.
- (a) The owner or operator who has been directed by any paragraph of this rule to request approval to employ monitoring devices and parameters other than required by this rule shall submit within an application for a permit or modification of a permit, or by other means provided by the Ohio EPA or its delegated local air agency, the following information:
- (i) A description of the parameter(s) to be monitored to ensure the capture system or control device is operated in conformance with its design and achieves the specified emission limit, per cent reduction, or nominal efficiency, and an explanation of the criteria used to select the parameter(s).
- (ii) A description of the methods and procedures that will be used to demonstrate that the parameter indicates proper operation of the capture system or control device being monitored, the schedule for this demonstration, and a statement that the owner or operator will establish an operating limit (operating parameter value) for the monitored parameter as part of the initial compliance status report required in paragraph (L)(2) of this rule.
- (iii) The frequency and content of monitoring, recording, and reporting if monitoring and recording is not continuous, or if reports of operating values when the monitored parameter value is outside the operating limit established in the permit or initial compliance report will not be included in semiannual compliance status reports as specified in paragraph (L)(3) of this rule. The rationale for the proposed monitoring, recording, and reporting system shall be included.

- (b) If the monitoring device and parameter are approved by the director, the monitoring device and parameter, including associated records and semiannual reporting, shall be specified in the terms and conditions of a permit or order issued by the director. If required by USEPA, any director-approved alternative monitoring device and/or monitoring parameter shall be submitted to USEPA for approval as a revision of the state implementation plan.
- (11) While operating a VOC emission control system for controlling emissions from a finishing operation, the owner or operator shall not operate any capture or control device within the VOC emission control system at a three-hour block average value greater than or less than (as appropriate) the operating limits (operating parameter values) established during the most recent compliance test(s) that demonstrated compliance, except during periods of startup, shutdown, and malfunction.
  - (12) The owner or operator shall inspect the VOC emission control system and monitoring equipment to assure that the VOC emission control system is operating properly, and that no leaks or malfunctions have occurred or are occurring. The inspections shall be made at the frequency defined by the equipment manufacturer, or as otherwise appropriate for each VOC emission control system and monitoring equipment, but not less than monthly.
- (I) Procedures for the VOC content and solids content of a coating, the VOC content for continuous coaters, and the determination of required overall control efficiency for controlled topcoats and sealers.
    - (1) The VOC content and solids content of a coating (finishing material or a strippable spray booth material) shall be determined by the owner or operator in accordance with paragraph (B) of rule 3745-21-10 of the Administrative Code, wherein formulation data or USEPA method 24 procedures (which include various ASTM measurement methods) may be employed.
    - (2) For a finishing material containing styrene, the VOC content and VOC emissions associated with styrene shall be based on an estimate of the unreacted styrene, which shall be calculated by multiplying the amount of styrene monomer in the finishing material, when it is applied, by a factor of 0.16.
    - (3) For a finishing material containing formaldehyde, the VOC content and VOC emissions associated with formaldehyde shall be based on the amount of free formaldehyde present in the finishing material when it is applied. The free formaldehyde content shall be determined in accordance with ASTM D1979-97, D5910-05, D6191-97(2003), or D6902-04e1.
    - (4) A certified product data sheet that provides data on VOC content and solids content shall be used by the owner or operator provided that any data based on a

measurement method shall be a measurement method that meets paragraph (I) of this rule.

(5) VOC content for continuous coaters.

The as-applied VOC content of a finishing material that is applied by a continuous coater shall be determined by the procedures under paragraph (I)(5)(a), (I)(5)(b), or (I)(5)(c) of this rule.

- (a) (VOC content for a continuous coater) The as-applied VOC content of a finishing material that is applied by a continuous coater shall be determined by the VOC content of the finishing material in the reservoir and the VOC content as calculated from records.
- (b) (VOC content and viscosity measurements for a continuous coater) The as-applied VOC content of a finishing material that is applied by a continuous coater shall be determined by the VOC content of the finishing material in the reservoir, maintaining a viscosity of the finishing material in the reservoir that is no less than the viscosity of the initial finishing material by monitoring the viscosity with a viscosity meter or by testing the viscosity of the initial finishing material and retesting the material in the reservoir each time solvent is added, and maintaining records of solvent additions. In order to use this procedure, the owner or operator shall provide data that demonstrates the correlation between viscosity of the finishing material and the VOC content of the finishing material in the reservoir.
- (c) (Rolling thirty-day average VOC content for a dip coater) The as-applied VOC content of a finishing material that is applied by a dip coater shall be determined by a rolling thirty-day average of the VOC content of the finishing material and thinner added to the reservoir of the dip coater. The rolling thirty-day average VOC content (C<sub>30</sub>), expressed in pounds of VOC per pound of solids, as applied, shall be calculated for each day of operation of the dip coater as follows:

$$C_{30} = \frac{\sum_{i=1}^n (A_{i,30})(C_{i, \text{VOC}})}{\sum_{i=1}^n (A_{i,30})(C_{i, \text{solids}})}$$

where:

$A_{i,30}$  = amount of material "i" added to the reservoir of the dip coater during a thirty-day period consisting of the day of operation of the continuous coater plus the past twenty-nine calendar days, expressed in gallons.

$C_{i,VOC}$  = VOC content of material "i", expressed in pounds of VOC per gallon.

$C_{i,solids}$  = solids content of material "i", expressed in pounds of solids per gallon.

i = subscript denoting a specific material (finishing material or thinner) added to the reservoir of the dip coater during the thirty-day period.

n = total number of materials (finishing materials and thinners) added to the reservoir of the dip coater during the thirty-day period.

- (6) Determination of required overall control efficiency for controlled topcoats and sealers.

For a VOC emission control system that is used to comply with paragraph (D)(3) of this rule, the overall reduction of VOC emissions, that is, the required overall control efficiency (R), expressed in per cent by weight, shall be determined as follows for each topcoat and sealer designated for control:

$$R = [(C - L)/C](100)$$

where:

C = the VOC content of the topcoat or sealer designated for control, in pounds of VOC per pound of solids, as applied.

L = the VOC content limit under paragraph (D)(1) or (D)(2) of this rule for the topcoat or sealer designated for control, in pounds of VOC per pound of solids, as applied.

- (J) Compliance tests for VOC emission control systems.

- (1) For a VOC emission control system used to comply with paragraph (D) of this rule, the owner or operator shall conduct an initial compliance test to determine the capture efficiency of the capture system, the control efficiency of the control device (or each control device if a combination of control devices), and the overall control efficiency of the VOC emission control system in accordance with paragraph (C) or rule 3745-21-10 of the Administrative Code wherein USEPA method 25 or 25A shall be used for determining the concentration of VOC in a gas stream.
- (2) During the compliance test described in paragraphs (J)(1) of this rule that demonstrates compliance, the owner or operator shall establish the operating limits (operating parameter values) for the monitoring devices required under paragraph (H) of this rule as follows:

- (a) If the control device is a thermal oxidizer, establish the operating limit as follows:
  - (i) Monitor and record the combustion temperature either in the firebox of the thermal oxidizer or immediately downstream of the firebox before any substantial heat exchange occurs at least once every fifteen minutes during each of the three runs of the compliance test.
  - (ii) Calculate and record the average combustion temperature maintained during the compliance test. This average combustion temperature is the minimum operating limit for the thermal oxidizer.
- (b) If the control device is a catalytic oxidizer, establish the operating limits according to either paragraphs (J)(2)(b)(i) and (J)(2)(b)(ii) or paragraphs (J)(2)(b)(iii) and (J)(2)(b)(iv) of this rule.
  - (i) Monitor and record the temperature just before the catalyst bed and the temperature difference across the catalyst bed at least once every fifteen minutes during each of the three test runs comprising a compliance test.
  - (ii) Calculate and record the average temperature just before the catalyst bed and the average temperature difference across the catalyst bed maintained during the compliance test. These are the minimum operating limits for the catalytic oxidizer.
  - (iii) Monitor and record the temperature just before the catalyst bed at least once every fifteen minutes during each of the three test runs of the compliance test. Use this recorded temperature data to calculate and record the average temperature before the catalyst bed during the performance test. This is the minimum operating limit for the catalytic oxidizer.
  - (iv) Develop and implement an inspection and maintenance plan for the catalytic oxidizer(s) for which the owner or operator elects to monitor according to paragraph (J)(2)(b)(iii) of this rule. The plan must address, at a minimum, the elements specified in paragraphs (J)(2)(b)(iv)(a) to (J)(2)(b)(iv)(c) of this rule.
    - (a) Conduct an annual sampling and analysis of the catalyst activity (i.e., conversion efficiency) following the manufacturer's or catalyst supplier's recommended procedures. If problems are found during the catalyst activity test, the owner or operator shall replace the catalyst bed or take other corrective action consistent with the manufacturer's recommendations.

- (b) Conduct monthly external inspection of the catalytic oxidizer system, including the burner assembly and fuel supply lines for problems and, as necessary, adjust the equipment to assure proper air-to-fuel mixtures.
  - (c) Conduct annual internal inspection of the catalyst bed to check for channeling, abrasion, and settling. If problems are found during the annual internal inspection of the catalyst, the owner or operator shall replace the catalyst bed or take other corrective action consistent with the manufacturer's recommendations. If the catalyst bed is replaced and is not of like or better kind and quality as the old catalyst, then the owner or operator shall conduct a new compliance test to determine the control efficiency of the catalytic oxidizer according to paragraph (I)(1) of this rule. If a catalyst bed is replaced and the replacement catalyst is of like or better kind and quality as the old catalyst, then a new compliance test to determine the control efficiency of the catalytic oxidizer is not required and the previously established operating limits for that catalytic oxidizer may be used.
- (c) If the control device is a regenerative carbon adsorber, establish the operating limits as follows:
  - (i) Monitor and record the total regeneration desorbing gas (e.g., steam or nitrogen) mass flow for each regeneration cycle, and the carbon bed temperature after each carbon bed regeneration and cooling cycle for the regeneration cycle either immediately preceding or immediately following the compliance test.
  - (ii) The operating limits for the regenerative carbon adsorber are the minimum total desorbing gas mass flow recorded during the regeneration cycle and the maximum carbon bed temperature recorded after the cooling cycle.
- (d) If the control device includes a concentrator, establish operating limits for the concentrator as follows:
  - (i) Monitor and record the desorption concentrate stream gas temperature at least once every fifteen minutes during each of the three runs of the compliance test.
  - (ii) Use the data collected during the compliance test to calculate and record the average temperature. This is the minimum operating limit for the desorption concentrate gas stream temperature.

- (iii) Monitor and record the pressure drop of the dilute stream across the concentrator at least once every fifteen minutes during each of the three runs of the performance test.
  - (iv) Use the data collected during the compliance test to calculate and record the average pressure drop. This is the minimum operating limit for the pressure drop of the dilute stream across the concentrator.
- (e) If the capture system is a permanent total enclosure, the operating limit is either one of the following, based on the criteria of a permanent total enclosure:
- (i) The pressure drop across the enclosure shall be at least 0.007 inch of water.
  - (ii) The average facial velocity of air through all natural draft openings shall be at least two hundred feet per minute.
- (f) If the capture system is a not a permanent total enclosure, establish an operating limit for each separate capture device in the capture system as follows:
- (i) Monitor and record either the gas volumetric flow rate or the duct static pressure for each separate capture device in the emission capture system at least once every fifteen minutes during each of the three test runs of the compliance test for capture efficiency at a point in the duct between the capture device and the control device inlet.
  - (ii) Calculate and record the average gas volumetric flow rate or average duct static pressure for the three test runs for each capture device. This average gas volumetric flow rate or average duct static pressure is the minimum operating limit for that specific capture device.

(K) Recordkeeping.

- (1) (General) All records specified under this paragraph shall be retained by the owner or operator for a period of not less than five years and shall be made available to the director or any authorized representative of the director for review during normal business hours. The following types of records are to be maintained by the owner or operator of a wood furniture manufacturing operation subject to this rule:
- (a) Compliance demonstration records for finishing operations.
  - (b) Compliance demonstration records for strippable spray booth materials.

- (c) Work practice implementation plan records.
  - (d) Monitoring records for VOC emission control systems.
- (2) Compliance demonstration records for finishing operations.

For any finishing operation subject to paragraph (D) of this rule, the owner or operator shall maintain the following records:

- (a) A record of the VOC emission requirement elected to be met under any one paragraph of paragraphs (D)(1) to (D)(5) of this rule for each day of operation of the finishing operation.
- (b) A certified product data sheet for each finishing material that is subject to a VOC emission requirement elected to be met under paragraph (K)(2)(a) of this rule, and a certified product data sheet for any thinners or other VOC material added to the finishing materials before application.
- (c) A record of the VOC content, in pounds of VOC per pound of solids, as applied, of each finishing material, other than a stain, that is subject to a VOC content limit or a daily VOC emissions limit under paragraph (D) of this rule, including documentation on any thinner or other VOC added to the finishing material before application.
- (d) A record of the VOC content, in pounds of VOC per gallon, as applied of each stain subject to a daily VOC emissions limit under paragraph (D) of this rule, including documentation on any thinner or other VOC added to the stain before application.
- (e) For any continuous coater that is subject to a VOC content limit under paragraph(D) of this rule, the records listed under paragraph (K)(2)(e)(i), (K)(2)(e)(ii), or (K)(2)(e)(iii) of this rule, whichever is applicable pursuant to paragraph (I)(5) of this rule:
  - (i) Records pertaining to VOC content for a continuous coater:
    - (a) For each day of operation, the gallons of each material (finishing material and thinner) added to the continuous coater reservoir.
    - (b) For each day of operation, the VOC content of the finishing material in the reservoir and the VOC content as calculated from records.
  - (ii) Records pertaining to VOC content and viscosity measurements for a continuous coater:

- (a) For each day of operation, the gallons of each material (finishing material and thinner) added to the continuous coater reservoir and the viscosity measurements.
    - (b) The VOC content and viscosity of the initial finishing material.
    - (c) Data that demonstrates the correlation between the viscosity of the finishing material and the VOC content of the finishing material in the reservoir.
  - (iii) Records pertaining to a rolling thirty-day average VOC content for a dip coater:
    - (a) For each day of operation, the gallons of each material (finishing material and thinner) added to the dip coater reservoir.
    - (b) The VOC content (in pounds VOC per gallon) and solids content (in pounds of solids per gallon) for each material added to the dip coater reservoir.
    - (c) For each day of operation, the rolling thirty-day average VOC content in pounds of VOC per pound of solids, as determined in accordance with paragraph (I)(5)(c) of this rule.
  - (f) For a VOC emission control system that is employed to meet paragraph (D)(3) of this rule and that has an overall control efficiency of less than eighty-one per cent, the VOC content in pounds of VOC per gallon of solids and the required overall control efficiency, as determined in accordance with paragraph (I)(6) of this rule, for each topcoat and sealer being controlled.
  - (g) For a finishing operation subject to a daily VOC emissions limit under paragraph (D)(4) or (D)(5) of this rule, the amounts of finishing materials employed for each day of operation, the daily actual VOC emissions and the daily VOC emissions limit.
  - (h) For a VOC emission control system that is employed to meet paragraph (D)(3), (D)(4), or (D)(5) of this rule, the monitoring records specified under paragraph (K)(5) of this rule.
- (3) Compliance demonstration records for strippable spray booth materials.

The owner or operator of a wood furniture manufacturing operation employing a strippable spray booth material subject to the VOC content limit in paragraph (E) of this rule shall maintain records of the following:

- (a) A certified product data sheet for each strippable spray booth material as received and a certified product data sheet for any thinner added to a strippable spray booth material.
- (b) The VOC content, in pounds of VOC per pound of solids, as applied, of each strippable spray booth material employed.

(4) Work practice implementation plan records.

The owner or operator of a wood furniture manufacturing operation subject to the work practice requirements in paragraph (E) of this rule shall maintain on-site the work practice implementation plan and all records associated with fulfilling the requirements of that plan, including, but not limited to the following:

- (a) Records demonstrating that the operator training program required by 40 CFR 63.803(b) is in place.
- (b) Records collected in accordance with the inspection and maintenance plan required by 40 CFR 63.803(c).
- (c) Records associated with the cleaning solvent accounting system required by 40 CFR 63.803(d);
- (d) Records associated with the limitation on the use of conventional air spray guns showing total finishing material usage and the percentage of finishing materials applied with conventional air spray guns for each semiannual period as required by 40 CFR 63.803(h)(5).
- (e) Copies of documentation such as logs developed to demonstrate that the other provisions of the work practice implementation plan are followed.

(5) Monitoring records for VOC emission control systems.

For any VOC emission control system subject to paragraph (H) of this rule, the owner or operator shall maintain monitoring records as follows:

- (a) Where a thermal oxidizer is employed:
  - (i) Continuous records of the firebox temperature.
  - (ii) Records of all three-hour block averages of the firebox temperature during operation of the finishing operation.
  - (iii) A record of the operating limit established under paragraph (J)(2) of this rule.

- (iv) Records of the times and durations of all periods during process or control operation when the monitoring device is not working.
- (b) Where a catalytic oxidizer is employed:
- (i) Continuous records of the temperature upstream and the temperature difference across the catalyst bed.
  - (ii) Records of three-hour block averages of the temperature upstream and the temperature difference across the catalyst bed during operation of the finishing operation.
  - (iii) A record of the operating limits established under paragraph (J)(2) of this rule.
  - (iv) Records of the times and durations of all periods during process or control operation when the monitoring device is not working.
- (c) Where a regenerative carbon adsorber is employed.
- (i) A record of the total regenerative steam mass or volumetric flow for each carbon bed regeneration cycle.
  - (ii) Record of the temperature of the carbon bed after each regeneration cycle [and within fifteen minutes of completing any cooling cycle(s)].
  - (iii) A record of the operating limits established under paragraph (J)(2) of this rule.
  - (iv) Records of the times and durations of all periods during process or control operation when either monitoring device is not working.
- (d) Where a concentrator is employed:
- (i) Continuous records of the temperature of the desorption concentrate stream and the pressure drop of the dilute stream across the concentrator.
  - (ii) Records of all three-hour block averages of the temperature of the desorption concentrate stream during operation of the finishing operation.
  - (iii) Records of all three-hour block averages of the pressure drop of the dilute stream across the concentrator during operation of the finishing operation.

- (iv) A record of the operating limits established under paragraph (J)(2) of this rule.
  - (v) Records of the times and durations of all periods during process or control operation when either monitoring device is not working.
- (e) Where an organic monitoring device is employed for monitoring the concentration level at the outlet of control device:
- (i) Continuous records of the concentration level of the outlet of the control device.
  - (ii) Records of all three-hour block averages of the concentration level during operation of the finishing operation.
  - (iii) A record of the operating limit established under paragraph (J)(2) of this rule.
  - (iv) Records of the times and durations of all periods during process or control operation when the monitoring device is not working.
- (f) For any capture system bypass line that could divert flow (i.e., VOC emissions) away from the control device to the atmosphere, the owner or operator shall maintain the monitoring records specified in paragraphs (K)(5)(f)(i) to (K)(5)(f)(iii) of this rule, whichever is applicable.
- (i) Where a flow indicator control position indicator, valve closure monitoring system, or flow direction indicator is employed to monitor the bypass line:
    - (a) Hourly records of whether the monitoring device was operating and whether a diversion of flow (VOC emissions) to the atmosphere was detected at any time during the hour.
    - (b) A record indicating that a monthly inspection of the monitoring device, if required under this rule, has been done.
    - (c) Records of the times and durations of all periods when the monitoring device is not operating or flow (VOC emissions) is diverted to the atmosphere.
  - (ii) Where a car-seal or a lock-and-key type configuration is employed to secure the bypass line valve in the non-diverting position:

- (a) A record indicating that a monthly visual inspection of the seal or closure mechanism has been done.
- (b) Records of the times and durations of all periods when the seal mechanism is broken, the bypass line valve position has changed, the serial number of the broken car-seal has changed, or when the key to unlock the bypass line valve has been checked out.
- (iii) Where an automatic shutdown system is employed, a record indicating that a monthly inspection of the system has been done.
- (g) For monthly (or more frequent) inspections of the VOC emission control system and monitoring equipment conducted pursuant to paragraph (H)(12) of this rule, a record of the results of each inspection.

(L) Reporting.

- (1) (General) The provisions under paragraph (L) of this rule describe the contents of reports and identify the reporting dates for the following reports:

- (a) Initial compliance status report.
- (b) Semiannual compliance status reports.

- (2) Initial compliance status report.

The owner or operator of a wood furniture manufacturing operation subject to this rule shall submit an initial compliance status report within sixty calendar days after the compliance date specified in paragraph (G) of this rule as follows:

- (a) For any finishing operation subject to paragraph (D) of this rule, the owner or operator shall state in the initial compliance status report which paragraph of paragraphs (D)(1) to (D)(5) of this rule is elected to be met.
- (b) For any topcoat or sealer that is subject to the VOC content limit of paragraph (D)(1), (D)(2), (D)(4)(b), or (D)(5)(b) of this rule and that complies by the procedures of paragraphs (I)(1) to (I)(4) of this rule, the owner or operator shall state in the initial compliance status report that compliant coatings for the topcoats and sealers, as applicable, are being used.
- (c) For any topcoat or sealer that is applied by means of a continuous coater, that is subject to the VOC content limit of paragraph (D)(1), (D)(2), (D)(4)(b), or (D)(5)(b) of this rule, and that complies by the procedures of paragraph (I)(5) of this rule, the owner or operator shall state in the initial compliance status report:

- (i) That compliant coatings are being used, as determined by the procedures of paragraph (I)(5)(a) of this rule for VOC content for a continuous coater; or
  - (ii) That compliant coatings are being used, as determined by the procedures of paragraph (I)(5)(b) of this rule for VOC content and viscosity measurements for a continuous coater; and shall submit data that demonstrates the correlation between the viscosity of the finishing material and the VOC content of the finishing material in the reservoir; or,
  - (iii) That compliant coatings are being used, as determined by the procedures of paragraph (I)(5)(c) of this rule for the rolling thirty-day average VOC content for a dip coater.
- (d) For any finishing operation that is equipped with a VOC emission control system to comply with paragraph (D)(3) of this rule, the owner or operator shall submit in the initial compliance status report:
- (i) Information on designated topcoats and sealers to be controlled and the data recorded pursuant to paragraph (I)(6) of this rule that demonstrate the required overall control efficiency for each topcoat and sealer to be controlled.
  - (ii) Identification and description of each monitoring device employed to comply with the requirements of paragraph (H) of this rule.
  - (iii) The results of compliance tests conducted pursuant to paragraph (J) of this rule to determine the overall control efficiency of the VOC emission control system and the control efficiency of any thermal or catalytic oxidizer within the VOC emission control system.
  - (iv) A complete test report for any compliance tests of the VOC emission control system.

A complete test report shall include a brief process description, sampling site description, description of sampling and analysis procedures and any modifications to standard procedures, quality assurance procedures, record of operating conditions during the test, record of preparation of standards, record of calibrations, raw data sheets for field sampling, raw data sheets for field and laboratory analyses, documentation of calculations, and any other information required by the test method.

- (v) For any compliance tests of the VOC emission control system, the compliance test monitoring data recorded pursuant to paragraph (J)(2) of this rule, including the operating parameter values established for any monitoring device.
- (e) For any finishing operation that is equipped with a VOC emission control system to comply with paragraph (D)(4)(a) or (D)(5)(a) of this rule, the owner or operator shall submit in the initial compliance status report the information specified under paragraphs (L)(2)(d)(ii) to (L)(2)(d)(iv) of this rule.
- (f) For any wood furniture manufacturing operation subject to paragraph (E) of this rule, the owner or operator shall state in the initial compliance status report that compliant coatings for strippable spray booth materials are being used.
- (g) For wood furniture manufacturing operations subject to the work practice requirements of paragraph (F) of this rule, the owner or operator shall state in the initial compliance status report that the work practice implementation plan has been developed and that procedures have been established for implementing the provisions of the plan.

(3) Semiannual compliance status reports.

The owner or operator of a wood furniture manufacturing operation subject to this rule shall submit semiannual compliance status reports no later than thirty calendar days after the end of each six-month period to the Ohio EPA or its delegated local air agency. The first report shall be submitted no later than thirty calendar days after the end of the first six-month period following the compliance date. Subsequent reports shall be submitted no later than thirty calendar days after the end of each six-month period following the first report or no later than thirty calendar days after the end of each six-month period otherwise established within a permit issued for the wood furniture manufacturing operation. For each semiannual compliance status report, the owner or operator shall submit the following information for the six-month period covered by the report:

- (a) For any finishing operation subject to paragraph (D) of this rule, the owner or operator shall state in the semiannual compliance status report any changes to the previous reporting of which paragraph of paragraphs (D)(1) to (D)(5) of this rule is elected to be met.
- (b) For any topcoat or sealer that is applied by means of a continuous coater, any changes to the means of compliance previously reported. If the change pertains to the use of the procedures of paragraph (I)(5)(b) of this rule for the VOC content and viscosity measurements of a continuous coater, the

owner or operator shall submit data that demonstrates the correlation between the viscosity of the finishing material and the VOC content of the finishing material in the reservoir.

- (c) For any VOC emission control system employed to meet paragraph (D)(3), (D)(4)(a), or (D)(5)(a) of this rule, any changes to monitoring devices previously reported and required under paragraph (H) of this rule.
- (d) If any subsequent compliance tests of the VOC emission control system are conducted during the semiannual reporting period after the initial compliance status report has been submitted, the semiannual compliance status report shall include the results of each compliance test, a complete test report, and the compliance test monitoring data as described under paragraphs (L)(2)(d)(ii) to (L)(2)(d)(iv) of this rule.
- (e) Compliance certification for semiannual reporting period.

The owner or operator shall submit with the semiannual compliance status report, the following compliance certifications, where applicable:

- (i) For any topcoat or sealer that is subject to the VOC content limit of paragraph (D)(1), (D)(2), (D)(4)(b), or (D)(5)(b) of this rule and that complies by the procedures of paragraphs (I)(1) to (I)(4) of this rule, the compliance certification shall state that compliant coatings for topcoats and sealers, as applicable, have been used each operating day in the semiannual reporting period, or should otherwise identify the periods of use of noncompliant coatings for topcoats and sealers, as applicable, the reasons for the use of noncompliant coatings, and the amounts and VOC contents of each noncompliant coating used. Use of a noncompliant coating is a separate violation for each day the noncompliant coating is used.
- (ii) For any topcoat or sealer that is applied by means of a continuous coater, that is subject to the VOC content limit of paragraph (D)(1), (D)(2), (D)(4)(b), or (D)(5)(b) of this rule, and that complies by the procedures of paragraph (I)(5) of this rule, the compliance certification shall state the following, whichever is applicable:
  - (a) ((Compliance by VOC content for a continuous coater) The compliance certification shall state that compliant coatings, as determined by the procedures of paragraph (I)(5)(a) of this rule, have been used each operating day in the semiannual reporting period, or should otherwise identify the periods of use of noncompliant coatings, the reasons for the use of noncompliant coatings, and the amounts and VOC contents of each noncompliant

coating used. Use of a noncompliant coating is a separate violation for each day the noncompliant coating is used

- (b) ((Compliance by VOC content and viscosity measurements for a continuous coater) The compliance certification shall state that compliant coatings, as determined by the procedures of paragraph (I)(5)(b) of this rule, have been used each operating day in the semiannual reporting period, or should otherwise identify the periods of use of noncompliant coatings, the reasons for the use of noncompliant coatings, and the amounts and VOC contents of each noncompliant coating used. Additionally, the certification shall state that the viscosity of the finishing material in the reservoir has not been less than the viscosity of the initial finishing material, that is, the material that is initially mixed and placed in the reservoir, for any day in the semiannual reporting period. Use of a noncompliant coating is a separate violation for each day the noncompliant coating is used.
  - (c) (Compliance by rolling thirty-day average VOC content for a dip coater) The compliance certification shall state that compliant coatings, as determined by the procedures of paragraph (I)(5)(c) of this rule, have been used each operating day in the semiannual reporting period, or should otherwise identify the periods of use of noncompliant coatings, the reasons for the use of noncompliant coatings, and the amounts and VOC contents of each noncompliant coating used. Use of a noncompliant coating is a separate violation for each day the noncompliant coating is used.
- (iii) For any finishing operation that is equipped with a VOC emission control system to comply with paragraph (D)(3) of this rule:
- (a) The compliance certification shall state that the three-hour block averages of the monitoring parameters recorded pursuant to paragraph (K)(5) of this rule had complied with the operating limits (operating parameter values) for the monitoring parameters established under paragraph (J)(2) of this rule during of all periods of operation of the finishing operation; or should otherwise identify the times and durations of all periods of noncompliance and the reasons for noncompliance.
  - (b) The compliance certification shall identify the times and durations of all periods during process or control operation when the monitoring device is not working, as recorded pursuant to paragraph (K)(5) of this rule.

- (c) For any capture system bypass line, the compliance certification shall identify the times and durations of all periods in which the captured VOC emissions were discharged to atmosphere instead of a control device, as recorded pursuant to paragraph (K)(5)(f) of this rule and the reasons for the discharges to atmosphere.
- (d) The compliance certification shall state that the overall reduction of VOC emissions, based on the most recent compliance test conducted in accordance with paragraph (J) of this rule, has met the overall reduction of VOC emissions required under paragraph (D)(3) of this rule for each topcoat and sealer designated for control during the semiannual reporting period, or should otherwise identify the periods of noncompliance and the reasons for noncompliance.
- (iv) For any finishing operation that is equipped with a VOC emission control system to comply with paragraph (D)(4)(a) or (D)(5)(a) of this rule, the compliance certification shall contain the information specified under paragraphs (L)(3)(e)(iii)(a) to (L)(3)(e)(iii)(c) of this rule.
- (v) For finishing operations that are subject to the daily VOC emissions limit under paragraph (D)(4) or (D)(5) of this rule, the compliance certification shall state that the daily actual VOC emissions did not exceed the daily VOC emissions limit for the finishing materials selected for inclusion in the daily VOC emissions limit for each operating day during the semiannual reporting period, or should otherwise identify for each day of noncompliance the daily actual VOC emissions, the daily VOC emissions limit, the finishing materials selected for inclusion in the daily VOC emissions limit, and the reasons for noncompliance.
- (vi) For any wood furniture manufacturing operation subject to paragraph (E) of this rule for strippable spray booth materials, the compliance certification shall state that compliant coatings for strippable spray booth materials have been used each day in the semiannual reporting period, or should otherwise identify each day noncompliant coatings for strippable spray booth materials were used., the reasons for the use of noncompliant coatings, and the amounts and VOC contents of each noncompliant coating used. Use of a noncompliant coating is a separate violation for each day the noncompliant coating is used
- (vii) For wood furniture manufacturing operations subject to the work practice requirements of paragraph (F) of this rule, the compliance certification shall state that the work practice implementation plan is being followed, or should otherwise identify the provisions of the plan

that have not been implemented and each day the provisions were not implemented.

(viii) The compliance certification shall identify and describe any corrective actions considered and implemented for any noncompliance being reported in the compliance certification.

(ix) The compliance certification shall be signed by a responsible official of the company that owns or operates the wood furniture manufacturing operations.

(M) Special provisions for owners or operators electing to use emissions averaging.

(1) The owner or operator of wood furniture manufacturing operations electing to comply with the daily VOC emissions limit in paragraph (D)(4) or (D)(5) of this rule shall submit to the director for approval a plan addressing the following provisions:

(a) Program goals and rationale as follows:

(i) Provide a summary of the reasons why the owner or operator of wood furniture manufacturing operations would like to comply with the VOC emission limitations through the procedures established in paragraph (D)(4) or (D)(5) of this rule.

(ii) Provide a summary of how averaging can be used to meet the VOC emission limitations.

(iii) Document that the additional environmental benefit requirement is being met through the use of the equations in paragraph (D)(4) or (D)(5) of this rule. These equations ensure that the wood furniture manufacturing operations achieve an additional ten per cent reduction in emissions when compared to wood furniture manufacturing operations using a compliant coatings approach to meet the requirements of the rule.

(b) Program scope as follows:

(i) Include the types of finishing materials that will be included in the wood furniture manufacturing operations' averaging program.

(ii) Stains, basecoats, washcoats, sealers, and topcoats may be used in the averaging program.

(iii) Finishing materials that are applied using continuous coaters may only be used in an averaging program if the owner or operator of the wood

furniture manufacturing operations can determine the amount of finishing material used each day.

- (c) For program baseline, each finishing material included in the averaging program shall be the lower of the actual or allowable emission rate as of the effective date of this rule.
- (d) Quantification procedures as follows:
  - (i) Describe how emissions and changes in emissions will be quantified, including methods for quantifying usage of each finishing material. Quantification procedures for VOC content are included in paragraph (I) of this rule.
  - (ii) Quantification methods used shall be accurate enough to ensure that the wood furniture manufacturing operations' actual emissions are less than the allowable emissions, as calculated using the equations in paragraph (D)(4) or (D)(5) of this rule, on a daily basis.
- (e) Monitoring, record keeping, and reporting as follows:
  - (i) Provide a summary of the monitoring, record keeping, and reporting procedures that will be used to demonstrate daily compliance with the equations presented in paragraph (D)(4) or (D)(5) of this rule.
  - (ii) Monitoring, record keeping, and reporting procedures shall be structured in such a way that the Ohio EPA or its delegated local air agency and owners or operators of the wood furniture manufacturing operations can determine compliance status for any day.
- (2) Pending approval by the director and the USEPA of the proposed emissions averaging plan, the owner or operator shall continue to comply with the requirements of this rule.

(N) Requirements on applicability notification and permit application.

- (1) The owner or operator of a facility that is subject to this rule, is located in Butler, Clermont, Hamilton, or Warren county, and has an initial startup of wood furniture manufacturing operations before May 27, 2005 shall notify the appropriate Ohio environmental protection agency district office or local air agency in writing that the facility is subject to this rule. The notification, which shall be submitted not later than July 26, 2005, shall provide the information specified in paragraph (N)(5) of this rule.
- (2) The owner or operator of a facility that is subject to this rule, is located in Butler, Clermont, Hamilton, or Warren county, and has an initial startup of wood

furniture manufacturing operations on or after May 27, 2005 shall notify the appropriate Ohio environmental protection agency district office or local air agency in writing that the facility is subject to this rule. The notification, which shall be submitted not later than either the date of initial startup of the facility or July 26, 2005 (whichever is later), shall provide the information specified in paragraph (N)(5) of this rule. The application for a permit-to-install under rule 3745-31-02 of the Administrative Code may be used to fulfill the notification requirements of this paragraph.

- (3) The owner or operator of a facility that is subject to this rule, is located in Ashtabula, Cuyahoga, Geauga, Lake, Lorain, Medina, Portage, or Summit county, and has an initial startup of wood furniture manufacturing operations before the effective date of this rule shall notify the appropriate Ohio environmental protection agency district office or local air agency in writing that the facility is subject to this rule. The notification, which shall be submitted not later than sixty days after the effective date of this rule, shall provide the information specified in paragraph (N)(5) of this rule.
- (4) The owner or operator of a facility that is subject to this rule, is located in Ashtabula, Cuyahoga, Geauga, Lake, Lorain, Medina, Portage, or Summit county, and has an initial startup of wood furniture manufacturing operations on or after the effective date of this rule shall notify the Ohio EPA or its delegated local air agency in writing that the facility is subject to this rule. The notification, which shall be submitted not later than either the date of initial startup of the facility or sixty days after the effective date of this rule (whichever is later), shall provide the information specified in paragraph (N)(5) of this rule. The application for a permit-to-install under rule 3745-31-02 of the Administrative Code may be used to fulfill the notification requirements of this paragraph.
- (5) The notification required in paragraphs (N)(1) to (N)(4) of this rule shall include the following information:
  - (a) Name and address of the owner or operator;
  - (b) Address (i.e., physical location) of the facility;
  - (c) Equipment description and Ohio EPA application number (if assigned) of any wood furniture manufacturing operations;
  - (d) Identification of the applicable requirements, the means of compliance, and the compliance date for the wood furniture manufacturing operations under this rule;
  - (e) Regarding a permit for wood furniture manufacturing operations, whichever of the following is applicable:

- (i) Submission of an application for a permit-to-operate, modification, or renewal of a permit to operate in accordance with paragraph (B) of rule 3745-35-02 of the Administrative Code; or
- (ii) Statement of intent to submit an application for a Title V permit or modification of a Title V permit in accordance with rule 3745-77-02 or rule 3745-77-08 of the Administrative Code, respectively.

**Control of volatile organic compound emissions from industrial wastewater.**

[Comment: For dates and availability of non-regulatory government publications, publications of recognized organizations and associations, federal rules, and federal statutory provisions referenced in this rule, see paragraph (HH) of rule 3745-21-01 of the Administrative Code entitled "Referenced materials."]

**(A) Applicability.**

- (1) Except as otherwise provided in paragraphs (A)(4) and (A)(5) of this rule, the requirements of paragraph (C) of this rule shall apply to any facility that generates process wastewater from an affected industrial category and meets either the following criteria in paragraphs (A)(1)(a) and (A)(1)(b) of this rule or paragraphs (A)(1)(c) and (A)(1)(d) of this rule:
  - (a) The facility is located in Butler, Clermont, Hamilton or Warren county; and
  - (b) The facility has a combined total potential to emit for VOC emissions equal to or greater than one hundred tons of VOC per calendar year on or after May 27, 2005 from all of the following:
    - (i) Industrial wastewater sources (waste management units);
    - (ii) All non-CTG sources; and
    - (iii) Unregulated emissions from CTG sources except sources regulated under Subparts BBB, III, NNN, and RRR of 40 CFR Part 60 and sources regulated under Subpart T of 40 CFR Part 63.
  - (c) The facility is located in Ashtabula, Cuyahoga, Geauga, Lake, Lorain, Medina, Portage, or Summit county; and
  - (d) The facility has a combined total potential to emit for VOC emissions equal to or greater than one hundred tons of VOC per calendar year on or after August 25, 2008 from all of the following:
    - (i) Industrial wastewater sources (waste management units);
    - (ii) All non-CTG sources; and
    - (iii) Unregulated emissions from CTG sources except sources regulated under Subparts BBB, III, NNN, and RRR of 40 CFR Part 60 and sources regulated under Subpart T of 40 CFR Part 63.

- (2) For the purposes of paragraphs (A)(1)(a) to (A)(1)(d) of this rule, a source shall be considered regulated by a paragraph, rule or subpart if it is subject to the limits of that paragraph, rule, or subpart. A source is not considered regulated by a paragraph, rule, or subpart if it is not subject to the limits of that paragraph, rule, or subpart. For example, if the source is covered by an exemption in the paragraph, rule, or subpart, or the applicability criteria of the paragraph or subpart are not met, then the source is not subject to that paragraph, rule, or subpart. A source is also not considered regulated if there is no rule contained in this chapter regulating the source category.
- (3) Once a facility has met the applicability requirements of paragraphs (A)(1)(a) and (A)(1)(b) of this rule on or after May 27, 2005, or the applicability requirements of paragraphs (A)(1)(c) and (A)(1)(d) of this rule on or after the effective date of this rule, it is always subject to the requirements of paragraph (C) of this rule, except as otherwise provided in paragraphs (A)(4) and (A)(5) of this rule.
- (4) In the event a facility meets the applicability requirements under paragraphs (A)(1)(a) and (A)(1)(b) of this rule, but reduces its potential to emit for volatile organic compounds by means of federally enforceable operational restrictions (e.g., production, hours of operation, or capacity utilization) to less than one hundred tons per year by no later than May 27, 2006 and documents that the actual VOC emissions from the above combined sources have never exceeded one hundred tons per year after the baseline year (1990) of the state implementation plan for ozone, the facility is not subject to the requirements of paragraph (C) of this rule.
- (5) In the event a facility meets the applicability requirements under paragraphs (A)(1)(c) and (A)(1)(d) of this rule, but reduces its potential to emit for VOCs by means of a federally enforceable operational restriction(s) (e.g., production, hours of operation, or capacity utilization) to less than one hundred tons per year by no later than twelve months after the effective date of this rule and documents that the actual VOC emissions from the above combined sources have never exceeded one hundred tons per year after the baseline year (2002) of the state implementation plan for ozone, the facility is not subject to the requirements of paragraph (C) of this rule.

(B) Definitions.

The definitions applicable to this rule are contained in paragraph (Y) of rule 3745-21-01 of the Administrative Code.

(C) Overall requirements for industrial wastewater.

- (1) Except as otherwise exempted under paragraph (C)(2) of this rule, the owner or operator of an affected industrial category at a facility that meets the

applicability criteria of paragraph (A) of this rule shall comply with the requirements of paragraphs (D) to (L) of this rule.

(2) The following exemptions shall apply:

- (a) Any plant with an annual affected VOCs loading in wastewater, as determined in accordance with paragraph (I) of this rule (relating to determination of wastewater characteristics), less than or equal to ten megagrams (11.03 tons) is exempt from the control requirements of paragraph (D) of this rule.
- (b) At any plant with an annual affected VOC loading in wastewater, as determined in accordance with paragraph (I) of this rule, greater than ten megagrams (11.03 tons), the owner or operator of the plant may exempt from the control requirements of paragraph (D) of this rule one or more affected VOC wastewater streams for which the sum of the annual VOC loading in wastewater for all of the exempted streams is less than or equal to ten megagrams (11.03 tons).
- (c) If compliance with the control requirements of paragraph (D) of this rule would create a safety hazard in a waste management unit, the owner or operator may request the USEPA to exempt that waste management unit from the control requirements of paragraph (D) of this rule. The USEPA shall approve the request if justified by the likelihood and magnitude of the potential injury and if the USEPA determines that reducing or eliminating the hazard is technologically or economically unreasonable. Such approval shall occur when the Ohio environmental protection agency is informed, in writing, that USEPA has no objections to this exemption.
- (d) Wet weather retention basins are exempt from the requirements of this rule.

(D) Control requirements for process wastewater.

- (1) The owner or operator of a facility with an affected industrial category shall comply with the following control requirements. Any waste management unit that receives, manages, or treats an affected VOC wastewater stream or affected residual shall be controlled in accordance with paragraph (D)(2) of this rule or with one of the alternate methods of control listed in paragraph (E) of this rule.
- (2) The owner or operator of a facility with an affected industrial category shall comply with the following control requirements. Any waste management unit that receives, manages, or treats an affected VOC wastewater stream or an affected residual shall be controlled in accordance with paragraphs (D)(3) to (D)(8) of this rule. The control requirements apply from the point of generation of an affected VOC wastewater stream until the affected VOC wastewater

stream, including any affected residual, is either returned to a process unit or treated in accordance with paragraph (D)(8) of this rule.

- (3) For each individual drain system that receives or manages an affected VOC wastewater stream or an affected residual, the owner or operator shall comply with the requirements of paragraph (D)(3)(a) or (D)(3)(b) of this rule.
  - (a) The owner or operator shall operate and maintain on each opening in the individual drain system a cover and if vented, route the vapors to a process or through a closed vent system to a control device as follows:
    - (i) The cover and all openings shall be maintained in a closed position at all times that an affected VOC wastewater stream or an affected residual is in the drain system except when it is necessary to use the opening for sampling or removal, or for equipment inspection, maintenance, or repair.
    - (ii) The control device shall be designed and operated to reduce the affected VOC vented to it by at least ninety per cent by weight.
    - (iii) The individual drain system shall be designed and operated to segregate the vapors within the system from other drain systems and the atmosphere.
  - (b) The owner or operator shall comply with the requirements of paragraphs (D)(3)(b)(i) to (D)(3)(b)(v) of this rule.
    - (i) Each drain shall be equipped with water seal controls or a tightly fitting cap or plug.
    - (ii) If a water seal is used on a drain receiving an affected VOC wastewater stream or an affected residual, the owner or operator shall either extend the pipe discharging the wastewater below the liquid surface in the water seal of the receiving drain, or install a flexible shield (or other enclosure which restricts wind motion across the open area between the pipe and the drain) that encloses the space between the pipe discharging the wastewater to the drain receiving the wastewater. (A water seal which is used on a hub receiving a wastewater stream that is not an affected VOC wastewater stream or an affected residual for the purpose of eliminating cross ventilation to drains carrying an affected VOC wastewater stream or an affected residual is not required to have an extended subsurface discharging pipe or a flexible shield.)
    - (iii) Each junction box shall be equipped with a tightly fitting solid cover (i.e., no visible gaps, cracks, or holes) which shall be kept in place at all times except during inspection and maintenance.

- (iv) If the junction box is vented, the owner or operator shall comply with one of the following requirements:
    - (a) The junction box shall be vented to a process or through a closed vent system to a control device that is designed and operated to reduce the VOC vented to it by at least ninety per cent by weight.
    - (b) If the junction box is filled and emptied by gravity flow (i.e., there is no pump) or is operated with no more than slight fluctuations in the liquid level, the owner or operator may vent the junction box to the atmosphere provided that the junction box complies with the following requirements:
      - (i) The vent pipe shall be at least ninety centimeters in length and no greater than 10.2 centimeters in nominal inside diameter.
      - (ii) Water seals shall be installed and maintained at the wastewater entrance(s) to or exit from the junction box restricting ventilation in the individual drain system and between components in the individual drain system.
  - (v) Each sewer line shall not be open to the atmosphere and shall be covered or enclosed in a manner so as to have no visible gaps or cracks in joints, seals, or other emission interfaces.
- (4) For each surface impoundment that receives, manages, or treats an affected VOC wastewater stream or an affected residual, the owner or operator shall comply with the requirements of paragraph (D)(4)(a) or (D)(4)(b) of this rule.
- (a) The surface impoundment shall be equipped with a cover (e.g., air-supported structure or rigid cover) and a closed-vent system which routes the VOC vapors vented from the surface impoundment to a control device that meet the following requirements:
    - (i) Each opening (e.g., access hatch, sampling port, and gauge well) shall be maintained in a closed position (e.g., covered by a lid) at all times that an affected VOC wastewater stream or an affected residual is in the surface impoundment except when it is necessary to use the opening for sampling, removal, or for equipment inspection, maintenance, or repair.
    - (ii) The cover shall be used at all times that an affected VOC wastewater stream or an affected residual is in the surface impoundment except during removal of treatment residuals in accordance with 40 CFR 268.4 or closure of the surface impoundment in accordance with 40 CFR 264.228.

- (iii) The control device shall be designed and operated to reduce the affected VOC vented to it by at least ninety per cent by weight.
- (b) The surface impoundment shall be equipped with a floating flexible membrane cover that meets the requirements specified in paragraphs (D)(4)(b)(2)(i) to (D)(4)(b)(2)(vii) of this rule.
- (i) The flexible membrane cover shall be designed to float on the liquid surface during normal operations, and to form a continuous barrier over the entire surface area of the liquid.
  - (ii) The flexible membrane cover shall be fabricated from a synthetic membrane material that is either a high density polyethylene with a thickness no less than 2.5 millimeters (one hundred mils) or a material (or a composite of different materials) determined to have both organic permeability properties that are equivalent to those of the high density polyethylene material and chemical and physical properties that maintain the material integrity for the intended service life of the material.
  - (iii) The flexible membrane cover shall be installed in a manner such that there are no visible cracks, holes, gaps, or other open spaces between cover section seams or between the interface of the cover edge and its foundation mountings.
  - (iv) Except as provided for in paragraph (D)(4)(b)(2)(v) of this rule, each opening in the flexible membrane cover shall be equipped with a closure device designed to operate such that when the closure device is secured in the closed position there are no visible cracks, holes, gaps, or other open spaces in the closure device or between the perimeter of the cover opening and the closure device.
  - (v) The flexible membrane cover may be equipped with one or more emergency cover drains for removal of stormwater. Each emergency cover drain shall be equipped with a slotted membrane fabric cover that covers at least ninety per cent of the area of the opening or a flexible fabric sleeve seal.
  - (vi) Whenever an affected VOC wastewater stream or an affected residual is in the surface impoundment, the flexible membrane cover shall float on the liquid and each closure device shall be secured in the closed position. Opening of closure devices or removal of the flexible membrane cover is allowed to provide access to the surface impoundment for performing routine inspection, maintenance, or other

activities needed for normal operations and/or to remove accumulated sludge or other residues from the bottom of the surface impoundment.

- (5) For each oil-water separator that receives, manages, or treats an affected VOC wastewater stream or an affected residual, the owner or operator shall comply with the requirements of paragraph (D)(5)(a) or (D)(5)(b) of this rule.
- (a) The oil-water separator shall be equipped with a fixed roof and a closed vent system that routes the vapors vented from the oil-water separator to a control device in accordance with following requirements:
- (i) Each opening in the fixed roof (e.g., access hatches, sampling ports, and gauge wells) shall be maintained in a closed, sealed position (e.g., covered by a lid that is gasketed and latched) at all times that the oil-water separator contains an affected VOC wastewater stream or an affected residual except when it is necessary to use the opening for sampling or removal, or for equipment inspection, maintenance, or repair.
  - (ii) The control device shall be designed and operated to reduce the VOC vented to it by at least ninety per cent by weight.
- (b) The oil-water separator shall be equipped with a floating roof in accordance with the requirements of paragraphs (D)(5)(b)(i) to (D)(5)(b)(v) of this rule.
- (i) The oil-water separator shall be equipped with a floating roof that has a closure device between the floating roof and the wall of the separator. For portions of the oil-water separator where it is infeasible to construct and operate a floating roof, such as over the weir mechanism, the owner or operator shall operate and maintain a fixed roof, closed vent system, and control device that meet the requirements specified in paragraph (D)(5)(a) of this rule.
  - (ii) The closure device shall consist of a primary seal and a secondary seal. The primary seal shall be a liquid-mounted seal or a mechanical shoe seal. The secondary seal shall be above the floating roof and cover the annular space between the floating roof and the wall of the separator.
  - (iii) The floating roof shall be floating on the liquid (i.e., off the roof supports) at all times except during abnormal conditions (i.e., low flow rate).
  - (iv) Except as provided for in paragraph (D)(5)(b)(v) of this rule, each opening in the floating roof shall be equipped with a gasketed cover, seal or lid, which shall be maintained in the closed position at all times, except during inspection and maintenance.

- (v) The floating roof may be equipped with one or more emergency cover drains for removal of stormwater. Each emergency cover drain shall be equipped with a slotted membrane fabric cover that covers at least ninety per cent of the area of the opening or a flexible fabric sleeve seal.
- (6) For each portable container that receives, manages, or treats an affected VOC wastewater stream or an affected residual, the owner or operator shall operate and maintain a cover on the portable container and shall comply with the requirements of paragraphs (D)(6)(a) to (D)(6)(c) of this rule.
- (a) The cover shall remain in place and all openings (e.g., bungs, hatches, sampling ports, and pressure relief devices) shall be maintained in a closed position (e.g., covered by a lid) at all times that an affected VOC wastewater stream or an affected residual is in the portable container except when it is necessary to use the opening for filling, removal, inspection, sampling, or pressure relief events related to safety considerations to prevent physical damage or permanent deformation of the portable container or cover.
  - (b) For portable containers with a capacity greater than or equal to one hundred ten gallons, a submerged fill pipe shall be used when a container is being filled by pumping with an affected VOC wastewater stream or an affected residual. The submerged fill pipe outlet shall extend to no more than six inches or within two fill pipe diameters of the bottom of the container while the container is being filled.
  - (c) During treatment of an affected VOC wastewater stream or an affected residual, including aeration, thermal or other treatment, in a portable container, whenever it is necessary for the container to be open, the container shall be located within an enclosure with a closed-vent system that routes the VOC vapors vented from the container to a control device. The control device shall be designed and operated to reduce the VOC vented to it by at least ninety per cent by weight.
- (7) For each wastewater tank that receives, manages, or treats an affected VOC wastewater stream or an affected residual, the owner or operator shall comply with the requirements of either paragraph (D)(7)(a) or (D)(7)(b) of this rule.
- (a) The owner or operator shall operate and maintain a fixed roof for the wastewater tank, except that if the wastewater tank meets any of the conditions in paragraphs (D)(7)(a)(i) to (D)(7)(a)(iv) of this rule, the owner or operator shall operate and maintain one of the emission control techniques listed in paragraphs (D)(7)(b)(i) to (D)(7)(b)(iii) of this rule.

- (i) Used for heating wastewater.
  - (ii) Used for treating by means of an exothermic reaction.
  - (iii) The contents of the tank is sparged.
  - (iv) The wastewater tank has a capacity equal to or greater than forty thousand gallons and the maximum vapor pressure stored material is equal to or greater than 1.5 pounds per square inch absolute.
- (b) The owner or operator shall operate and maintain one of the emission control techniques listed in paragraphs (D)(7)(b)(i) to (D)(7)(b)(iv) of this rule.
- (i) A fixed roof and a closed-vent system that routes the VOC vapors vented from the wastewater tank to a control device.
    - (a) Each opening in the fixed roof (e.g., access hatches, sampling ports, and gauge wells) shall be maintained in a closed position (e.g., covered by a lid) at all times that the wastewater tank contains an affected VOC wastewater stream or an affected residual except when it is necessary to use the opening for wastewater sampling, removal, or for equipment inspection, maintenance, or repair.
    - (b) The control device shall be designed and operated to reduce the VOC vented to it by at least ninety per cent by weight.
  - (ii) A fixed roof and an internal floating roof that meets the requirements specified in paragraphs (D)(7)(b)(ii)(a) to (D)(7)(b)(ii)(l) of this rule.
    - (a) The internal floating roof shall be floating on the liquid surface at all times except when the floating roof must be supported by the leg supports during initial fill, after the tank has been completely emptied and degassed, and when the tank is completely emptied before being subsequently refilled.
    - (b) When the floating roof is resting on the leg supports, the process of filling, emptying, or refilling shall be continuous and shall be accomplished as soon as practical.
    - (c) The internal floating roof shall be equipped with a closure device between the wall of the tank and the roof edge. The closure device shall consist of a liquid-mounted seal, or a metallic shoe seal, or two seals mounted one above the other so that each forms a continuous closure that completely covers the space between the wall of the storage vessel and the edge of the internal floating roof.

The lower seal may be vapor-mounted, but both must be continuous seals.

- (d) Automatic bleeder vents are to be closed at all times when the roof is floating, except when the roof is being floated off or is being landed on the roof leg supports.
  - (e) Each opening in a noncontact internal floating roof except for automatic bleeder vents (vacuum breaker vents) and rim space vents is to provide a projection below the liquid surface.
  - (f) Each opening in the internal floating roof except for leg sleeves, automatic bleeder vents, rim space vents, column wells, ladder wells, sample wells, and stub drains shall be equipped with a cover or lid. The cover or lid shall be equipped with a gasket.
  - (g) Each penetration of the internal floating roof for the purposes of sampling shall be a sample well. Each sample well shall have a slit fabric cover that covers at least ninety per cent of the opening.
  - (h) Each automatic bleeder vent shall be gasketed.
  - (i) Each rim space vent shall be gasketed.
  - (j) Each penetration of the internal floating roof that allows for passage of a ladder shall have a gasketed sliding cover.
  - (k) Each penetration of the internal floating roof that allows for passage of a column supporting the fixed roof shall have a flexible fabric sleeve seal or a gasketed sliding cover.
  - (l) Each cover or lid on any opening in the internal floating roof shall be closed (i.e., no visible gaps), except when the cover or lid must be open for access. Covers on each access hatch and each gauge float well shall be bolted or fastened so as to be air-tight when they are closed. Rim space vents are to be set to open only when the internal floating roof is not floating or when the pressure beneath the rim seal exceeds the manufacturer's recommended setting.
- (iii) An external floating roof that meets the requirements specified in paragraphs (D)(7)(b)(iii)(a) to (D)(7)(b)(iii)(o) of this rule.
- (a) Each external floating roof shall be equipped with a closure device between the wall of the storage vessel and the roof edge. The closure device is to consist of two seals, one above the other. The lower seal (primary seal) shall be either a metallic shoe seal or a

liquid-mounted seal. The upper seal (secondary seal) shall be a rim-mounted or shoe-mounted seal.

- (b) Except during inspections, both the primary seal and the secondary seal shall completely cover the annular space between the external floating roof and the wall of the storage vessel in a continuous fashion.
- (c) Except for automatic bleeder vents (vacuum breaker vents) and rim space vents, each opening in the noncontact external floating roof shall provide a projection below the liquid surface.
- (d) Except for automatic bleeder vents, rim space vents, roof drains, and leg sleeves, each opening in the roof is to be equipped with a gasketed cover, seal or lid which is to be maintained in a closed position (i.e., no visible gap) at all times except when the cover or lid must be open for access. Covers on each access hatch and each gauge float well shall be bolted or fastened so as to be air-tight when they are closed.
- (e) Automatic bleeder vents are to be closed at all times when the roof is floating, except when the roof is being floated off or is being landed on the roof leg supports.
- (f) Rim space vents are to be set to open only when the roof is being floated off the roof leg supports or when the pressure beneath the rim seal exceeds the manufacturer's recommended setting.
- (g) Automatic bleeder vents and rim space vents are to be gasketed.
- (h) Each roof drain that empties into the stored liquid is to be provided with a slotted membrane fabric cover that covers at least ninety per cent of the area of the opening.
- (i) Each unslotted guide pole well shall have a gasketed sliding cover or a flexible fabric sleeve seal.
- (j) Each unslotted guide pole shall have on the end of the pole a gasketed cap which is closed at all times except when gauging the liquid level or taking liquid samples.
- (k) Each slotted guide pole well shall have a gasketed sliding cover or a flexible fabric sleeve seal.
- (l) Each slotted guide pole shall have a gasketed float or other device which closes off the liquid surface from the atmosphere.

residuals that comply with the requirements for RCRA treatment options specified in paragraph (D)(8)(f) of this rule.

- (d) The owner or operator using a closed biological treatment process for at least one affected VOC wastewater stream shall reduce the mass flow rate for all affected VOC from all wastewater streams entering the biological treatment process by at least ninety per cent.
- (e) (Design steam stripper option.) The owner or operator shall operate and maintain a steam stripper that meets all the requirements of paragraphs (D)(8)(e)(i) to (D)(8)(e)(vi) of this rule.
  - (i) Minimum active column height of five meters.
  - (ii) Countercurrent flow configuration with a minimum of ten actual trays.
  - (iii) Minimum steam flow rate of 0.04 kilograms of steam per liter of wastewater feed within the column.
  - (iv) Minimum wastewater feed temperature to the steam stripper of ninety-five degrees Celsius, or minimum column operating temperature of ninety-five degrees Celsius.
  - (v) Maximum liquid loading of sixty-seven thousand one hundred liters per hour per square meter.
  - (vi) Operate at nominal atmospheric pressure.
- (f) (RCRA treatment options.) The owner or operator may elect to treat the affected VOC wastewater stream or affected residual in a unit identified in, and complying with, paragraph (D)(8)(f)(i), (D)(8)(f)(ii), or (D)(8)(f)(iii) of this rule.
  - (i) The affected VOC wastewater stream or affected residual is discharged to a hazardous waste incinerator for which the owner or operator has been issued a final permit under 40 CFR Part 270 and complies with the requirements of 40 CFR part 264, subpart O, or has certified compliance with the interim status requirements of 40 CFR part 265, subpart O.
  - (ii) The affected VOC wastewater stream or affected residual is discharged to a process heater or boiler burning hazardous waste for which the owner or operator:
    - (a) Has been issued a final permit under 40 CFR part 270 and complies with the requirements of 40 CFR part 266, subpart H; or

(b) Has certified compliance with the interim status requirements of 40 CFR part 266, subpart H.

(iii) The affected VOC wastewater stream or affected residual is discharged to an underground injection well for which the owner or operator has been issued a final permit under 40 CFR part 270 or 40 CFR part 144 and complies with the requirements of 40 CFR part 122. The owner or operator shall comply with all applicable requirements of this subpart prior to the point where the wastewater enters the underground portion of the injection well.

(g) (Affected residuals.) For each affected residual, the owner or operator shall control for air emissions by complying with paragraphs (D)(3) to (D)(7) of this rule and by complying with one of the provisions in paragraphs (D)(8)(g)(i) to (D)(8)(g)(iv) of this rule.

(i) Recycle the affected residual to a production process or sell the affected residual for the purpose of recycling. Once an affected residual is returned to a production process, the affected residual is no longer subject to this rule.

(ii) Return the affected residual to the treatment process.

(iii) Treat the affected residual to destroy the total combined mass flow rate of affected VOC by ninety-nine per cent or more in a nonbiological treatment process.

(iv) Comply with the requirements for RCRA treatment options specified in paragraph (D)(8)(f) of this rule.

(E) Alternate methods of control.

The following alternate methods of demonstrating and documenting continuous compliance with the applicable control requirements or exemption criteria in this rule may be utilized if approved by the USEPA. Such approval shall occur when the Ohio environmental protection agency is informed, in writing, that USEPA has no objections to the alternate method(s) of control.

(1) (Ninety per cent overall control option) As an alternative to the control requirements of paragraph (D) of this rule (relating to control requirements), the owner or operator of waste management units may elect to ensure that the overall control of VOC emissions at the facility from wastewater from affected source industries is at least ninety per cent less than the calendar year baseline emissions inventory for VOC emissions to the ambient air from process wastewater, provided that adequate documentation is submitted which supports

the accuracy of the calendar year baseline emission inventory and the following requirements are met.

- (a) To qualify for the control option available under paragraph (E)(1) of this rule after the effective date of this rule, the owner or operator of a waste management unit for which a control plan was not previously submitted shall submit a control plan to the director and any local air pollution control program with jurisdiction which demonstrates that the overall control of VOC emissions at the facility from wastewater from affected industrial categories will be at least ninety per cent less than the calendar year baseline emissions inventory. Any control plan submitted after the effective date of this rule, must be approved by the USEPA in writing before the owner or operator may use the control option available under paragraph (E)(1) of this rule for compliance. At a minimum, the control plan shall include the applicable emissions unit identification; the facility premise number (PN); the calendar year calendar year baseline emission rates of VOC from wastewater from affected industrial categories (consistent with the calendar year baseline emissions inventory); a plot plan showing the location, the emissions unit identification, and PN associated with a waste management units; the VOC emission rates for the preceding calendar year; and an explanation of the recordkeeping procedure and calculations which will be used to demonstrate compliance. The VOC emission rates shall be calculated in a manner consistent with the calendar year baseline emissions inventory.
- (b) The owner or operator shall submit an annual report no later than March thirty-first of each year to the director and the local air pollution control program with jurisdiction, which demonstrates that the overall control of VOC emissions at the account from wastewater from affected industrial categories during the preceding calendar year is at least ninety per cent less than the baseline emissions inventory. At a minimum, the report shall include the PN; the emissions unit identification; the throughput of wastewater from affected industrial categories; a plot plan showing the location; the emissions unit identification; and the premise number associated with waste management units; and the VOC emission rates for the preceding calendar year. The emission rates for the preceding calendar year shall be calculated in a manner consistent with the calendar year baseline emissions inventory.
- (c) All representations in control plans and annual reports become enforceable conditions. It shall be unlawful for any person to vary from such representations if the variation will cause a change in the identity of the specific emission sources being controlled or the method of control of emissions unless the owner or operator submits a revised control plan to the director and the local air pollution control agency with jurisdiction no later than thirty days after the change. All control plans and reports shall include

documentation that the overall reduction of VOC emissions at the account from wastewater from affected source categories continues to be at least ninety per cent less than the calendar year baseline emissions inventory. The emission rates shall be calculated in a manner consistent with the calendar year baseline emissions inventory.

- (d) For waste management units located in Butler, Clermont, Hamilton or Warren county, the calendar year baseline is 1990.
  - (e) For waste management units located in Ashtabula, Cuyahoga, Geauga, Lake, Lorain, Medina, Portage, or Summit county, the calendar year baseline is 2002.
- (2) The owner or operator of an affected industrial category may elect to comply with the provisions of 40 CFR part 63, subpart G ("National Emission Standards for Hazardous Air Pollutants From the Synthetic Organic Chemical Manufacturing Industry for Process Vents, Storage Vessels, Transfer Operations, and Wastewater"), 40 CFR part 63, subpart JJJ ("National Emission Standards for Hazardous Air Pollutants: Group IV Polymers and Resins"), 40 CFR part 63, subpart FFFF ("National Emission Standards for Hazardous Air Pollutants: Miscellaneous Organic Chemical Manufacturing") or any other emission standard promulgated under 40 CFR part 63 that references the wastewater control requirements set forth in 40 CFR part 63, subpart G if the wastewater stream is subject to the national emission standards for hazardous air pollutants control requirements for that category, as alternatives to complying with this rule, provided that:
- (a) The term "affected VOC" is substituted each place that 40 CFR part 63, subpart G, subpart JJJ, subpart FFFF and any other 40 CFR part 63 emission standard references the term "organic hazardous air pollutant" or "organic HAP";
  - (b) For affected VOC not specifically listed in table 9 of 40 CFR part 63, subpart G the corresponding fraction removed (Fr) value shall be determined as follows:
    - (i) Determine the Fr value by the procedures in 40 CFR part 60, appendix J as proposed on December 9, 1998 in the Federal Register; or
    - (ii) Assign an Fr value of 0.99; or
    - (iii) Use WATER9, a wastewater treatment model of USEPA, to determine the Fr value of a chemical.
  - (c) Before implementing the option available under paragraph (E)(2) of this rule, the owner or operator provides written notice of their intent to utilize this

option to the director and any local air pollution control program with jurisdiction of the intention to use this option.

(F) Inspection and monitoring.

The owner or operator of a waste management unit that is subject to requirements under paragraph (D) or (E) of this rule shall comply with the following inspection and monitoring requirements. An owner and operator choosing to comply with a subpart in 40 CFR part 63 in paragraph (E)(2) of this rule, provided it is subject to that subpart, may comply with the inspection monitoring and record keeping requirements of the subpart instead of the requirements in paragraph (F) of this rule.

- (1) The owner or operator of a waste management unit that is subject to requirements under paragraph (D) or (E) of this rule shall comply with the following inspection and monitoring requirements. An owner and operator choosing to comply with a subpart in 40 CFR part 63 in paragraph (E)(2) of this rule, provided it is subject to that subpart, may comply with the inspection monitoring and record keeping requirements of the subpart instead of the requirements in paragraph (F) of this rule.
- (2) All seals, covers, closed vent systems, and other equipment used to comply with paragraph (D) or (E) of this rule (relating to control requirements) shall be visually inspected for leaks and improper condition initially, semiannually, and upon repair as specified under paragraphs (F)(2)(a) to (F)(2)(k) of this rule. If any seal, cover, closed vent system, or other equipment is found to have a leak or improper condition, a first attempt at repair shall be completed as soon as possible, but no later than fifteen calendar days after detection, unless the repair or correction is technically infeasible without requiring a process unit shutdown, in which case the repair or correction shall be made at the next process unit shutdown.
  - (a) For a wastewater tank equipped with a fixed roof and vapor control system (closed vent system and control device), visually inspect the fixed roof, openings, and the closed vent system for leaks, except for a cover and closed vent system maintained under negative pressure.
  - (b) For a wastewater tank equipped with an internal or external floating roof, visually inspect for the following improper conditions:
    - (i) Leaving open any access door or other opening when such door or opening is not in use.
    - (ii) The floating roof is not resting on either the surface of the liquid or on the leg supports.
    - (iii) There is stored liquid on the floating roof.

- (iv) A rim seal is detached from the floating roof.
  - (v) There are holes, tears, cracks or gaps in the rim seal or seal fabric of the floating roof.
  - (vi) There are visible gaps between the seal of an internal floating roof and the wall of the wastewater tank.
  - (vii) Where a metallic shoe seal is used on an external floating roof, one end of the metallic shoe does not extend into the stored liquid or one end of the metallic shoe does not extend a minimum vertical distance of sixty-one centimeters above the surface of the stored liquid.
  - (viii) A gasket, joint, lid, cover, or door has a crack or gap, or is broken.
- (c) For a surface impoundment, visually inspect the cover and all openings for leaks, except for a cover and closed vent system maintained under negative pressure.
  - (d) For a surface impoundment, visually inspect the following improper conditions:
    - (i) Leaving open any access hatch or other opening when such hatch or opening is not in use.
    - (ii) A joint, lid, cover, or door has a crack or gap, or is broken.
  - (e) For a portable container, visually inspect the cover and all openings for leaks.
  - (f) For a portable container that is located within an enclosure that is vented by means of a closed vent system to a control device, visually inspect the enclosure and closed vent system for leaks, except for an enclosure and closed vent system maintained under negative pressure.
  - (g) For a portable container, visually inspect for the following improper conditions:
    - (i) Leaving open any access hatch or other opening when such hatch or opening is not in use.
    - (ii) A cover or door has a gap or crack, or is broken.
  - (h) For an individual drain systems, visually inspect for the following improper conditions:

- (i) A joint, lid, cover, or door has a gap, crack, hole or is broken.
  - (ii) Leaving open any access hatch or other opening when such hatch or opening is not in use for sampling or removal, or for equipment inspection, maintenance, or repair.
  - (iii) Sufficient water is not present to properly maintain integrity of water seals.
  - (iv) Drains using tightly-fitted caps or plugs have caps and plugs that are not in place or not properly installed.
  - (v) Junction boxes do not have covers in place or covers have visible gaps, cracks, or holes.
  - (vi) Unburied portion of sewer lines have cracks or gaps.
- (i) For a junction box vented to a process or through a closed vent system to a control device, visually inspect for leaks in the closed vent system.
  - (j) For oil-water separators, visually inspect fixed roof and all openings for leaks.
  - (k) Leaving open or ungasketed any access door or other opening when such door or opening is not in use.
    - (i) Leaving open or ungasketed any access door or other opening when such door or opening is not in use.
    - (ii) The floating roof is not resting on either the surface of the liquid or on the leg supports.
    - (iii) There is stored liquid on the floating roof.
    - (iv) A rim seal is detached from the floating roof.
    - (v) There are holes, tears, or other open spaces in the rim seal or seal fabric of the floating roof.
    - (vi) A gasket, joint, lid, cover, or door has a gap or crack, or is broken.
- (3) For a wastewater tank or oil-water separator equipped with an external floating roof having primary and secondary seals used to comply with paragraph (D) or (E) of this rule, the secondary seal shall be inspected for seal gaps and repaired as follows:

- (a) The secondary seal shall be measured for seal gaps initially, annually, and after repair, as determined under paragraph (I) of rule 3745-21-10 of the Administrative Code.
  - (b) The accumulated area of gaps that exceed one-eighth inch (0.32 cm) in width between the secondary seal and tank wall shall be no greater than 1.0 square inch per foot (twenty-one square centimeters per meter) of tank diameter.
  - (c) If the seal gap requirement of paragraph (F)(2)(b) of this rule is not being met, the secondary seal shall be repaired or replaced within forty-five days after detection of the improper seal gap unless the repair or correction is technically infeasible without requiring a process unit shutdown, in which case the repair or correction shall be made at the next process unit shutdown.
- (4) The following records shall be maintained on leaks, improper conditions, and improper seal gaps:
- (a) The date on which a leak, improper condition, or improper seal gap is discovered;
  - (b) The date on which a first attempt at repair was made to correct the leak or improper condition; and
  - (c) The date on which a leak, improper condition, or improper seal gap is repaired.
- (5) Monitors shall be installed and maintained as required by this paragraph to measure operational parameters of any emission control device or other device installed to comply with paragraph (D) or (E) of this rule. Such monitoring and parameters shall be sufficient to demonstrate proper functioning of those devices to design specifications, and include the monitoring and parameters listed in paragraphs (F)(3)(a) to (F)(3)(g) of this rule, as applicable, except as provided in paragraph (F)(3)(a) of this rule.
- (a) For an enclosed non-catalytic combustion device (including, but not limited to, a thermal incinerator, boiler, or process heater), continuously monitor and record the temperature of the gas stream either in the combustion chamber or immediately downstream before any substantial heat exchange.
  - (b) For a catalytic incinerator, continuously monitor and record the temperature of the gas stream immediately before and after the catalyst bed.
  - (c) For a condenser (chiller), continuously monitor and record the temperature of the gas stream at the condenser exit.

- (d) For a carbon adsorber, continuously monitor and record the VOC concentration of exhaust gas stream to determine if breakthrough has occurred. If the carbon adsorber does not regenerate the carbon bed directly in the control device (e.g., a carbon canister), the exhaust gas stream shall be monitored daily or at intervals no greater than twenty per cent of the design replacement interval, whichever is greater, or as an alternative to conducting monitoring, the carbon may be replaced with fresh carbon at a regular predetermined time interval that is less than the carbon replacement interval that is determined by the maximum design flow rate and the VOC concentration in the gas stream vented to the carbon adsorber.
  - (e) For a flare, meet the requirements specified in 40 CFR 60.18(b).
  - (f) For a steam stripper, continuously monitor and record the steam flow rate, the wastewater feed mass flow rate, and either the wastewater feed temperature or the column operating temperature (i.e., the temperature in the column top tray liquid phase at the downcomer).
  - (g) For vapor control systems other than those specified in paragraphs (F)(15)(a) to (F)(15)(g) of this rule, continuously monitor and record the appropriate operating parameters.
  - (h) In lieu of the monitoring and parameters listed in paragraphs (F)(15)(a) to (F)(15)(g) of this rule, other monitoring and parameters may be approved or required by the USEPA. Such approval or requirement shall occur when the Ohio environmental protection agency is informed, in writing, that USEPA has no objection to, or requires, the other monitoring and parameters that are indicated.
- (6) For a closed-vent system that is used to comply with paragraph (D) or (E) of this rule and that is designed to operate at a pressure below atmospheric pressure, the closed-vent system shall be equipped with at least one pressure gauge or other pressure measurement device that can be read from a readily accessible location to verify that negative pressure is being maintained in the closed-vent system when the control device is operating.
- (G) Approved test methods.

Compliance with the emission specifications, vapor control system efficiency, and certain control requirements, inspection requirements, and exemption criteria of paragraphs (D) to (F) and paragraph (C)(2) of this rule (relating to control requirements, alternate control requirements, inspection and monitoring requirements, and exemptions) shall be determined by applying one or more of the following test methods and procedures, as appropriate.

- (1) (Gas flow rate) USEPA methods 1, 2, 3 and 4 are used for determining gas flow rates, as necessary.
- (2) Concentration of affected VOCs in a gas stream.
  - (a) USEPA method 18 is used for determining gaseous organic compound emissions by gas chromatography.
  - (b) USEPA method 25 is used for determining total gaseous nonmethane organic emissions as carbon.
  - (c) USEPA method 25A or 25B are used for determining total gaseous organic concentrations using flame ionization or nondispersive infrared analysis.
- (3) Performance test for control devices.
  - (a) For flares, the performance test requirements of 40 CFR 60.18(b) shall apply. Compliance with the requirements of 40 CFR 60.18(b) will be considered to represent ninety-eight per cent control of the VOC in the flare inlet.
  - (b) For control devices other than flares, the VOC control efficiency shall be determined in accordance with paragraph (C) of rule 3745-21-10 of the Administrative Code where the flow rate and VOC concentration of the inlet and outlet gas streams of the control device are measured as specified under paragraphs (G)(1) and (G)(2) of this rule.
- (4) (Vapor pressure) Use standard reference texts or ASTM test methods D323-99a, D2879-97(2002)e1, D4953-99a, D5190-01, or D5191-04a for the measurement of vapor pressure, adjusted for actual storage temperature in accordance with American petroleum institute publication 2517.
- (5) (Leak determination by instrument method) Use USEPA method 21 for determining VOC leaks and for monitoring a carbon canister in accordance with paragraph (F)(3)(d) of this rule.
- (6) (Determination of VOC concentration of wastewater samples) Use SW-846 method 5030B (purge and trap) followed by SW-846 method 8015B with a DB-5 boiling point (or equivalent column), and flame ionization detector, with the detector calibrated with benzene as required by 40 CFR Part 261; SW-846 methods 3810, 5030B (followed by 8021B), 8260B, and 9060 as required by 40 CFR Part 261; USEPA methods 602, 624, 1624, 625, 1625; USEPA method 305; APHA method 5310(B) contained in standard methods for the examination of water and wastewater; or USEPA method 25D. In the event of any conflict, USEPA method 25D takes precedence.

- (7) The measurement of wastewater flow rate shall be determined with flow measurement devices. Flow rate measurements shall be taken at the same time as the concentration measurements.
- (8) (Minor modifications) Minor modifications to these test methods may be used, if approved by the USEPA. Such approval shall occur when the Ohio environmental protection agency is informed, in writing, that USEPA has no objections to the minor modifications to the test methods.
- (9) (Alternate test methods) Test methods other than those specified in paragraphs (J)(1) to (J)(8) of this rule may be used if validated by USEPA method 301.

(H) Recordkeeping.

The owner or operator of an affected industrial category shall comply with the following recordkeeping requirements.

- (1) Complete and up-to-date records shall be maintained as needed to demonstrate compliance with paragraphs (D) and (E) of this rule (relating to control requirements and alternate control requirements) which are sufficient to demonstrate the characteristics of wastewater streams and the qualification for any exemptions claimed under paragraph (C)(2) of this rule (relating to exemptions).
- (2) Records shall be maintained of the results of any inspection or monitoring conducted in accordance with paragraph (F) of this rule (relating to inspection and monitoring requirements). Records shall be sufficient to demonstrate proper functioning of applicable control equipment to design specifications to ensure compliance with paragraphs (D) and (E) of this rule.
- (3) Records shall be maintained of the results of any testing conducted in accordance with paragraph (G) of this rule (relating to approved test methods).
- (4) All records shall be maintained at the plant for at least five years and be made available upon request to USEPA, or the appropriate Ohio environmental protection agency district office or local air agency.

(I) Determination of wastewater characteristics.

The determination of the characteristics of a wastewater stream for purposes of this rule shall be made as follows.

- (1) The characteristics shall be determined at a location between the point of generation (as defined by this rule) and before the wastewater stream is exposed to the atmosphere, treated for VOC removal, or mixed with another wastewater stream. For wastewater streams at a facility meeting the applicability

requirements under paragraphs (A)(1)(a) and (A)(1)(b) of this rule and which, prior to May 27, 2005, were either actually being mixed or construction had commenced which would result in the wastewater streams being mixed, this mixing shall not establish a limit on where the characteristics may be determined. For wastewater streams at a facility meeting the applicability requirements under paragraphs (A)(1)(c) and (A)(1)(d) of this rule and which, prior to the effective date of this rule, were either actually being mixed or construction had commenced which would result in the wastewater streams being mixed, this mixing shall not establish a limit on where the characteristics may be determined.

- (2) The flow rate of a wastewater stream shall be determined on the basis of an annual average by one of the following methods:
  - (a) The highest annual quantity of wastewater managed, based on historical records for the most recent five years of operation, or for the entire time the wastewater stream has existed if less than five years, but at least one year;
  - (b) The maximum design capacity of the waste management unit;
  - (c) The maximum design capacity to generate wastewater of the process unit generating the wastewater stream; or
  - (d) Measurements that are representative of the actual, normal wastewater generation rates.
- (3) The VOC concentration of a wastewater stream shall be determined on the basis of a flow-weighted annual average by one of the following methods, or by a combination of the methods. If the director or USEPA determines that the VOC concentration cannot be adequately determined by knowledge of the wastewater, or by bench-scale or pilot-scale test data, the VOC concentration shall be determined in accordance with paragraph (I)(3)(c) of this rule, or by a combination of the methods in paragraphs (I)(3)(a), (I)(3)(b), and (I)(3)(c) of this rule. VOC with a "Henry's Law Constant" less than  $1.8 \times 10^{-6}$  atm-m<sup>3</sup>/mole (0.1 y/x) at twenty-five degrees Celsius shall not be included in the determination of VOC concentration.
  - (a) (Knowledge of the wastewater) Sufficient information to document the VOC concentration. Examples of information include material balances, records of chemical purchases, or previous test results.
  - (b) (Bench-scale or pilot-scale test data) Sufficient information to demonstrate that the bench-scale or pilot-scale test concentration data are representative of the actual VOC concentration.

- (c) (Measurements) Collect a minimum of three representative samples from the wastewater stream and determine the affected VOC concentration for each sample in accordance with paragraph (G) of this rule (relating to approved test methods). The affected VOC concentration of the wastewater stream shall be the flow-weighted average of the individual samples.
- (4) The annual affected VOC loading in wastewater for a wastewater stream shall be the annual average flow rate determined in paragraph (I)(2) of this rule multiplied by the annual average affected VOC concentration determined in paragraph (I)(3) of this rule.
- (5) The annual VOC loading in wastewater for a plant shall be the sum of the annual VOC loading in wastewater for each affected VOC wastewater stream.
- (6) The "Henry's Law Constant" shall be determined by the procedures in 40 CFR part 60, appendix J, as proposed on December 9, 1998 in the Federal Register.

(J) Maintenance wastewater requirements.

- (1) Each owner or operator of a source subject to this rule shall comply with the requirements of paragraphs (J)(2) and (J)(3) of this rule for maintenance wastewaters containing volatile organic compounds.
- (2) The owner or operator shall prepare a description of maintenance procedures for management of wastewaters generated from the emptying and purging of equipment in the process during temporary shutdowns for inspections, maintenance, and repair (i.e., a maintenance-turnaround) and during periods which are not shutdowns (i.e., routine maintenance). The descriptions shall:
  - (a) Specify the process equipment or maintenance tasks that are anticipated to create wastewater during maintenance activities.
  - (b) Specify the procedures that will be followed to properly manage the wastewater and control VOC emissions to the atmosphere.
  - (c) Specify the procedures to be followed when clearing materials from the process equipment.
- (3) The owner or operator shall modify and update the information required by paragraph (J)(2) of this rule as needed following each maintenance procedure based on the actions taken and the wastewaters generated in the preceding maintenance procedure.
- (4) The owner or operator shall maintain a record of the information required by paragraphs (J)(2) and (J)(3) of this rule.

(K) Compliance dates.

- (1) Except where otherwise specified within this rule, any owner or operator of a facility that is subject to this rule shall comply with the requirements of this rule by no later than the following dates:
  - (a) For a facility located in Butler, Clermont, Hamilton, or Warren county and for which installation commenced before May 27, 2005, the compliance date of any waste management unit within the facility is either May 27, 2006 or the date of initial startup of the waste management unit, whichever is later.
  - (b) For a facility located in Butler, Clermont, Hamilton, or Warren county and for which installation commenced on or after the effective date of this rule, the compliance date of any waste management unit is the date of initial startup of the waste management unit.
  - (c) For a facility located in Ashtabula, Cuyahoga, Geauga, Lake, Lorain, Medina, Portage, or Summit county and for which installation commenced before the effective date of this rule, the compliance date of any waste management unit within the facility is either twelve months from the effective date of this rule or the date of initial startup of the waste management unit, whichever is later.
  - (d) For a facility located in Ashtabula, Cuyahoga, Geauga, Lake, Lorain, Medina, Portage, or Summit county and for which installation commenced on or after the effective date of this rule, the compliance date of any waste management unit is the date of initial startup of the waste management unit.
- (2) For any emission control device that is used to comply with an emission control requirement of this rule, the owner or operator shall demonstrate compliance by testing the emission control device in accordance with paragraph (G) of this rule within ninety days after the compliance date.
- (3) For any treatment process (or combined treatment processes) that is used to comply with this rule, the owner or operator shall demonstrate compliance by testing the treatment process (or combined treatment processes) in accordance with the methods in paragraph (G) of this rule within ninety days after the compliance date.
- (4) Additional testing of the emission control device or the treatment process in accordance with paragraph (G) of this rule may be required by the director to ensure continued compliance.
- (5) In the event the owner or operator reduces the facilities potential to emit pursuant to paragraph (A)(4) or (A)(5) of this rule, the date on which the facility

subsequently meets the applicability criteria of paragraph (A)(1) of this rule is the date the facility becomes subject to this rule.

(L) Requirements on applicability notification and permit application.

- (1) The owner or operator of a facility that is subject to this rule, is located in Butler, Clermont, Hamilton or Warren county, and has an initial startup of a waste management unit before May 27, 2005 shall notify the appropriate Ohio environmental protection agency district office or local air agency in writing that the facility is subject to this rule. The notification, which shall be submitted not later than July 26, 2005, shall provide the information specified in paragraph (L)(5) of this rule.
- (2) The owner or operator of a facility that is subject to this rule, is located in Butler, Clermont, Hamilton or Warren county, and has an initial startup of a waste management unit on or after the effective date of this rule, shall notify the appropriate Ohio environmental protection agency district office or local air agency in writing that the waste management unit is subject to this rule. The notification, which shall be submitted not later than either the date of initial startup of the waste management unit or July 26, 2005 (whichever is later), shall provide the information specified in paragraph (L)(5) of this rule. The application for an installation permit under rule 3745-31-02 of the Administrative Code may be used to fulfill the notification requirements of this paragraph.
- (3) The owner or operator of a facility that is subject to this rule, is located in Ashtabula, Cuyahoga, Geauga, Lake, Lorain, Medina, Portage, or Summit county, and has an initial startup of a waste management unit before the effective date of this rule, shall notify the appropriate Ohio environmental protection agency district office or local air agency in writing that the facility is subject to this rule. The notification, which shall be submitted not later than sixty days after the effective date of this rule, shall provide the information specified in paragraph (L)(5) of this rule.
- (4) The owner or operator of a facility that is subject to this rule, is located in Ashtabula, Cuyahoga, Geauga, Lake, Lorain, Medina, Portage, or Summit county, and has an initial startup of a waste management unit on or after the effective date of this rule, shall notify the appropriate Ohio environmental protection agency district office or local air agency in writing that the waste management unit is subject to this rule. The notification, which shall be submitted not later than either the date of initial startup of the waste management unit or sixty days after the effective date of this rule (whichever is later), shall provide the information specified in paragraph (L)(5) of this rule. The application for an installation permit under rule 3745-31-02 of the Administrative Code may be used to fulfill the notification requirements of this paragraph.

- (5) The notification required in paragraphs (L)(1) to (L)(4) of this rule shall include the following information:
- (a) Name and address of the owner or operator;
  - (b) Address (i.e., physical location) of the facility;
  - (c) Equipment description and Ohio EPA application number (if assigned) of any waste management unit;
  - (d) Identification of the applicable requirements, the means of compliance, and the compliance date for the waste management unit; and
  - (e) Regarding a permit for any waste management unit, whichever of the following is applicable:
    - (i) Submission of an application for an operating permit, modification, or renewal of an operating permit, in accordance with paragraph (B) of rule 3745-35-02 of the Administrative Code; or  
  
[Comment: Applications requiring submittal prior to June 30, 2008, were submitted in accordance with Chapter 3745-35 of the Administrative Code.]
    - (ii) Statement of intent to submit an application for a Title V permit or modification of a Title V permit in accordance with rule 3745-77-02 or rule 3745-77-08 of the Administrative Code, respectively.

3745-21-17      **Portable fuel containers.**

(A) Applicability.

Except as provided in paragraph (C) of this rule, this rule applies to any person who sells, supplies, offers for sale, or manufactures for sale in Ohio portable fuel containers or spouts or both portable fuel containers and spouts for use in Ohio.

Except as provided in paragraph (C) of this rule, no person shall sell, supply, offer for sale, advertise, or manufacture for sale in Ohio a portable fuel container or spout or both portable fuel container or spout on or after July 1, 2007 unless the portable fuel container or spout or both portable fuel container and spout:

- (1) Has been certified by the California air resources board (CARB) pursuant to the certification requirements contained in title 13, division 3, chapter 9, article 6 of the California Code of Regulations; "Portable Containers and Spouts;" effective October 11, 2006 and the manufacturer, supplier, seller or other person has submitted to the director a copy of the certification document; or

[Comment: Copies of the California Code of Regulations may be obtained by writing to: "West Customer Service, P.O. Box 64833, St. Paul, MN 55164-0833" or by calling 1-800-888-3600. The full text of regulations are also available in electronic format at <http://ccr.oal.ca.gov/>.]

- (2) Has been certified or otherwise approved under requirements and in a manner that the director of the Ohio EPA determines are as stringent as the California requirements identified in paragraph (A)(1) of this rule and the manufacturer, supplier, seller or other person has submitted to the director a copy of such certification or approval document.

(B) Definitions.

The definitions applicable to this rule are contained in paragraph (Z) of rule 3745-21-01 of the Administrative Code.

(C) Exemptions.

This rule does not apply to:

- (1) Any portable fuel container or spout or both portable fuel container and spout manufactured in Ohio for shipment, sale, and use outside of Ohio.
- (2) Safety cans meeting the requirements of 29 CFR Part 1926, Subpart F; "Fire Protection and Prevention;" as published in the July 1, 2006 edition of the Code of Federal Regulations.

[Comment: Information and copies of the Code of Federal Regulations (CFR) may be obtained by writing to: "Superintendent of Documents, Attn: New Orders, PO Box 371954, Pittsburgh, PA 15250-7954." The full text of the CFR is also available in electronic format at [www.access.gpo.gov/nara/cfr/](http://www.access.gpo.gov/nara/cfr/). The CFR compilations are also available for inspection and copying at most public libraries and "The State Library of Ohio."]

- (3) Portable fuel containers with a nominal capacity less than or equal to one quart.
- (4) Rapid refueling devices with nominal capacities greater than or equal to four gallons, provided such devices are designed for use in officially sanctioned off-highway motor sports such as car racing or motorcycle competitions and either create a leak-proof seal against a stock target fuel tank or are designed to operate in conjunction with a receiver permanently installed on the target fuel tank.
- (5) Portable fuel tanks manufactured specifically to deliver fuel through a hose attached between the portable fuel tank and the outboard engine for the purpose of operating the outboard engine.
- (6) Closed-system portable fuel containers that are used exclusively for fueling remote control model airplanes.
- (7) Portable fuel containers or portable fuel container spouts manufactured prior to July 1, 2007.

**Commercial motor vehicle and mobile equipment refinishing operations.**

[Comment: For dates and availability of non-regulatory government publications, publications of recognized organizations and associations, federal rules, and federal statutory provisions referenced in this rule, see paragraph (HH) of rule 3745-21-01 of the Administrative Code titled "Referenced materials."]

**(A) Applicability.**

- (1) All commercial motor vehicle and mobile equipment refinishing operations (sources), regardless of date of construction or modification, that are located in Butler, Clark, Clermont, Greene, Hamilton, Miami, Montgomery, or Warren county shall comply with:
  - (a) The requirements of paragraphs (C)(1) and (C)(2) of this rule beginning May 1, 2009; and
  - (b) The requirements of paragraphs (C)(3) to (C)(6) of this rule beginning April 11, 2006.
- (2) All commercial motor vehicle and mobile equipment refinishing operations (sources), regardless of date of construction or modification, that are located in Ashtabula, Cuyahoga, Geauga, Lake, Lorain, Medina, Portage, or Summit county shall achieve compliance with the requirements of this rule by no later than one year after the effective date of this rule.

**(B) Definitions.**

The definitions applicable to this rule are contained in paragraph (D) of rule 3745-21-01 of the Administrative Code.

**(C) Operating requirements.**

Except where exempt under paragraph (D) of this rule a person at a facility subject to the requirements of this rule shall:

- (1) Not apply to mobile equipment or mobile equipment components any automotive pretreatment, automotive primer-surfacer, automotive primer-sealer, automotive topcoat, or automotive specialty coatings, including any VOC-containing materials added to the original coating supplied by the manufacturer, that contain VOCs in excess of the limits specified in the table of this rule:

-Table: Allowable content of VOCs in mobile equipment repair and refinishing coatings, as applied (in weight of VOC per volume of coating, excluding water and non-VOC or exempt solvents)-

Coating Type	Limit (pounds VOC per gallon of coating, excluding water and exempt solvents)	Limit (grams VOC per liter of coating, excluding water and exempt solvents)
pretreatment primer	6.5	780
primer-surfacer	4.8	575
primer-sealer	4.6	550
topcoat(single-stage)	5.0	600
topcoat (two-stage basecoat/clearcoat)	5.0	600
topcoat (three or four-stage basecoat/clearcoat)	5.2	625
multi-colored topcoat	5.7	680
automotive specialty	7.0	840

(2) Calculate the VOC content of the coatings employed in accordance with the following:

- (a) Except for multi-stage topcoats, the mass of VOC per combined volume of VOC and coating solids, excluding water and exempt solvents, shall be calculated by the following equation:

$$VOC = \frac{(Wv - Ww - Wec)}{(V - Vw - Vec)}$$

where:

VOC = VOC content in pounds per gallon of coating, excluding water and exempt solvents;

Wv = mass of total volatiles, in pounds;

Ww = mass of water, in pounds;

Wec = mass of exempt solvents, in pounds;

V = volume of coating, in gallons;

Vw = volume of water, in gallons; and

Vec = volume of exempt solvents, in gallons.

- (b) The VOC content of a multi-stage topcoat shall be calculated by the following equation:

$$VOC_{multi} = \frac{VOC_{bc} + \sum_{i=0}^M VOC_{mci} + 2(VOC_{cc})}{M + 3}$$

where:

VOC<sub>multi</sub> = VOC content of multistage topcoat, in pounds per gallon, excluding water and exempt solvents;

VOC<sub>bc</sub> = VOC content of basecoat, in pounds per gallon, excluding water and exempt solvents;

VOC<sub>mci</sub> = VOC content of each midcoat(s), in pounds per gallon, excluding water and exempt solvents;

VOC<sub>cc</sub> = VOC content of the clear coat, in pounds per gallon, excluding water and exempt solvents; and

M = number of midcoats.

(The VOC content of each coating shall be measured in accordance with USEPA method 24.)

- (3) Use one or more of the following application techniques, in accordance with manufacturer's specifications, to apply any coating containing a VOC as a pretreatment, primer, sealant, basecoat, clear coat, or topcoat to mobile equipment for commercial purposes:
- (a) Flow or curtain coating;
  - (b) Dip coating;
  - (c) Roller coating;
  - (d) Brush coating;
  - (e) Cotton-tipped swab application;
  - (f) Electro-deposition coating;
  - (g) HVLP spraying;
  - (h) Electrostatic spray;

- (i) Airless spray;
  - (j) Air-assisted airless spray; and
  - (k) Any other coating application method that the owner or operator of the facility demonstrates and Ohio environmental protection agency determines achieves emission reductions equivalent to HVLP or electrostatic spray application methods. This demonstration shall be submitted for approval to the director of Ohio environmental protection agency. Any equivalent coating application method approved by the director shall be submitted to the USEPA as a revision to the Ohio state implementation plan for ozone.
- (4) Be properly trained in the use of an HVLP sprayer, or equivalent application, in accordance with manufacturer's specifications, and in the handling of a coating and any solvents used to clean the sprayer.
- (5) Ensure that the spray guns used to apply mobile equipment repair and refinishing coatings shall be cleaned by one of the following:
- (a) An enclosed spray gun cleaning system that is kept closed when not in use;
  - (b) Un-atomized discharge of solvent into a paint waste container that is kept closed when not in use;
  - (c) Disassembly of the spray gun and cleaning in a vat that is kept closed when not in use; and
  - (d) Atomized spray into a paint waste container that is fitted with a device designed to capture atomized solvent emissions.
- (6) Store the following materials in nonabsorbent, non-leaking containers and keep these containers closed at all times when not in use:
- (a) Fresh coatings;
  - (b) Used coatings;
  - (c) Solvents;
  - (d) VOC-containing additives and materials;
  - (e) VOC-containing waste materials; and
  - (f) Cloth, paper, or absorbent applicators moistened with any of the items listed in this subsection.

(D) Exemptions.

The following coating applications shall be exempt from the requirements of this rule:

- (1) The application of a coating for graphic designs, stenciling, lettering or other identification marking through the use of an air brush method;
- (2) The application of a coating sold in a non-refillable aerosol container; and
- (3) The application of a coating to mobile equipment solely for repair of small areas of surface damage or minor imperfections.

(E) Record keeping and reporting requirements.

- (1) Each owner or operator subject to the provisions of this rule shall submit documentation sufficient to demonstrate that high efficiency transfer application techniques of coatings required in this rule are in use at their facility. The documentation also shall verify that all employees applying coatings are properly trained in the use of an HVLP sprayer, or equivalent application, and in the handling of a coating and any solvents used to clean the sprayer. This documentation shall be submitted to the appropriate Ohio environmental protection agency district office or local air agency. In addition, the owner or operator shall retain the documentation on site and make the documentation available to the appropriate Ohio environmental protection agency district office or local air agency upon request. The documentation shall be submitted by:
  - (a) June 10, 2006 for sources covered under paragraph (A)(1)(b) of this rule;
  - (b) June 10, 2009 for sources covered under paragraph (A)(1)(a) of this rule; or
  - (c) No later than one year after the effective date of this rule for sources covered under paragraph (A)(2) of this rule.
- (2) Each owner or operator subject to the provisions of this rule shall maintain records for a period of five years of the amount and VOC content of each coating employed and report to the director all emissions in excess of the limits specified in the table of this rule within forty-five days after each exceedance is discovered.

**Control of volatile organic compound emissions from aerospace manufacturing and rework facilities.**

[Comment: For dates and availability of non-regulatory government publications, publications of recognized organizations and associations, federal rules, and federal statutory provisions referenced in this rule, see the "Incorporation by Reference" paragraph at the end of rule 3745-21-01 of the Administrative Code.]

**(A) Rule applicability.**

- (1) Except as otherwise provided in paragraph (A)(2) of this rule, this rule shall apply to any aerospace manufacturing or rework facility that is located in Ashtabula, Cuyahoga, Geauga, Lake, Lorain, Medina, Portage, or Summit county.
- (2) Excluded from the requirements of this rule is any aerospace manufacturing or rework facility that has the potential to emit for VOC of less than 25.0 tons per year for all operations combined where aerospace components and vehicles are cleaned or coated. The activities, operations, and materials described in paragraphs (C)(2) and (C)(3) of this rule are not included in such determination of potential to emit for VOC.

**(B) Definitions.**

The definitions applicable to this rule are contained in paragraphs (B) and (AA) of rule 3745-21-01 of the Administrative Code.

**(C) Overall requirements for an aerospace manufacturing or rework facility.**

- (1) Except as otherwise provided in paragraphs (C)(2) and (C)(3) of this rule, any owner or operator of an aerospace manufacturing or rework facility that is subject to this rule shall comply with the requirements of paragraphs (D) to (L) of this rule.
- (2) This rule does not apply to the following activities where cleaning and coating of aerospace components and vehicles may take place:
  - (a) Research and development;
  - (b) Quality control;
  - (c) Laboratory testing; and
  - (d) Electronic parts and assemblies (except for cleaning and coating of completed assemblies).

- (3) This rule does not apply to rework operations performed on antique aerospace vehicles and components.

(D) VOC emission limitations and application methods for coating operations.

- (1) Except as otherwise provided in paragraphs (D)(2) and (D)(3) of this rule, a person shall not apply to aerospace vehicles or components any coating that contains VOC in excess of the VOC content limits specified below:

- (a) VOC content limits for primers, topcoats, and chemical milling maskants.
