

Communicable Disease Report Summit County June, 2020

1. Monthly Highlights/Observations:

Tuberculosis- There were no suspected cases of TB investigated in June, and one case transferred to Summit County from another state. SCPH CDU continued to investigate local contacts for five TB cases that were confirmed in 2018 and 2019, and continue evaluation of two suspect cases. SCPH CDU currently provides direct observed therapy (DOT) to 10 cases (8 cases of pulmonary TB and 2 extra pulmonary cases). This includes one DOT case (pulmonary) was initiated in June. DOT clients receive daily to monthly visits depending on side effects and where client is in treatment. All cases are complex and require resources (including obtaining the medications, collecting sputum samples), which requires collaboration and coordination between multiple agencies and external community services.

The CDU also investigated 6 cases of hepatitis B, 5 cases CP-CRE, 3 cases legionellosis, 5 cases Lyme disease, 1 case mumps, and 25 enteric cases (6 campylobacteriosis, 1 cyclosporiasis, 2 E. coli, 1 giardiasis, 3 hepatitis A, 11 salmonellosis, and 1 yersiniosis) in June.

2. Outbreaks: Fourteen COVID-19 outbreaks were reported to the CDU in June, and were located at long term care facilities, group homes, manufacturing sites, retail stores, and community agencies.

Hepatitis A Community Outbreak: Although hepatitis A activity has decreased, the Ohio Department of Health has not yet declared the end of the statewide outbreak. From January 1, 2018 to June 30, 2020, there were 212 reported hepatitis A cases in Summit County; 157 of which were linked to the outbreak.

COVID-19: There were 509 confirmed or probable cases of COVID-19 reported in Summit County, all were investigated by the CDU staff. Investigation of COVID-19 cases includes (but is not limited to) patient interviews, contact tracing, and follow up with healthcare providers and employers. 14,370 COVID-19 cases were reported in Ohio in June.

3. Epicenter: Epicenter is an electronic surveillance system which provides instant notification of unusual symptomatic activity at local Emergency Departments. 9 Epicenter alerts were issued during June for the following communicable disease symptoms: Diarrhea - not watery or bloody (4), Vision (2), Rash (2), and Botulinic (1). These alerts were investigated and were determined to not be of public concern.

4. Influenza Surveillance: Surveillance for the 2019-2020 influenza season ended on May 9, and the final report was issued on May 15. Surveillance data from the 2019-2020 season and previous seasons are available in an influenza dashboard, which is located on the SCPH website: <https://www.scph.org/dashboards> Weekly influenza reports may be accessed here: <https://www.scph.org/flu-surveillance-reports>

5. Vector-borne Surveillance: Vector borne disease surveillance resumed on May 24, with reports being distributed every other week through October. As of June 20, there were 9 tests for human West Nile virus (or arbovirus panels) ordered at Summit County hospitals, one of which was positive for WNV (this was not an active infection, the patient had antibodies from a previous infection). As of June 25, environmental testing had not yet identified any locations in Summit County with mosquito pools that were positive for WNV (Note: ODH testing is limited due to the COVID-19 pandemic). There were 42 Lyme disease tests ordered at Summit County hospitals from May 24 to June 20, with 9 confirmed positive or indeterminate results. Copies of the reports may be accessed at: <https://www.scph.org/vector-surveillance-reports>

Communicable Disease Reports Received, June 2020

Reportable Condition	June 2020	May 2020	Year-to-Date 2020	Year-to-Date 2019
Amebiasis	0	0	0	0
Babesiosis	0	0	1	0
Botulism - infant	0	0	0	0
Botulism, food borne	0	0	0	0
Brucellosis	1	0	1	0
COVID-19	509	888	2,047	NR
CP-CRE	5	0	14	10
Campylobacteriosis	6	3	28	50

Yersiniosis	1	1	5	6
Zika virus infection	0	0	0	0
Total	1,045	1,333	5,453	3,773

Notes:

1) This report includes the number of reports of disease received and investigated by Summit County Public Health (SCPH). This includes all reports that were determined to be probable, suspected, or confirmed. Based on case investigation, clinical diagnoses, epidemiological case definitions, and lab results, the case status may change. NR = not reported in previous year.

2) The Total Year-to-Date column reflects all cases of disease where SCPH is identified as the local health department in the Ohio Disease Reporting System (ODRS) as of the date that data was extracted. This includes the cases of disease entered into ODRS after last month's report was generated which will now be included in the Previous Month Revised column. Data may also vary in response to recent changes in data extraction and analysis. Because case classifications can change over time, monthly figures should not be considered final until the annual report is complete.

3) The number of perinatal hepatitis B cases reflect the number of infants born to hepatitis B positive mothers during the time period indicated. These infants will be followed by the Perinatal Hepatitis B Prevention Program (PHBPP) until serology indicates that the child has immunity.

For questions or comments about this report, please contact Joan Hall, MPH at (330) 926-5746 or the Communicable Disease Unit at (330) 375-2662. This report was issued on July 2, 2020.
